[634] The first image is a sombre one of mountains and time, probably called up by the sun wandering over the mountains; the next image, visualizing the simultaneous nearness and separation of the lovers, seems to hint at life in the underworld,[26] where one is united with everything that was dear to one and yet cannot enjoy the happiness of reunion because it is all shadowy, unreal and devoid of life. There the descending soul drinks the "innocent" water, the drink of rejuvenation,[27] that he may grow wings and soar up again into life, like the winged sun-disc (cf. pls. VII, IX*a*) which rises swan-like from the water.

So I spoke, when swifter
Than I had fancied, and far
Whither I never had thought to come,
A Genius bore me away
From my house. In the twilight
The shadowy woods darkened as I went
And the yearning brooks of my home;
No more did I know these lands.

[635] After the dark and enigmatic prelude, which is like a premonition of what is to come, the poet begins the journey to the East, towards the sunrise, towards the mystery of eternity and rebirth, of which Nietzsche also dreams:

> O how should I not burn for eternity and for the nuptial ring of rings—the ring of return! Never yet did I find the woman from whom I desired children, unless it be this woman whom I love: for

I love thee, O Eternity.[28]

[636] Hölderlin puts this same longing into a magnificent image, whose main features we know already:

Yet soon in fresh radiance,
Mysterious
In the golden smoke,
Swiftly sprung up
With the tread of the sun,

Asia bloomed out before me,
Fragrant with a thousand peaks, and dazzled
I sought one that I knew, for I was
A stranger to the broad streets
Where the gold-flecked Pactolus
Rushes down from Tmolus,
And Taurus stands and Messogis,
And full of flowers the garden,
A quiet fire. But high in the light
Blossoms the silver snow,
And, witness to life everlasting,
On attainless walls
The immemorial ivy[29] grows, and upborne
Upon living columns of cedars and laurels
Are the solemn,
The divinely built palaces.

[637] The vision is apocalyptic: the mother-city in the land of eternal youth, surrounded by the flowery verdure of imperishable spring.[30] (Cf. pl. XXII*a*.) The poet identifies himself here with John, who lived on Patmos and consorted with the "Son of the Highest" and saw him face to face:

As at the mystery of the vine
They sat together at the hour of the banquet,
And quietly prescient in his great soul
The Lord spake death and the last love …

Thereon he died. Of that
There were much to be said. And the friends saw
How he gazed forth victorious,
The most joyful of all, at the last …

Therefore he sent them

The Spirit, and the house
Solemnly trembled,
And the storm of God
Rolled far-thundering over their visionary heads,
Where brooding
The heroes of death were assembled,
As he now, in departure,
Once more appeared before them.
For now was put out
The day of the sun, the kingly one,
And himself, divinely suffering,
Shattered the straight-rayed sceptre,
For it shall come again
At the proper time …

[638] The underlying images are the sacrificial death and resurrection of Christ, conceived as the self-sacrifice of the sun, which voluntarily breaks its rayed sceptre in the certain hope of resurrection. Concerning the substance of the rayed sceptre the following may be noted: Spielrein’s patient said that “God pierces the earth with his ray.” For her the earth was a woman; she also regarded the sunbeam in mythological fashion as something solid: “Jesus Christ has shown me his love by tapping at the window with a sunbeam.” I have come across the same idea of the solid substance of the sunbeam in other insane patients. Thor’s hammer, which split the earth and penetrated deep into it, may be compared with Kaineus’ foot. Inside the earth the hammer comports itself like the treasure, for in the fulness of time it comes to the surface again, i.e., is born again from the earth. At the place where Samson threw away the jawbone of the ass the Lord caused a fountain to gush forth.[31] Springs also come from hoof-marks, footprints, horse’s hooves. Magic wands and sceptres in general come into this category of meanings. Gr. *σκῆπτρον* is related to *σκᾱ̃πος*, *σκηπᾱ̃νιον*, *σκήπων* = ’staff’; *σκηπτὸς* = ‘storm-wind’; Lat. *scapus*, ‘shaft, stalk’; OHG. *scaft*, ‘spear, lance.’ [32] (Cf. pl. XLV.) So once again we meet in this context the connections already known to us as libido-symbols. The breaking of the sceptre therefore signifies the sacrifice of power as previously exercised, i.e., of the libido which had been organized in a certain direction.

[639] That Hölderlin’s poem should pass from Asia to Patmos and thence to the Christian mystery may seem like a superficial association of ideas, but actually it is a highly significant train of thought: it is the entry into death and the land beyond, seen as the self-sacrifice of the hero for the attainment of immortality. At this time, when the sun has set and life seems extinguished, man awaits in secret expectancy the renewal of all life:

And it was joy
From now on
To dwell in loving night and maintain
Steadfast in simple eyes
Abysses of wisdom.

[640] Wisdom dwells in the depths, the wisdom of the mother; being one with her means being granted a vision of deeper things, of the primordial images and primitive forces which underlie all life and are its nourishing, sustaining, creative matrix. Hölderlin, in his pathological ecstasy, senses the grandeur of the things seen, but unlike Faust he does not care to bring into the light of day all that he has found in the depths:

And no evil it is if something
Is lost and the living sound
Fades from our speech,
For heavenly labour is like to our own.
The Highest would not have
All at one time.
So long as the pit bears iron
And Etna fiery resin,
So I have riches
To fashion an image and see
The Spirit [33] as ever it was.

[641] What the poet beholds in his Vulcan’s pit is in truth the “Spirit” as ever it was, namely the totality of primary forms from which the archetypal images come. In this world of the collective unconscious spirit appears as an archetype which is endowed with supreme significance and is expressed through the figure of the divine hero, whose counterpart in the West is Christ.

He wakens the dead,
Who are not yet bound
By the grossness of death …

And if the heavenly ones,
As I believe, so love me.…

Quiet is his [34] sign
In the thunderous sky. And One stands beneath it
His life long. For Christ lives yet.

[642] But, as once Gilgamesh, bringing back the magic herb from the Western Land (cf. pl. XIX), was robbed of his treasure by the demon-serpent, so Hölderlin's poem dies away in a painful lament, which tells us that his descent to the shadows will be followed by no resurrection in this world:

… shamefully
A mighty force wrenches the heart from us,
For the heavenly each demand sacrifice.

[643] This recognition, that one must give up the retrospective longing which only wants to resuscitate the torpid bliss and effortlessness of childhood, *before* the "heavenly ones" wrench the sacrifice from us (and with it the entire man), came too late to the poet.

[644] I therefore take it as a wise counsel which the unconscious gives our author, to let her hero die, for he was really not much more than the personification of a regressive and infantile reverie, having neither the will nor the power to make good his aversion from this world by fishing up another from the primeval ocean of the unconscious, which would truly have been an heroic act. Such a sacrifice can only be accomplished through whole-hearted dedication to life. All the libido that was tied up in family bonds must be withdrawn from the narrower circle into the larger one, because the psychic health of the adult individual, who in childhood was a mere particle revolving in a rotary system, demands that he should himself become the centre of a new system. That such a step includes the solution, or at least some consideration, of the sexual problem is obvious enough, for unless this is done the unemployed libido will inevitably remain fixed in the unconscious endogamous relationship to the parents

and will seriously hamper the individual’s freedom. We must remember that Christ’s teaching means ruthlessly separating a man from his family, and we saw in the Nicodemus dialogue how he took especial pains to give regression a symbolic meaning. Both tendencies serve the same goal, namely that of freeing man from his family fixations, from his weakness and uncontrolled infantile feelings. For if he allows his libido to get stuck in a childish milieu, and does not free it for higher purposes, he falls under the spell of unconscious compulsion. Wherever he may be, the unconscious will then recreate the infantile milieu by projecting his complexes, thus reproducing all over again, and in defiance of his vital interests, the same dependence and lack of freedom which formerly characterized his relations with his parents. His destiny no longer lies in his own hands: his Τύχαι καὶ Μοῖραι (fortunes and fates) fall from the stars. The Stoics called this condition Heimarmene, compulsion by the stars, to which every “unredeemed” soul is subject. When the libido thus remains fixed in its most primitive form it keeps men on a correspondingly low level where they have no control over themselves and are at the mercy of their affects. That was the psychological situation of late antiquity, and the saviour and physician of that time was he who sought to free humanity from bondage to Heimarmene.[35]

[645] Miss Miller’s vision seems at first sight to treat the problem of sacrifice as a purely individual problem, but if we examine the way it is worked out we shall see that it is something that must be a problem for humanity in general. For the symbols employed—the snake that kills the horse, and the hero who sacrifices himself of his own free will—are mythological figures born of the unconscious.

[646] To the extent that the world and everything in it is a product of thought, the sacrifice of the libido that strives back to the past necessarily results in the creation of the world. For him who looks backwards the whole world, even the starry sky, becomes the mother who bends over him and enfolds him on all sides, and from the renunciation of this image, and of the longing for it, arises the picture of the world as we know it today. This simple thought is what constitutes the meaning of the cosmic sacrifice, a good example being the slaying of Tiamat (fig. 41), the Babylonian mother-dragon, from whose body heaven and earth were

made.[36] But perhaps the fullest expression of this idea is to be found in Indian philosophy of the oldest date, in the Vedic hymns. The Rig-Veda asks:

> What was the wood, what was the tree,
> From which heaven and earth were hewn?
> Let the sages inquire within their minds.[37]

Fig. 41. Marduk fighting Tiamat
Assyrian cylinder seal

[647] Vishvakarman, the All-Creator, who made the world from the unknown tree, did so as follows:

> Sacrificing as a wise sacrificer,
> Our Father entered into all these beings;
> Striving for blessings through prayer,
> Hiding his origin, he went into the lower world.
> Yet what and who has served him
> As a resting-place and a support?

[648] The Rig-Veda proceeds to answer these questions: Purusha (Man, Anthropos) was the primal being who

> Encompassed the earth on all sides
> And ruled over the ten-finger place
> (the highest point of heaven).[38]

[649] Purusha is evidently a sort of Platonic world-soul who surrounds the earth from outside:

> Being born he overtopped the world
> Before, behind, and in all places.

[650] As the all-encompassing world-soul Purusha has a maternal character, for he represents the original "dawn state" of the psyche: he is the encompasser and the encompassed, mother and unborn child, an undifferentiated, unconscious state of primal being. As such a condition must be terminated, and as it is at the same time an object of regressive longing, it must be sacrificed in order that discriminated entities—i.e., conscious contents—may come into being:

> Him, Purusha, born at the beginning, they besprinkled on the straw; the gods sacrificed with him, and the saints and the sages.

[651] The passage is very remarkable. If one attempted to put this mythologem on the Procrustean bed of logic sore violence would be done to it. How on earth ordinary "sages" come to be sacrificing the primal being side by side with the gods is an utterly fantastic conception, quite apart from the fact that in the beginning (i.e., before the sacrifice) nothing existed except the primal being! But if this primal being means the great mystery of the original psychic state, then everything becomes clear:

> From that sacrifice when it was fully offered the speckled (clotted) butter was collected; it constituted the birds and the wild and domestic animals.
>
> From that sacrifice when it was fully offered the hymns were born, and the chants; the metres were born from it, and from it the prose formula was born.…
>
> The moon was born from his mind; from his eye was born the sun; from his mouth Indra and Agni; from his breath Vayu was born.
>
> From his navel grew the atmosphere; from his head the sky; from his feet the earth; from his ear the directions. Thus the worlds are made.

[652] It is evident that by this is meant not a physical, but a psychological cosmogony. The world comes into being when man discovers it. But he only discovers it when he sacrifices his containment in the primal mother, the original state of unconsciousness. What drives him towards this discovery is conceived by Freud as the "incest barrier." The incest prohibition blocks the infantile longing for the mother and forces the libido along the path of life's biological aim. The libido, driven back from the mother by the incest prohibition, seeks a sexual object in place of the forbidden mother. Here the terms "incest prohibition," "mother," etc. are used metaphorically, and it is in this sense that we have to interpret Freud's paradoxical dictum: "To begin with we knew only sexual objects."[39] This statement is not much more than a sexual

allegory, as when one speaks of male and female electrical connections, screws, etc. All it does is to read the partial truths of the adult into infantile conditions which are totally different. Freud's view is incorrect if we take it literally, for it would be truer to say that at a still earlier stage we knew nothing but nourishing breasts. The fact that the infant finds pleasure in sucking does not prove that it is a sexual pleasure, for pleasure can have many different sources. Presumably the caterpillar finds quite as much pleasure in eating, even though caterpillars possess no sexual function whatever and the food instinct is something quite different from the sex instinct, quite unconcerned about what a later sexual stage may make of these earlier activities. Kissing, for instance, derives far more from the act of nutrition than from sexuality. Moreover the so-called "incest barrier" is an exceedingly doubtful hypothesis (admirable as it is for describing certain neurotic conditions), because it is a product of culture which nobody invented and which grew up naturally on the basis of complex biological necessities connected with the development of "marriage classes." The main purpose of these is not to prevent incest but to meet the social danger of endogamy by instituting the "cross-cousin marriage." The typical marriage with the daughter of the maternal uncle is actually implemented by the same libido which could equally well possess the mother or the sister. So it is not a question of avoiding incest, for which incidentally there are plenty of opportunities in the frequent fits of promiscuity to which primitives are prone, but of the social necessity of spreading the family organization throughout the whole tribe.[40]

[653] Therefore it cannot have been the incest-taboo that forced mankind out of the original psychic state of non-differentiation. On the contrary, it was the evolutionary instinct peculiar to man, which distinguishes him so radically from all other animals and forced upon him countless taboos, among them the incest-taboo. Against this "other urge" the animal in us fights with all his instinctive conservatism and misoneism—hatred of novelty—which are the two outstanding features of the primitive and feebly conscious individual. Our mania for progress represents the inevitable morbid compensation.

[54] Freud’s incest theory describes certain fantasies that accompany the regression of libido and are especially characteristic of the personal unconscious as found in hysterical patients. Up to a point they are infantile-sexual fantasies which show very clearly just where the hysterical attitude is defective and why it is so incongruous. They reveal the shadow. Obviously the language used by this compensation will be dramatic and exaggerated. The theory derived from it exactly matches the hysterical attitude that causes the patient to be neurotic. One should not, therefore, take this mode of expression quite as seriously as Freud himself took it. It is just as unconvincing as the ostensibly sexual traumata of hysterics. The neurotic sexual theory is further discomfited by the fact that the last act of the drama consists in a return to the mother’s body. This is usually effected not through the natural channels but through the mouth, through being devoured and swallowed (pl. LXII), thereby giving rise to an even more infantile theory which has been elaborated by Otto Rank. All these allegories are mere makeshifts. The real point is that the regression goes back to the deeper layer of the nutritive function, which is anterior to sexuality, and there clothes itself in the experiences of infancy. In other words, the sexual language of regression changes, on retreating still further back, into metaphors derived from the nutritive and digestive functions, and which cannot be taken as anything more than a *façon de parler*. The so-called Oedipus complex with its famous incest tendency changes at this level into a “Jonah-and-the-Whale” complex, which has any number of variants, for instance the witch who eats children, the wolf, the ogre, the dragon, and so on. Fear of incest turns into fear of being devoured by the mother. The regressing libido apparently desexualizes itself by retreating back step by step to the presexual stage of earliest infancy. Even there it does not make a halt, but in a manner of speaking continues right back to the intra-uterine, pre-natal condition and, leaving the sphere of personal psychology altogether, irrupts into the collective psyche where Jonah saw the “mysteries” (“représentations collectives”) in the whale’s belly. The libido thus reaches a kind of inchoate condition in which, like Theseus and Peirithous on their journey to the underworld, it may easily stick fast. But it can also tear itself loose from the maternal embrace and return to the surface with new possibilities of life.

[655] What actually happens in these incest and womb fantasies is that the libido immerses itself in the unconscious, thereby provoking infantile reactions, affects, opinions and attitudes from the personal sphere, but at the same time activating collective images (archetypes) which have a compensatory and curative meaning such as has always pertained to the myth. Freud makes his theory of neurosis—so admirably suited to the nature of neurotics—much too dependent on the neurotic ideas from which precisely the patients suffer. This leads to the pretence (which suits the neurotic down to the ground) that the *causa efficiens* of his neurosis lies in the remote past. In reality the neurosis is manufactured anew every day, with the help of a false attitude that consists in the neurotic's thinking and feeling as he does and justifying it by his theory of neurosis.

[656] After this digression, let us turn back to our Vedic hymn. Rig-Veda X, 90 closes with a significant verse which is also of the greatest importance as regards the Christian mystery:

> With the sacrifice the gods sacrificed to the sacrifice; these were the first ordinances. These powers (arising from the sacrifice) reach the sky where are the saints and the gods.[41]

[657] Sacrifice brings with it a plenitude of power that is equal to the power of the gods. Even as the world is created by sacrifice, by renouncing the personal tie to childhood, so, according to the teaching of the Upanishads, will be created the new state of man, which can be described as immortal. This new state beyond the human one is again attained through a sacrifice, the horse-sacrifice, which has cosmic significance. What the sacrificed horse means we learn from the Brihadaranyaka Upanishad:

> Om!
>
> 1. Verily, dawn is the head of the sacrificial horse, the sun his eye, the wind his breath, universal fire his open mouth. The year is the body of the sacrificial horse, the sky his back, the atmosphere his belly, the earth the underpart of his belly, the quarters his flanks, the intermediate quarters his ribs, the seasons his limbs, the months and half-months his joints, days and nights his feet, the stars his bones, the clouds his flesh. Sand is the food in his stomach, rivers are his entrails. His liver and lungs are the mountains, plants and trees his hair. The rising sun is his forepart, the setting sun his hindpart. When he shows his teeth, that is lightning. When he shakes himself, then it thunders. When he urinates, then it rains. His voice is speech.
>
> 2. Verily, day was created for the horse as the sacrificial dish which stands before him; its place is the world-ocean towards the east. Night was created for the sacrificial horse as the sacrificial

dish which stands behind him; its place is the world-ocean towards the west.

Verily, these two surround the horse on both sides as the two sacrificial vessels.

As a steed he carried the gods, as a charger the Gandharvas, as a racer the demons, as a horse men. The ocean is his kinsman, the sea his cradle.[42]

[658] As Deussen remarks, the horse-sacrifice signifies a renunciation of the world. When the horse is sacrificed the world is sacrificed and destroyed—a train of thought that also suggested itself to Schopenhauer. The horse stands between two sacrificial vessels, passing from one to the other, just as the sun passes from morning to evening. (Cf. fig. 3.) Since the horse is man's steed and works for him, and energy is even measured in terms of "horse power," the horse signifies a quantum of energy that stands at man's disposal. It therefore represents the libido which has passed into the world. We saw earlier on that the "mother-libido" must be sacrificed in order to create the world; here the world is destroyed by renewed sacrifice of the same libido, which once belonged to the mother and then passed into the world. The horse, therefore, may reasonably be substituted as a symbol for this libido because, as we saw, it has numerous connections with the mother.[43] The sacrifice of the horse can only produce another phase of introversion similar to that which prevailed before the creation of the world. The position of the horse between the two vessels, which represent the birth-giving and the devouring mother, hints at the idea of life enclosed in the ovum; consequently the vessels are destined to "surround" the horse. That this is in fact so can be seen from the Brihadaranyaka Upanishad 3, 3 ("Where the offerers of the horse sacrifice go"):

"What has become of the Parikshitas? I ask you, Yajñavalkya, what has become of the Parikshitas?"

Yajñavalkya said: "… Doubtless they have gone whither the offerers of the horse sacrifice go."

"And where, pray, do the offerers of the horse sacrifice go?"

"This inhabited world is as broad as thirty-two days' journeys of the sun-god's chariot. The earth, which is twice as broad, surrounds it on all sides. The ocean, which is twice as broad, surrounds the earth on all sides. There [44] is a gap as broad as the edge of a razor or the wing of a mosquito. Indra, taking the form of a falcon, delivered the Parikshitas to the wind, and the wind took them and bore them to the place where the offerers of the horse sacrifice were …

"Therefore the wind is the most individual thing (*vyashti*) and the most universal (*samashti*). He who knows this wards off repeated death."[45]

[659] As the text says, the offerers of the horse-sacrifice go to that narrowest of gaps between the shells of the world-egg, the point where they are at once united and divided. Indra, who in the form of a falcon has stolen the soma (the treasure hard to attain), is the psychopomp who delivers the souls to the wind, to the generating pneuma, the individual and universal *prana* (life-breath),[46] to save them from “repeated death.” This line of thought summarizes the meaning of innumerable myths and is at the same time an excellent example of how far Indian philosophy is, in a certain sense, nothing more than refined and sublimated mythology.[47] In the Miller drama the first to die is the horse, the animal brother of the hero (corresponding to the early death of the half-bestial Enkidu, friend and brother of Gilgamesh). His sacrificial death brings to mind the whole category of animal-sacrifices in mythology. The animal-sacrifice, where it has lost its original meaning as an offered gift and has taken on a higher religious significance, has an inner relationship to the hero or god. The animal represents the god himself; thus the bull represents Dionysus Zagreus and Mithras, the lamb Christ, etc.[48] The sacrifice of the animal means, therefore, the sacrifice of the animal nature, the instinctual libido. This is expressed most clearly in the cult legend of Attis. Attis was the son-lover of Agdistis-Cybele, the mother of the gods. Driven mad by his mother’s insane love for him, he castrated himself under a pine-tree. The pine-tree played an important part in his cult (fig. 42); every year a pine-tree was decked with garlands, an effigy of Attis was hung upon it and then it was cut down. Cybele then took the pine-tree into her cave and lamented over it. The tree obviously signifies the son—according to one version Attis was actually changed into a pine-tree—whom the mother takes back into her “cave,” i.e., the maternal womb. At the same time, the tree also has a maternal significance, since the hanging of the son or his effigy on the tree represents the union of mother and son. Common speech employs the same image: a person is said to “hang on his mother.” Again, the felling of the pine-tree parallels the castration and is a direct reminder of it. In that case the tree would have more of a phallic meaning. But since the tree is primarily significant of the mother, its felling has the significance of a mother-sacrifice. These intricate overlappings of meaning can only be disentangled if we reduce

them to a common denominator. This denominator is the libido: the son personifies the longing for the mother which exists in the psyche of every individual who finds himself in a similar situation. The mother personifies the (incestuous) love for the son. The tree personifies the mother on the one hand and the phallus of the son on the other. The phallus in its turn stands for the son's libido. The felling of the pine, i.e., castration, denotes the sacrifice of this libido, which seeks something that is as incongruous as it is impossible. The myth therefore depicts, through the arrangement and nature of the protagonists, the typical fate of a libido regression that is played out mainly in the unconscious. At the same time the dramatis personae appear in consciousness as in a dream, but in essence they are only envisagings of the currents and tendencies of the libido. The actuating principle of all the figures is the libido, which by its own unity binds its products so closely together that certain attributes or activities may easily pass from one figure to the next—a fact which presents no difficulties to intuitive understanding, but vastly complicates the task of logical exposition.

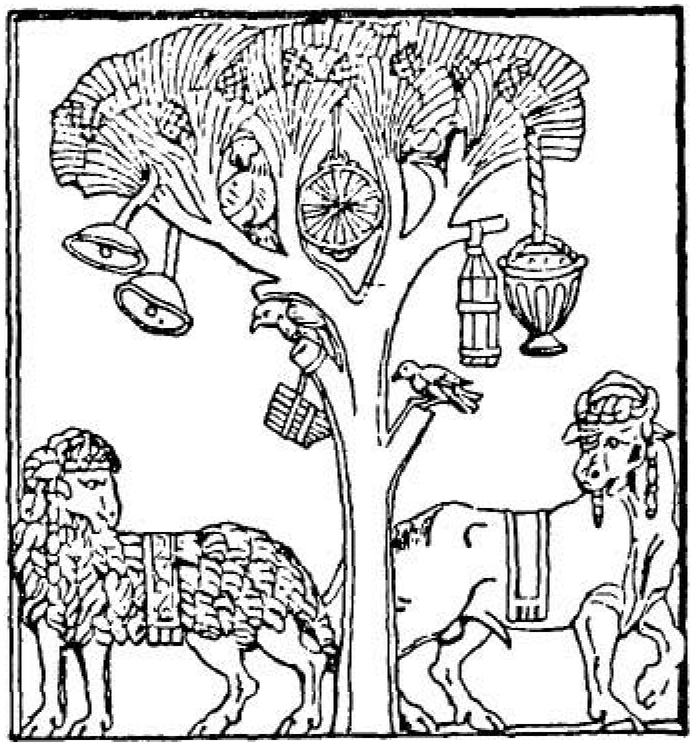

Fig. 42. The sacred tree of Attis
Relief from an altar to Cybele

[660] The impulse to sacrifice proceeds in the above instance from the *mater saeva cupidinum*, who drives the son to madness and self-mutilation. As a primal being the mother represents the unconscious; hence the myths tell us that the impulse to sacrifice comes from the unconscious. This is to be understood in the sense that regression is inimical to life and disrupts the instinctual foundations of the personality, and is consequently followed by a compensatory reaction taking the form of violent suppression and elimination of the incompatible tendency. It is a natural, unconscious process, a collision between instinctive tendencies, which the conscious ego experiences in most cases passively because it is not normally aware of these libido movements and does not consciously participate in them.

[661] Ovid, by the way, says of the pine-tree that it is "pleasing to the mother of the gods, because Cybelean Attis here put off his human form and stiffened into a tree-trunk."[49]

[662] Transformation into the pine-tree amounts to burial in the mother, just as Osiris was overgrown by the cedar. (Cf. fig. 23.) On the Coblenz bas-relief,[50] Attis is shown growing out of a tree. This is interpreted by Mannhardt as the indwelling vegetation numen, but it is probably simply a tree-birth, as with Mithras. (Cf. the Heddernheim Relief, pl. XL.) As Firmicus Maternus notes, tree and effigy played an important part in the Isis and Osiris cult and also in that of Kore-Persephone.[51] Dionysus bore the name of Dendrites, and in Boeotia he was supposed to have been called *ἒνδενδρος*, 'he in the tree.[52] In the legend of Pentheus, which is bound up with the Dionysus myth, there is a striking counterpart to the death of Attis and the subsequent lamentation: Pentheus,[53] curious to see the orgies of the Maenads, climbed up into a pine-tree but was spotted by his mother; the Maenads cut down the tree, and Pentheus, taken for a wild animal, was torn to pieces by them in their frenzy,[54] his own mother being the first to hurl herself upon him.[55] In this legend the phallic meaning of the tree (felling = castration), its maternal nature (the tree "bears" Pentheus), and its identity with the son (felling = slaying of Pentheus), are all present; at the same time we have here the counterpart and complement of the Pietà, namely the Terrible Mother. The feast of

Attis was celebrated first as a lamentation and then as a festival of joy in the spring. (Good Friday and Easter.) The priests of the Attis-Cybele cult were eunuchs, and were called Galloi.[56] The *archigallos* was called Atys.[57] Instead of the annual castration the priests merely scratched their arms till they bled. (Arm as substitute for phallus; twisting out the arms.[58]) There is a similar instinct-sacrificing symbolism in the Mithraic religion, where the essential portions of the mystery consisted in the catching and subduing of the bull. A parallel figure to Mithras is the Original Man, Gayomart. He was created together with his ox, and the two lived in a state of bliss for six thousand years. But when the world entered the aeon of Libra (the seventh zodiacal sign), the evil principle broke loose. In astrology, Libra is known as the "Positive House" of Venus, so the evil principle came under the dominion of the goddess of love, who personifies the erotic aspect of the mother. Since this aspect, as we have seen, is psychologically extremely dangerous, the classical catastrophe threatened to overtake the son. As a result of this constellation, Gayomart and his ox died only thirty years later. (The trials of Zarathustra also lasted for thirty years.) Fifty-five species of grain and twelve kinds of healing plants came from the dead ox. His seed entered into the moon for purification, but the seed of Gayomart entered into the sun. This seems to suggest that the bull has a hidden feminine significance. Gosh or Drvashpa was the bull's soul and it was worshipped as a female divinity. At first she was so faint-hearted that she refused to become the goddess of cattle until, as a consolation, the coming of Zarathustra was announced to her. This has its parallel in the Purana where the earth received the promise of Krishna's coming.[59] Like Ardvisura, the goddess of love, Gosh rides in a chariot. So the bull-anima appears to be decidedly feminine. In astrology Taurus, too, is a House of Venus. The myth of Gayomart repeats in modified form the primitive "closed circle" of a self-reproducing masculine and feminine divinity.

[663] Like the sacrificial bull, fire—whose sacrifice we have already discussed in Chapter Ill—has a feminine nature in Chinese philosophy, according to one of the commentators [60] on the Chuang-tzu (350 B.C.): "The hearth spirit is called Chi. He is dressed in bright red, resembling fire, and in appearance is like a lovely, attractive maiden." The Book of

Rites says: “Wood is burnt in the flames for the Au spirit. This sacrifice to Au is a sacrifice to the old women who are dead.” These hearth and fire spirits are the souls of departed cooks and are therefore referred to as “old women.” The god of kitchens grew out of this pre-Buddhistic tradition and later, as a man, became the ruler of the family and the link between it and heaven. In this way the original female fire-spirit became a sort of Logos and mediator.

[664] From the seed of the bull sprang the first progenitors of cattle, as well as 272 kinds of useful animals.[61] According to the Mainyo-i-Khard,[62] Gayomart destroyed Dev Azur, the demon of evil desires. Azhi, another evil demon, remained the longest on earth despite the activities of Zarathustra, but was finally destroyed at the Resurrection (like Satan in the Apocalypse). Another version says that Angramainyu and the serpent were left until the last so as to be destroyed by Ahura-Mazda himself.[63] Kern suggests that Zarathustra may mean “Golden Star” and may be identical with Mithras.[64] The name Mithras is related to Modern Persian *mihr*, meaning ‘love’ and ‘sun.’

[665] In the case of Zagreus, we saw that the bull is identical with the god and that the bull-sacrifice is a divine sacrifice. But the animal is, as it were, only a part of the hero; he sacrifices only his animal attribute, and thus symbolically gives up his instinctuality. His inner participation in the sacrificial act [65] is perfectly expressed in the anguished and ecstatic countenance of the bull-slaying Mithras. He slays it willingly and unwillingly at once,[66] hence the rather pathetic expression on certain monuments, which is not unlike the somewhat mawkish face of Christ in Guido Reni’s *Crucifixion*. Benndorf says of Mithras:

> The features, which … especially in the upper portion have an absolutely ideal character, wear an extremely sickly expression.[67]

[666] Cumont likewise stresses the facial expression of the Tauroctonos:

> The face, which can be seen in the best reproductions, is that of a young man of almost feminine beauty; a mass of curly hair rising up from the forehead surrounds it as with an aureole; the head is slightly tilted backwards, so that his glance is directed towards the heavens, and the contraction of the brows and lips gives a strange expression of sorrow to the face.[68]

[667] The head from Ostia (cf. frontispiece), supposed by Cumont to be that of Mithras Tauroctonos,[69] certainly wears an expression which we know all too well from our patients as one of sentimental resignation. It is a fact worth noting that the spiritual transformation that took place in the first centuries of Christianity was accompanied by an extraordinary release of feeling, which expressed itself not only in the lofty form of charity and love of God, but in sentimentality and infantilism. The lamb allegories of early Christian art fall in this category.

[668] Since sentimentality is sister to brutality, and the two are never very far apart, they must be somehow typical of the period between the first and third centuries of our era. The morbid facial expression points to the disunity and split-mindedness of the sacrificer: he wants to, and yet doesn’t want to. This conflict tells us that the hero is both the sacrificer and the sacrificed. Nevertheless, it is only his animal nature that Mithras sacrifices, his instinctuality,[70] always in close analogy to the course of the sun.

[669] We have learned in the course of this investigation that the libido which builds up religious structures regresses in the last analysis to the mother, and thus represents the real bond through which we are connected with our origins. When the Church Fathers derive the word *religio* from *religare* (to reconnect, link back), they could at least have appealed to this psychological fact in support of their view.[71] As we have seen, this regressive libido conceals itself in countless symbols of the most heterogeneous nature, some masculine and some feminine—differences of sex are at bottom secondary and not nearly so important psychologically as would appear at first sight. The essence and motive force of the sacrificial drama consist in an unconscious transformation of energy, of which the ego becomes aware in much the same way as sailors are made aware of a volcanic upheaval under the sea. Of course, when we consider the beauty and sublimity of the whole conception of sacrifice and its solemn ritual, it must be admitted that a psychological formulation has a shockingly sobering effect. The dramatic concreteness of the sacrificial act is reduced to a barren abstraction, and the flourishing life of the figures is flattened into two-dimensionality. Scientific

understanding is bound, unfortunately, to have regrettable effects—on one side; on the other side abstraction makes for a deepened understanding of the phenomena in question. Thus we come to realize that the figures in the mythical drama possess qualities that are interchangeable, because they do not have the same "existential" meaning as the concrete figures of the physical world. The latter suffer tragedy, perhaps, in the real sense, whereas the others merely enact it against the subjective backcloth of introspective consciousness. The boldest speculations of the human mind concerning the nature of the phenomenal world, namely that the wheeling stars and the whole course of human history are but the phantasmagoria of a divine dream, become, when applied to the inner drama, a scientific probability. The essential thing in the mythical drama is not the concreteness of the figures, nor is it important what sort of an animal is sacrificed or what sort of god it represents; what alone is important is that an act of sacrifice takes place, that a process of transformation is going on in the unconscious whose dynamism, whose contents and whose subject are themselves unknown but become visible indirectly to the conscious mind by stimulating the imaginative material at its disposal, clothing themselves in it like the dancers who clothe themselves in the skins of animals or the priests in the skins of their human victims.

[670] The great advantage of scientific abstraction is that it gives us a key to the mysterious processes enacted behind the scenes, where, leaving the colourful world of the theatre behind us, we enter into the ultimate reality of psychic dynamism and psychic meaningfulness. This knowledge strips the unconscious processes of all epiphenomenality and allows them to appear as what our whole experience tells us that they are—autonomous quantities. Consequently, every attempt to derive the unconscious from the conscious sphere is so much empty talk, a sterile, intellectual parlour-game. One suspects this wherever writers cheerfully talk of the "subconscious," without apparently realizing what an arrogant prejudice they are presuming to express. How do they know, forsooth, that the unconscious is "lower" and not "higher" than the conscious? The only certain thing about this terminology is that consciousness deems itself

higher—higher than the gods themselves. One day, let us hope, its "god-almightiness will make it quiver and quake"!

[671] The annual sacrifice of a maiden to the dragon is perhaps the ideal sacrifice on a mythological level. In order to mollify the wrath of the Terrible Mother the most beautiful girl was sacrificed as a symbol of man's concupiscence. Milder forms were the sacrifice of the first-born and of various domestic animals. The alternative ideal is self-castration, of which a milder form is circumcision. Here at least only a modicum is sacrificed, which amounts to replacing the sacrifice by a symbolical act.[72] By sacrificing these valued objects of desire and possession, the instinctive desire, or libido, is given up in order that it may be regained in new form. Through sacrifice man ransoms himself from the fear of death and is reconciled to the demands of Hades. In the late cults the hero, who in olden times conquered evil and death through his labours, has become the divine protagonist, the priestly self-sacrificer and renewer of life. Since he is now a divine figure and his sacrifice is a transcendental mystery whose meaning far exceeds the value of an ordinary sacrificial gift, this deepening of the sacrificial symbolism is a reversion to the old idea of human sacrifice, because a stronger and more total expression is needed to portray the idea of *self*-sacrifice. The relation of Mithras to his bull comes very close to this idea. In Christianity it is the hero himself who dies of his own free will. On the Mithraic monuments we often come across a strange symbol: a krater [73] (mixing-bowl) with a snake coiled round it, and a lion facing the snake like an antagonist.[74] (Pl. LXIII*b*.) It looks as if they were fighting for the krater. The krater symbolizes the maternal vessel of rebirth, the snake fear and resistance, and the lion raging desire.[75] The snake almost always assists at the bull-sacrifice by gliding towards the blood flowing from the wound. It seems to follow from this that the bull's life—its blood—is offered to the snake, that it is a sacrificial offering to the powers of the underworld, like the blood drunk by the shades in the nekyia of Odysseus. We have already pointed out the reciprocal relationship between bull and snake, and we saw that the bull symbolizes the living hero, whereas the snake symbolizes the dead, buried, chthonic hero. But as the hero, when dead, is back in the mother, the snake also stands for the devouring mother. The

combination of the bull’s blood and the snake therefore looks like a union of opposites, and the lion and snake fighting for the krater may mean the same thing. This is probably the cause of the miraculous fertility that results from the sacrifice of the bull. Even on the primitive level, among the Australian blackfellows, we meet with the idea that the life-force wears out, turns “bad” or gets lost, and must therefore be renewed at regular intervals. Whenever such an *abaissement* occurs the rites of renewal must be performed. There is an infinite number of these rites, but even on a much higher level they retain their original meaning. Thus the Mithraic killing of the bull is a sacrifice to the Terrible Mother, to the unconscious, which spontaneously attracts energy from the conscious mind because it has strayed too far from its roots, forgetting the power of the gods, without whom all life withers or ends catastrophically in a welter of perversity. In the act of sacrifice the consciousness gives up its power and possessions in the interests of the unconscious. This makes possible a union of opposites resulting in a release of energy. At the same time the act of sacrifice is a fertilization of the mother: the chthonic serpent-demon drinks the blood, i.e., the soul, of the hero. In this way life becomes immortal, for, like the sun, the hero regenerates himself by his self-sacrifice and re-entry into the mother. After all this we should have no difficulty in recognizing the son’s sacrifice to the mother in the Christian mystery. Just as Attis unmans himself for the sake of his mother, and his effigy was hung on the pine-tree in memory of this deed, so Christ hangs [76] on the tree of life, on the wood of martyrdom, the ‘Ἑκάτη and mother (cf. pl. XXXVI), and ransoms creation from death. By entering again into the womb of the mother, he pays in death [77] for the sin which the Protanthropos Adam committed in life, and by that deed he regenerates on a spiritual level the life which was corrupted by original sin. St. Augustine, as we have already remarked, actually interprets Christ’s death as a *hieros gamos* with the mother, similar to the feast of Adonis, where Venus and Adonis were laid upon the bridal couch:

> Like a bridegroom Christ went forth from his chamber, he went out with a presage of his nuptials into the field of the world.… He came to the marriage-bed of the cross, and there, in mounting it, he consummated his marriage. And when he perceived the sighs of the creature, he lovingly gave himself up to the torment in place of his bride, and he joined himself to the woman [*matrona*] for ever.[78]

[672] *Matrona* in the language of St. Augustine means the Church, the bride of the Lamb. The feeling-tone of the classical *hieros gamos* has here changed into its opposite: torment instead of lust, and the martyr's stake instead of the mother and mistress. What was once felt as pleasurable—i.e., the union of the masculine consciousness with the feminine unconscious—is now felt as painful; the symbol of the *hieros gamos* is no longer experienced concretely on the bodily level, but on a higher, psychic one as the union of God with his congregation (the *corpus mysticum)*. To put it in modern psychological language, this projection of the *hieros gamos* signifies the conjunction of conscious and unconscious, the transcendent function characteristic of the individuation process. Integration of the unconscious invariably has a healing effect.[79]

[673] Comparison between the Mithraic and the Christian sacrifice should show just where the superiority of the Christian symbol lies: it lies in the frank admission that not only has man's animal instinctuality (symbolized by the bull) to be sacrificed, but the entire natural man, who is more than can be expressed by his theriomorphic symbol. Whereas the latter represents animal instinctuality and utter subjection to the law of the species, the natural man means something more than that, something specifically human, namely the ability to deviate from the law, or what in theological language is known as the capacity for "sin." It is only because this variability in his nature has continually kept other ways open that spiritual development has been possible for *Homo sapiens* at all. The disadvantage, however, is that the absolute and apparently reliable guidance furnished by the instincts is displaced by an abnormal learning capacity which we also find in the anthropoid apes. Instead of instinctive certainty there is uncertainty and consequently the need for a discerning, evaluating, selecting, discriminating consciousness. If the latter succeeds in compensating the instinctive certainty, it will increasingly substitute reliable rules and modes of behaviour for instinctive action and intuition. There then arises the opposite danger of consciousness being separated from its instinctual foundations and of setting up the conscious will in the place of natural impulse.

[674] Through the sacrifice of the natural man an attempt is made to reach this goal, for only then will the dominating ideal of consciousness be in a

position to assert itself completely and mould human nature as it wishes. The loftiness of this ideal is incontestable and should indeed not be contested. Yet it is precisely on this lofty height that one is beset by a doubt whether human nature is capable of being moulded in this way, and whether our dominating idea is such that it can shape the natural material without damaging it. Only experience will show. Meanwhile, the attempt must be made to climb these heights, for without such an undertaking it could never be proved that this bold and violent experiment in self-transformation is possible at all. Nor could we ever estimate or understand the powers that favour the attempt or make it utterly impossible. Only then shall we be in a position to see whether the self-sacrifice of the natural man, as the Christian understands it, is a final solution or a view capable of further modification. Whereas the Mithraic sacrifice was still symbolized by the archaic slaughter of an animal and aimed only at domesticating and disciplining the instinctual man,[80] the Christian idea of sacrifice is symbolized by the death of a human being and demands a surrender of the whole man—not merely a taming of his animal instincts, but a total renunciation of them and a disciplining of his specifically human, spiritual functions for the sake of a spiritual goal beyond this world. This ideal is a hard schooling which cannot help alienating man from his own nature and, to a large degree, from nature in general. The attempt, as history has shown, was entirely possible and led in the course of a few centuries to a development of consciousness which would have been quite out of the question but for this training. Developments of this kind are not arbitrary inventions or mere intellectual fantasies; they have their own inner logic and necessity. The barrage of materialistic criticism that has been directed against the physical impossibility of dogma ever since the age of enlightenment is completely beside the point. Dogma *must* be a physical impossibility, for it has nothing whatever to say about the physical world but is a symbol of “transcendental” or unconscious processes which, so far as psychology can understand them at all, seem to be bound up with the unavoidable development of consciousness. Belief in dogma is an equally unavoidable stop-gap which must sooner or later be replaced by adequate understanding and knowledge if our civilization is to continue.

[675] In Miss Miller's fantasy, too, there is an inner necessity that compels it to go on from the horse-sacrifice to the sacrifice of the hero. Whereas the former symbolizes the renunciation of biological drives, the latter has the deeper and ethically more valuable meaning of a human self-sacrifice, a renunciation of egohood. In her case, of course, this is true only in a metaphorical sense, since it is not the author of the story but its hero, Chiwantopel, who offers himself and is voluntarily sacrificed. The morally significant act is delegated to the hero, while Miss Miller only looks on admiringly and applaudingly, without, it seems, realizing that her animus-figure is constrained to do what she herself so signally fails to do. The advance from the animal sacrifice to the human sacrifice is therefore only an idea, and when Miss Miller plays the part of a pious spectator of this imaginary sacrificial act, her participation is without ethical significance. As is usual in such cases, she is totally unconscious of what it means when the hero, the vehicle of the vitally important magical action, perishes. When that happens, the projection falls away and the threatening sacrificial act recoils upon the subject herself, that is, upon the personal ego of the dreamer. In what form the drama will then run to an end it is impossible to predict. Nor, in the case of Miss Miller, owing to the lack of material and my ignorance of her personality, did I foresee, or venture to assume, that it would be a psychosis which would form the companion piece to Chiwantopel's sacrifice. It was, in fact, a *κατοχή*—a total surrender, not to the positive possibilities of life, but to the nocturnal world of the unconscious, a débâcle similar to the one that overtook her hero.

[676] Chiwantopel is killed by a snake. We have already found abundant evidence for the snake as an instrument of sacrifice (the legend of St. Sylvester, the virginity test, wounding of Ra and Philoctetes, lance and arrow symbolism). It is the knife that kills, but also the phallus as symbol of the regenerative power of the grain, which, buried in the earth like a corpse, is at the same time the inseminator of the earth. (P1. LXIII*a*.) The snake symbolizes the numen of the transformative act as well as the transformative substance itself, as is particularly clear in alchemy. As the chthonic dweller in the cave she lives in the womb of mother earth, like the Kundalini serpent who lies coiled in the abdominal cavity, at the base

of the spine. Alchemy has the legend of Gabricus and Beya, the royal brother-sister pair. During the *hieros gamos*, Gabricus gets right inside the body of his sister and disappears completely; he is buried in her womb, where, dissolved into atoms, he changes into the soul-snake, the *serpens mercurialis*.[81] (Cf. fig. 6.) Such fantasies are not uncommon among patients. Thus one patient of mine had the fantasy that she was a snake which wound itself round her mother and finally crawled right into her.

[677] The snake that killed the hero is *green*. So was the snake of another patient,[82] who said: "Then a little green snake came up to my mouth, it had the finest, loveliest feeling—as if it had human reason and wanted to tell me something—just as if it wanted to kiss me." Spielrein's patient said of her snake: "It is God's animal, it has such wonderful colours: green, blue, and white. The rattlesnake is green; it is very dangerous.… The snake can have a human mind, it can have divine judgment; it is a friend of children. It would save the children who are needed to preserve human life."[83] The significance of the snake as an instrument of regeneration is unmistakable. (Cf. fig. 37.)

[678] As the horse is the brother, so the snake is the sister of Chiwantopel ("my little sister"). Rider and horse form a centaur-like unit,[84] like man and his shadow, i.e., the higher and lower man, ego-consciousness and shadow, Gilgamesh and Enkidu. In the same way the feminine belongs to man as his own unconscious femininity, which I have called the anima. She is often found in patients in the form of a snake. Green, the life-colour, suits her very well; it is also the colour of the Creator Spiritus. I have defined the anima as the *archetype of life itself*.[85] Here, because of the snake symbolism, she must also be thought of as having the attribute of "spirit." This apparent contradiction is due to the fact that the anima personifies the total unconscious so long as she is not differentiated as a figure from the other archetypes. With further differentiations the figure of the (wise) old man becomes detached from the anima and appears as an archetype of the "spirit." He stands to her in the relationship of a "spiritual" father, like Wotan toThe OHG. Brünhilde or Bythos to Sophia. Classic examples are to be found in the novels of Rider Haggard.

[679] When Chiwantopel calls the snake his “little sister,” this is not without significance for Miss Miller, because the hero is in fact her brother-beloved, her “ghostly lover,” the animus. She herself is his life-snake which brings death to him. When the hero and his horse die, the green snake remains, and the snake is nothing other than the unconscious psyche of the author herself who now, as we have seen, will suffer the same fate as Chiwantopel, that is, she will be overpowered by her unconscious.

[680] The conflict between horse and snake or bull and snake represents a conflict within the libido itself, a striving forwards and backwards at one and the same time.[86] It is as if the libido were not only a ceaseless forward movement, an unending will for life, evolution, creation, such as Schopenhauer envisaged in his cosmic Will, where death is a mishap or fatality coming from outside; like the sun, the libido also wills its own descent, its own involution. During the first half of life it strives for growth; during the second half, softly at first and then ever more perceptibly, it points towards an altered goal. And just as in youth the urge for limitless expansion often lies hidden under veiling layers of resistance to life, so that “other urge” often hides behind an obstinate and purposeless cleaving to life in its old form. This apparent contradiction in the nature of the libido is illustrated by a statue of Priapus in the archaeological museum at Verona: Priapus, with a sidelong smile, points with his finger to a snake biting his phallus (pl. LXI*b*).

[681] A similar motif can be found in a Rubens’ *Last Judgment* (pl. LXIV), where, in the foreground, a man is being castrated by a serpent. This motif illustrates the meaning of the end of the world.[87] The fantasy of world conflagration, of the cataclysmic end of the world in general, is the projected primordial image of the great transformation, the enantiodromia of life into death, which Rubens represents as emasculation by the serpent. The image of the consuming change that dissolves the phenomenal world of individual psychic existence originates in the unconscious and appears before the conscious mind in dreams and shadowy premonitions. And the more unwilling the latter is to heed this intimation, the more frightening become the symbols by which it makes itself known. The snake plays an important role in dreams

as a fear-symbol. Because of its poisonousness, its appearance is often an early symptom of physical disease. As a rule, however, it expresses an abnormally active or "constellated" unconscious and the physiological symptoms—mainly abdominal—associated therewith. Interpretation in any given case depends as always on individual circumstances and must be modified accordingly. In youth it denotes fear of life; in age, fear of death. In the case of Miss Miller the fatal significance of the green snake is obvious enough in the light of subsequent events. But it is not so easy to say what was the real cause of the unconscious gaining the upper hand. The necessary biographical material is lacking. I can only say that I have very often noticed in such cases a singularly narrow consciousness, an apprehensive stiffness of attitude, and a spiritual and emotional horizon bounded by childish naïveté or pedantic prejudice. To judge from the little we know of Miss Miller, it seems to be more a case of emotional naïveté: she underestimated the possibilities in her and leapt too lightly into dangerously deep waters where some knowledge of the shadow would have been in place. Such people should be given as much psychological knowledge as possible. Even if it doesn't protect them from the outbreak of psychosis, it nevertheless makes the prognosis look more hopeful, as I have often observed. In border-line cases such as this a real psychological understanding is often a matter of life and death.

[682] As at the beginning of our investigation the name of the hero obliged us to speak of the symbolism of Popocatapetl as the "creative" part of the body, so now at the end of the Miller drama we again have an opportunity to see how the volcano assists at the death of the hero and, by means of an earthquake, causes him to disappear into the bowels of the earth. Just as the volcano gave birth and name to the hero, so at the end it swallows him back again.[88] We learn from his last words that the longed-for beloved who alone understands him is called "Ja-ni-wa-ma." In this name we find those sweet lispings already known to us from the babyhood of Hiawatha: *wawa, wama, mama*. The only one who really understands us is the mother. For *ver-*, in *verstehen*, 'to understand' (OHG. *firstân),* may be derived from a primitive Germanic prefix *fri-*, which is identical with *περί*, 'round,' 'about.' The OHG. *antfristôn*, 'to interpret,' is considered to be identical with *firstân*. Hence the

fundamental meaning of *verstehen* would be to ‘stand round about something.’[89] *Comprehendere* and *κατασυλλαμβάνειν* both express an image similar to the German *erfassen*, ‘to grasp, comprehend.’ The factor common to all these terms is the idea of surrounding, embracing. And there is no doubt at all that nothing in the world ever embraces us so completely as the mother. When the neurotic complains that the world does not understand him, he is telling us in a word that he wants his mother. Paul Verlaine has given beautiful expression to this thought in his poem “Mon Rêve familier”:

> Je fais souvent ce rêve étrange et pénétrant
> D’une femme inconnue, et que j’aime, et qui m’aime,
> Et qui n’est, chaque fois, ni tout à fait la même
> Ni tout à fait une autre, et m’aime et me comprend.
>   Car elle me comprend, et mon cœur, transparent
> Pour elle seule, hélas! cesse d’être un problème
> Pour elle seule, et les moiteurs de mon front blême.
> Elle seule les sait rafraîchir, en pleurant.
>   Est-elle brune, blonde ou rousse?—Je l’ignore.
> Son nom? Je me souviens qu’il est doux et sonore
> Comme ceux des aimés que la Vie exila.
>   Son regard est pareil au regard des statues,
> Et, pour sa voix, lointaine, et calme, et grave, elle a
> L’inflexion des voix chères qui se sont tues.[90]

IX

EPILOGUE

[683] So end the Miller fantasies. Their melancholy outcome is due largely to the fact that they break off at the critical moment when the threat of invasion by the unconscious is plainly apparent. It is hardly to be supposed that Miss Miller, who evidently had not the faintest clue as to the real meaning of her visions—which even Théodore Flournoy, despite his fine feeling for values, could do nothing to explain—would be able to meet the next phase of the process, namely the assimilation of the hero to her conscious personality, with the right attitude. In order to do so she would have had to recognize what fate demanded of her, and what was the meaning of the bizarre images that had broken in upon her consciousness. That there was already some degree of dissociation is obvious, since the unconscious went ahead independently and kept on churning out images which she had not consciously produced herself and which she felt as strange and portentous. To the objective observer it is perfectly clear that the fantasies were products of a psychic energy not under the control of the conscious mind. They were longings, impulses, and symbolic happenings which it was quite unable to cope with either positively or negatively. The instinctual impulse that was trying to rouse the dreamer from the sleep of childhood was opposed by a personal pride that was distinctly out of place, and also, one must suppose, by a correspondingly narrow moral horizon, so that there was nothing to help her understand the spiritual content of the symbols. Our civilization has long since forgotten how to think symbolically, and even the theologian has no further use for the hermeneutics of the Church Fathers. The cure of souls in Protestantism is in an even more parlous condition. Who ever would go to the trouble, nowadays, of patching together the basic ideas of Christianity from a “welter of pathological fantasies”? For patients in this situation it is a positive life-saver when the doctor takes such

products seriously and gives the patient access to the meanings they suggest. In this way he makes it possible for the patient to assimilate at least part of the unconscious and to repair the menacing dissociation by just that amount. At the same time the assimilation guards against the dangerous isolation which everyone feels when confronted by an incomprehensible and irrational aspect of his personality. Isolation leads to panic, and that is only too often the beginning of a psychosis. The wider the gap between conscious and unconscious, the nearer creeps the fatal splitting of the personality, which in neurotically disposed individuals leads to neurosis, and, in those with a psychotic constitution, to schizophrenia and fragmentation of personality. The aim of psychotherapy is therefore to narrow down and eventually abolish the dissociation by integrating the tendencies of the unconscious into the conscious mind. Normally these promptings are realized unconsciously or, as we say, "instinctively," and though their spiritual content remains unnoticed, it nevertheless insinuates itself into the conscious spiritual life of the patient, mostly in disguised form, without his being aware of it. All this passes off smoothly and without difficulty provided that his consciousness contains certain ideas of a symbolic nature—"for those who have the symbol the passage is easy," say the alchemists. If, on the other hand, there is already a tendency to dissociation, perhaps dating back to youth, then every advance of the unconscious only increases the gap between it and consciousness. As a rule outside help is needed to bridge the gap. Had I treated Miss Miller I would have had to tell her some of the things of which I have written in this book, in order to build up her conscious mind to the point where it could have understood the contents of the collective unconscious. Without the help of these "représentations collectives," which have psychotherapeutic value even for primitives, it is not possible to understand the archetypal associations of the products of the unconscious. It is in no sense sufficient to try to do so with nothing but a personalistically oriented psychology. Anyone who wants to treat serious dissociations must know something of the anatomy and evolutionary history of the mind he is setting out to cure. The physician who treats physical diseases is required to have some knowledge of anatomy, physiology, embryology, and comparative evolution. Neurotic dissociations can, up to a point, be remedied with the help of purely personalistic psychology, but not the problem of transference, which crops up in the majority of cases and always hides collective contents.

[684] The Miller case is a classic example of the unconscious manifestations which precede a serious psychic disorder. Their presence does not by any means prove that a disorder of this kind is bound to occur. That, as I have already said, depends among other things on whether the conscious attitude towards them is positive or negative. The Miller case suited my book very well because I had nothing to do with it personally and could thus refute the oft-repeated charge that I had "influenced" the patient. Had the case come up for treatment at the very first sign of spontaneous fantasy creations, the later episode of Chiwantopel, for instance, might have taken a very different turn, and the end, so we will hope, would have been less calamitous.

[685] With these remarks we come to the end of our programme. We set ourselves the task of examining an individual fantasy system in relation to its sources, and in the course of our inquiry have stumbled upon problems of such enormous proportions that our attempts to understand their full scope and complexity cannot of necessity amount to much more than a superficial survey. I do not take kindly to the argument that because certain working hypotheses may not possess eternal validity or may possibly be erroneous, they must be withheld from the public. Certainly I have done my best to guard against error, which can be particularly pernicious on such treacherous ground, by keeping myself fully conscious of the dangers that beset an investigation of this kind. We doctors are not so happily placed as research workers in other fields. We cannot choose our assignment or mark off the territory to be investigated, for the sick man who comes to us for treatment confronts us with unforeseeable problems and expects us to fulfil a therapeutic task for which we cannot but feel inadequate. The strongest incentive to unceasing research has always come to me from my practice, and it consisted in the simple question which no man can ignore: "How can you treat something that you do not understand?" Dreams, visions, fantasies, and delusions are expressive of a situation. If I do not understand the dreams, neither do I understand the situation of the patient, and of what

use is my treatment then? It was never my intention to justify my theories by my patients; it seemed to me far more important to understand their situation in all its aspects, which naturally include the compensatory activity of the unconscious. Such was the case with Miss Miller. I have tried to understand her situation to the best of my ability and have set down the results of my efforts as an example of the nature and extent of the problems about which any doctor who wants to practise psychotherapy should have scientific knowledge. He needs a science of the psyche, not a theory about it. I do not regard the pursuit of science as a bickering about who is right, but as an endeavour to augment and deepen human knowledge. The present work is addressed to those who think and feel about science in the same way.

APPENDIX:

THE MILLER FANTASIES

[Translated from “Quelques Faits d’imagination créatrice subconsciente,” in *Archives de psychologie* (Geneva), V (1906), 36–51. The article contains an introduction of five pages signed by Théodore Flournoy, which is not translated here. In it, Flournoy speaks of the Miller material as a “traduction”; it is therefore evident that Miss Miller wrote her memoir in English and it was translated (by Flournoy?) into French. Flournoy describes her as “a young American who studied for a semester at our [Geneva] university and who today pursues a distinguished career as a journalist and lecturer in the United States.” The original of the Miller memoir has never come to light, and accordingly a double translation has been necessary both in the present edition and in the Hinkle translation of 1916 (where, however, the full Miller text was not given, as here). Professor Jung based his study on the French version, and therefore certain words and phrases that he considered of special point are here given in French, in brackets. Likewise, indication is given of words and passages that the Flournoy publication left in English.

—EDITORS.]

[Note: The original English text of the article was published as “Some Instances of Subconscious Creative Imagination,” in *The Journal of the American Society for Psychical Research* (New York), 1:6 (June 1907). There is no evidence that Jung was acquainted with this version, and the present translated version is retained.

SOME INSTANCES OF SUBCONSCIOUS CREATIVE IMAGINATION

by Miss Frank Miller of New York

I. PHENOMENA OF TRANSITORY SUGGESTION OR OF INSTANTANEOUS AUTOSUGGESTION

What I mean by this, in default of a better term, is a curious phenomenon that I have observed in myself and that occurs in different forms. It consists in this, that at certain moments and for a few seconds only, the impressions or feelings of another person are so strongly suggested to me that they seem to be *mine*, although, as soon as the suggestion is over, I am perfectly sure that this was not the case. Here are some examples:

1. I am passionately fond of caviar, the odour and taste of which are, on the contrary, very repellent to certain members of my family. But if one of them, just as I am about to eat it, begins to express her disgust, this disgust is at once suggested to me so clearly that, for a few moments, I feel complete repugnance for the smell and the taste of caviar. It takes, however, only a minute's effort for me to dispel this impression and to find the caviar as delectable as ever.

2. Here, on the other hand, is an example of the transmission of a pleasing impression. There are certain perfumes and essences that affect me disagreeably because they smell too strong, so much so as to give me nausea and make me almost ill. Yet if a lady begins to smell her eau-de-Cologne, recommending it to me for its strength and exquisite perfume, her pleasure for an instant becomes mine—probably not for more than three to five seconds—after which it disappears and gives place to my usual aversion to strong odours. It is much easier for me, it seems, to dismiss the agreeable suggestion and return to my real feeling of distaste than to do the reverse.

3. When I am following a story with great interest, either reading or listening, I often have the illusion, which may last up to a minute, of really taking part in the action, instead of merely reading or hearing it. This is especially marked at fine theatrical productions (for example, performances by Sarah Bernhardt, Duse, or Irving). The illusion becomes so complete in certain very moving scenes that in *Cyrano*, for instance, when Christian is killed and Sarah Bernhardt throws herself upon him to stanch the bleeding of his wound, I have felt a real, piercing pain in my own breast, just where Christian is supposed to have received the blow. This kind of suggestion may last a minute, or a second.

4. Such momentary suggestions sometimes take on very curious aspects, in which the part played by imagination is accentuated. For example, I have enjoyed my sea voyages enormously, and I retain a particularly vivid memory of crossing the Atlantic. Now, someone lately showed me a beautiful photograph of a steamship in mid ocean; and instantly—the illusion was of an arresting power and beauty—I felt the throb of the engines, the heave of the waves, the roll of the ship. It can hardly have lasted for more than a second, but during that barely appreciable instant it

was as though I were once more at sea. The same phenomenon recurred, though less clearly, on seeing the same photograph again some days later.

5. Here is an example proceeding evidently from creative fantasy. One day when I was taking a bath and was preparing to use the shower, I was in the act of winding a towel round my head to protect my hair from the water. The towel, of a thick material, had taken a conical shape, and I was standing in front of a mirror to pin it firmly in place. This conical form was, no doubt, a striking reminder of the pointed head-dress of the ancient Egyptians; be that as it may, it seemed to me, for one moment and with an almost breath-taking clarity, that I was on a pedestal, a veritable Egyptian statue with all its details; stiff-limbed, one foot forward, holding insignia in my hand, etc. This indeed was superb, and it was with regret that I felt the impression fading away like a rainbow; like a rainbow, too, it returned again faintly before it disappeared altogether.

6. Yet another phenomenon. An artist of some reputation very much wished to illustrate some of my publications. But in this matter I have my own ideas and am difficult to please. However, I succeeded in making him draw landscapes, such as those of Lake Geneva, where he had never been, and he used to pretend that I could make him depict things that he had never seen and give him the sense of a surrounding atmosphere that he had never felt; in short, that I was using him as he himself used his pencil; that is, simply as an instrument.

I do not attach much importance to the various things I have just described—they are so fugitive and nebulous!—and I think that all persons with a nervous temperament and imagination, who react with a lively sympathy towards external impressions, experience analogous phenomena. They do not seem to me to be of much consequence in themselves, unless they can help us to understand other things, less elementary. I believe that this sympathic or sympathizing (sympathetic [1]) temperament, in people whose health is quite normal, plays a large part in the creation or the possibility of such "suggested" images and impressions. Now, may it not be that, under certain favourable conditions, something quite new, different from anything that one knows, may come over the mental horizon, something as dazzling and splendid as a rainbow and yet as natural in its origin and cause? For, surely, these queer little experiences (I mean the last of those above) differ as much from the ordinary, everyday course of life as a rainbow differs from blue sky.

The aim of the few preceding observations is to serve as an introduction to two or three further, more important ones which, in their turn, seem to me of a nature that throws some light on the even more complex and mystifying phenomena experienced by other persons, who are carried away by them because they are unable—or unwilling—to analyse the abnormal, subliminal, or subconscious working of their minds.

II. “GLORY TO GOD”: A DREAM POEM

1. One could imagine nothing more delightful than the voyage from Odessa to Genoa in winter, with brief but entrancing landings at Constantinople, Smyrna, Athens, at the ports of Sicily and the west coast of Italy.… One must be a philistine indeed, devoid of any aesthetic feeling, not to be carried away with admiration by the glory of the Bosporus, or not to respond with all one’s soul to the remembrance of the past in Athens.… That was the voyage on which I was privileged to go at the age of twenty, with my family, in 1898.

After the long and rough voyage from New York to Stockholm, then to St. Petersburg and Odessa, it was a real pleasure [*une véritable volupté*] to leave the world of cities, of roaring streets, of business—in short, of the earth—and enter the world of waves, sky, and silence.… I spent hours on end on the deck of the ship, dreaming, stretched out in a deck chair. All the histories, legends, and myths of the different countries I saw in the distance came back to me confusedly, dissolved in a kind of luminous mist in which real things seemed to lose their being, while dreams and ideas took on the aspect of the only true reality. At first I even avoided all company and kept to myself, lost in my reveries, where everything I had ever known that was truly great, beautiful, and good came back to mind with renewspiritualism or the contra-natural ed life and vigour. I also spent a good part of my days writing to absent friends, reading, or scribbling little bits of poetry in remembrance of the various places we visited. Some of these poems were of a rather serious character. But as the voyage drew near its end, the ship’s officers outdid themselves in kindness and amiability [*se montrèrent tout ce qu’il y a de plus empressés et aimables]*, and I passed many an amusing hour teaching them English.

Off the coast of Sicily, in the port of Catania, I wrote a sea-chanty, which, however, was little more than an adaptation of a well-known song about the sea, wine, and love (“Brine, wine and damsels fine”[2]). The Italians are all good singers, as a rule; and one of the officers, singing at night as he stood watch on deck, had made a great impression on me and had given me the idea of writing some words that could be fitted to his melody.

Soon afterwards, I nearly did as the old proverb says, “See Naples and die,” for in the port of Naples I began by being very ill (though not dangerously so); then I recovered sufficiently to go ashore and visit the principal sights of the city in a carriage. This outing tired me extremely; and as we were intending to visit Pisa the next day, I soon returned on board and went to bed early, without thinking of anything more serious than the good looks of the officers and the ugliness of Italian beggars.

2. From Naples to Leghorn is one night by boat, during which I slept moderately well—my sleep is rarely deep or dreamless—and it seemed to me that my mother’s voice woke me up just at the end of the following dream, which must, therefore, have taken place immediately before waking.

First, I was vaguely conscious of the words “when the morning stars sang together,”[3] which served as the prelude, if I may so put it, to an involved idea of creation and to mighty chorales reverberating through the universe. But, with the confusion and strange contradiction characteristic of dreams, all this was mixed up with choruses from oratorios given by one of the leading musical societies of New York, and with indistinct memories of Milton’s *Paradise Lost*. Then, slowly, out of this medley, words appeared, and a little later they arranged themselves in three stanzas, in my handwriting, on a sheet of ordinary blue-lined writing-paper, in a page of my old poetry album that I always carry about with me: in short, they appeared to me exactly as they did in reality, a few minutes later, in my book.

That was the moment when my mother called to me: “Now then, wake up! You can’t sleep all day and see Pisa too!” This made me jump down from my bunk, crying out, “Don’t speak to me! Not a word! I’ve just had the most beautiful dream in my life, a real poem! I have seen and heard the words, the verses, even the refrain. Where is my notebook? I must write it down at once before I forget any of it.”—My mother, quite accustomed to see me writing at all hours, took my whim in good part and even admired my dream, which I told her as quickly as I could put it into sentences. It took me some minutes to find my notebook and a pencil and slip on a garment; but, short though it was, this delay was enough for my immediate recollection of the dream to have begun to fade a little; so that, when I was ready to write, the words had lost something of their clearness. However, the first verse came easily enough; the second was harder to recollect, and it cost me a great effort to re-memorize the last, distracted as I was by the feeling that I cut a rather ridiculous figure, perched on the upper bunk of the cabin, and scribbling away, half-dressed, while my mother made fun of me. Thus, the first version left something to be desired. My duties as a guide absorbed me after this, until the end of our long voyage; and it was not until some months later, when I was installed at Lausanne for my studies, that the thought of this dream came back to haunt me in the calm of loneliness. Then I produced a second version of my poem, more exact than the first, I mean much closer to the original dream. I give it here in both forms.

First version [4]

When God had first made Sound,
A myriad ears sprang into being
And throughout all the Universe
Rolled a mighty echo:
“Glory to the God of Sound!”
When beauty (light) first was given by God,
A myriad eyes sprang out to see
And hearing ears and seeing eyes
Again gave forth that mighty song:
“Glory to the God of Beauty (Light)!”
When God has first given Love,
A myriad hearts lept up;
And ears full of music, eyes all full of Beauty,
Hearts all full of love sang:
“Glory to the God of Love!”

Second version (more exact)[4]

When the Eternal first made Sound
A myriad ears sprang out to hear,
And throughout all the Universe
There rolled an echo deep and clear:
“All glory to the God of Sound!”
When the Eternal first made Light,
A myriad eyes sprang out to look,
And hearing ears and seeing eyes,
Once more a mighty choral took:
“All glory to the God of Light!”
When the Eternal first gave Love,
A myriad hearts sprang into life;
Ears filled with music, eyes with light,
Pealed forth with hearts with love all rife:
“All glory to the God of Love!”

3. Never having been an adept in spiritualism or the contranatural (which I distinguish from the supernatural), I set to work, some months afterwards, trying to find out the probable causes and the necessary conditions for such a dream.

What struck me most, and still seems to me like an unexplained fantasy, is that, contrary to the Mosaic account, in which I had always believed, my poem put the creation of light in the second place instead of the first. It may be of interest to recall that Anaxagoras, too, makes the cosmos arise out of chaosthe previous poem by means of a whirlwind—which does not normally occur without producing a noise. But at that time I had not yet made a study of philosophy and I knew nothing either of Anaxagoras or of his theories about the νοῦς which I found I had been unconsciously following. I was in equally complete ignorance of the name of Leibniz and consequently of his doctrine "dum Deus calculat fit mundus." But let us come to what I have discovered concerning the probable sources of my dream.

In the first place, there is Milton's *Paradise Lost*, of which we had a fine edition at home, illustrated by Gustave Doré, and which I have known well since childhood. Then the Book of Job, which has been read aloud to me ever since I can remember. Now, if you compare my first line with the first words of *Paradise Lost*, you find it is in the same metre (◡—/◡—/◡—/◡—):

> Of man's first disobedience …
> When the Eternal first made sound.

Moreover, the general idea of my poem is slightly reminiscent of various passages in Job, and also of one or two places in Handel's oratorio *The Creation* [5] (which appeared in the confusion at the beginning of the dream).

I remember that, at the age of fifteen, I was very much excited by an article my mother had read to me, about "the Idea spontaneously creating its own object," and I passed almost the whole night without sleep, wondering what it could all mean.—From the age of nine to sixteen, I used to go on Sundays to a Presbyterian church, where the pastor was a highly cultivated man, now president of a well-known college. And in one of the earliest memories I have of him, I see myself, still quite a little girl, sitting in our large pew in church and struggling to keep myself awake, without being able to understand what in the world he meant when he spoke to us of "Chaos," "Cosmos," and "the Gift of Love."

With regard to dreams, I recollect that once, at the age of fifteen, while I was preparing for an examination in geometry, and had gone to bed without being able to solve a problem, I awoke in the middle of the night, sat up in bed, repeated to myself a formula that I had just discovered in a dream, and then went to sleep again, and in the morning everything had become clear in my mind.—Something very similar happened to me with a Latin word I was trying to remember.—I have also dreamed, many times, that friends far away have written to me, and this just before the actual arrival of letters from them; the explanation of which is, very simply, that while I was asleep I calculated approximately the time they would be likely to write to me, and that the idea of the letter's actual arrival was substituted, in the dream, for the expectation of its probable arrival. I draw this conclusion from the fact that I have several times had dreams of receiving letters that were not followed by their arrival.

To sum up, when I reflect upon the foregoing, and upon the fact that I had just composed a number of poems at the time of this dream, the dream does not seem to me so extraordinary as it did at first. It seems to me to result from a mixture in my mind of *Paradise Lost*, *Job*, and *The Creation*, with notions like the "Idea spontaneously creating its own object," the "Gift of Love," "Chaos," and "Cosmos." Just as the little bits of coloured glass in a kaleidoscope form marvellous and rare patterns, so, in my opinion, the fragments of philosophy, aesthetics, and religion in my mind were blended together—under the stimulation of the voyage and of countries fleetingly seen, coupled with the vast silence and impalpable charm of the sea—to produce this beautiful dream. There was only this and nothing more. [*Ce ne fut que cela et rien de plus*.] "Only this and nothing more!"[6]

III. "THE MOTH AND THE SUN": A HYPNAGOGIC POEM

The day before I left Geneva for Paris had been extremely exhausting. I had made an excursion up the Salève, and on my return I found a telegram that obliged me to pack my bags, settle my affairs, and depart within the space of two hours. My fatigue on the train was such that I hardly slept an hour. It was horribly hot in the ladies' compartment. Towards four o'clock I lifted my head from the bag that had served me for a pillow, sat up, and stretched my swollen limbs. A tiny butterfly, or moth, was fluttering towards the light that shone through the glass panel behind a curtain that was swinging with the motion of the train. I lay down and tried to sleep again, and almost succeeded; that is to say, I found myself as nearly asleep as possible without completely losing self-consciousness. It was then that the following piece of poetry suddenly came into my mind. It was impossible to drive it away in spite of my repeated efforts. I took a pencil and wrote it down straight away.

The Moth to the Sun [7]

I longed for thee when first I crawled to consciousness.
My dreams were all of thee when in the chrysalis I lay.
Oft myriads of my kind beat out their lives
Against some feeble spark once caught from thee.
And one hour more—and my poor life is gone;
Yet my last effort, as my first desire, shall be
But to approach thy glory: then, having gained
One raptured glance, I'll die content,
For I, the source of beauty, warmth and life
Have in his perfect splendor once beheld!

This little poem made a profound impression on me. I could not at first find a sufficiently clear and direct explanation of it. But a few days afterwards, having again taken up a philosophical article that I had read in Berlin the previous winter, which had delighted me extremely, and reading it aloud to a friend, I came upon these words: "The same passionate longing of the moth for the star, of man for God.…" I had completely forgotten them, but it seemed to me quite obvious that these were the words that had reappeared in my hypnagogic poem. Moreover, a play entitled *The Moth and the Flame*,[8] which I saw a few years ago, also came back to me as another possible source of my poem. You see how often the word *Moth* has been impressed upon me!—I would add that, in the spring, I had been reading a selection of Byron's poems that pleased me greatly and that I often dipped into. Moreover, there is a great similarity of rhythm between my two last lines, "For I, the source, etc." and these two of Byron's:

Now let me die as I have lived in faith
Nor tremble tho' the Universe should quake!

It is possible that my having so often read this book had an influence on me, and contributed towards my inspiration, as much from the point of view of meaning as of rhythmical form.

Comparing this poem, which came to me in a half-waking dream-state, with, on the one hand, those written when wide awake and, on the other hand, the previous poem [Sec. II, above] that came when I was fast asleep, it seems to me that these three categories form a perfectly natural series. The intermediate state establishes a simple and easy transition between the two extremes, and thus dispels any suspicion of an intervention of the "occult" that one might have had about the poem I produced while asleep.

IV. "CHIWANTOPEL": A HYPNAGOGIC DRAMA

Borderland phenomena—or, if you prefer it, the productions of the brain in the half-dreaming state—are of particular interest to me, and I believe that a detailed and intelligent examination of them would do much to clear up the mystery of so-called "spirits" and dispel superstition concerning them. It is with this idea in mind that I am sending you an observation which, in the hands of someone less careful of the exact truth, or less scrupulous about indulging in embroideries or amplifications, might very well give rise to some fantastic romance that would outdo the fictitious ramblings of your mediums. I have rewritten the following observation as faithfully as possible from the notes I made immediately after the half-dream in question, and have limited myself to the insertion between brackets [ ] of one or two remarks and of letters referring to the explanatory notes that follow.

Observation of 17 March, 1902. Half an hour after midnight.

1st Phase.—After an evening of trouble and anxiety, I had gone to bed at half past eleven. I felt restless; unable to sleep although very tired. I had the impression of being in a receptive mood. There was no light in the room. I closed my eyes, and had the feeling of waiting for something that was about to happen. Then I felt a great relaxation come over me, and I remained as completely passive as possible. Lines, sparks, and spirals of fire passed before my eyes, symptoms of nervousness and ocular fatigue, followed by a kaleidoscopic and fragmentary review of recent trivial events. Then an impression that something was on the point of being communicated to me. It seemed as if these words were repeating themselves in me—"Speak, Lord, for thy servant heareth—Open thou mine ears." The head of a sphinx suddenly appeared in the field of vision, in an Egyptian setting: then it faded away. At that moment my parents called to me, and I immediately answered them in a perfectly coherent way, a proof that I was not asleep.

2nd Phase.—Suddenly, the apparition of an Aztec, complete in every detail: hand open, with large fingers, head in profile, armoured, with a head-dress resembling the plumed crests of the American Indians, etc. The whole is somewhat suggestive of the carvings on Mexican monuments [note A].[8a] —The name "Chi-wan-to-pel" forms itself bit by bit, and it seems to belong to the previous personage, son of an Inca of Peru [note B].—Then a swarm of people. Horses, a battle, the view of a *dream-city* [note C].—A strange conifer with knotty branches, lateen sails in a bay of purple water, a perpendicular cliff. A confusion of sounds resembling Wa-ma, Wa-ma, etc.

(A lacuna.)—The scene changes to a wood. Trees, undergrowth, bushes, etc. The figure of Chi-wan-to-pel comes up from the south, on horseback, wrapped in a blanket of bright colours, red, blue, and white. An Indian, dressed in buckskin, beaded and ornamented with feathers [note D], creeps forward stealthily, making ready to shoot an arrow at Chi-wan-to-pel, who bares his breast to him in an attitude of defiance [note E]; and the Indian, fascinated by this sight, slinks away and disappears into the forest. Chi-wan-to-pel sinks down upon a mound, leaves his horse to graze on the tether, and delivers himself of the following soliloquy, all in English: [9] "From the tip of the backbone of these continents [probably an allusion to the Andes and the Rocky Mountains], from the farthest lowlands, I have wandered for a hundred moons since quitting my father's palace [note F], forever pursued by my mad desire to find 'her who will understand.' With jewels I tempted many beautiful women; with kisses tried I to draw out the secrets of their hearts, with deeds of daring I won their admiration. [He reviews one after another the women he has known.] Chi-ta, the princess of my own race … she was a fool, vain as a peacock, without a thought in her head except trinkets and perfumes. Ta-nan, the peasant girl … bah! a perfect sow, nothing but a bust and a belly, thinking of nothing but pleasure. And then Ki-ma, the priestess, a mere parrot, repeating the empty phrases learnt from the priests, all for show, without real understanding or sincerity, mistrustful, affected, hypocritical!… Alas! Not one who understands me, not one who resembles me or has a soul that is sister to mine [note G]. There is not one among them all who has known my soul, not one who could read my thoughts—far from it; not one capable of seeking the shining summits with me, or of spelling out with me the superhuman word Love!"

(A lacuna.)—He cries mournfully: "In all the world there is not a single one! I have searched among a hundred tribes. I have aged a hundred moons since I began. Will there never be anyone who will know my soul?—Yes, by almighty God, yes!—But ten thousand moons will wax and wane before her pure soul is born. And it is from another world that her parents will come to this one. She will be fair of skin and fair-haired. She will know sorrow even before her mother bears her. Suffering will be her companion;

she too will seek—and will find no one who understands her. Many a suitor will wish to pay court to her, but not one of them will know how to understand her. Temptation will often assail her soul, but she will not yield. … In her dreams I shall come to her, and *she will understand* [note H]. I have kept my body inviolate [note I]. I have come ten thousand moons before her time, and she will come ten thousand moons too late. *But she will understand!* It is but once in ten thousand moons that a soul like hers is born!”

(A lacuna.)—A green viper darts out of the bushes, glides towards him, and stings him in the arm; then it attacks his horse, which is the first to succumb. Then Chi-wan-to-pel says to his horse: “Farewell, faithful brother! Enter into your rest! I have loved you and you have served me well. Farewell, I shall rejoin you soon!” Then to the serpent: “Thanks, little sister, you have put an end to my wanderings!” Now he shrieks with pain and calls out in prayer, “Almighty God, take me soon! I have sought to know thee and to keep thy law. Oh, suffer not my body to fall into corruption and decay, and become carrion for the eagles!” A smoking volcano appears in the distance [note K], the rumbling of an earthquake is heard, followed by a landslide. Chi-wan-to-pel cries out in an extremity of anguish as the earth closes over his body: “Ah, she will understand! Ja-ni-wa-ma, Ja-ni-wa-ma, thou that understandest me!”

Remarks and Explanatory Notes

You will agree, I think, that as a work of imagination, this hypnagogic fantasy is well worth a little attention. It is certainly not wanting in complexity and strangeness of form, and one may even claim a certain originality for its combination of themes. One might even be able to make it into a kind of melodrama in one act. If I were personally inclined to exaggerate the purport of compositions of this kind, and were not able to recognize many familiar elements in this phantasmagoria, I might let myself go so far as to regard Chi-wan-to-pel as my “control,” my spirit-guide, after the manner of so many mediums. I need hardly tell you that I do no such thing. So let us look for the probable sources of this little account.

First, as to the name Chi-wan-to-pel: one day, when I was fully awake, there suddenly came into my mind the word A-ha-ma-ra-ma, surrounded by an Assyrian decoration, and I had only to compare it with other names I already knew, such as Ahasuerus, Asurabama (who made cuneiform bricks), to detect its origin. Similarly here; compare Chi-wan-to-pel with

Po-po-cat-a-pel,[10] the name of a volcano in Central America as we have been taught to pronounce it: the similarity of construction is striking.

I note also that, on the previous day, I had received a letter from Naples, on the envelope of which there was a view of Vesuvius smoking in the distance [K].—In my childhood I was particularly interested in Aztec remains and in the history of Peru and the Incas. [A and B].–I had recently visited a fascinating exhibition of Indians, with their costumes, etc., which have found a quite appropriate place in the dream [D].—The well-known passage in Shakespeare [11] where Cassius bares his breast to Brutus furnishes me with an easy explanation of scene [E]; and scene [F] recalls to me the story of Buddha leaving his father's home, or equally, the story of Rasselas, prince of Abyssinia, by Samuel Johnson.—There are many details, too, which make one think of the Song of Hiawatha, Longfellow's Indian epic, whose rhythm has been unconsciously followed in several passages of Chi-wan-to-pel's soliloquy. And his burning need for someone who resembles himself [G] presents the greatest analogy with Siegfried's feelings for Brunhild, so marvellously expressed by Wagner.—Finally [I] I had recently heard a lecture by Felix Adler, on the Inviolable Personality (The inviolate Personality [12]).

In the feverish life one leads in New York, a thousand different elements are often mixed in the total impression of a single day. Concerts, lectures, books, reviews, theatrical performances, etc., there is enough to put your brain in quite a whirl. It is said that nothing of what enters into your mind is ever completely lost; that some association of ideas, or a certain conjunction of circumstances, may be enough to re-animate even the slightest impression. It seems that this may apply in many cases. For example here, the details of the *dream-city* [C] reproduced almost exactly those on the cover of one of the reviews I had lately been reading. So it is possible, after all, that this whole affair may be nothing more than a mosaic of the following elements:

A.—Aztec remains and history of the Incas of Peru.

B.—Pizarro in Peru.

C.—Engravings and illustrations, recently seen in various magazines.

D.—Exhibition of Indians with their costumes, etc.

E.—Recollection of a passage from Shakespeare's *Julius Caesar*.

F.—Departure of Buddha and of Rasselas.

G. and H.—Siegfried sighing after Brunhild.
I.—Memory of a lecture on the Inviolable Personality.
K.—View of Vesuvius on the envelope of a letter.

And now, if I add that, for days before, I had been in quest of “an original idea,” not much effort is required to see that this mosaic may have formed itself out of the multitude of impressions that are necessarily encountered in a very busy life, and may have taken on this fantastic, oneiric form. This was about midnight, and it may be that my fatigue and torment of mind had to some degree disturbed or deformed the current of my thoughts.

P.S.—I fear that my concern for exactitude may have induced me to give my observations rather too personal a turn. But I hope—and this is my excuse—that they may help others to free their minds from things of the same kind that are worrying them and do something to clear up the more complex phenomena that are often presented by mediums.

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious,* which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

[*]1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)
On Hysterical Misreading (1904)
Cryptomnesia (1905)
On Manic Mood Disorder (1903)
A Case of Hysterical Stupor in a Prisoner in Detention (1902)
On Simulated Insanity (1903)
A Medical Opinion on a Case of Simulated Insanity (1904)
A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)
On the Psychological Diagnosis of Facts (1905)

[†]2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)
Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)
The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)
Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I
Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth
PART II
Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry

The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)

Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF
The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)

After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff's "Studies in Jungian Psychology" (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling's "America Set Free" (1930) and "La Révolution Mondiale" (1934)
The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)
Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION
Psychology and Religion (The Terry Lectures) (1938/1940)
A Psychological Approach to the Dogma of the Trinity (1942/1948)
Transformation Symbolism in the Mass (1942/1954)
Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)
Brother Klaus (1933)
Psychotherapists or the Clergy (1932)
Psychoanalysis and the Cure of Souls (1928)
Answer to Job (1952)
EASTERN RELIGION
Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)
Yoga and the West (1936)
Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)
The Psychology of Eastern Meditation (1943)
The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)
Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)
Introduction to the Religious and Psychological Problems of Alchemy
Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)
Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY
The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY
Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY
The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's “Analyses der Kinderseele” (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1923)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

VOL. 1: 1906–1950
VOL. 2: 1951–1961

THE FREUD / JUNG LETTERS
The Correspondence between Sigmund Freud and C. G. Jung
Translated by Ralph Manheim and R.F.C. Hull
Edited by William McGuire

* First published in two parts in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig), III–IV (1911–12), and republished the same year as a book by Deuticke Verlag, Leipzig and Vienna. An English translation, by Dr. Beatrice M. Hinkle, entitled *Psychology of the Unconscious*, was published in 1916 by Moffatt Yard and Co., New York, and in 1917 by Kegan Paul, London. Translations have also appeared in Dutch, French, and Italian.

[1] [The edition here translated.—EDITORS.]

[1] *The Interpretation of Dreams*, pp. 260–61.

[2] He is supposed to have killed himself when he heard that his adored Ninon was really his mother.

[3] *Wishfulfilment and Symbolism in Fairy Tales*.

[4] *Dreams and Myths*.

[5] *The Myth of the Birth of the Hero*.

[6] “Die Symbolik in den Legenden.”

[7] *On the Nightmare*.

[8] *Die Frömmigkeit des Grafen Ludwig von Zinzendorf*.

[9] Also Rank, “Ein Traum, der sich selbst deutet.”

[10] [I.e., after 1912, the date of the original publication of the present work.—EDITORS.]

[11] His subsequent publications, *Umkreisung der Mitte* and *The Great Mother*, may also be included in this category. [Three of the essays in the former work were translated in *Art and the Creative Unconscious.—EDITORS.]*

[1] Mörike, *Werke*, I, p. 33.

[1a] Cf. Liepmann, *Über Ideenflucht;* also my "Studies in Word Association" (1918/-19 edn., p. 124). For thinking as subordination to a ruling idea, cf. Ebbinghaus, in *Kultur der Gegenwart*, pp. 221ff. Kuelpe (*Outlines of Psychology*, p. 447) expresses himself in a similar manner: in thinking "we find an anticipatory apperception, which covers a more or less extensive circle of individual reproductions, and differs from a group of accidental incentives to reproduction only in the consistency with which all ideas outside the circle are checked or suppressed."

[2] In his *Psychologia empirica*, ch. II, § 23, p. 16, Christian Wolff says simply and precisely: "Cogitatio est actus animae quo sibi sui rerumque aliarum extra se conscia est" (Thinking is an act of the soul whereby it becomes conscious of itself and of other things outside itself).

[3] The element of adaptation is particularly stressed by William James in his definition of logical thinking (*Principles of Psychology*, II, p. 330): "Let us make this ability to deal with *novel* data the technical differentia of reasoning. This will sufficiently mark it out from common associative thinking."

[4] "Thoughts are shadows of our feelings, always darker, emptier, and simpler than these," says Nietzsche. Lotze (*Logik*, p. 552) remarks in this connection: "Thinking, if left to the logical laws of its own movement, coincides once more at the end of its correct trajectory with the behaviour of objectively real things."

[5] Cf. Baldwin's remarks quoted below. The eccentric philosopher Johann Georg Hamann (1730–88) actually equates reason with language. (See Hamann's writings, pub. 1821–43.) With Nietzsche reason fares even worse as "linguistic metaphysics." Friedrich Mauthner goes the furthest in this direction (*Sprache und Psychologie*); for him there is absolutely no thought without speech, and only speaking is thinking. His idea of the "word fetishism" that dominates science is worth noting.

[6] Cf. Kleinpaul, *Das Leben der Sprache*.

[7] My small son gave me an explicit example of the subjectivity of such symbols, which originally seem to belong entirely to the subject: He described everything he wanted to take or eat with an energetic "stô lôl" (Swiss-German for "leave it!").

[8] *Le Jardin d'Epicure*, p. 80.

[9] It is difficult to estimate how great is the seductive influence of primitive word meanings on our thinking. "Everything that has ever been in consciousness remains as an active element in the unconscious," says Hermann Paul (*Prinzipien der Sprachgeschichte*, p. 25). The old word-meanings continue to have an effect which is imperceptible at first and proceeds "from that dark chamber of the unconscious in the soul" (ibid.). Hamann states emphatically (*Schriften*, VII, p. 8): "Metaphysics misuses all the verbal signs and figures of speech based on empirical knowledge and reduces them to empty hieroglyphs and types of ideal relationships." Kant is supposed to have learnt a thing or two from Hamann.

[10] *Grundriss der Psychologie*, pp. 363–64.

[11] *Lehrbuch aer Psychologie*, II, ch. 10, par. 26, p. 260.

[12] Baldwin, *Thought and Things*, II, pp. 145ff.

[13] In this connection I would mention the experimental "investigations into the linguistic components of association" (1908) made by Eberschweiler [q.v., Bibliography] at my request, which

disclose the remarkable fact that during an association experiment the intrapsychic association is influenced by phonetic considerations.

[14] See n. 5, above.

[15] There was as a matter of fact no external compulsion which would have made technical thinking necessary. The labour question was solved by an endless supply of cheap slaves, so that efforts to save labour were superfluous. We must also remember that the interest of the man of antiquity was turned in quite another direction: he reverenced the divine cosmos, a quality which is entirely lacking in our technological age.

[16] So at least it appears to the conscious mind. Freud (*The Interpretation of Dreams*, II, p. 528) says in this connection: “For it is demonstrably untrue that we are being carried along a purposeless stream of ideas when, in the process of interpreting a dream, we abandon reflection and allow involuntary ideas to emerge. It can be shown that all we can ever get rid of are purposive ideas that are *known* to us; as soon as we have done this, *unknown*—or, as we inaccurately say, ‘unconscious’—purposive ideas take charge and thereafter determine the course of the involuntary ideas. No influence that we can bring to bear upon our mental processes can ever enable us to think without purposive ideas; nor am I aware of any states of psychical confusion which can do so.”

[17] *Outlines*, p. 448.

[18] *Principles*, II, p. 325.

[19] This statement is based primarily on experiences derived from the field of normal psychology. Indefinite thinking is very far removed from “reflection,” particularly where readiness of speech is concerned. In psychological experiments I have frequently found that subjects—I am speaking only of cultivated and intelligent people—whom I allowed to indulge in reveries, as though unintentionally and without previous instruction, exhibited affects which could be registered experimentally, but that with the best will in the world they could express the underlying thought only very imperfectly or not at all. More instructive are experiences of a pathological nature, not so much those arising in the field of hysteria and the various neuroses, which are characterized by an overwhelming transference tendency, as experiences connected with introversion neurosis or psychosis, which must be regarded as constituting by far the greater number of mental disturbances, at any rate the whole of Bleuler’s schizophrenic group. As already indicated by the term “introversion” (which I cursorily introduced in 1910, in my “Psychic Conflicts in a Child,” pp. 13 and 16 [*Coll. Works*, Vol. 17]), this type of neurosis leads to an isolated inner life. And here we meet with that “supralinguistic” or pure “fantasy thinking” which moves in “inexpressible” images and feelings. You get some idea of this when you try to find out the meaning of the pitiful and muddled expressions used by these people. As I have often observed, it costs these patients endless trouble and effort to put their fantasies into ordinary human speech. A highly intelligent patient, who “translated” such a fantasy system for me piecemeal, used to say to me: “I know quite well what it’s all about, I can see and feel everything, but it is quite impossible for me to find the right words for it.”

[20] Similarly James, *Principles*, II, pp. 325–26. Reasoning is productive, whereas “empirical” (merely associative) thinking is only reproductive. This opinion, however, is not altogether satisfying. It is no doubt true that fantasy-thinking is not immediately productive, i.e., is unadapted and therefore useless for all practical purposes. But in the long run the play of fantasy uncovers creative forces and contents, just as dreams do. Such contents cannot as a rule be realized except through passive, associative, and fantasy-thinking.

[21] Cf. the impressive description of Petrarch's ascent of Mt. Ventoux, in Burckhardt, *The Civilization of the Renaissance in Italy*, pp. 180–81: "A description of the view from the summit would be looked for in vain, not because the poet was insensible to it, but, on the contrary, because the impression was too overwhelming. His whole past life, with all its follies, rose before his mind; he remembered that ten years ago that day he had quitted Bologna a young man, and turned a longing gaze towards his native country; he opened a book which was then his constant companion, the 'Confessions of St. Augustine,' and his eye fell on the passage in the tenth chapter: 'and men go forth, and admire lofty mountains and broad seas, and roaring torrents, and the ocean, and the course of the stars, and turn away from themselves while doing so.' His brother, to whom he read these words, could not understand why he closed the book and said no more."

[22] Wundt gives a short account of the scholastic method in his *Philosophische Studien* (XIII, p. 345). The method consisted "firstly, in regarding as the chief aim of scientific investigation the discovery of a firmly established conceptual scheme capable of being applied in a uniform manner to the most varied problems; secondly, in laying an inordinate value upon certain general concepts, and consequently upon the verbal symbols designating these concepts, as a result of which an analysis of the meanings of words or, in extreme cases, a vapid intellectual subtlety and splitting of hairs comes to replace an investigation of the real facts from which the concepts are abstracted."

[23] *The Interpretation of Dreams*, II, p. 543.

[24] Ibid., p. 546.

[25] Ibid., p. 567.

[26] The passage in *The Interpretation of Dreams* that follows immediately afterwards has since been confirmed through investigation of the psychoses. "These methods of working on the part of the psychical apparatus, which are normally suppressed in waking hours, become current once more in psychosis and then reveal their incapacity for satisfying our needs in relation to the external world" (ibid., p. 567). The importance of this sentence is borne out by the views of Pierre Janet, which were developed independently of Freud and deserve mention here because they confirm it from an entirely different angle, namely the biological side. Janet distinguishes in the function a firmly organized "inferior" part and a "superior" part that is in a state of continuous transformation: "It is precisely on this 'superior' part of the functions, on their adaptation to existing circumstances, that the neuroses depend.… Neuroses are disturbances or checks in the evolution of the functions.… Neuroses are maladies dependent on the various functions of the organism and are characterized by an alteration in the superior parts of these functions, which are checked in their evolution, in their adaptation to the present moment and the existing state of the external world and of the individual, while there is no deterioration in the older parts of these same functions.… In place of these superior operations some degree of physical and mental disturbance develops—above all, emotionality. This is nothing but the tendency to replace the superior operations by an exaggeration of certain inferior operations, and particularly by gross visceral disturbances." (*Les Névroses*, pp. 386ff.) The "older parts" are the same as the "inferior parts" of the functions, and they replace the abortive attempts at adaptation. Similar views concerning the nature of neurotic symptoms are expressed by Claparède (p. 169). He regards the hysterogenic mechanism as a "tendance à la reversion," a kind of atavistic reaction.

[27] I am indebted to Dr. Abraham for the following story: "A small girl of three and a half had been presented with a baby brother, who soon became the object of well-known childish jealousy. One day she said to her mother: 'You are two Mamas. You are my Mama, and your breast is little brother's Mama.' " She had just been observing with great interest the act of suckling. It is characteristic of the

archaic thinking of the child to call the breast “Mama” [so in the original—EDITORS]. *Mamma* is Latin for ‘breast.’

[28] Cf. particularly Freud’s “Analysis of a Phobia in a Five-year-old Boy” and my “Psychic Conflicts in a Child.”

[31] *Der Künstler,* p. 36.

[32] Cf. also Rank, *The Birth of the Hero*.

[33] *Wishfulfilment and Symbolism in Fairy Tales*.

[34] Abraham, *Dreams and Myths*, pp. 36 and 72, modified.

[35] Rank, *The Birth of the Hero;* also Kerényi, “The Primordial Child,” in Jung and Kerényi, *Science of Mythology*, pp. 38f. (1963 edn., pp. 27ff.).

[36] For the mythological rape of the bride, cf. id., “Kore,” pp. 170ff. (122ff.).

[37] Ferrero, *Les Lois psychologiques*, p. vii.

[38] See my paper “On the Nature of the Psyche,” pars. 398ff.

[39] Except for the fact that the contents entering consciousness are already in a high state of complexity, as Wundt has pointed out.

[40] Schelling (*Philosophie der Mythologie*, II) regards the “preconscious” as the creative source, just as Fichte (*Psychologie*, I, pp. 508ff.) regards the “preconscious region” as the birthplace of important dream contents.

[41] Cf. Flournoy, *From India to the Planet Mars*. Also my “On the Psychology and Pathology of So-called Occult Phenomena,” “The Psychology of Dementia Praecox,” and “A Review of the Complex Theory.” Excellent examples are to be found in Schreber, *Memoirs of My Nervous Illness*.

[42] Le Jardin d’Épicure.

[43] The Judas-figure assumes great psychological significance as the sacrificer of the Lamb of God, who by this act sacrifices himself at the same time (suicide). See Part II.

[44] Cf. Drews’ remarks in *The Christ Myth*. Intelligent theologians, like Kalthoff (*The Rise of Christianity)*, are of the same opinion as Drews. Thus Kalthoff says: “The documents that give us our information about the origin of Christianity are of such a nature that in the present state of historical science no student would venture to use them for the purpose of compiling a biography of an historical Jesus” (ibid., p. 10). “To look behind these evangelical narratives for the life of a natural historical human being would not occur to any thoughtful men today if it were not for the influence of the earlier rationalistic theologians” (p. 13). “In Christ the divine is always most intimately one with the human. From the God-man of the Church there is a straight line back, through the Epistles and Gospels of the New Testament, to the apocalypse of Daniel, in which the ecclesiastical conception of Christ makes its first appearance. But at every single point in this line Christ has superhuman features; he is never what critical theology would make him—a mere natural man, an historical individual” (p. 11). Cf. also Schweitzer, *The Quest of the Historical Jesus*.

[45] Cf. Burckhardt’s letter (1855) to his student Albert Brenner (trans. by Dru, p. 116, modified): “I have no special explanation of *Faust* ready prepared and filed away. And in any case you are well provided with commentaries of every kind. Listen: take all those second-hand wares back to the library from which they originally came! (Perhaps in the meanwhile you have already done so.) What you are destined to discover in *Faust*, you will have to discover intuitively (*N.B.* I am only speaking of the first part). *Faust* is a genuine myth, i.e., a great primordial image, in which every man has to discover *his* own being and destiny in his own way. Let me make a comparison: whatever would the Greeks have said if a commentator had planted himself between them and the Oedipus saga? There was an Oedipus chord in every Greek that longed to be directly touched and to vibrate after its own fashion. The same is true of *Faust* and the German nation.”

[46] [See the Appendix for the full Miller account, translated into English.—EDITORS.]

[1] There is an example of this in C. A. Bernoulli, *Franz Overbeck und Friedrich Nietzsche*, I, p. 72. Bernoulli describes Nietzsche's behaviour at a party in Basel: "Once at a dinner he said to the young lady seated next to him, 'I dreamed a short while ago that my hand, lying before me on the table, suddenly had a skin like glass, shiny and transparent; in it I saw distinctly the bones, the tissues, the play of the muscles. All at once I saw a fat toad sitting on my hand and I felt at the same time an irresistible compulsion to swallow the creature. I overcame my terrible loathing and gulped it down.' The young lady laughed. 'Is that a thing to laugh at?' Nietzsche asked, dreadfully serious, his deep eyes fixed on his companion, half questioning, half sorrowful. She then knew intuitively, even though she did not quite understand it, that an oracle had spoken to her in a parable, and that Nietzsche had allowed her to glimpse, as through a narrow crack, into the dark abyss of his inner self." Bernoulli makes (p. 166) the following observation: "One can perhaps see that behind the faultless exactitude of his dress there lay not so much a harmless pleasure in his appearance, as a fear of defilement born of some secret, tormenting disgust."

Nietzsche came to Basel very young; he was just at the age when other young people are contemplating marriage. Sitting beside a young woman, he tells her that something terrible and disgusting has happened to his transparent hand, something he must take completely into his body. We know what disease caused the premature ending of Nietzsche's life. It was precisely this that he had to tell his young lady, and her laughter was indeed out of tune.

[2] Rostand, *Cyrano de Bergerac*, trans. by Thomas and Guillemard, p. 282.

[3] Ibid., p. 293.

[1] The choice of words and comparisons is always significant. [The words “a real pleasure,” however, may not be precisely those which Miss Miller originally wrote in English and which Flournoy rendered as “une véritable volupté,” the phrase being remarked on here.—EDITORS.]

[2] This illness had until recently the not altogether suitable name given it by Kraepelin: dementia praecox. Bleuler later called it schizophrenia. It is the particular misfortune of this illness that it was discovered by the psychiatrists, for its apparently bad prognosis is due to this fact, dementia praecox being synonymous with therapeutic hopelessness. How would hysteria appear if judged from the standpoint of psychiatry! The psychiatrist naturally sees only the worst cases in his asylum, and because of his therapeutic helplessness he is bound to be a pessimist. Tuberculosis would indeed be in a deplorable situation if it were described solely on the basis of experiences acquired in a Home for Incurables. The chronic cases of hysteria who slowly degenerate into idiots in lunatic asylums are no more characteristic of real hysteria than schizophrenia is characteristic of the early forms of the disease, so frequently met with in practice, that hardly ever come under the supervision of the institutional psychiatrist. “Latent psychosis” is an idea that the psychotherapist knows and fears only too well.

[3] The reader must remember that these lines were written before the first World War. Much has changed since then.

[4] Here I purposely give preference to the term “imago” rather than to “complex,” in order to make clear, by this choice of a technical term, that the psychological factor which I sum up under “imago” has a living independence in the psychic hierarchy, i.e., possesses that *autonomy* which wide experience has shown to be the essential feature of feeling-toned complexes. This is brought out by the term “imago.” (Cf. my “Psychology of Dementia Praecox,” chs. 2 and 3.) My critics have seen in this view a return to medieval psychology and have therefore repudiated it. This “return” was made consciously and deliberately on my part, because the psychology of ancient and modern superstition furnishes abundant evidence for my point of view. Valuable insight and confirmation is also given us by the insane Schreber in his autobiography. My use of “imago” has close parallels in Spitteler’s novel of the same name, and also in the ancient religious idea of the “imagines et lares.” In my later writings, I use the term “archetype” instead, in order to bring out the fact that we are dealing with impersonal, collective forces.

[5] The idea that the masculine deity is derived from the father-imago need be taken literally only within the limits of a personalistic psychology. Closer investigation of the father-imago has shown that certain collective components are contained in it from the beginning and cannot be reduced to personal experiences. Cf. my essay, “The Relations between the Ego and the Unconscious,” pars. 211ff.

[6] “But the voice and the name [are] sun and moon.” Hippolytus, *Elenchos*, VI, 13.—Max Müller, in his foreword to the *Sacred Books of the East*, I, p. xxv, says of the sacred syllable *Om:* “He therefore who meditates on Om, meditates on the spirit in man as identical with the spirit … in the sun.”

[7] Schultz *Gnosis*, p. 62. Text in *Scott, Hermetica*, I, p. 115: Lib. I, 4.

[8] Pap. J 395, in Dieterich, *Abraxas*, p. 17: “And God laughed seven times Cha Cha Cha Cha Cha Cha Cha, and as God laughed, there arose seven gods.”

[9] In Anaxagoras, the living primal power of νοῦς imparts movement to inert matter. There is, of course, no mention of noise. Also, Miss Miller stresses the wind nature of νοῦς more than is warranted by ancient tradition. On the other hand, this νοῦς is related to the πνεῦμα of late antiquity

and to the λόγος σπερματικός of the Stoics. In the incest fantasy of one of my patients, her father covered her face with his hands and blew into her open mouth—an allusion to *inspiration*.

[10] Probably Haydn’s *Creation* is meant.

[11] See Job 16:1–11.

[12] I remember the case of a crazy young girl of 20, who continually imagined that her innocence was suspected despite all my efforts to talk her out of it. Gradually her indignant defence developed into a correspondingly aggressive erotomania.

[13] Job 16: 1 1ff.

[14] The case is published in my “On the Psychology and Pathology of So-called Occult Phenomena.”

[15] Cf. Freud, “Analysis of a Phobia in a Five-year-old Boy”, and my “Psychic Conflicts in a *Child*,” pars. 46ff.

[16] οὐρανὸς ἄνω, οὐρανὸς κάτω, ἄστρα ἄνω, ἄστρα κάτω, πᾶν τοῦτο ἄνω, πᾶν τοῦτο κάτω, τοῦτο λαβὲ καὶ εὐτύχει.—An old paraphrase of the *Tabula smaragdina* of Hermes, and of the text mentioned by Athanasius Kircher (*Oedipus Aegyptiacus*, Part 2, p. 414). I have quoted the latter text in my “Psychology of the Transference,” par. 384.

[17] *Wisdom and Destiny*.

[18] This time I shall hardly escape the charge of mysticism. But perhaps the facts should be considered further: there is no doubt that the unconscious contains psychological combinations which do not reach the threshold of consciousness. Analysis dissolves these combinations back into their historical determinants. It works backwards, like the science of history. Just as a large part of the past is so remote as to be beyond the reach of historical knowledge, so too the greater part of these unconscious determinants is unreachable. History, however, knows nothing either of that which is hidden in the past or of that which is hidden in the future. Both might be reached with some degree of probability, the first as a postulate, the second as a political prognosis. Thus, in so far as tomorrow is already contained in today, and all the threads of the future are already laid down, a deeper knowledge of the present might render possible a moderately far-sighted prognosis of the future. If we apply this reasoning to the realm of the psychic we necessarily come to the same result. Just as memories that have long since fallen below the threshold are still accessibie to the unconscious, so also are certain very fine subliminal combinations that point forward, and these are of the greatest significance for future events in so far as the latter are conditioned by our psychology. But no more than the science of history bothers itself with future combinations of events, which are rather the object of political science, can the forward-pointing psychological combinations be the object of analysis; they would be much more the object of a refined psychological syntheticism that knew how to follow the natural currents of libido. This we cannot do, or only badly; but it happens easily enough in the unconscious, and it seems as if from time to time, under certain conditions, important fragments of this work come to light, at least in dreams, thus accounting for the prophetic significance of dreams long claimed by superstition. Dreams are very often anticipations of future alterations of consciousness. [Cf. Jung, “General Aspects of Dream Psychology,” pars. 492ff—EDITORS.]

[19] Dreams seem to remain spontaneously in the memory for just so long as they correctly sum up the psychological situation of the individual.

[20] How collective the elements in such an experience are can be seen from the following love-song. Of its many variants, I quote a modern Greek version from Epirus (*Zeitschrift des Vereins für Volkskunde*, XII, 1902, p. 159):

> O maiden, when we kissed, it was night. Who saw us?—
> A bright star saw us, and the moon saw us,
> And it leaned down to the sea and whispered the tidings,
> And the sea told the rudder, and the rudder told the sailor,
> The sailor made a song, then the neighbours heard it,
> Then the priest heard it too and told it to my mother,
> From her my father heard it and was livid with anger.
> They nagged me and scolded me and now have forbidden me
> Ever to go to the door or look out of the window,
> And yet I will go to the window as if to my flowers.
> And never will I rest until my beloved is mine.

[21] The atmosphere of the poem is very reminiscent of Gérard de Nerval's *Aurelia*, a book that anticipates the same fate that befell Miss Miller: spiritual benightedness. Cf. the significance of the raven in alchemy, where it is a synonym for the *nigredo (Psychology and Alchemy*, pars. 333ff.).

[22] This again is decidedly reminiscent of Gérard de Nerval's attitude towards Aurelia, whose significance he refuses to admit. He would not believe that a "femme ordinaire de ce monde" could have the glamour his unconscious endowed her with. Today we know that a powerful impression of this kind is due to the projection of an archetype, i.e., that of the anima or animus. See "The Relations between the Ego and the Unconscious," pars. 296ff., and my "Psychological Aspects of the Kore," pars. 356ff.

[23] Trans. by MacNeice, p. 15, modified.

[24] Job 1:11. [Cf. these pars, with Jung, "Answer to Job."—EDITORS.]

[25] Job 40: 15–19; 41:1–4.

[26] Cf. Schärf, "Die Gestalt des Satans im Alten Testament," in Jung, *Symbolik des Geistes*, pp. 288ff.

[27] Job 41:19–29:

> Out of his mouth go burning lamps, and sparks of fire leap out.
> Out of his nostrils goeth smoke, as out of a seething pot or cauldron.
> His breath kindleth coals, and a flame goeth out of his mouth.
> In his neck remaineth strength, and sorrow is turned into joy before him
> The flakes of his flesh are joined together: they are firm in themselves; they cannot be moved.
> His heart is as firm as a stone; yea, as hard as a piece of the nether millstone.
> When he raiseth up himself, the mighty are afraid: by reason of breakings they purify themselves.
> The sword of him that layeth at him cannot hold: the spear, the dart, nor the habergeon.
> He esteemeth iron as straw, and brass as rotten wood.
> The arrow cannot make him flee: slingstones are turned with him into stubble.

> Darts are counted as stubble: he laugheth at the shaking of a spear.

[28] These expressions are all anthropomorphisms whose source is primarily psychological.

[29] This proposition has caused much offence, because people have failed to see that it is a *psychological* view and not a metaphysical statement. The psychic fact “God” is a typical autonomism, a *collective archetype*, as I later called it. It is therefore characteristic not only of all higher forms of religion, but appears spontaneously in the dreams of individuals. The archetype is, as such, an unconscious psychic image, but it has a reality independent of the attitude of the conscious mind. It is a psychic existent which should not in itself be confused with the idea of a metaphysical God. The existence of the archetype neither postulates a God, nor does it deny that he exists.

[30] Theriomorphic elements are lacking in Christianity, except for remnants like the dove, the fish, and the lamb, and the beasts representing the Evangelists. The raven and the lion symbolized definite degrees of initiation in the Mithraic mysteries. Since Dionysus was represented, among other things, as a bull, his female worshippers wore horns, as though they were cows. (I owe this information to Professor Kerényi. The female worshippers of the bear goddess Artemis were called ἄρκτοι, ‘bears.’ Cf. pl. *Lb*.)

[31] See my “On the Nature of Dreams,” pars. 542ff.

[32] Cf. I Peter 4:7; and Philemon, vv. 4 and 6.

[33] Cf. I John 1: 8; “If we say we have no sin, we deceive ourselves, and the truth is not in us” (RSV; also nn. 34–36).

[34] Ephesians 1:7 and Colossians 1: 14. Isaiah 53:4: “Surely he has borne our griefs and carried our sorrows.”

[35] I Peter 2:22.

[36] I Peter 2: 24.

[37] Hebrews 9: 28 (ZB).

[38] As I have shown above, it is not always an illusion, for the subject himself can be the main source of these figures, as is particularly the case in neuroses and psychoses.

[39] James 5:16, And Galatians 6:2: “Bear one another’s burdens.” (RSV; and nn. 40–44.)

[40] Galatians 5: 13.

[41] Hebrews 13: 1.

[42] Hebrews 10:24f.

[43] I John 2:10f.

[44] 1 John 4:12.

[45] “Magnam ergo vim habes, caritas, tu sola Deum trahere potuisti de caelo ad terras. O quam forte est vinculum tuum, quo et Deus ligari potuit.… Adduxisti illum vinculis tuis alligatum, adduxisti illum sagittis tuis vulneratum.… Vulnerasti impassibilem, ligasti insuperabilem, traxisti incommutabilem, aeternum fecisti mortalem.… O caritas quanta est victoria tua!”— *De laude caritatis*, cols. 974f.

[46] I John 4: 16: “God is love, and he who abides in love abides in God, and God abides in him” (RSV).

[47] One cannot of one’s own free will choose and desire something that one does not know. Hence a spiritual goal cannot consciously be striven for if it does not yet exist.

[48] John 4:24 (RSV).

[49] Romans 15:7 (RSV).

[50] Cf. Reitzenstein, *Die hellenistischen Mysterienreligionen*, p. 20: “To the various forms in which primitive peoples have envisaged the supreme religious sacrament, union with God, there necessarily belongs that of sexual union, through which man takes into himself the innermost essence and power of a god, his semen. What is at first a wholly sensual idea becomes, independently in different parts of the world, a sacred act, where the god is represented by a human deputy or by his symbol the phallus.” Further material in Dieterich, *Eine Mithrasliturgie*, pp. 121ff.

[51] Cf. the prayers in the so-called Mithras liturgy (published in 1910 by Dieterich, ibid.). There we find such characteristic passages as: *τῆς ἀνθρωπίνης μου ψυχικῆς δυνὰμεως ἥν ἐγὼ αάλιν μεταπαραλήμψομαι μετὰ τὴν ἐνεστῶσαν καὶ κατεπεί γουσἀν με πικρὰν ἀνἀγκην ἀνἀγκην ἀχρεοκόπητον* (my human soul-force, which I shall recover again undiminished after the present bitter necessity that presses upon me), and *ἕνεια τῆς κατ επειγούσης καὶ πικρὰς ἀπαραιτήτου ἀνἀγκης* (because of the bitter inexorable necessity that oppresses me). The speech of the high priest of Isis (Apuleius, *The Golden Ass*, XI, 15) reveals a similar train of thought. The young philosopher Lucius was changed into an ass, that ever-rutting animal hateful to Isis. Later he was released from the spell and initiated into the mysteries. (Cf. pl. vi.) During his disenchantment, the priest says: “On the slippery path of your lusty youth you fell a prey to servile pleasures, and won a sinister reward for your ill-fated curiosity.… But hostile fortune has no power over those who have devoted their lives to serve the honour and majesty of our goddess.… Now, you are safe, and under the protection of that fortune which is not blind, but can see.” In his prayer to Isis, Queen of Heaven, Lucius says (XI, 25): “… thy saving hand, wherewith thou unweavest even the inextricably tangled web of fate, and assuagest the tempests of fortune, and restrainest the baleful orbits of the stars.” Altogether, the purpose of the mysteries (pl. IV*b*) was to break the “compulsion of the stars” by magic power.

The power of fate makes itself felt unpleasantly only when everything goes against our will, that is to say, when we are no longer in harmony with ourselves. The ancients, accordingly, brought *εἱμαρμένη* into relation with the “primal light” or “primal fire,” the Stoic conception of the ultimate cause, or all-pervading warmth which produced everything and is therefore fate. (Cf. Cumont, *The Mysteries of Mithra*, p. 114.) This warmth, as will be shown later, is a libido-image (cf. fig. 4). Another conception of Ananke (Necessity), according to Zoroaster’s book Περὶ Φὐσεως (“On Nature”), is air, which in the form of wind is again connected with the fertilizing agent.

[52] Schiller says in *Piccolomini*, II, 6: “The stars of thine own fate lie in thy breast.” “A man’s fortunes are the fruits of his character,” says Emerson, in his essay “Fate,” in *The Conduct of Life (Works*, VI, p. 41).

[53] *The Confessions of St. Augustine*, VI, 7–8, trans. by Sheed, pp. 88–91, slightly modified.

[54] Seneca, *Ad Lucilium epistulae morales*, trans. by Gummere, I, pp. 278f., 274f.

[55] The ascent to the “idea” is described in Augustine, *Confessions*, Book X, ch. 6ff. The beginning of ch. 8 reads: “I shall mount beyond this power of my nature, still rising by degrees towards Him who made me. And so I come to the fields and vast palaces of memory.” (Trans. by Sheed, p. 172.)

[56] The followers of Mithras also called themselves brothers. In philosophical language, Mithras was the Logos emanated by God (Cumont, *Mysteries*, p. 140).

[57] Augustine, who was close to that period of transition not only in time but intellectually too, writes in his *Confessions* (Book VI, ch. 16; Sheed trans., pp. 99–100): "And I put the question, supposing we were immortals and could live in perpetual enjoyment of the body without any fear of loss, why should we not then be happy, or what else should we seek? I did not realize that it belonged to the very heart of my wretchedness to be so drowned and blinded in it that I could not conceive the light of honour, and of beauty loved for its own sake, which the eye of the flesh does not see but only the innermost soul. I was so blind that I never came to ask myself what was the source of the pleasure I found in discussing these ideas (worthless as they were) with friends, and of my inability to be happy without friends, even in the sense of happiness which I then held, no matter how great the abundance of carnal pleasure. For truly I loved my friends for their own sake, and I knew that I was in turn loved by them. O tortuous ways! Woe to my soul with its rash hope of finding something better if it forsook Thee! My soul turned and turned again, on back and sides and belly, and the bed was always hard. For thou alone art her rest."

[58] Both religions teach a distinctly ascetic morality and a morality of action. The latter is particularly true of Mithraism. Cumont (p. 147) says that Mithraism owed its success to the value of its morality, "which above all things favoured action." The followers of Mithras formed a "sacred army" in the fight against evil (p. 148), and among them were *virgines*, 'nuns', and *continentes*, 'ascetics' (p. 165).

[59] I have intentionally let these sentences stand from the earlier editions, as they typify the false *fin de siècle* sense of security. Since then we have experienced abominations of desolation of which Rome never dreamed. As regards the social conditions in the Roman Empire I would refer the reader to Pöhlmann (*Geschichte des antiken Kommunismus und Sozialismus*) and Bücher (*Die Aufstände der unfreien Arbeiter 143–129 B.C.*). The fact that an incredibly large proportion of the people languished in the black misery of slavery is no doubt one of the main causes of the singular melancholy that reigned all through the time of the Caesars. It was not in the long run possible for those who wallowed in pleasure not to be infected, through the mysterious working of the unconscious, by the deep sadness and still deeper wretchedness of their brothers. As a result, the former were driven to orgiastic frenzy, while the latter, the better of them, fell into the strange *Weltschmerz* and world-weariness typical of the intellectuals of that age.

[60] Unfortunately Freud, too, has made himself guilty of this error.

[61] A theologian, who accuses me of being anti-Christian, has completely overlooked the fact that Christ never said "Unless ye *remain* as little children," but, most emphatically, "Unless ye *become* as little children." His accusation is proof of a remarkable dulness of religious sensibility. One cannot, after all, ignore the whole drama of rebirth *in novam infantiam!*

[62] *Confessions*, X, 8, cited in Burckhardt, *The Renaissance in Italy*, p. 181.

[63] Cumont, *The Mysteries of Mithra*, p. 149, modified.

[64] [Cf. Gummere trans., pp. 272–75.]

[65] *Confessions*, X, 6, trans. based on Sheed, p. 170.

[66] Trans. by Sheed, p. 171.

[67] Lucretius, *De rerum natura*, I, 21–24 [cf. Rouse trans., pp. 4–5]:

> "Quae quoniam rerum naturam sola gubernas,

Nec sine te quicquam dias in luminis oras
Exoritur, neque fit laetum neque amabile quicquam."

[68] Cf. Kerényi, "Die Göttin Natur," pp. 50ff.

[69] Cf. Hartlaub, *Giorgiones Geheimnis*.

[71] Kalthoff, *The Rise of Christianity*, p. 200 (trans. modified).

[72] See my "Relations between the Ego and the Unconscious," pars. 353ff.

[73] When I wrote this book, these things were still completely dark to me, and I knew no other counsel but to quote to myself the following passage from the 41st letter of Seneca to Lucilius (Gummere trans., pp. 272–73): "You are doing an excellent thing, one which will be wholesome for you, if … you persist in your effort to attain sound understanding; it is foolish to pray for this when you can acquire it from yourself. We do not need to uplift our hands towards heaven, or to beg the keeper of a temple to let us approach his idol's ear, as if in this way our prayers were more likely to be heard. God is near you, he is with you, he is within you. This is what I mean, Lucilius; a holy spirit indwells within us, one who works our good and bad deeds, and is our guardian. As we treat this spirit, so we are treated by it. Indeed, no man can be good without the help of God. Can one rise superior to fortune unless God helps him to rise? He it is that gives noble and upright counsel. In each good man 'a god doth dwell, but what god we know not.'"

[1] Complexes are usually of great stability even though their outward manifestations change kaleidoscopically. Experimental researches have entirely convinced me of this fact. See my “Studies in Word Association.”

[2] Part I, trans. by Wayne, pp. 66–67.

[3] Ibid., p. 54, modified.

[4] As the reader will be aware, the last notoriously unsuccessful attempt to conquer Christianity with a nature religion was made by Julian the Apostate.

[5] This solution of the problem had its parallel in the flight from the world during the first few centuries after Christ (cities of the anchorites in the desert). The Desert Fathers mortified themselves through spirituality in order to escape the extreme brutality of the decadent Roman civilization. Asceticism occurs whenever the animal instincts are so strong that they need to be violently exterminated. Chamberlain (*Foundations of the Nineteenth Century*) saw asceticism as a biological suicide caused by the enormous amount of racial interbreeding among the Mediterranean peoples at that time. I believe that miscegenation makes rather for a coarsened *joie de vivre*. To all appearances the ascetics were ethical people who, disgusted with the melancholy of the age which was merely an expression of the disruption of the individual, put an end to their lives in order to mortify an attitude that was itself obsolete.

[6] Δίκη, Justice, daughter of Zeus and Themis, who after the Golden Age forsook the degenerate earth.

[7] *Bucolica*, Eclogue IV. Trans. based on Fairclough, I, pp. 28–31. (Cf. Norden, *Die Geburt des Kindes.)* Thanks to this eclogue, Virgil was later honoured as a quasi-Christian poet. To this position he also owes his function as psychopomp in Dante.

[8] “Below the hills a marshy plain
Is poisoning all that we have won;
This pestilential swamp to drain
Would crown the work I have begun,
Give many millions room to live.” [Cf. MacNeice trans., p. 287.]

[9] Part I, trans. by Wayne, pp. 64–5, modified.

[10] “FAUST: I long to join his quest
On tireless wings uplifted from the ground.
Then should I see, in deathless evening light,
The world in cradled stillness at my feet.…
Yet stirs my heart with new-awakened might,
The streams of quenchless light I long to drink.…”

(Part I, trans. by Wayne, p. 66.)

[11] [For a note on this play, see Appendix, pp. 456f.—EDITORS.]

[12] Cf. my “Psychology of Dementia Praecox,” pars. 77ff., and my “Review of the Complex Theory,” pars. 200ff.

[13] I John 4: 8 and 12 (RSV). “Caritas” in the Vulgate corresponds to *άγάπη*. This New Testament word derives, like ἀγάππησις (love, affection), from *ἀγαπἀν*, ‘to love, esteem, praise, approve, etc’ ‘Αγἀπη is, therefore, an unmistakably psychic function.

[14] Apuleius, *The Golden Ass*, XI: “In my right hand I carried a torch blazing with flames; my head was garlanded with a fair crown of white palm, with the leaves standing out like rays. Thus I was adorned like the sun and set up as an image.”

[15] Dieterich, *Mithrasliturgie*, pp. 8–9. (*Εγώ ειμι σύμπλανος ὑμῖν ἀστὴρ καὶ ἐκ τοῦθους ἀανλάμπων*.)

[16] In the same way, the Sassanid kings styled themselves “brothers of the sun and moon.” In ancient Egypt the soul of every Pharaoh was a split-off from the Horus-sun.

[17] *Elenchos*, X, 34, 4. (*Γἐγονας γὰρ θεὸς ἔαῃ δὲ ὁμιλτὴς θεοῦ καὶ συγκληρονόμος Χρισ τοῦ./ Τοῦτ ἔστι τὸ γνῶθι σεαυτόν*.)

[18] Cf. the coronation rite mentioned above. Feathers symbolize power. The feather crown = crown of sun rays, halo. Crowning is in itself an identification with the sun. For instance the spiked crown appeared on Roman coins from the time when the Caesars were identified with the *Sol invictus. Solis invicti comes:* ‘companion of the unconquerable sun.’ The halo means the same thing; it is an image of the sun, as is the tonsure. The priests of Isis had smooth-shaven heads that shone like stars (Apuleius).

[19] “The Coming Forth by Day from the Underworld,” in Erman, *Life in Ancient Egypt*, p. 343 (trans. modified).

[20] The text of the Mithraic liturgy reads: Εγώ ειμι σύμπλανος ὑμῖν ἀστὴρ καὶ ἐκ τοῦ βάθονς ὰναλὰμπων… τοῦτά σον εἰπόντος εὐθέως ὁ δίσκος άπλωήσεται (I am a Star wandering with you and shining up from the depths.… When you have said this, the disc of the sun will immediately unfold). Through his prayer, the celebrant has the divine power to make the sun come out.

[21] Cf. the sayings in John: “I and the Father are one” (10: 30). “He who has seen me has seen the Father” (14: 9). “Believe me that I am in the Father and the Father in me” (14: 11). “I came from the Father and have come into the world; again, I am leaving the world and going to the Father” (16: 28). “I am ascending to my Father and your Father, to my God and your God” (20:17). (All RSV.)

[22] *Επάκουσόν μου κύριε ὀ συνδήσας πνεύματι τά πύρινα κλεῖθρα τοῦ οὐρανοθ δισώματος, πορίπολε, φωτὸς κτίστα… πνρίπνοε, πυρίθυμε, πνευματόφως, πνριχαρῆ καλλίφως, φωτοκράτωρ, πυρισώματε, φωτοδότα, πνρισπόρε, πυρικλόνε, φωτόβιε, πυριδῖνα φωτοκινῆτα, κεραυνοκλόνε, φωτός. αὐξησίφως, ἐνπυρισχησίφως, άστοδάμα, κτλ*

[23] *The Revelations of Mechthild of Magdeburg*, trans. by Menzies, p. 14.

[24] Renan, *Dialogues*, p. 168, says: “Avant que la religion fût arrivée à proclamer que Dieu doit être mis dans l’absolu et l’ideal, c’est-à-dire hors du monde, un seul culte fût raisonnable et scientifique, ce fût le culte du soleil.”

[25] Dieterich, p. 6: ‘Η*δὲ πορεία τῶν ὑρωμένων βεῶν διὰ τοῦ δίσκου, πατρός μου, θεοῦ φανήσεται*.

[26] In Pitra, *Analecta sacra*, VIII, p. 333. Cited from Buber, pp. 51f.

[27] “Love-songs to God,” in Buber, p. 40. There is a related symbolism in Carlyle (“Heroes and Hero Worship,” p. 280): “The great fact of Existence is great to him. Fly as he will, he cannot get out of the

awful presence of this Reality. His mind is so made; he is great by that, first of all. Fearful and wonderful, real as Life, real as Death, is this Universe to him. Though all men should forget its truth, and walk in a vain show, he cannot. *At all moments the Flame-image glares in upon him."* One could take any amount of examples from literature. For instance, S. Friedländer says, in *Jugend* (1910), p. 823: "Her longing demands only the purest from the beloved. Like the sun, she burns to ashes with the flame of her immense vitality anything that does not desire to be light. This sun-like eye of love," etc.

28 This image contains the psychological root of the "heavenly wanderings of the soul," an idea that is very old. It is an image of the wandering sun (fig. 3), which from its rising to its setting travels over the world. This comparison has been indelibly imprinted on man's imagination, as is clear from the poem "Grief" of Mathilde von Wesendonck (1828–1902):

The sun, every evening weeping.
Reddens its beautiful eyes for you;
When early death seizes you,
Bathing in the mirror of the sea.

Still in its old splendour
The glory rises from the dark world;
You awaken anew in the morning
Like a proud conqueror.

Ah, why then should I lament,
When my heart, so heavy, sees you?
Must the sun itself despair?
Must the sun set?

And does death alone bear life?
Do griefs alone give joys?
O, how grateful I am that
Such pains have given me nature!

There is another parallel in a poem by Ricarda Huch (1864–1947):

As the earth, separating from the sun,
Withdraws in quick flight into the stormy night,
Starring the naked body with cold snow,
Deafened, it takes away the summer joy.
And sinking deeper in the shadows of winter.
Suddenly draws close to that which it flees,
Sees itself warmly embraced with rosy light
Leaning against the lost consort.
Thus I went, suffering the punishment of exile,
Away from your countenance, into the ancient place.
Unprotected, turning to the desolate north,
Always retreating deeper into the sleep of death;

And then would I awake on your heart,
Blinded by the splendour of the dawn.

[Both poems as trans. in the Hinkle edn. (1916).]

The heavenly journey is a special instance of the journeys of the hero, a motif that was continued as the *peregrinatio* in alchemy. The earliest appearance of this motif is probably the heavenly journey of Plato (?) in the Harranite treatise “Platonis liber quartorum” (*Theatrum chemicum*, V, p. 145). See also my *Psychology and Alchemy*, par. 457.

[29] Buber, p. 45.

[30] *Werke*, VIII, p. 427.

[31] Dieterich, pp. 8f.

[32] Ibid., p. 13.

[33] *Memoirs*, pp. 4, 162ff.

[34] From *Ecce Homo*, trans. based on A. M. Ludovici’s.

[35] Even the water-god Sobk, who appeared as a crocodile, was identified with Ra.

[36] Erman, *Life in Ancient Egypt*, p. 261.

[37] Ibid., p. 262.

[38] Cf. the “five-fingered stars” mentioned above.

[39] The Apis-bull as manifestation of Ptah.

[40] Amon.

[41] Sobk of the Fayum.

[42] The god of Dedu, in the Delta, who was worshipped as a wooden post.

[43] This reformation was initiated with a great deal of fanaticism but soon collapsed.

[44] Apuleius, XI, 2. (“Regina coeli, sive tu Ceres, alma frugum parens, seu tu coelestis Venus … seu Phoebi soror … seu nocturnis ululatibus horrenda Proserpina … ista luce feminea conlustrans cuncta moenia.”) It is worth noting that the Humanists too (I am thinking of a passage in Mutianus Rufus) developed the same syncretism and maintained that there were really only two gods in antiquity, a masculine and a feminine.

[45] The light or fire-substance was ascribed not only to divinity but also to the soul, as for instance in the system of Mani, and again with the Greeks, who thought of it as a fiery breath of air. The Holy Ghost of the New Testament appeared to the apostles in the form of flames, because the pneuma was believed to be fiery (cf. Dieterich, p. 116). The Iranian conception of Hvareno was similar: it signified the “Grace of Heaven” through which the monarch ruled. This “Grace” was understood as a sort of fire or shining glory, something very substantial (cf. Cumont, *Mysteries*, p. 94). We come across ideas of the same type in Kerner’s *Seeress of Prevorst*.

[46] Dieterich, pp. 6–7: ‘Ομοίως δὲ καὶ ὁ καλούμενος αὐλὸς, ἡ ἀρχὴ τοῦ λειτουργοῦντος ἀνέμου ἡ ὄψει γὰρ ἀπὸ τοῦ δίσκου ὡς αὐλὸν κρεμάμενον.

[47] According to ancient superstition, the mares of Lusitania and the Egyptian vultures were fertilized by the wind.

[48] St. Jerome (*Adversus Jovinianum*, I, 7, in Migne, *P.L.*, vol. 23, col. 219) says of Mithras, who was born in a miraculous manner from a rock (cf. fig. 9), that his birth was caused “solo aestu libidinis”—by the sole heat of libido. (Cumont, *Textes*, I, p. 163.)

[49] Mead, *A Mithraic Ritual*, p. 22.

[50] Dieterich, p. 7.

[51] I am indebted to my late colleague Dr. Franz Riklin for the following case, which presents an interesting symbolism. It concerns a paranoid woman patient who developed the stage of manifest megalomania in the following way: She suddenly saw a *strong light*, a *wind blew upon her*, she felt as if her “heart turned over,” and from that moment she knew that God had visited her and was in her.

[52] Permission for me to do this was kindly given by Dr. William Alanson White, late superintendent of the St. Elizabeth’s Hospital, in Washington, D.C.

[53] Further material in my “Psychology of the Child Archetype,” pars. 260ff., and my “On the Nature of the Psyche,” pars. 388ff.

[54] See my “Psychology and Religion,” pars. 104f.

[55] Dieterich, p.11: ὄψει θεὸν νεώτερον εὐεδῆ πυρινότριχα ἐν χιτῶνι λευκῷ καὶ χλαμύδι κοκκίνῃ, ἔχοντα πύρινον στέφανον

[56] Ibid., p. 15: ὄψει θεὸν ὑπερμεγέθη, φωτινὴν ἔχοντα τήν ὄψιν, νεώτερον, χρυσοκόμαν, ἐν χιτῶνι λευκῷ καὶ χρυσῷ στεφάνῳ καὶ ἀναξυρίσι, κατέχοντα τῇ δειᾷ χειρὶ μὸσχου ὦμόν χρύσεον, ὅς ἐστιν ἄρκτος ἡ κινοῦσα καὶ ἀντιστρέφουσα τὸν οὐρανόν, κατἀ ὥραν ἀναπολεὺουσα καὶ καταπολεύουσα. ἔπειτα ὄψει αὐτοῦ έκ τῶν ὀμμὰτων ἀστραπἀς καὶ έκ τοῦ αώματος ἀστέρας ἀλλομἐνους.

[57] The Great Bear consists of seven stars.

[58] Mithras is frequently represented with a short sword in one hand and a torch in the other (fig. 9). The sword as sacrificial instrument plays a considerable role in the Mithraic myth and also in Christian symbolism. See my “Transformation Symbolism in the Mass,” pars. 324, 357ff.

[59] *στέφανον χρυσοῦν*, lit. ‘golden wreath.’

[60] Cf. the scarlet mantle of Helios. An essential feature in the rites of many different cults was that the worshippers dressed themselves in the bloody pelts of the sacrificed animals, as at the Lupercalia, Dionysia, and Saturnalia. The last of these lingers on in the Carnival; in Rome the typical Carnival figure was the priapic Punchinello.

[61] Cf. the linen-clad retinue of the god Helios. The bull-headed gods wore white ττεριζώματα. (aprons?).

[62] The development of the sun-symbolism in *Faust* (Part I, Scene 1) does not go as far as an anthropomorphic vision; it stops in the suicide scene (Wayne, p. 54) at the chariot of Helios (“As if on wings, a chariot of fire draws near me”). The fiery chariot comes to receive the dying or departing hero, as in the ascension of Elijah or Mithras (and also with St. Francis of Assisi). Faust in his flight passes over the sea, just as Mithras does; the early Christian paintings of the ascension of Elijah are based partly on the corresponding Mithraic representations, where the horses of the sun-chariot

mounting up to heaven leave the solid earth behind them and gallop away over the figure of a water-god—Oceanus—lying at their feet. Cf. Cumont, *Textes*, I, p. 178.

[63] Title of Mithras in the Vendidad, XIX, 28, cited by Cumont, *Textes*, I, p. 37.

[64] *De somniis*, I, 85.

[65] “Ιιλιος ἀνατολῆς… μόνος ἥλιος οὗτος ἀνἐτειλεν ἀττ’ οὐρανοῦ. Cf. Pitra, *Analecta sacra*, II, p. 5, cited in Cumont, *Textes*, I, p. 355.

[66] De *Pascha Computus*, in Migne, *P.L.*, 4, col. 964. Cited in Usener, *Weihnachtsfest*, p. 5.—“O quam praeclara … providentia ut in illo die quo factus est sol, in ipso die nasceretur Christus, v. Kal. Apr. feria IV. Et ideo de ipso merito ad plebem dicebat Malachias propheta: ‘Orietur vobis sol iustitiae et curatio est in pennis ejus,’ hic est sol iustitiae cuius in pennis curatio praeostendebatur.” The passage occurs in Malachi 4:2: “But unto you that fear my name shall the Sun of righteousness arise, with healing in his wings.” This image recalls the winged sun-disc of ancient Egypt. (Pl. IX*a*; cf. also pl. VII)

[67] “Sed et dominus nascitur mense Decembri hiemis tempore, VIII. kal. Januarias, quando oleae maturae premuntur ut unctio, id est chrisma, nascatur—sed et Invicti natalem appellant. Quis utique tam invictus nisi Dominus noster qui mortem subactam devicit? Vel quod dicant Solis esse natalem, ipse est sol iustitiae, de quo Malachias propheta dixit.—Dominus lucis ac noctis conditor et discretor qui a propheta Sol iustitiae cognominatus est.” Cumont, *Textes*, p. 355.

[68] Οὐαῖ τοῖζ προσκυνοῦσι τὸν ἡλιον καὶ τὴν σαλήνην καὶ τοὺς ἀστέρας. Ιιολοις γὰρ οἶδα τοὺς προσκυνοῦντας καὶ εὐχομένους εἰς τὸν ἥλιον “Ιιδη γὰρ ἀνατείλαντος τοῦ ἡλίου, προσεύχονται καὶ λέγουσιν” ‘Ελέησον ἡμᾶς “καὶ οὐ μόνον ‘Ηλιογνώσται καὶ αἱρετικοὶ τοῦτο ποιοῦσιν ἀλλὰ καὶ χριστιανοὶ καὶ ἀφέντες τὴν τοῖς αἱρετικοῖς ἀναμίγνυνται.—Oratio VI: Περὶ ἀστρονόμων, cited in Cumont, p. 356.

[69] “Non est Dominus Christus sol factus, sed per quem Sol factus est.”—*In Johannis Evang*., Tract. XXXIV, 2. [Trans. from author’s version.]

[70] The pictures in the catacombs likewise contain a good deal of sun symbolism. For instance there is a swastika (sun-wheel) on the robe of Fossor Diogenes in the cemetery of Peter and Marcellinus. The symbols of the rising sun—bull and ram—are found in the Orpheus frescoes in the cemetery of Domitilla; also the ram and peacock (a sun-symbol like the phoenix) on an epitaph in the Callistus catacomb.

[71] Numerous examples in Görres, *Die Christliche Mystik*.

[72] Le Blant, *Sarcophages de la Gaule*. In the Homilies of Clement of Rome (*Homil*. II, 23, cited in Cumont, *Textes*, I, p. 356) we read: Τ*ῷ κυρὶῳ γεγόνασιν δώδεκα ἀπόστολοι τῶν τοῦ ἡλίου δώδεκα μηνῶν φἐρονες τὸν ἀριθμὸν* (The Lord had twelve apostles, bearing the number of the twelve months of the sun) (trans. by Roberts and Donaldson, p. 42). This image evidently refers to the sun’s course through the zodiac. The course of the sun (like the course of the moon in Assyria; cf. fig. 10) was represented as a snake carrying the signs of the zodiac on its back (like the *Deus leontocephalus* of the Mithraic mysteries; cf. pl. XLIV). This view is supported by a passage from a Vatican Codex edited by Cumont (190, 13th cent., p. 229; in *Textes*, I, p. 35): Τ*ότε ὀ πάνσοφος δημιουργὸς ἄκρῳ νεὐματι ἐκίνησε τὸν μἐγαν δράκοσμημἐνῳ στεφάνῳ, λέγω δὴ τὰ ιβ’ ξῴδια βαστάζοτα ἐπὶ τοῦ νώτου αὐτοῦ* (Then the all-wise Demiurge, by his highest command, set in motion the great dragon with the spangled crown, I mean the twelve signs of the zodiac which are borne on his back). In the Manichaean system, the symbol of the snake, and actually the snake on the tree of Paradise, was

attributed to Christ. Cf. John 3: 14: “And as Moses lifted up the serpent in the wilderness, so must the Son of man be lifted up.” (Pl. IX*b*.)

[73] *Apologia* 16: “Alii humanius et verisimilius Solem credunt deum nostrum.”

[74] “Report on the Happenings in Persia,” from an 11th-cent. MS. in Munich: Wirth, ed., *Aus orientalischen Chroniken*, p. 151.

[75] “To the great God Zeus Helios, King Jesus” (p. 166, § 22).

[76] Abeghian, *Der armenische Volksglaube*, p. 43.

[77] Attis was later assimilated to Mithras, and like him was represented with the Phrygian cap (cf. fig. 9). Cumont, *Mysteries*, p. 87. According to the testimony of St. Jerome (*Ep. 58 ad Paulinum*), the birth-cave at Bethlehem was originally a sanctuary (spelaeum) of Attis-Adonis (Usener, *Weihnachtsfest*, p. 283).

[78] Cumont (pp. iv–v) says: “The two adversaries discovered with amazement, but with no inkling of their origin, the similarities which united them.”

[79] *Works*, p. 559.

[80] Trans. by Thomas and Guillemard, p. 293.

[81] Genesis 6:2.

[82] [Cf. “Kubla Khan,” *Poems*, p. 297.—EDITORS.]

[83] Byron, p. 556.

[84] Nature, the object par excellence, reflects all those contents of the unconscious which as such are not conscious to us. Many nuances of pleasure and pain perceived by the senses are unthinkingly attributed to the object, without our pausing to consider how far the object can be made responsible for them. An example of direct projection can be seen in the following modern Greek folksong:

“Down on the strand, down on the shore,
A maiden washed the kerchief of her lover …
And a soft west wind came sighing over the shore,
And lifted her skirt a little with its breath.
So that a little of her ankles could be seen,
And the seashore grew bright as all the world.”

(Sanders, *Das Volksleben der Neugriechen*, p. 81, cited in the *Zeitschrift des Vereins für Volkskunde*, XII, 1902, p. 166.) Here is a Germanic variant, from the *Edda:*

“In Gymir’s farm I saw
A lovely maid coming towards me.
With the glory of her arm glowed
The sky and all the everlasting sea.”

(Gering, p. 53, cited in the *Zeitschrift*, p. 167.) Projection also accounts for all the miraculous reports of “cosmic” events at the birth and death of heroes.

[85] Cf. the mythical heroes, who after their greatest deeds fall into spiritual confusion.

[86] The history of religion is full of such aberrations.

[87] Anah is the beloved of Japhet, the son of Noah. She deserts him for the seraph.

[88] The one invoked is actually a star. Cf. Miss Miller's "morning stars," par. 60 above.

[89] This is an attribute of the "wandering sun."

[90] The light substance of her own psyche.

[91] The bringing together of the two light substances shows their common origin: they are libido images. According to Mechthild of Magdeburg (*Das fliessende Licht der Gottheit*), the soul is compounded of "Minne" (love).

[92] Cf. the paintings by Stuck—"Sin," (pl. x), "Vice," and "Sensuality"—where a woman's naked body is encircled by a huge snake. At bottom it portrays the fear of death.

[93] Byron, p. 551.

[94] Interpretation of the products of the unconscious, for instance of a person in a dream, has a double aspect: what that person means in himself (the "objective level") and what he means as a projection ("subjective level"). Cf. "On the Psychology of the Unconscious," *Two Essays*, par. 130.

[1] Samson as a sun-god. See Steinthal, “Die Sage von Simson.” The killing of the lion, like the Mithraic bull-sacrifice, is an anticipation of the god’s self-sacrifice.

[2] Rudra, properly—as father of the Maruts (winds)—a wind- or storm-god, appears here as the sole creator-god, as the text shows. The role of creator and fertilizer naturally falls to him as a wind-god. Cf. my comments on Anaxagoras in pars. 67 and 76, above.

[3] Trans. of this and the following passages (Shvet. Up. 3. 2–4; 7, 8, 11; 12–15) based on Hume, *The Thirteen Principal Upanishads*, pp. 399–401; and Max Müller, *The Upanishads*, II, pp. 244ff.

[4] Similarly, the Persian sun-god Mithras is equipped with an immense number of eyes. It is possible that Loyola’s vision of the snake with multiple eyes is a variant of this motif. See my “On the Nature of the Psyche,” par. 395.

[5] Whoever has God, the sun, in himself is immortal like the sun. Cf. Part I, ch. 5, above.

[6] 4. 13; trans. by Purohit Swami and Yeats, p. 34. [Or, in René Guénon’s trans., *Man and His Becoming according to the Vedanta*, p. 45: “This Purusha, of the size of a thumb, is of a clear luminosity like a smokeless fire; it is the Lord of the past and of the future; it is today, and it will be tomorrow, such as it is.”—TRANS.]

[7] The light symbolism in the etymology of *φαλλός* is discussed in pars. 321f., below.

[8] *Faust*, Part II, trans. based on MacNeice, p. 177.

[9] Ibid., Part I, trans. by Wayne, p. 75, modified.

[10] *Psychology and Alchemy*, index, s.v. “coniunctio.” For a psychological account of the problem, see my “Psychology of the Transference.”

[11] Goethe is here referring to the “miracle” of the Chrysopoea, or gold-making.

[12] It is also said that, out of gratitude to him for having buried the mother of the serpents, the young serpents cleaned his ears, so that he became clairaudient.

[13] Cf. the vase painting from the Cabirion at Thebes (fig. 14), where the Cabiri are depicted in a noble as well as a caricatured form (Roscher, *Lexikon*, s.v. “Megaloi Theoi”). Cf. also Kerényi, “The Mysteries of the Kabeiroi.”

[14] Justification for calling the dactyls “Thumblings” may be found in a note in Pliny (VII, 57; Bostock and Riley trans., II, p. 225), where he says that in Crete there were precious stones, iron-coloured and shaped like a thumb, which were known as Idaean dactyls.

[15] Hence the dactylic metre in poetry.

[16] Roscher, s.v. “Daktyloi.”

[17] Varro identifies the μεγάλοι *θεοί* with the *penates*. He says the “simulacra duo virilia Castoris et Pollucis” in the harbour of Samothrace were Cabiri.

[18] Statues only a foot high, with caps on their heads, were found at Prasiae, on the Laconian coast, and at Pephnos.

[19] Next to him is a female figure labelled ΚΡΑΤΕΙΑ, orphically interpreted as “she who brings forth.”

[20] Roscher, s.v. “Megaloi Theoi.” Today an ancient Mediterranean, pre-Grecian origin is regarded as more probable. Cf. Kerényi, *Die Geburt der Helena*, p. 59.

[21] “Companion and fellow-reveller of Bacchus.” Roscher, s.v. “Phales.”

[22] Illustrated in Kerényi, “The Mysteries of the Kabeiroi,” fig. 1 (and our fig. 14).

[23] Freud, in “Notes on … a Case of Paranoia,” pp. 78f., which appeared simultaneously with Part I of this book (1st [1912] edition), makes an observation that closely parallels my own remarks concerning the “libido theory” based on the fantasies of the insane Schreber: “Schreber’s ‘rays of God,’ which are made up of a condensation of the sun’s rays, of nerve-fibres, and of spermatozoa, are in reality nothing else than a concrete representation and projection outwards of libidinal cathexes; and they thus lend his delusions a striking conformity with our theory. His belief that the world must come to an end because his ego was attracting all the rays to itself, his anxious concern at a later period, during the process of reconstruction, lest God should sever his ray-connection with him,—these and many other details of Schreber’s delusional formation sound almost like endopsychic perceptions of the processes whose existence I have assumed in these pages as the basis of our explanation of paranoia.”

[24] Cicero, *Tusculan Disputations*, Book IV, vi, 12. ([volunt ex duobus opinatis] bonis [nasci] … libidinem et laetitiam, ut sit laetitia praesentium bonorum, libido futurorum … cum libido ad id, quod videtur bonum, illecta et inflammata rapiatur … natura enim omnes ea quae bona videntur, sequuntur, fugiuntque contraria; quam ob rem simul obiecta species est cuiuspiam, quod bonum videatur, ad id adipiscendum impellit ipsa natura. Id cum constanter prudenterque fit, eiusmodi appetitionem Stoici *βούλησιν* appellant, nos appellemus voluntatem; eam illi putant in solo esse sapiente, quam sic definiunt: voluntas est quae quid cum ratione desiderat; quae autem a ratione aversa incitata est vehementius, ea libido est, vel cupiditas effrenata, quae in omnibus stultis invenitur.)

[25] Pro *Quinctio*, 14.

[26] *The War with Catiline*, VII, trans. by Rolfe, pp. 14–15.

[27] *Letter to Caesar*, XIII, trans. ibid., pp. 488–89.

[28] In this sense the word *libidine* is still commonly used in Tuscany today.

[29] *De Civitate Dei*, XIV, xv. (Est igitur libido ulciscendi, quae ira dicitur; est libido habendi pecuniam, quae avaritia; est libido quomodocumque vincendi, quae pervicacia; est libido gloriandi, quae iactantia nuncupatur. Sunt multae variaeque libidines, quarum nonnullae habent etiam vocabula propria, quaedam vero non habent. Quis enim facile dixerit, quid vocetur libido dominandi, quam tamen plurimum valere in tyrannorum animis, etiam civilia bella testantur?)

[30] Ibid. (Voluptatem vero praecedit appetitus quidam, qui sentitur in carne quasi cupiditas eius, sicut fames et sitis.)

[31] Walde, *Wörterbuch*, p. 426, s.v. “libet.” *Liberi*, ‘children,’ is grouped with *libet* by Nazari (pp. 573f.). If this is correct, then Liber, the ancient Italian god of procreation, who is most certainly connected with *liberi*, would also be related to *libet*. Libitina, the goddess of the dead, is supposed to have nothing to do with Lubentina or Lubentia (an attribute of Venus), which is related to *libet*. The name is as yet unexplained.

[32] See my “On Psychic Energy,” par. 37.

[1] [Originally *Drei Abhandlungen zur Sexualtheorie*, 1905.—EDITORS.]

[2] “Three Essays on the Theory of Sexuality,” pp. 135ff.

[3] An idea which Möbius tried to resuscitate. Fouillée, Wundt, Beneke, Spencer, and Ribot are among the more modern writers who recognize the psychological primacy of the instincts.

[4] But the same is also true of hunger. I once had a patient whom I had freed pretty well from her symptoms. One day she suddenly turned up with what looked like a complete relapse into her earlier neurosis. I was unable to explain it at first, until I discovered that she was so engrossed in a lively fantasy that she had forgotten to eat lunch. A glass of milk and a slice of bread successfully removed the “hunger afflux.”

[5] Freud (“Essays on the Theory of Sexuality,” p. 163) says: “I must first explain … that all my experience shows that these psychoneuroses are based on sexual instinctual forces. By this I do not merely mean that the energy of the sexual instinct makes a contribution to the forces that maintain the pathological manifestations (the symptoms). I mean expressly to assert that that contribution is the most important and only constant source of energy of the neurosis and that in consequence the sexual life of the persons in question is expressed—whether exclusively or principally or only partly—in these symptoms.”

[6] “Notes on a Case of Paranoia,” pp. 73ff.

[7] Ibid., p. 75.

[8] Schreber’s case, which Freud is here discussing, is not a pure paranoia. See Schreber, *Memoirs of My Nervous Illness*.

[9] Pp. 30ff. Also see “The Content of the Psychoses.”

[10] Cf. “The Psychology of Dementia Praecox,” pars. 19, 195.

[11] Ferenczi’s use of the term “introjection” denotes the exact opposite: taking the external world into oneself. Cf. his “Introjection and Transference,” p. 47.

[12] *The World as Will and Idea*, trans. by Haldane and Kemp, I, p. 145, modified.

[13] *Theogony*, 120.

[29] Here I might also mention those American Indians who believe that the first human beings arose from the union of a sword-hilt and a shuttle.

[30] Spielrein, p. 399.

[1] I have seen this pendulum movement of the head in a catatonic patient, gradually building itself up from what Freud has termed the “upward displacement” of coitus movements.

[2] *Dreams and Myths*.

[3] *Mythologische Studien*, I: *Die Herabkunft des Feuers und des Göttertranks*. (Cf. pl. XV.) A résumé of the contents is to be found in Steinthal, “Die ursprüngliche Form der Sage von Prometheus,” and in Abraham, *Dreams and Myths*.

[4] Also *mathnāmi* and *māthāyati*. The root is *manth* or *math*.

[5] Kuhn, in *Zeitschrift für υergleichende Sprachforschung*, II, p. 395 and IV, p. 124.

[6] K. Bapp, in Roscher, *Lexikon*, III, 3034.

[7] [“The one who thinks ahead” is the meaning of Prometheus now accepted as philologically correct. —EDITORS.] An interesting parallel is the Balinese fire-god, who has his seat in man’s brain and is always represented as dancing on a fiery wheel (a sun-symbol). He is regarded as the highest and most popular god of the Balinese. (P1. XIII*a*.)

[8] *Bhrigu* = *øλέγυ*, an accepted phonetic equivalence. See Roscher, III, 3034, 54.

[9] For the eagle as a fire-totem among the Indians, see Roscher, III, 3034, 60.

[10] According to Kuhn the root *manth* becomes in German *mangeln* (Eng. ‘to mangle’). *Manthara* is the stick used for churning butter. (Cf. pl. XV.) When the gods produced the *amrita* (drink of immortality: ambrosia) by churning the ocean round, they used Mt. Mandara as a churning-stick (Kuhn, *Mythologische Studien*, I, pp. 16ff.). Steinthal calls attention to Lat. *mentula*, a poetic expression for the male organ, presumably derived from *ment* or *manth*. I would add that *mentula* can be taken as a diminutive of *menta* or *mentha* (*μίνθα*), ‘mint.’ In antiquity mint was called “Aphrodite’s crown” (Dioscorides, II, 154). Apuleius calls it “mentha venerea,” because it was held to be an aphrodisiac. Hippocrates (“On Diet,” II, 54) gives it the opposite meaning: “Si quis earn saepe comedat, eius genitale semen ita colliquescit, ut effluat, et arrigere prohibet et corpus imbecillum reddit” (If one eats of it often, the genital seed becomes so liquid that it flows out; it prevents erection and renders the body weak), and according to Dioscorides (III, 34) mint is a contraceptive (cf. Aigremont, *Volkserotik*, I, p. 127). But the ancients also said: “Menta autem appellata, quod suo odore mentem feriat … mentae ipsius odor animum excitat” (It is called *menta* because it strikes the mind [*mentem*] with its smell … the smell of the mint excites the mind). This leads us to the root *ment*, as in *mens* (mind), so that the development of the parallel to *pramantha* would be complete. One might also add that a strong chin was called *mento* or *mentum*. As we know, the priapic figure of Punchinello was given a powerfully developed chin, and the pointed beards (and ears) of the satyrs and other priapic demons have a similar meaning, just as in general all the protruding parts of the body can be given a masculine, and all its concavities a feminine, significance.

[11] Cf. Kerényi, *Prometheus*, p. 36.

[12] “What is named the gulya (pudendum) means the yoni (the birthplace) of the god; the fire that is born there is called beneficent”: *Katyayanas Karmapradipa*, I, 7 (Kuhn, *Mythol. Studien*, I, p. 67). Kuhn’s suggestion of an etymological connection between G. *bohren*, ‘to bore,’ and *geboren*, ‘born,’ is very unlikely. According to him, G. *boron* (*bohren*) is primarily related to Lat. *forare* and Gr. *ϕαράω*, ‘to plough.’ He conjectures an Indo-European root **bher*, meaning ‘to bear,’ Skr. *bhar*-, Gr. *øερ*-, Lat. *fer*-, whence OHG, *beran*, ‘to bear’; Lat. *fero*, *fertilis*, and *fordus*, ‘pregnant’; Gr. *ϕορός*,

‘pregnant.’ Walde, in *Lateinisches Wörterbuch* (s.v. *ferio*), however, definitely relates *forare* to the root *bher*. Cf. the plough symbolism, below, par. 214, n. 22, and fig. 15.

[13] Weber, *Indische Studien*, I, p. 197, cited in Kuhn, p. 71.

[14] Or of mankind in general. *Vispatni* is the feminine fire-stick; *vispati*, an attribute of Agni, the masculine.

[15] Rig-Veda, III, 29, 1–3, trans. based on Griffith, II, p. 25. For wood as a mother-symbol, see Freud, *The Interpretation of Dreams*, p. 355. “The son of Ila”: Ila was the daughter of Manu, the Indian Noah, who with the help of his fish survived the deluge and then begat a new race of human beings with his daughter.

[16] Cf. Hirt, *Etymologie*, p. 348.

[17] The capitulary of Charlemagne in 942 expressly forbids “illos sacrilegos ignes quos niedfyr vocant” (those sacrilegious fires which are called Niedfyr). Cf. Grimm, *Teutonic Mythology*, II, p. 604, where similar fire ceremonies are described.

[18] *Mythologische Studien*, I, p. 43. (Pro fidei divinae integritate servanda recolat lector, quod cum hoc anno in Laodonia pestis grassaretur in pecudes armenti, quam vocant usitate Lungessouth, quidam bestiales, habitu claustrales non animo, docebant idiotas patriae ignem confrictione de lignis educere et simulacrum Priapi statuere, et per haec bestiis succurrere. Quod cum unus laicus Cisterciensis apud Fentone fecisset ante atrium aulae, ac intinctis testiculis canis in aquam benedictam super animalia sparsisset.)

[19] Preuss, “Der Ursprung der Religion und Kunst,” p. 358.

[20] Cf. Schultze, *Psychologie der Naturvölker*, pp. 161f.

[21] This primitive play leads to the phallic plough symbolism of higher cultures. ‘Αροῦν means ‘to plough’ and possesses in addition the poetic meaning of ‘to impregnate.’ The Latin *arare* means simply ‘to plough,’ but the phrase “fundum alienum arare” is the equivalent of ‘plucking cherries in your neighbour’s garden.’ There is an excellent picture of the phallic plough on a vase in [or once in] the Museo Archeologico in Florence: it portrays a row of six naked ithyphallic men carrying a plough which is represented ithyphallically (fig. 15). (Cf. Dieterich, *Mutter Erde*, pp. 107ff.) The “carrus navalis” (Carnival) of our spring festivals during the Middle Ages was occasionally a plough. (Hahn, *Demeter und Baubo*, p. 40, cited in Dieterich, p. 109.) Prof. Emil Abegg, of Zurich, has drawn my attention to the work of Meringer, “Wörter und Sachen,” which demonstrates a far-reaching fusion of libido-symbols with external materials and external activities, and lends the strongest support to the views I have outlined above. Meringer bases his argument on two Indo-European roots, **uen* and **ueneti*. IEur. **uen*, OInd. *υán, υánα*, = ‘wood.’ Agni is called *garbhas vanām*, ‘fruit of the womb of the woods.’ IEur. **ueneti* = ‘he ploughs’ (*er ackert*)–piercing the ground and tearing it up with a sharp piece of wood. The verb itself is not verified, because the primitive method of agriculture it denoted—a sort of hoeing—died out at a very early date. When a better method of tillage was discovered, the designation for the primitive ploughed field was transferred to pastureland and meadows; hence Goth. *υinja*, Gr. *νομή*, Olcel. *υin*, ‘pasture, meadow.’ Also perhaps the Icet. *Vanen*, gods of agriculture. Also IEur. **uenos*, ‘enjoyment of love,’ Lat. Venus. From the emotional significance of **uenos* comes OHG. *υinnan*, ‘to rage’; also Goth. *υens*, Gr. ἐλπίς, OHG. *wân*, ‘expectation, hope’; Skr. *υan*, ‘to want, desire’; G. *Wonne*, ‘ecstasy’; Olcel. *υinr*, ‘beloved, friend.’ From the connotation *ackern* arose G. *wohnen*, ‘to dwell,” OE. *won*, ‘dwelling,’ a transition found only in the Germanic languages. From *wohnen* comes *gewöhnen*, ‘to get accustomed, to be wont’;

OIcel. *υanr*, ‘accustomed.’ From *ackern*, again, comes *sich mühen, plagen*, ‘to take trouble or pains’; OIcel. *υinna*, ‘to work,’ OHG. *winnan*, ‘to toil or drudge’; Goth. *υinnan*, Gr. *πάσχετν*, ‘to suffer,’ *υunns, πάθημα*, ‘suffering.’ On the other hand, from *ackern* comes *gewinnen*, *erlangen*, ‘to win, attain,’ OHG. *giwinnan*; but also *verletzen*, ‘to wound,’ Goth, *υunds*. ‘Wound’ in the original sense, therefore, meant the ground torn up by hoeing. From *υerletzen* come *schlagen*, ‘to strike,’, *besiegen*; ‘to conquer’; OHG. *winna*, ‘strife’; Old Saxon *winnan*, ‘to battle.’ (Fig. 16.)

[22] The old custom of the “bridal bed” in the field, to make the field fruitful, expresses the analogy in the clearest possible way: as I make this woman fruitful, so I make the earth fruitful. The symbol canalizes the libido into cultivating and fructifying the earth. (Cf. pl. XI*b*) Cf. Mannhardt, *Wald- und Feldkulte*, I, for exhaustive evidence.

[23] Cf. “The Psychology of the Transference,” pars. 433ff.

[31] [Cf. “On the Nature of the Psyche,” pars. 397ff.—EDITORS.]

[32] Known as the “factor of extensity” in the older physics. Cf. von Hartmann, *Die Weltanschauung der modernen Physik*, p. 5.

[33] The Upanishads expound the theology of the Vedic writings and contain the speculative, theosophical part of the teachings. The Vedic writings are mostly of very uncertain age, and since for a long time they were handed down only orally, they may date back to the very remote past.

[34] The primordial universal being, a concept which in psychological terms coincides with that of the libido.

[35] The atman is thus thought of as originally bisexual or hermaphroditic. The world was created by desire: cf. Brih. Up. 1, 4, 1–3: “In the beginning this world was Self alone in the form of a Person (*purusha*). He looked round and saw nothing but himself.… He became afraid; therefore one who is alone is afraid. He thought: ‘Why should I be afraid, since there is nothing but myself?.…’ He had no joy; therefore one who is alone has no joy. He desired a second.” Then follows the description of his division into two, quoted above. Plato’s idea of the world-soul comes very close to this Indian image: “It had no need of eyes, for there was nothing outside it to be seen; nor of ears, for there was nothing outside it to be heard.… Nothing went out from or came into it anywhere, for there was nothing.” (*Timaeus*, 33, trans. based on Cornford, p. 55.)

[36] Brih. Up. 1, 4, 3–6, trans. based on Hume, pp. 81–82.

[37] I, 3–4, trans. based on Hume, p. 294.

[38] Trans. based on Hume, p. 133.

[39] Cf. Brugsch, *Religion und Mythologie der alten Aegypter*, pp. 255f., and the *Dictionnaire hiéroglyphique*.

[40] The word *swan* might also be mentioned here, because the swan sings when about to die. The swan, eagle, and phoenix occur in alchemy as related symbols. They signify the sun and thus the philosophical gold. Cf. also the verse from Heine (trans. by Todhunter):

> A swan on the lake sings lonely,
> He oars himself to and fro,
> Then faint and fainter singing,
> Sinks to his grave below.

[41] Trans. by Wayne, p. 39.

[50] The alchemists, too, were interested in this story and regarded the “fourth” as the *filius philosophorum*. Cf. *Psychology and Alchemy*, par. 449.

[51] This side of Agni points to Dionysus, who exhibits parallels both with Christian and with Indian mythology.

[52] “Whatever is liquid he created from semen, and that is soma.” Brih. Up. 1, 4, 6.

[53] The question is whether this meaning was only a secondary development. Kuhn seems to assume this; he says (*Mythol. Studien*, I, p. 18): “But, together with the meaning which the root *manth* had already developed, there also grew up in the Vedas, as a natural development of the procedure, the idea of tearing off or plucking.”

[54] For examples see Frobenius, *Das Zeitalter des Sonnengottes*.

[55] “Zur Psychologie der Brandstifter,” p. 80.

[1] Hence the beautiful name of the sun-hero Gilgamesh, “The Man of Joy and Sorrow,” in Jensen, *Das Gilgamesch-Epos*.

[6] Cf. the following chapters.

[7] Cf. Müller, *Über die phantastischen Gesichtserscheinungen*.

[8] In my later works, I therefore speak of the “collective” unconscious.

[9] “Illustrierte Halluzinationen,” pp. 69ff.

[10] In the Middle Ages, the sphinx was regarded as an “emblem” of pleasure. Thus Andrea Alciati says in his *Emblemata* (p. 801) that the sphinx signifies “corporis voluptas, primo quidem aspectu blandiens, sed asperrima, tristisque, postquam gustaveris. De qua sic … meretricius ardor egregiis iuvenes sevocat a studiis” (the pleasure of the body, attractive indeed at first sight, but very bitter and sad after you have tasted it. And … [name corrupt] says this about it: the love of whores lures young men away from lofty studies).

[11] The motif of the “helpful animals” may also be connected with the parental imago.

[12] For relevant case material, see Gerhard Adler, *Studies in Analytical Psychology*.

[13] In Hellenistic syncretism, the Echidna became a cult-symbol of mother Isis.

[14] To the extent that the shadow is unconscious it corresponds to the concept of the “personal unconscious.” Cf. “On the Psychology of the Unconscious,” *Two Essays*, par. 103.

[15] Cf. Emma Jung, “Ein Beitrag zum Problem des Animus,” pp. 296ff.

[16] Bunsen, *Gebetbuch*, No. 912, p. 789. [As trans. in the Hinkle (1916) edn.] The crown also plays a role in alchemy, perhaps as a result of cabalistic influence. (Cf. the compilation by Goodenough, “The Crown of Victory in Judaism,” pp. 139ff.) The hermaphrodite is generally represented as crowned (pl. XVIII). For the alchemical material on the crown, see “Psychology of the Transference,” par. 497, n. 14.

[17] Bunsen, No. 494, p. 271.

[18] Ibid., No. 640, p. 348. [As trans. in the Hinkle (1916) edn.]

[19] In popular German speech, incendiarism is called “putting a red cock on the roof.”

[20] In the mystery religions, there is no doubt about the identity of the divine hero with the celebrant. A prayer addressed to Hermes says: σῢ γὰρ ἐγὼ καὶ ἐγώ σῢ τὸ σὸν ὄνομα ἐμὸν καὶ τὸ ἐμὸν σὸν ὲγῴ γὰρ είμι τὸ εἴδωλὸν σον. (For you are I and I am you; your name is mine and my name is yours; for I am your image). Kenyon, *Greek Papyri in the British Museum*, p. 116, Pap. CXXII, 36–38; cited in Dieterich, *Mithrasliturgie*, p. 97. The hero as a libido-image is aptly portrayed in the head of Dionysus in Leiden (Roscher, *Lexikon*, I, 1128), where the hair is twisted up like a flame. Cf. Isaiah 10:17 (RSV): “The light of Israel will become a fire, and his Holy One a flame.” Firmicus Maternus

(*De errore*, XIX) reports that the god was greeted as the “bridegroom” and the “new light.” He quotes the saying: νυμøίε χαῐρε νυμøίε χαīρε νἐον øῶs (Hail, bridegroom, hail, new light!), and contrasts it with the Christian: “Nullum aput te lumen est, nec est aliqui qui sponsus mereatur audire: unum lumen est, unus est sponsus. Nominum horum gratiam Christus accepit” (No light is with you, nor is there anyone who deserves the name of bridegroom: there is only one light, one bridegroom. The grace of these titles is reserved to Christ).

[21] Hence the old custom of giving children the names of saints.

[22] [The term is reported from the United States. In a popular song, “Feet Up, Pat Him on the Po-po,” copyright 1952, a baby is being playfully patted on the buttocks. The term is said to occur in American Southern dialect and appears to be unrelated to German.—EDITORS.]

[23] De Gubernatis (*Zoological Mythology*) says that dung and gold are always associated in folklore, and Freud tells us the same thing on the basis of his psychological experience. Grimm reports the following magical practice: “If you want money in the house all the year round, you must eat lentils on New Year’s Day.” This singular association is very simply explained by the indigestibility of lentils, which reappear in the form of coins. In this manner one defecates money.

[24] A French-speaking father, who naturally denied that his child had any such interests, nevertheless mentioned that whenever the child spoke of “cacao” (cocoa) he always added “lit” (bed), meaning “caca-au-lit.”

[25] “Analysis of a Phobia in a Five-year-old Boy.”

[26] See the etymological connections given above.

[27] Lombroso, *Genio e Follia*, p. 141.

[28] Popular belief refuses to give up its wandering sun-heroes. Cagliostro, for instance, is said to have driven out of the city of Basel from all the gates simultaneously, with four white horses!

[29] Cf. my paper “Concerning Rebirth,” pars. 240ff.

[30] [The following passages are translated from the version used by the author, the source of which is not given. The material may also be found in Pickthall’s trans., pp. 301ff., and Rodwell’s, pp. 186ff. —TRANS.]

[31] Allah.

[32] The “two-horned.” According to the commentators this refers to Alexander the Great, who in Arabian legend plays the same kind of role as Dietrich of Bern. The two-horned refers to the strength of the sun-bull. Alexander is often found on coins with the horns of Jupiter Ammon. (Pl. XX*a*.) This is one of the identifications of the legendary ruler with the spring sun in the sign of the Ram. There can be no doubt that mankind felt a great need to eliminate everything personal and human from its heroes so as to make them equal to the sun, i.e., absolute libido-symbols, through a kind of metastasis. If we think like Schopenhauer, we shall say “libido-symbol”; but if we think like Goethe, we say “sun.” We exist because the sun sees us.

[33] Vollers, “Chidher,” pp. 234–84. This is my source for the Koran commentaries.

[34] Also with Mithras and Christ. See par 165, above.

[35] On the other hand, according to Matthew 17: 13, Elias is to be understood as John the Baptist.

[36] Cf. the Kyffhäuser legend. [Referring to the Emperor Barbarossa, who is said to sleep inside a mountain.—EDITORS.]

[37] Vollers, “Chidher.”

[38] There is also a legend that Alexander had been on the “mountain of Adam” in India, with his “minister” Khidr.

[39] These mythological equations follow the dream rule that the dreamer can be split up into several figures.

[40] John 3:30: “He must increase, but I must decrease.”

[41] Cumont, *Textes*, I, pp. 172ff.

[42] Ibid., p. 173.

[43] The parallel between Heracles and Mithras can be carried even further. Like Heracles, Mithras is an excellent archer. Judging from certain of the monuments, it would seem that not only Heracles, but Mithras too, was threatened in youth by a snake. The labours of Heracles have the same meaning as the conquest and sacrifice of the bull in the Mithraic mystery. (Cf. fig. 17.)

[44] These three scenes are represented in a row on the Klagenfurt monument, so presumably there was some dramatic connection between them. Illustrated in Cumont, *Mysteries of Mithra*, fig. 24, p. 133.

[45] Ibid. See also Roscher, II, 3048, 42ff.

[46] Cf. Frobenius, *Zeitalter des Sonnengottes*.

[47] This interpretation is still a bit mythological; to be more accurate, the fish signifies an autonomous content of the unconscious. Manu had a fish with horns. Christ was a fish, like ‘Iχθὺs, son of the Syrophoenician Derceto. Joshua ben Nun was called “son of the fish.” The “two-horned” (Dhulqarnein = Alexander) turns up in the legend of Khidr. (Cf. pl. XX*a*.)

[48] The wrapping signifies invisibility, hence to be a “spirit.” That is why the neophytes were veiled in the mysteries. (Cf. pl. IV*b*.) Children bom with a caul over their heads are supposed to be particularly fortunate.

[49] The Etruscan Tages, the boy who sprang from the freshly ploughed furrow, was also a teacher of wisdom. In the Litaolane myth of the Basuto (Frobenius, p. 105), we are told how a monster devoured all human beings and left only one woman alive, who gave birth to a son, the hero, in a cowshed (instead of a cave). Before she could prepare a bed of straw for the infant, he was already grown up and spoke “words of wisdom.” The rapid growth of the hero, a recurrent motif, seems to indicate that the birth and apparent childhood of the hero are extraordinary because his birth is really a rebirth, for which reason he is able to adapt so quickly to his heroic role. For a more detailed interpretation of the Khidr legend, see my paper “Concerning Rebirth,” pars. 240ff.

[50] Cf. Ra’s fight with the night serpent.

[51] *Gilgamesch-Epos*, I, p. 50. When revising this book, I left the above account, which is based mainly on Jensen, in its original form, though certain details could have been supplemented by the results of recent research. I refer the reader to Heidel, *The Gilgamesh Epic and Old Testament Parallels*; Schott, *Das Gilgamesch-Epos*; Speiser’s version in Pritchard, ed., *Ancient Near Eastern Texts*; and especially to Thompson’s remarkable trans., *The Epic of Gilgamish*.

[52] The difference between this and the Mithraic sacrifice is significant. The dadophors are harmless gods of light who take no part in the sacrifice. The Christian scene is much more dramatic. The inner relation of the dadophors to Mithras, of which I will speak later, suggests that there was a similar relation between Christ and the two thieves.

[53] For instance, there is the following dedication on a monument: “D[eo] I[nvicto] M[ithrae] Cautopati.” One finds that “Deo Mithrae Caute” or “Deo Mithrae Cautopati” is interchangeable with “Deo Invicto Mithrae” or “Deo Invicto,” or simply “Invicto.” Sometimes the dadophors are equipped with knife and bow, the attributes of Mithras. From this we can conclude that the three figures represent three different states, as it were, of a single person. Cf. Cumont, *Textes*, I, pp. 208f.

[54] Ibid., p. 208f.

[55] The triadic symbolism is discussed in my “A Psychological Approach to the Dogma of the Trinity,” pars. 172ff.

[56] *Textes*, I, p. 210.

[57] For the period from 4300 to 2150 B.C. So, although these signs had long been superseded, they were preserved in the cults until well into the Christian era.

[58] The Shvetashvatara Upanished (4, 6ff.) uses the following parable to describe the individual and the universal soul, the personal and tianspcrsonal atman:

Behold, upon the selfsame tree,
Two birds, fast-bound companions, sit.
This one enjoys the ripened fruit,
The other looks, but does not eat.

On such a tree my spirit crouched,
Deluded by its powerlessness,
Till seeing with joy how great its Lord,
It found from sorrow swift release.…
Hymns, sacrifices, Vedic lore,
Past, future, all by him are taught.
The Maya-Maker thinks the world
In which by Maya we are caught.
(Trans. based on Hume, pp. 403f.)

[59] Among the elements composing man, the Mithraic liturgy lays particular stress on fire as the divine element, describing it as *τό εὶς ἐμὴν κρᾶσιν θεοδώρητον* (the divine gift in my composition). Dieterich, *Mithrasliturgie*, p. 58.

[60] An illustration of the periodicity or rhythm expressed in sexuality.

[61] Reproduced not from a photograph, but from a drawing I myself made.

[62] In a myth of the Bakairi Indians, of Brazil, a woman appears who sprang from a corn mortar. A Zulu myth tells a woman to catch a drop of blood in a pot, then close the pot, put it aside for eight months, and open it again in the ninth month. She follows this advice, opens the pot in the ninth month, and finds a child inside it. (Frobenius, I, p. 237.)

[63] Roscher, *Lexikon*, II, 2733/4, s.v. “Men.”

[64] A well-known sun-animal.

[65] Like Mithras and the dadophors.

[66] This explanation is not satisfactory, because I found it impossible to go into the archetypal incest problem and all its complications here. I have dealt with it at some length in my “Psychology of the Transference.”

[67] Like Gilgamesh, Dionysus, Heracles, Mithras, etc.

[68] Cf. Graf, *Richard Wagner im Fliegenden Holländer*.

[69] Trans. based on MacNeicc, pp. 175ff. Cf. also trans. by Wayne, Part II, pp. 76ff.

[1] Freud, *The Interpretation of Dreams*, pp. 245–46, 288.

[2] Today we would call it a mandala symbol of the self.

[3] Another form of the same motif is the Persian idea of the tree of life, which stands in the lake of rain, Vouru-Kasha. The seeds of this tree were mixed with the water and so maintained the fertility of the earth. The Vendidad, 5, 17ff. (trans. by Darmesteter, p. 54), says that the waters flow "to the sea Vouru-Kasha, towards the well-watered tree, whereon grow the seeds of my plants of every kind.… Those plants I, Ahura-Mazda, rain down upon the earth, to bring food to the faithful, and fodder to the beneficent cow." Another tree of life is the white haoma, which grows in the spring Ardvisura, the water of life. Spiegel, *Erānische Altertumskunde*, I, pp. 465ff.

[4] Examples in Rank, *Birth of the Hero*.

[5] Frobenius, *Das Zeitalter des Sonnengottes*, p. 30.

[6] Ibid., p. 421.

[7] Ibid., pp. 60f.

[7a] Elsewhere in the poem we are told that he came out of the monster's right ear (like Rabelais' Gargantua, who was born from the ear of his mother).

[8] This probably means simply his soul. No moral considerations are implied.

[9] Frobenius, pp. 173f.

[10] And, of course, to the father, though the relation to the mother naturally takes first place, being on a deeper level.

[11] In the Babylonian underworld, for instance, the souls wear feather-dresses like birds. Cf. the Gilgamesh Epic.

[12] In a 14th-century copy of the gospels, at Bruges, there is a miniature which shows the "woman," beautiful as the mother of God, standing with the *lower* half of her body in a dragon.

[13] The Greek text has τὸ ἀρνίον, 'little goat, kid,' a diminutive of the obsolete áρἡν, 'ram.' (Theophrastus uses it in the sense of "young scion" of a family.) The related word äγνϛ characterizes a festival held annually in Argos in honour of Linus, where the so-called Linus lament was sung. Linus, the child of Psamathe and Apollo, was exposed at birth by his mother from fear of her father Crotopus, and was torn to pieces by dogs. In revenge Apollo sent a dragon, Poine, into the land of Crotopus, and the oracle at Delphi commanded a yearly lament by the women and maidens for the dead Linus. Honour was also paid to Psamathe. The Linus lament, as Herodotus shows (II, 79), was analogous to the lamentation for Adonis and Tammuz in Phoenicia, Cyprus, and Egypt. In Egypt, Linus was called Maneros. Brugsch thinks that the name Maneros comes from the Egyptian cry of lamentation *maa-n-chru*, 'come to the call.' The dragon Poine had the disagreeable habit of tearing children out of their mothers' wombs. All these motifs are to be found in Revelation 12: 1f., where the child of the sun-woman was threatened by a dragon and afterwards "caught up" to God. Herod's massacre of the innocents is the "human" form of this primordial image. (Cf. Brugsch, *Adonisklage und Linoslied*.) Dieterich, in *Abraxas*, refers to the parallel myth of Apollo and Python, of which he gives the following version (based on Hyginus): Python, the son of the earth and a mighty dragon, had been told by an oracle that he would be slain by the son of Leto. Leto was with child by Zeus, but Hera arranged matters so that she could only give birth where the sun did not shine. When Python

saw that Leto was near her time, he began to pursue her in order to compass her death; but Boreas carried her to Poseidon, who brought her to Ortygia and covered the island with waves. Python, unable to find Leto, went back to Parnassus, and Poseidon raised the island out of the sea. Here Leto brought forth. Four days later, Apollo took his revenge and killed Python.

[14] Rev. 21:2: "And I John saw the holy city, new Jerusalem, coming down from God out of heaven, prepared as a bride adorned for her husband."

[15] The legend of Shaktideva, related by Somadeva Bhatta, tells how the hero, after he had escaped being devoured by a huge fish (terrible mother), finally sees the golden city and marries his beloved princess. (Frobenius, p. 175.)

[16] In the apocryphal *Acts of Thomas* (2nd century), the Church is thought of as the virgin mother-wife of Christ. One of the apostle's invocations says (trans. by Walker, p. 404): "Come, holy name of Christ, which is above every name; come, power of the Most High, and perfect compassion; come, grace most high; come, compassionate mother; come, thou that hast charge of the male child; come, thou who revealest secret mysteries.…" Another invocation says: "Come, perfect compassion; come, spouse of [lit. "communion with"] man; come, woman who knowest the mystery of the chosen one; come, woman who layest bare the hidden things, and makest manifest things not to be spoken, holy dove which hath brought forth twin nestlings; come, secret mother …" (trans. by Walker, modified). Cf. also Conybeare, "Die jungfräuliche Kirche und die jungfräuliche Mutter." The connection of the Church with the mother is beyond all doubt (cf. pl. XXX*a*), also the interpretation of the mother as the spouse. The "communion with man" points to the motif of continuous cohabitation. The "twin nestlings" refers to the old legend that Jesus and Thomas were twins, which was based on the Coptic idea of Jesus and his *ka*. See the *Pistis Sophia*.

[17] Cf. Freud, *The Interpretation of Dreams*, pp. 399ff., and Abraham, *Dreams and Myths*, p. 23.

[18] Isaiah 48: 1: "Hear ye this, O house of Jacob, which are called by the name of Israel, and are come forth out of the waters of Judah …"

[19] Wirth, *Aus orientalischen Chroniken*.

[20] Cumont, *Textes*, pp. 106f.

[21] Part I, trans. by Wayne, p. 48.

[22] See my *Psychological Types*, Def. 50.

[23] Cones were sometimes used instead of columns, as in the cults of Aphrodite, Astarte, etc.

[24] For the symbolism of the finger-joint, see my remarks on the dactyls, pars. 180–84. Here I would like to add the following from a Bakairi myth: "Nimagakaniro swallowed two Bakairi finger-bones. There were many of these lying about the house, because Oka used them for tipping his arrows, and killed many Bakairi and ate their flesh. From these finger-bones, and not from Oka, the woman became pregnant." (Frobenius, p. 236.)

[25] Further evidence in Prellwitz, *Wörterbuch*.

[26] [Cf. par. 180, above.]

[27] Respectively, in I, 114: 3 and 4; in II, 33: 5, 6, 8, and 14. Trans. from Siecke, "Der Gott Rudra im Rigveda," pp. 237ff.

[28] Cf. the anima / animus theory in my later writings.

[29] *Psychology and Alchemy*, fig. 131.

[30] The fig-tree is phallic. It is worth noting that Dionysus planted a fig-tree at the entrance to Hades, in the same way that phalloi were placed on graves. The cypress, sacred to Aphrodite, the Cyprian, became an emblem of death, and used to be placed at the door of houses where people were dying.

[31] Concerning hermaphroditism, see *Psychology and Alchemy*, index, s.v. "hermaphrodite."

[32] The relationship of the son to the mother was the psychological basis of numerous cults. Robertson (*Christianity and Mythology*, p. 322) was struck by Christ's relationship to the two Marys, and he conjectures that it probably points to an old myth "in which a Palestinian God, perhaps named Joshua, figures in the changing relations of lover and son towards a mythic Mary—a natural fluctuation in early theosophy and one which occurs with a difference in the myths of Mithras, Adonis, Attis, Osiris, and Dionysus, all of whom are connected with Mother-Goddesses and either a consort or a female double, the mother and consort being at times identified."

[33] [Cf. "The Psychology of the Transference" and *Mysterium Coniunctionis*, ch. 6.—EDITORS.]

[34] *Faust*, Part II, Act 5, trans. by Wayne, p. 288.

[35] Rank (*Die Lohengrinsage*) has found some beautiful examples of this in the myth of the swan-maiden.

[36] Muther (*Geschichte der Malerei*, II, p. 355) says, in his chapter on "The First Spanish Classics": "Tieck once wrote: 'Sexuality is the great mystery of our being, sensuality the first cog in our machinery. It stirs our whole being and makes it alive and joyful. All our dreams of beauty and nobility have their source here. Sensuality and sexuality constitute the essence of music, of painting, and of all the arts. All the desires of mankind revolve round this centre like moths round a flame. The sense of beauty and artistic feeling are only other dialects, other expressions. They signify nothing more than the sexual urge of mankind. I regard even piety as a diverted channel for the sexual impulse.' This clearly expresses what one should never forget when judging the old ecclesiastical art, that the struggle to efface the boundaries between earthly and heavenly love, to blend them into each other imperceptibly, has always been the guiding thought, the most powerful impulse of the Catholic Church." To this I would add that it is hardly possible to restrict this impulse to sexuality. It is primarily a question of primitive instinctuality, of insufficiently differentiated libido which prefers to take a sexual form. Sexuality is by no means the only form of the "full feeling of life." There are some passions that cannot be derived from sex.

[37] [Cf. Jung's "Wotan."—EDITORS.]

[38] For the functional significance of the symbol, see my "On Psychic Energy," sec. III (d), on symbol formation (pars. 88ff.).

[39] *De Iside et Osiride*, in Babbitt trans., pp. 31–33.

[40] *Faust*, Part I, trans. by Wayne, p. 75, modified.

[41] Erman, *Life in Ancient Egypt*, p. 265.

[42] Here I must again remind the reader that I give the word "incest" a different meaning from that which properly belongs to it. Incest is the urge to get back to childhood. For the child, of course, this cannot be called incest; it is only for an adult with a fully developed sexuality that this backward striving becomes incest, because he is no longer a child but possesses a sexuality which cannot be allowed a regressive outlet.

[43] Frobenius, *Zeitalter*.

[44] This recalls the phallic columns set up in the temples of Astarte. In fact, according to one version, the king's wife was named Astarte. This symbol is also reminiscent of the crosses which were aptly called ἐγκόλπια (pregnant), because they had a secret reliquary inside them.

[45] Spielrein (pp. 358ff.) found numerous allusions to this motif in an insane patient. Fragments of different things and materials were "cooked" or "burnt." "The ashes can turn into a man," said the patient, and she also saw "dismembered children in glass coffins."

[46] Demeter collected the limbs of the dismembered Dionysus and put him together again.

[46a] [Cf. Harrer, *Seven Years in Tibet*, p. 61.—EDITORS.]

[47] Diodorus, III, 62 (cf. Oldfather and Geer trans., II, pp. 285ff.).

[48] *Symbolik und Mythologie der alten Völker*.

[49] *Satyricon*, ch. 71. [Cf. Heseltine trans., pp. 136–37.] ("Valde te rogo, ut secundum pedes statuae meae catellam pingas … ut mihi contingat tuo beneficio post mortem vivere.")

[50] Frobenius (*Zeitalter*, p. 393) observes that the fire-gods (sun-heroes) often have a limb missing. He gives the following parallel: "Just as the god wrenches out the ogre's arm, so Odysseus puts out the eye of the noble Polyphemus, whereupon the sun creeps mysteriously into the sky. Is there a connection between the twisting of the fire-sticks and the twisting out of the arm?" The main elements here are firstly a mutilation, and secondly a twisting movement, which Frobenius rightly connects with fire-boring. The mutilation is a castration in the case of Attis, and something similar in the case of Osiris.

[51] Cf. Aigremont, *Fuss- und Schuhsymbolik*.

[52] Brugsch, *Religion und Mythologie der alten Aegypter*, p. 354.

[53] Ibid., p. 310.

[54] Ibid., p. 310.

[55] Ibid., pp. 112ff.

[56] In Thebes the chief god Khnum, in his cosmogonic aspect, represented the wind-breath, from which the "spirit (*τνεῡμα*) of God moving over the waters" was later developed—the primitive idea of the World Parents lying pressed together until the son separates them.

[57] Brugsch, pp. 114f.

[58] Ibid., pp. 128f.

[59] Cf. the similar motif in the Egyptian "Tale of the Two Brothers": Erman, *Literature*, p. 156.

[60] Serbian folksong, mentioned in Grimm, *Teutonic Mythology*, II, p. 653.

[61] Frobenius, *Zeitalter*.

[62] *The Light of Asia*, p. 5. Cf. the birth of the Germanic king Aschanes, where there is a similar conjunction of rock, tree, and water. [Cf. par. 368, below.] Spitteler uses the same motif of the loving tree in his *Prometheus*, to describe how nature receives the "jewel" that was brought to earth. The idea is taken from Buddha's birth-story. Cf. "Om mani padme hum" (the jewel is in the lotus).

[63] Δὐγos means ‘willow,’ or indeed any pliant twig or rod. λυγόω means ‘to twist, plait, weave.’

[64] *Description of Greece*, II, 38, 2.

[65] Book XIV, 346–52, trans. by Rieu, p. 266.

[66] Curiously enough, near this point (XIV, 289–91) there is a description of Sleep sitting high up in a fir-tree: “There he perched, hidden by the branches with their sharp needles, in the form of a songbird of the mountains” (Rieu, p. 264, modified). It looks as if this motif belonged to the *hieros gamos*. Cf. also the magic net with which Hephaestus caught Ares and Aphrodite *in flagrante* and kept them there for the entertainment of the gods.

[67] See Roscher, *Lexikon*, I, 2102, 52ff.

[68] Pausanias, III, 16, 11.

[69] See “On the Psychology of the Unconscious,” pars. 123ff.

[70] Fick, *Wörterbuch*, pp. 132f.

[71] Cf. Goethe’s “sonorous day-star,” above, par. 235.

[72] This motif also includes that of the “clashing rocks” (Frobenius, p. 405). The hero often has to steer his ship between two rocks that clash together. (A similar idea is that of the biting door or the snapping tree-trunk.) In its passage the stern of the ship (or the tail of the bird) is pinched off, another reminder of the mutilation motif (twisting out the arm). The 19th-cent. German poet J. V. von Scheffel uses this image in his poem “A herring loved an oyster.” The poem ends with the oyster nipping off the herring’s head in a kiss. The doves which bring Zeus his ambrosia have to pass through the clashing rocks. Frobenius points out that these rocks are closely connected with the rocks or caves that only open at a magic word. The most striking illustration of this is a South African myth (p. 407): “You must call the rock by name and cry loudly: ‘Rock Untunjambili, open, so that I may enter.’ ” But if the rock does not want to open, it answers: “The rock will not open to children, it opens to the swallows that fly in the air.” The remarkable thing is that no human power can open the rock, only the magic word—or a bird. This formulation implies that opening the rock is an undertaking that can never be accomplished in reality, it can only be *wished*. *Wünschen* (wish) in Middle High German means the “power to do something extraordinary.” The bird is a symbol of “wishful thinking.”

[73] Grimm, II, p. 571.

[74] In Athens there was a family called Αίγειροτόμοι, ‘hewn from the poplar.’

[75] Herrmann, *Nordische Mythologie*, p. 589.

[76] Certain Javanese tribes set up their idols in trees that have been artificially hollowed out. In Persian myth, the white haoma is a celestial tree growing in the lake Vouru-Kasha, while the fish Kar-mahi circles round it and protects it from the frog of Ahriman. The tree gives eternal life, children to women, husbands to girls, and horses to men. In the Mainyo-i-Khard it is called the “preparer of the corpse” (Spiegel, *Erānische Altertumskunde*, II, p. 115).

[77] I.e., the sun-ship, which accompanies the sun and the soul over the sea of death towards the sunrise.

[78] Brugsch, p. 177.

[79] Cf. Isaiah 51 : 1: “… look unto the rock whence ye are hewn, and to the hole of the pit whence ye are digged.” Further evidence in Löwis of Menar, “Nordkaukasische Steingeburtssagen,” pp. 509ff.

[80] Grimm, I, p. 474. [For Aschanes, see also Grimm, II, p. 572—EDITORS.]

[81] *The Cross of Christ*.

[82] The legend of Seth is in Jubinal, *Mystères inédits du XV. siècle*, II, pp. 16ff. Cited in Zöckler, p. 225.

[83] The Germanic sacred trees were under an absolute taboo: no leaf might be plucked from them, and nothing picked from the ground on which their shadow fell.

[84] According to German legend (Grimm, III, p. 969), the saviour will be born when he can be rocked in a cradle made from the wood of a tree that is now but a feeble shoot sprouting from a wall. The formula runs: “A limetree shall be planted, that shall throw out two *plantschen* [boughs] above, and out of their wood is a *poie* [buoy] to be made; the first child that therein lies is doomed to be brought from life to death by the sword, and then will salvation ensue.” It is remarkable that in the German legends the heralding of the future event is connected with a *budding tree*. Christ was sometimes called a “branch” or a “rod.”

[85] Here we may discern, perhaps, the motif of the “helpful bird”–angels are really birds. Cf. the feather-dress of the “soul-birds” in the underworld. In the Mithraic sacrifice the messenger of the gods—the “angel”—was a raven; the messenger is winged (Hermes). In Jewish tradition angels are masculine. The symbolism of the three angels is important because it signifies the upper, aerial, spiritual triad in conflict with the *one* lower, feminine power. Cf. my “Phenomenology of the Spirit in Fairytales,” pars. 419ff.

[86] Frobenius, *Zeitalter*.

[87] Λαμός, ‘gorge’ = gullet; τὰ λαμία, ‘gorge’ = ravine.

[88] Note the close connection between δελφίς, ‘dolphin,’ and δελϕ[Entity]ς, ‘womb.’ In Delphi there was the Delphic gorge and the δελϕινίs, a tripod with feet in the form of dolphins. Cf. Melicertes on the dolphin and Melkarth’s sacrifice by fire.

(“Abigunt eas nymphas (matres deas, moiras) hodie rustici osse capitis equini tectis injecto, cujusmodi ossa per has terras in rusticorum villis crebra est animadvertere. Nocte autem ad concubia equitare creduntur et equos fatigare ad longinqua itinera.”) Cited from Grimm, III, p. 1246.

[93] Ibid., III, p. 1246. [From the Ynglinga Saga, 16.]

[94] Ibid.; also I, pp. 277–78: “Eat fast tonight I pray, that the Stempe tread you not.” [The “Stempe,” according to Grimm’s citations, was an indeterminate nightmare figure that terrified children by trampling on them.—EDITORS.]

[95] Herrmann, *Nordische Mythologie*, p. 64, and Fick, *Wörterbuch*, I, p. 716. [In more recent philology, a kinship of mors and μροςs is not assured. Not all the etymological conjectures in this

passage are now considered warranted.—EDITORS.]

[96] Grimm, I, p. 417.

[97] *The Gallic War*, I, 50, trans. by Edwards, pp. 82–83, slightly modified. (“Ut matres familiae eorum sortibus et vaticinationibus declararent, utrum proelium committi ex usu esset, necne.”) Cf. the mantic significance of the Delphic gorge, Mimir’s fountain, etc.

[98] Cf. p. 206, above.

[99] Plutarch, *De Iside et Osiride*, 19, 6. [Cf. Babbitt trans., pp. 48–49.]

[100] Cf. the exotic myths in Frobenius, where the belly of the whale is clearly the land of death.

[101] One of the peculiarities of the Mara is that he can only get out through the hole by which he came in. [As Mephistopheles says (Wayne trans., p. 77): “All friends and phantoms must obey a law/To use the way they entered in before.”—TRANS.] This motif evidently belongs to the rebirth myth.

[102] For the abyss of wisdom, fount of wisdom, source of fantasies, see par. 640, below.

[103] Trans. of this and following passages based on Gressmann, *Altorientalische* Texte. I, pp. *4ff.*, and E. A. Speiser, in Pritchard, *Ancient Near Eastern Texts*, pp. 62–67.

[104] “Then the Lord approached, looking for the inside of Tiamat.”

[105] Splitting of the mother; cf. Kaineus, pars. 439f., 460, 480, 638, below.

[106] *Schöpfung und Chaos*, p. 30ff.

[106a] [This and the next three passages are RSV.—TRANS.]

[107] Represented in the human sphere by the quaternity composed of father, mother, godfather, godmother, the latter two corresponding to the divine pair.

[108] I.e., the sun-god.

[109] Brugsch, *Religion und Mythologie*, pp. 161ff.

[110] Ares probably means the Egyptian god Set.

[111] [In the German text used by the author this word (*σνμμεῑξαι*) is translated as ‘to have intercourse with.’—TRANS.]

[112] Herodotus, Book II, 61ff., trans. by de Selincourt, pp. 126–27.

[113] Cited in Dieterich, *Eine Mithrasliturgie*, p. 100.

[114] The Polynesian myth of Maui says that the hero robbed his mother of her girdle. The theft of the veil in the myth of the swan-maiden means the same thing. In a myth of the Yoruba, of Nigeria, the hero simply ravishes his mother (Frobenius, *Zeitalter*).

[115] The above-mentioned myth of Halirrhothios (par. 372), who killed himself in the attempt to cut down the sacred tree of Athens, the moria, expresses the same psychology, as also does the castration of the priests who serve the Great Mother. The ascetic tendency in Christianity (e.g., Origen’s self-castration) is a similar phenomenon.

[116] Kuhn, *Mythol. Studien*, I.

[117] III, p. 1246. [Cf. par. 370, above.]

[118] Hence, in England, the custom of hanging mistletoe at Christmas. For mistletoe as the wand of life, see Aigremont, *Volkserotik und Pflanzenwelt*, II, p. 36.

[119] There is a beautiful description of the *puer aeternus* in an exquisite little book by the airman Antoine de Saint-Exupéry, *The Little Prince*. My impression that the author had a personal mother-complex was amply confirmed from firsthand information.

[120] See "The Relations between the Ego and the Unconscious," par. 103.

[121] A variation of the same motif can be found in a legend from Lower Saxony: There was once a young ash-tree that grew unnoticed in a wood. Each New Year's Eve a white knight riding upon a white horse comes to cut down the young shoot. At the same time a black knight arrives and engages him in combat. After a lengthy battle the white knight overcomes the black knight and cuts down the tree. But one day the white knight will be unsuccessful, then the ash will grow, and when it is big enough for a horse to be tethered under it, a mighty king will come and a tremendous battle will begin: i.e., end of the world. (Grimm, III, p. 960.)

[122] J. E. Lehmann, in Chantepie de la Saussaye, *Lehrbuch der Religionsgeschichte*, II, p. 185.

[123] Other examples in Frobenius, *passim*.

[124] Cf. Jensen, *Gilgamesch-Epos*, etc.

[125] This transformation of the God-image was clearly felt and expressed even in the Middle Ages (see *Psychology and Alchemy*, pars. 522ff.). The transformation had already begun in the Book of Job: Yahweh allows himself to be fooled by Satan, deals faithlessly with Job, misjudges the situation, and then has to admit his error. But although Job is obliged to bow to brute force he carries off the moral victory. In this conflict there lies a budding consciousness of the Johannine Christ: "I am the way, and the truth, and the life." [Cf. also Jung, "Answer to Job."—EDITORS.]

[126] Christ dies on the same tree against which Adam sinned. Zöckler, *The Cross of Christ*, p. 225.

[127] The skins of animals were hung on the sacrificial trees and afterwards spears were thrown at them.

[128] Trans. by Bellows, *The Poetic Edda*, p. 60.

[141] *Timaeus*, 34 B–C.

[142] See *Psychological Types*, "soul" and "soul image," Defs. 48 and 49. The *anima* is the archetype of the feminine and plays a very important role in a man's unconscious. See "The Relations between the Ego and the Unconscious," pars. 296ff. I have discussed the world-soul of Plato's *Timaeus* in "A Psychological Approach to the Dogma of the Trinity," pars. 186ff.

[143] See my remarks ibid.

[144] *Timaeus*, 36 B–E.

[145] Zöckler, p. 24.

[146] The "left eye" is the moon. See below, par. 487: the moon as the gathering-place of souls (cf. fig. 31).

[147] Brugsch, *Religion und Mythologie der alten Aegypter*, pp. 281ff.

[148] Cf. the retreat of Ra on the heavenly cow (par. 351). In one of the Hindu rites of purification the penitent has to crawl through an artificial cow in order to be reborn.

[149] Cited in Schultze, *Psychologie der Naturvölker*, p. 338.

[150] Brugsch, pp. 290ff.

[151] This formula is not surprising, since it is the primitive man in us whose animal forces appear in religion. From this point of view what Dieterich says in his *Mithrasliturgie* (p. 108) is especially significant: "The old thoughts coming from below gain a new strength in the history of religion. The revolution from below creates new life in the old indestructible forms."

[152] *Sermo Suppositus* 120, 8. ("Procedit Christus quasi sponsus de thalamo suo, praesagio nuptiarum exiit ad campum saeculi; … pervenit usque ad crucis torum et ibi firmavit ascendendo coniugium; ubi cum sentiret anhelantem in suspiriis creaturam commercio pietatis se pro coniuge dedit ad poenam; et copulavit sibi perpetuo iure matronam.") The "woman" is the Church. (Cf. pl. XXX*a*.)

[153] Dispute between Mary and the Cross," in Morris, *Legends of the Holy Rood*, pp. 134–35.

[154] [In modern English: "Tree unkind thou shalt be known, my son's stepmother I call thee: Cross, thou holdest him so high in height, my fruit's feet I may not kiss; Cross, I find thou art my foe, thou bearest my bird, beaten blue … / Lady, to thee I owe honour, thy bright palms now I bear; thy fruit flourisheth for me in blood colour …; that blossom bloomed up in thy bower. And not for thee alone, but to win all this world. / Thou art crowned Heaven's queen, through the burden that thou barest. I

am a Relic that shineth bright; men desire to know where I am. At the parliament [of the judgment day] shall I be, on doomsday appear suddenly; at the parliament I shall put up complaint, how a Maiden's fruit on me began to die."]

[155] In Greece the stake on which criminals were executed or punished was known as the "hecate."

[156] The incest-taboo is part of a complicated whole, i.e., the marriage class system, the most elementary form of which is the cross-cousin marriage. This is a compromise between the endogamous and exogamous tendencies. See my "Psychology of the Transference," pars. 433ff.

[157] Diez, *Wörterbuch der romanischen Sprachen*, p. 168.

[158] Part I, trans. by Wayne, p. 66.

[159] Ibid., p. 54.

[1] The goddess of the underworld, Hecate, is sometimes represented with a horse's head. Demeter and Philyra, wishing to escape the attentions of Kronos or Poseidon, change themselves into mares. Witches can easily change into horses, hence the nail-marks of the horseshoe may be seen on their hands. The devil rides on the witch's horse (fig. 29), and priests' housekeepers are changed after death into horses. (Negelein, "Das Pferd im Seelenglauben und Totenkult," XI, pp. 406ff.)

[2] In the same way the legendary king Tahmurath rides on Ahriman, the devil.

[3] The she-ass and her foal might derive from astrology, since the zodiacal sign Cancer, which rules at the summer solstice, was known in antiquity as the ass and its young. Cf. Robertson, *Christianity and Mythology*, p. 368.

[4] The image is probably taken from the Roman circus. The Spanish matador still has an heroic significance. Cf. Suetonius, *Opera*, trans. by Rolfe, II, pp. 40–43: "They drive wild bulls all over the arena, leaping upon them when they are tired out and throwing them to the ground by the horns."

[5] This legend is part of the astrological aspect of the Jewish god (Saturn), which I would rather not discuss here.

[6] Cf. the exhaustive account of this theme in Max Jähns, *Ross und Reiter*.

[7] Wotan is one-eyed. Cf. Schwartz, *Indogermanischer Volksglaube*, pp. 164ff.

[8] Odin gives this riddle to King Heidhrekr (Hervarar Saga). Schwartz, p. 183.

[18] Evidence for the centaurs as wind-gods may be found in Meyer, *Indogermanische Mythen*, II, pp. 4i7ff.

[19] Schwartz, p. 447.

[20] *Opera*, XXXVI, 6. Cited in Cumont, *Mysteries of Mithra*, p. 25.

[21] This is a special motif which must have something typical about it. A schizophrenic patient ("The Psychology of Dementia Praecox," par. 290) declared that her horses had "half-moons" under their skins "like little curls." The *I Ching* is supposed to have been brought to China by a horse that had the magic signs (the "river map") on his coat. The skin of the Egyptian sky-goddess, the heavenly cow, is dotted with stars. (Cf. fig. 25.) The Mithraic Aion bears the signs of the zodiac on his skin (cf. pl. XLIV).

[22] This is the result of a world catastrophe. In mythology, too, the blossoming and withering of the tree of life denotes the turning point, the beginning of a new age.

[23] Br. Up., i, i, trans. by Hume, p. 73, modified.

[24] Cumont, *Textes*, I, p. 76.

[25] Therefore the lion was killed by Samson, who afterwards harvested honey from the carcass. Summer's end is autumn's plenty. The legend of Samson is a parallel of the Mithraic sacrifice. Cf. Steinthal, "Die Sage von Simson," pp. 129ff.

[28] Spiegel, *Erānische Altertumskunde*, II, p. 193. In the treatise *Περὶ φύσεως*, which is ascribed to Zoroaster, Ananke, the goddess of fate, is symbolized by air. (Cumont, p. 87.)

[29] Spielrein's patient (p. 394) speaks of horses who eat human beings and even exhumed corpses.

[30] Negelein, p. 416. Cf. my remarks on the three-legged horse in "The Phenomenology of the Spirit in Fairy Tales" (1954/55 edn., p. 28).

[31] [Cf. *Psychology and Alchemy*, par. 535—EDITORS.]

[32] Act IV, scene III.

[33] A clear case of identity with the anima. The first carrier of the anima-image is the mother.

[34] Because her fantasy is not a creation she consciously willed and formed, out an involuntary product.

[35] See par. 48, above.

[36] The heart of the mother of God is pierced by a sword, "that the thoughts of many hearts may be revealed." Luke 2:35.

[37] Wegener, *Leben der Dienerin Gottes Anna Catherina Emmerich*, p. 63.

[38] [German 'heart' and 'pain.'—EDITORS.]

[39] *Sutta-Nipata*, trans. by Fausböll, p. 146.

[40] Theocritus (27, 29), calls the pangs of birth the "darts of Eileithyia," as though the pain came from outside. [Cf. Edmonds trans., p. 337.] The same comparison is used for desire in Ecclesiasticus 19:2: "As an arrow that sticketh in the flesh of the thigh, so is a word in a fool's belly." That is to say, it gives him no peace until it is out.

[41] This fact, however, does not prove that the experience of the *unio mystica* is exclusively erotic in origin. The upsurge of eroticism only proves that the canalization of libido has not been entirely successful, with the result that clear traces of the original form remain behind unassimilated.

[42] Wegener, 77ff.

[43] Apuleius (*The Golden Ass*, II, 31, in Graves trans., p. 59) makes drastic use of the bow-and-arrow symbolism: "Since the first of Cupid's sharp arrows lodged in my heart this morning, I have been

standing to arms all day, and now my bow is strung so tight that I’m afraid something will snap if the Advance isn’t sounded pretty soon.”

[44] And like the plague-bringing Apollo. In OHG., ‘arrow’ is *strala*.

[45] Herodotus, IV, 81. [Cf. Selincourt trans., p. 269.]

[46] Cf. Roscher, *Lexikon*, III, 894ff., S.V. “Kaineus.”

[47] Pindar, fr. 166f. Spielrein’s patient (p. 371) also had this idea of splitting the earth: “Iron is used for boring into the earth—With iron you can make men—The earth is split, burst open, man is divided—Man is cut up and put together again—In order to put a stop to being buried alive, Jesus told his disciples to bore into the earth.” The motif of “splitting” is of world-wide significance. The Persian hero Tishtriya, taking the form of a white horse, split open the rain-lake and so made the earth fruitful. He is also called Tir, ’arrow.’ He is sometimes represented as feminine, with bow and arrow. (Cumont, *Textes*, I, p. 136.) Mithras shoots water from the rock with his arrow in order to stop the drought. On Mithraic monuments the knife, otherwise used as the sacrificial instrument for killing the bull, is sometimes found stuck in the earth. (Ibid., pp. 115, 116, 165.)

[48] *Metamorphoses*, trans. by Miller, II, pp. 216–17, modified.

[52] Spielrein’s patient said that she too had been shot by God three times—“then came a resurrection of the spirit.”

[53] “Between Birds of Prey.” (*Werke*, VIII, p. 414.) [Cf. trans. in *Ecce Homo and Poetry* by Ludovici, Cohn, et al., p. 179.]

[54] Trans. by Meltzner, p. 75.

[55] *Faust*, Part II, “The Mothers.”

[56] This is mythologically represented in the legend of Theseus and Peirithous, who wanted to abduct Persephone from the underworld. They entered a chasm in the grove of Colonus and descended into the bowels of the earth. When they got down below they wished to rest a little, but found they had grown fast to the rocks and could not rise. In other words, they remained stuck in the mother and were lost to the upper world. Later Theseus was rescued by Heracles, who appeared in the role of the death-conquering hero. The Theseus myth is therefore a representation of the individuation process.

[57] When the Greeks set out on their expedition to Troy, they wished, like the Argonauts and Heracles before them, to offer sacrifice on the altar of Chryse, a nymph who lived on an island of the same name, in order to secure a happy end to their voyage. Philoctetes was the only one among them who knew the way to her hidden shrine. But there the disaster befell him which is described above. Sophocles treats of this episode in his *Philoctetes*. We learn from a scholiast that Chryse offered the hero her love, but, on being scorned, cursed him. Philoctetes, like his forerunner Heracles, is the prototype of the wounded and ailing king, a motif that is continued in the legend of the Grail and in alchemical symbolism (cf. *Psychology and Alchemy*, pars. 491ff. and fig. 149).

[58] Roscher, *Lexikon*, 2318, 15ff., S.V. “Philoctetes.”

[59] When the Russian sun-hero Oleg approached the skull of the slain horse, a snake darted out and bit him in the foot, so that he fell sick and died. And when Indra, in the form of Shyena the falcon, stole the soma drink, Krishanu the herdsman wounded him in the foot with an arrow. De Gubernatis, *Zoological Mythology*, II, pp. 181–82.

[60] Like the Grail king who guards the chalice, symbol of the mother. The myth of Philoctetes comes from the wider context of the Heracles cycle. Heracles had two mothers, the helpful Alcmene and the vengeful Hera, from whose breast he drank the milk of immortality. Heracles conquered Hera's serpents while yet in the cradle; that is, he freed himself from the grip of the unconscious. But from time to time Hera sent him fits of madness, in one of which he killed his own children. This is indirect proof that she was a lamia. According to one tradition, Heracles perpetrated this deed after refusing to perform the labours for his taskmaster Eurystheus. As a consequence of his hanging back, the libido that was ready for the work regressed to the unconscious mother-imago, and this resulted in madness. In this state he identified with the lamia and killed his own children. The Delphic oracle told him that he was named Heracles because he owed his immortal fame to Hera, who through her persecutions drove him to his great deeds. It is evident that the great deed really means overcoming the mother and thus winning immortality. His characteristic weapon, the club, he cut from the maternal olive-tree. Like the sun, he possessed the arrows of Apollo. He conquered the Nemean lion in its cave, whose meaning is the "grave in the mother's womb" (see the end of this chapter). Then follows the fight with the Hydra (cf. also fig. 17) and his other deeds, which were all wished on him by Hera. All of them symbolize the fight with the unconscious. At the end of his career, however, he became the slave of Omphale (*ὀμφαλός* = 'navel') as the oracle prophesied; that is, he had to submit after all to the unconscious.

[61] This and the following passages trans. from Erman, pp. 265–67, modified.

[62] How concretely this mythologem is taken on the primitive level can be seen from the description in Gatti, *South of the Sahara* (pp. 226ff.), of a medicine-woman in Natal who had a twenty-foot boa constrictor as her familiar.

[63] The myth of Hippolytus has similar ingredients: His step-mother Phaedra falls in love with him, he repulses her, she accuses him of violation before her husband, who calls upon Poseidon to punish Hippolytus. Whereupon a monster comes out of the sea; Hippolytus' horses take fright and drag him to death. But he is restored to life by Aesculapius, and the gods convey him to the grove of the wise nymph Egeria, the counsellor of Numa Pompilius.

[64] Cf. Heracles and Omphale.

[65] The case was written up at the time by Freud in a very unsatisfactory way after I had drawn his attention to the book. See "Psycho-Analytical Notes upon an Autobiographical Account of a Case of Paranoia."

[65a] [Cf. especially "A Study in the Process of Individuation."—EDITORS.]

[66] Spielrein's patient was also sick from "snake poison" (p. 385). Schreber said he was infected by "corpse poison," that "soul murder" had been committed on him, etc. (pp. 54ff.).

[67] "Between Birds of Prey." (*Werke*, VIII, p. 414.) [Cf. trans. in *Ecce Homo and Poetry*, by Ludovici et al., p. 179.]

[68] Spielrein's patient (p. 336) uses the same images; she speaks of the "rigidity of the soul on the cross," of "stone figures" who must be "melted."

[69] Gurlitt says: “The carrying of the bull [pl. XLIX*a*] is one of the difficult δθλα which Mithras performed for the redemption of mankind; it corresponds roughly—if we may compare small things with great—to Christ carrying the cross.” (“Vorbericht über Ausgrabungen in Pettau”; cited in Cumont, *Textes*, I, p. 172.)

[70] Robertson (*Christianity and Mythology*, p. 401) makes an interesting contribution to the symbol of carrying the cross: Samson carried the gate-posts of the city of Gaza, and died between the pillars of the temple of the Philistines. Heracles carried his pillars to Gades (Cadiz), where, according to the Syrian version of the legend, he died. The Pillars of Hercules mark the point in the west where the sun sinks into the sea. “In ancient art,” says Robertson, “he was actually represented carrying the two pillars in such a way under his arms that they form exactly a cross. Here, probably, we have the origin of the myth of Jesus carrying his own cross to the place of execution. Singularly enough, the three Synoptics substitute for Jesus as cross-bearer one Simon, a man of Cyrene. Cyrene is in Libya, the legendary scene, as we saw, of the pillar-carrying exploit of Heracles; and Simon (Simeon) is the nearest Greek name-form to Samson.… In Palestine, Simon, or Sem, was actually a god-name, representing the ancient sun-god Shemesh, identified with Baal, from whose mythus that of Samson unquestionably arose; and the God Simon was especially worshipped in Samaria.” I give Robertson’s words here, but must emphasize that the etymological connection between Simon and Samson is exceedingly questionable. The cross of Heracles may well be the sun-wheel, for which the Greeks used the symbol of the cross. The sun-wheel on the bas-relief of the Little Metropolis in Athens actually contains a cross which looks very like the Maltese cross. (Cf. Thiele, *Antike Himmelsbilder*, p. 59.) Here I must refer the reader to the mandala symbolism in *Psychology and Alchemy* and in *The Secret of the Golden Flower*.

[71] The legend of Ixion (pl. XLVI*b*), who was “crucified on the four-spoked wheel” (Pindar), says the same thing. Ixion first murdered his father-in-law but was afterwards absolved from guilt by Zeus and blessed with his favour. Ixion, with gross ingratitude, then tried to seduce Hera, but Zeus tricked him by getting the cloud-goddess Nephele to assume Hera’s shape. From this union the centaurs are said to have sprung. Ixion boasted of his deed, but as a punishment for his crimes Zeus cast him into the underworld, where he was bound on a wheel that turned forever in the wind.

[72] Cited from the *Zentralblatt für Psychoanalyse*, II (1912), p. 365 [in a note by W. Stekel, quoting extracts from Hauptmann’s published diary.—EDITORS].

[1] [See p. 394, n. 1, concerning this chapter heading.—EDITORS.]

[2] Probably an allusion to the Andes and the Rocky Mountains. [Note by Flournoy.]

[3] *Septem tractatus aurei* (1566), ch. IV, p. 24. ("Ego vinctus ulnis et pectori meae matris et substantiae eius continere et quiescere meam substantiam facio, et invisibile ex visibili compono.") The subject of this sentence (Mercurius or the arcane substance) can be interpreted as inner fantasy activity. The quotation naturally has a much more comprehensive, anagogic meaning in the original text, while making use of the primordial image of relationship to the mother. Cf. *Psychology and Alchemy*, par. 141.

[4] See "On the Nature of the Psyche," Sec. VII.

[5] Cf. Harding, *The Way of All Women*.

[6] Another source mentioned by Miss Miller, namely Samuel Johnson's *History of Basselas* (1759), was not available to me at the time of writing.

[7] Cf. Horus's sacrilegious assault on Isis, which so horrifies Plutarch (*De Iside et Osiride*, trans. by Babbitt, V, pp. 48–49): "If they hold such opinions and relate such tales about the blessed and imperishable (in accordance with which our concept of the divine must be framed), as if such deeds and occurrences actually took place, then 'Much need there is to spit and cleanse the mouth,' as Aeschylus has it."

[8] *Human, All Too Human*, trans. by Zimmern and Cohn, II, pp. 4f., modified.

[9] Ibid., II, p. 6.

[10] [Published 1855. It is based on American Indian legend, drawing its sources mainly from the work of Henry Rowe Schoolcraft, a pioneer of American Indian ethnology. Hiawatha was, historically, a 16th-century Iroquoian leader, but the terminology and legendary material of the poem are Algonquian. (Cf. *Standard Dictionary of Folklore*, s.v. "Hiawatha.") Longfellow derived the metre from the Finnish epic Kalevala.—EDITORS.]

[11] On the motif of the "friend," see my paper "Concerning Rebirth," pars. 240ff.

[12] The figure of Gitche Manito can be regarded as a kind of Original Man (Anthropos).

[13] Budge, *Coptic Apocrypha in the Dialect of Upper Egypt*, p. 243.

[17] Humboldt, *Cosmos*, I, p. 99, n.

[18] Porphyry (*De antro nympharum*, p. 190), says that, according to Mithraic doctrine, the ancients "very reasonably connected winds with souls proceeding into generation, and again separating themselves from it [i.e., at birth and death], because, as some think, souls attract spirit, and have a pneumatic nature."

[19] In the Mithraic liturgy, the generating breath of the spirit comes from the sun, presumably from the "sun-tube" (cf. Part I, pars. 149–54). There is a similar idea in the Rig-Veda, where the sun is

called "one-footed." Cf. the Armenian prayer that the sun may let its foot rest on the face of the worshipper. Abeghian, *Der armenische Volksglaube*, p. 43.

[20] [The Haida myth upon which the depiction in fig. 32 is based tells of a woman who offended the moon and was removed thence, together with her water-pail and a berry-bush she grasped in trying to save herself. Cf. Swanton, *Ethnology of the Haida*, p. 142.—EDITORS.]

[21] Firmicus Maternus (*Matheseos libri octo*, I, 5, 9, in edn. of Kroll, etc., pp. 16–17): "Cui [animo] descensus per orbem solis tribuitur, per orbem vero lunae praeparatur ascensus" (The soul is believed to descend through the disc of the sun, but its ascent is prepared through the disc of the moon). Lydus (*De mensibus*, IV, 1, 2, in Wunsch edn., p. 66) reports the saying of the hierophant Praetextus that Janus "sends the diviner souls to the lunar throng." Epiphanius (*Adversus octoginta haereses*, LXVI, 52): "the disc of the moon is filled with souls." It is the same in exotic myths. Cf. Frobenius, *Zeitalter*, pp. 352ff.

[22] Waitz, *Anthropologie der Naturvölker*, II, p. 342.

[23] Trans. by Untermeyer, p. 78.

[25] *The Light of Asia*, Book I, p. 2. The elephant is shown penetrating Maya's side with his trunk. According to a medieval tradition, Mary's conception of Jesus took place through the ear.

[26] *Cf. Psychology and Alchemy*, pars. 518ff.

[27] *The Myth of the Birth of the Hero*.

[28] The rapid death of the mother, or separation from the mother, is an essential part of the hero-myth. The same idea is expressed in the myth of the swan-maiden, who flies away again after the birth of the child, her purpose fulfilled.

[29] The bear is associated with Artemis and is thus a "feminine" animal. Cf. also the Gallo-Roman Dea Artio (pl. L*b*), and my "Psychological Aspects of the Kore," pars. 340ff.

[30] Cf. Layard, "The Incest Taboo and the Virgin Archetype," pp. 254ff.

[31] Karl Joël (*Seele und Welt*, pp. 153f.) says: "Life is not lessened in artists and prophets, but is enhanced. They are our guides into the Lost Paradise, which only becomes Paradise through being found again. It is not the old, mindless unity that the artist strives for, but a felt reunion; not empty unity, but full unity; not the oneness of indifference, but the oneness attained through differentiation. … All life is a loss of balance and a struggling back into balance. We find this return home in religion and art."

[32] By "primal experience" is meant that first human differentiation between subject and object, that first conscious objectivation which is psychologically inconceivable without an inner division of the human animal against himself—the very means by which he separated himself from the oneness of nature.

[33] *Seele und Welt*.

[34] Crèvecoeur, *Voyage dans la haute Pensylvanie*, I, p. 362. I heard much the same thing from a chief of the Pueblo Indians, who told me the Americans were mad because they were so restless.

[35] The dragons of Greek (and Swiss) legend also live in or near springs or other waters, of which they are often the guardians. This links up with the motif of the "struggle by the ford."

[36] Where one can wade through the water—cf. what we said above about the encircling and devouring motif. Water as an obstacle in dreams seems to indicate the mother, or a regression of libido. Crossing the water means overcoming the obstacle, i.e., the mother as symbol of man's longing for the condition of sleep or death. See my "On the Psychology of the Unconscious," pars. 132ff.

[37] Cf. the Attic custom of stuffing a bull in spring; also the Lupercalia, Saturnalia, etc.

[38] This fact led my pupil Dr. Spielrein to develop her idea of the death-instinct, which was then taken up by Freud. In my opinion it is not so much a question of a death-instinct as of that "other" instinct (Goethe) which signifies spiritual life.

[39] An essential part of this disposition is the *a priori* existence of "organizing factors," the archetypes, which are to be understood as inborn modes of functioning that constitute, in their totality, man's nature. The chick does not learn how to come out of the egg—it possesses this knowledge *a priori*.

[40] *Liber Azoth*, ed. by Sudhoff, XIV, p. 576.

[41] Trans. by Friedlander, ch. 10, p. 69.

[42] In the Gilgamesh Epic, too, immortality is the goal of the hero.

[43] Cf. "The Visions of Zosimos," par. 86: "… by compelling necessity I am sanctified as a priest and now stand in perfection as a spirit." (Also in Berthelot, *Alch. grecs*, III, i, 2.)

[44] Cf. my "Phenomenology of the Spirit in Fairytales," pars. 400ff.

[45] Sepp, *Das Heidentum und dessen Bedeutung für das Christentum*, III, p. 82, cited in Drews, *The Christ Myth*, p. 116, n.

[46] An excellent example of this is the love-story of Sophia, reported by Irenaeus, *Adversus Haereses*, Roberts and Rambaut trans., I, p. 7.

[47] *Almus* means 'nourishing, refreshing, kind, bountiful.' (Cf. pl. XIV*a*.)

[48] Bernardino de Sahagún, *General History of the Things of New Spain*, Book 3, pp. 5f. [Cf. "Transformation Symbolism in the Mass," pars. 339ff.]

[49] For the "friend," see my discussion of Khidr in "Concerning Rebirth," pars. 240ff. [Cf. also *Psychology and Alchemy*, pars. 155–57. The account of Khidr is in the Koran, Sura 18.–EDITORS.]

[50] Frazer, *The Golden Bough*, IV, p. 297.

[51] "You sought the heaviest burden, and found yourself."—Nietzsche. [Cf. par. 459, above.]

[52] Christ successfully resisted the temptations of the power-devil in the wilderness. Whoever prefers power is therefore, in the Christian view, possessed by the devil. The psychologist can only agree.

[53] Hebrews 10:31; Origen, *In Jeremiam*, 3, 3 [see James, *Apocryphal New Testament*, p. 35]; Hebrews 12:29; Revelation 5:5; Genesis 49:9.

[54] I Peter 5: 8.

[55] It is an almost invariable feature of the dragon-whale myth that the hero begins to feel very hungry in the belly of the monster and cuts off bits of the innards for food. He is, in fact, inside the "nourishing mother." His next act is to make a fire in order to get out of the monster. In an Eskimo

myth from the Bering Strait, the hero finds a woman in the whale's belly, who is its soul. Cf. Frobenius, *Zeitalter*.

[56] The carrying of the tree (θαλλοφορία), as we know from Strabo, played an important part in the cults of Dionysus and Ceres (Demeter).

[57] A Pyramid text dealing with the arrival of the dead Pharaoh in heaven describes how he overpowers the gods in order to assimilate their divine nature and become their lord. "His servants have caught the gods with lassoes, and have taken them and dragged them away, they have bound them, they have cut their throats and taken out their entrails, they have cut them up and cooked them in hot cooking-pots. And the king consumes their strength and eats their souls. He devours the great gods for breakfast, the middle gods for dinner, and the little gods for supper … The king devours everything that comes his way. He consumes all things in his greed, and his magic power becomes greater than all magic power. He becomes an heir of power greater than all heirs, he becomes the lord of heaven, he eats all the crowns and bracelets, he eats the wisdom of all the gods." (Wiedemann, in *Der Alte Orient*, II (1900), p. 50; i.e., no. 2, p. 18.) This ravenous hunger (βουλιμία) aptly describes man's repressive instinctuality at the stage where the parents have a predominantly nutritive significance.

[58] The sacrifice of Dionysus-Zagreus and the eating of the sacrificial meat produced the νὲος Διόνυσος, the resurrection of the god, as is apparent from the Cretan fragment of Euripides quoted by Dieterich (*Mithrasliturgie*, p. 105):

àϒνὸν δὲ βίον τείνων, ἐξ οὗ
Διός Ἰδαίου μύστης ϒενόμην
καί νυκτιπόλου Ζαγρέως βούτας
τοὺς ὠμοφάγους δαῖτας τελέσας.

(Leading a holy life since I have been initiated into the mysteries of Idaean Zeus, and have eaten raw the flesh of Zagreus, the night-roaming shepherd.) Through eating the raw flesh the initiates assimilated the essence of the god. Cf. the Mexican rite of Teoqualo, "god-eating," in my "Transformation Symbolism in the Mass," pars. 339ff.

[59] Judges 14: 14.

[60] *Metamorphoses*, IV, 18–20, trans. by Miller, I, p. 181.

[61] Orphic Hymn 46, trans. by Taylor, p. 100. Cf. Roscher, *Lexikon*, S.V. "Iakchos."

[62] An exact parallel is the legend of Izanagi, the Japanese Orpheus, who followed his dead wife down to the underworld and begged her to return with him. She was willing to do so but besought him not to look at her. Izanagi then made a light with one of the "masculine" prongs of his comb and immediately lost his wife. (Frobenius, *Zeitalter*, p. 343.) For "wife" read "mother," "anima," "unconscious." Instead of the mother, the hero brings back fire, just as Hiawatha produced the corn, Odin the runes, etc.

[63] Cited from De Jong, *Das antike Mysterienwesen*, p. 22. [For Asterius, bishop of Amasea, see his *Homilia X in sanctos martyres*, in Migne, *P.G.*, vol. 40, 323–24.—EDITORS.]

[64] A son-lover from the Demeter myth was Iasion, who lay with Demeter on a thrice-ploughed cornfield, and was struck with lightning by Zeus. (Ovid, *Metamorphoses*, IX.)

[65] εἰς τόπον ἀνήλιον.—*De Iside et Osiride*, 369. [Cf. Babbitt trans., V, p. 113.]

[66] εἰς χωρίον ἔρημον καὶ ὑλῶδες καί ἀνήλιον.—*Menippus*. [Cf. Harman trans., IV, p. 89.]

[67] κατάβασις εἰς ἄντρον.—Oratio V. [Cf. Wright trans., I, p. 463.] Here cited from Cumont, *Textes*, I, p. 56.

[68] *Protrepticus*. [Cf. the Wilson trans., I, p. 13.] ‘Ἐνήστευσα, ἒπιον τὸν κυκεῶνα, ἒλαβον ἐκ κίστης, ὲργασάμενος άπεθέμην εὶς κάλαθον καὶ ἐκ καλάθου εἰς κίστην. Instead of ἐργασάμενος Lobeck suggests ἐγγευσάμενος, ‘after I have tasted.’ Dieterich (*Mithras-liturgie*, p. 125) keeps to the traditional reading.

[69] Dieterich, pp. 123ff.

[70] As, for instance, in a Campana bas-relief in Caetani-Lovatelli, *Antichi monumenti*, Pl. IV, fig. 5. [The “Lovatelli urn” is described and depicted, also, in this work.—EDITORS.] Similarly, the Verona Priapus holds a basket filled with phalli. (Cf. pl. LXI*b*.)

[71] Wilson trans., I, p. 17.

[72] “ΣΚΙΡΑ,” p. 124.

[73] The mother is the giver of nourishment. St. Dominic was nourished at the breasts of the mother of God, and so was the adept in alchemy. The sun-woman of the Namaquas, of South Africa, is made of bacon-fat. Cf. the megalomaniac ideas of my patient: “I am Germania and Helvetia made of exclusively sweet butter” (“Psychology of Dementia Praecox,” par. 201).

[74] *Protrepticus*, II, 16. Cited in Dieterich, p. 123. (ἀ διὰ κόλπου θεός, δρὰκων δέ έστι καὶ οὖτος διελκόμενος τοῦ κόλπου τῶν τελουμέων.)

[75] *Adversus Gentes*, V, 21. (“aureus coluber in sinum demittitur consecratis et eximitur rursus ab inferioribus partibus atque imis.”) [Cf. Bryce and Campbell trans., p. 244.]

[76] Cf. Nietzsche’s images: “thyself pierced through,” “working in thine own pit,” etc. [pars. 446 and 459, above]. A prayer to Hermes in a papyrus says: έλθέ μοι, κὑριε Ἑρμῆ, ώς τὰ βρέφη εὀς τὰς κοιλίας τῶν γυναικῶν (Come to me, O Hermes, as children come into the womb of women).—Kenyon, *Greek Papyri in the British Museum*, I, p. 116: Pap. CXXII, 11. 2ff.; cited in Dieterich, p. 97.

[77] *ἒϒεκε Πότνια κοῦρον, Βριμὼ Βριμόν*.—Brimo = Demeter. Jupiter is said to have had intercourse with his mother Deo (Demeter) in the form of a bull. This made the goddess so furious that, to pacify her, he pretended to castrate himself. Roscher, *Lexikon*, IV, s.v. “Sabazios,” 253, 5.

[78] De Jong, *Das antike Mysterienwesen*, p. 22.

[79] The corn-god of antiquity was Adonis, whose death and resurrection were celebrated annually. He was the son-lover of the mother, for the corn is the son and fructifier of the earth’s womb, as Robertson (*Christianity and Mythology*, p. 318) has already pointed out.

[80] Trans. by Evelyn-White, p. 323.

[80a] [Jung’s maternal grandfather.]

[81] [As trans. in the Hinkle edn. (1916), p. 378.]

[82] (“Nocte quadam simulacrum in lectica supinum ponitur, et per numeros digestis fletibus plangitur; deinde cum se ficta lamentatione satiaverint, lumen infertur: tunc a sacerdote omnium qui flebant fauces unguentur, quibus perunctis sacerdos hoc lento murmure susurrat: *Θαρρεῑτε μὑσται τοῡ θεοῡ*

σεσωσμένου, ἒαται ϒὰρ ήμῑν ἐκ πόνων σωτηρία”).—*De errore profanarum religionum*, XXII, I, p. 57.

[83] Dieterich, ρ. 167.

[84] Ibid.

[85] As an example, I will quote here the Polynesian myth of Rata (Frobenius, *Zeitalter*, pp. 64–66): “The boat was sailing along merrily over the ocean under a favourable wind, when one day Nganaoa called out: ‘O Rata! A fearful enemy is rising up from the sea!’ It was a giant clam, wide open. One of its shells was in front of the boat, the other behind, and the vessel lay in between. The next moment the horrible clam would have snapped shut and ground the boat and all its occupants to pulp. But Nganaoa was prepared for this possibility. Seizing his long spear, he thrust it quickly into the creature’s belly, so that instead of snapping shut it sank instantly to the bottom of the sea. After escaping from this danger they continued on their way. Yet soon the voice of the ever watchful Nganaoa was heard again: ‘O Rata! Another fearful enemy is rising up from the sea!’ This time it was a mighty octopus, whose giant tentacles were already wrapped round the boat to destroy it. At this critical moment Nganaoa seized his spear and plunged it into the head of the octopus. The tentacles sank down limply, and the dead monster floated away on the surface of the ocean. Once more they continued on their journey, but a still greater danger awaited them. One day the valiant Nganaoa cried out: ‘O Rata! Here is a great whale!’ Its huge jaws were wide open, the lower jaw was already under the boat, the upper one was over it. Another moment and the whale would have swallowed them. Then Nganaoa, the ‘slayer of monsters,’ broke his spear in two, and just as the whale was about to crush them he stuck the two pieces in his enemy’s gullet, so that he could not close his jaws. Then Nganaoa leapt into the maw of the great whale (devouring of the hero) and peered down into his belly, and what did he see? There sat his two parents, his father Tairitokerau and his mother Vaiaroa, who had been swallowed by this monster of the deep when out fishing. The oracle had come true. The voyage had reached its goal. Great was the joy of the parents of Nganaoa when they beheld their son, for they were now persuaded that their liberation was at hand. And Nganaoa, too, was bent upon vengeance. Taking one of the two sticks from the animal’s gullet—the other was enough to prevent the whale from closing his jaws and to keep the passage clear for Nganaoa and his parents—he broke it into two pieces for use as fire-sticks. He told his father to hold one piece firmly below, while he himself manipulated the upper one until the fire began to glimmer (fire-lighting). Then, blowing it into a flame, he hastened to heat the fatty parts inside the belly (i.e., the heart) with the fire. The monster, writhing with pain, sought relief by swimming to land (sea journey). As soon as it reached the sandbank (landing), father, mother and son stepped ashore through the open gullet of the dying whale (slipping out of the hero).” See diagram on p. 210.

[86] [Cf. par. 235, above.]

[87] In the Maori myth of Maui (Frobenius, pp. 66ff.) the monster to be overcome is Grandmother Hine-nui-te-po. Maui, the hero, says to the birds who help him: “My little friends, when I creep into the jaws of the old woman, you must not laugh, but once I have been in and have come out of her mouth again, you may welcome me with shouts of laughter.” Then Maui creeps into the mouth of the old woman as she sleeps.

[88] Negelein, ed., *Der Traumschlüssel des Jaggadeva*, p. 256.

[89] Cited from Negelein, p. 256.

[90] It is the pine-tree that speaks the significant word “Minne-wawa!”

[91] In the story of Cinderella, the helpful bird appears on the tree that grows out of her mother's grave.

[92] Roscher, *Lexikon*, s.v. "Picus," III, 2, 2496, 30.

[93] The father of Picus was called Sterculus or Sterculius, a name which is obviously derived from *stercus*, 'excrement.' He is also said to have invented manure. The original Creator who fashioned the mother did so in the infantile manner, as we saw earlier. This supreme god laid an egg, his mother, from which he hatched himself out. Excrement in alchemy signifies the *prima materia*.

[94] Spielrein's patient received three arrow wounds from God, through her head, breast, and eye, "then came a resurrection of the spirit" (p. 376). In the Tibetan legend of Bogda Gesser Khan, the sun-hero shoots his arrow into the forehead of the demoniacal old woman, who then eats him and spits him out again. In a legend of the Kalmucks, from Siberia, the hero shoots the arrow into the "bull's-eye" that grows on the bull's forehead and "emits rays."

[95] This is synonymous with entering into the mother, becoming immersed in oneself, crawling through something, boring, picking the ear, driving in nails, swallowing snakes, etc.

[96] Cf. "Psychology and Religion," par. 97.

[97] Cf. the *Μεσουράνισμα ἡλίου*, position of the sun at midday as symbol of the initiate's illumination, in "The Visions of Zosimos," pars. 86 and 95.

[98] Cf. Mary's flight into Egypt, the persecution of Leto, etc.

[99] *Die Walküre*, li. 1782–83, 1792–94.

[100] Rig-Veda, X, 72, trans. from the German of Deussen, *Allgemeine Geschichte der Philosophie*, I, p. 145.

[101] Rig-Veda, X, 31, trans. from ibid., p. 140.

[102] *Die Walküre*, li. 900–903, 907–908.

[103] Trans. by Walker, p. 392, modified.

[104] Ibid., p. 416, modified.

[105] Die *Walküre*, li. 1867–74.

[106] Grimm mentions the legend that Siegfried was suckled by a doe.

[107] Cf. Grimm, *Teutonic Mythology*, I, pp. 379ff. Mime or Mimir is a gigantic being of great wisdom, an "elder nature god" with whom the Norse gods associate. Later fables make him a forest spirit and skilful smith. Like Wotan, who goes to the wise woman for advice, Odin goes to the fountain of Mimir in which wisdom and cunning lie hidden. There he asks for a drink (the drink of immortality), but no sooner does he receive it than he sacrifices his eye to the fountain. The fountain of Mimir is an obvious allusion to the mother-imago. Mimir and his fountain are a condensation of mother and embryo (dwarf, subterranean sun, Harpocrates); but at the same time he is, as the mother, the source of wisdom and art. Just as Bes, the dwarf and teacher, is associated with the Egyptian mother goddess, so Mimir is associated with the maternal fountain. In Barlach's play, *Der tote Tag* (1912), the demonic mother has a familiar house-spirit called "Steissbart" (Rumpbeard), who is a dwarfish figure like Bes. These are all mythological animus-figures. Concerning the animus see "The Relations between the Ego and the Unconscious," pars. 328ff.

[108] The enchanted sleep also occurs in Homer’s celebration of the *hieros gamos*.

[109] Cf. Siegfried’s words (li. 2641–50):

Through burning fire
I sped toward you;
Neither shield nor buckler
Guarded my body:
The flames have broken
Through to my breast;
My blood races
Hot through my veins;
A raging fire
Is kindled within me.

[110] The dragon in the cave is the Terrible Mother. In German legend the maiden in distress often appears as a snake or dragon that has to be kissed; then it changes into a beautiful woman. Certain wise women are supposed to have a fish’s or a serpent’s tail. A king’s daughter was immured in the Golden Mount as a snake. In Oselberg, near Dinkelsbühl, there is a snake with a woman’s head and a bunch of keys round the neck. Grimm, III, p. 969.

[111] *Siegfried*, li. 1462–70.

[112] Ibid., li. 1482–87.

[113] This problem is dealt with in Barlach’s *Der tote Tag*, which gives a brilliant description of the mother complex.

[114] *Psychological Types;* Jung and Wilhelm, *The Secret of the Golden Flower; Psychology and Alchemy; Aion*.

[115] Cf. Schlauch, trans., *The Saga of the Volsungs*, p. 101.

[123] Ibid.

[124] Maehly, *Die Schlange im Mythus und Kultus*, p. 13.

[125] “Erat draco immanissimus in monte Tarpeio, in quo est Capitolium collocatum. Ad hunc draconem per CCCLXV gradus, quasi ad infernum, magi cum virginibus sacrilegis descendebant semel in mense cum sacrificiis et lustris, ex quibus esca poterat tanto draconi inferri. Hic draco subito ex improviso ascendebat et licet non egrederetur vicinos tamen aeres flatu suo vitiabat. Ex quo

mortalitas hominum et maxima luctus de morte veniebat infantum. Sanctus itaque Silvester cum haberet cum paganis pro defensione veritatis conflictum, ad hoc venit ut dicerent ei pagani: Silvester descende ad draconem et fac eum in nomine Dei tui vel uno anno ab interfectione generis humani cessare.” Duchesne, *Liber Pontificalis*, I, p. cxi; cited in Cumont, *Textes*, I, p. 351.

[126] Revelation 20: 1–2.

[127] Cf. Revelation 20: 3. We find the same motif of the armed dragon who pierces the women with a sword in a myth of the Oyster Bay tribe, of Tasmania: “A devilfish lay hidden in the hollow of a rock—a huge devilfish! The devilfish was enormous and he had a very long spear. From his hole he espied the women; he saw them dive into the water, he pierced them with his spear, he killed them, he carried them away. For a time they were no longer to be seen.” The monster was then killed by the two heroes. They made a fire and brought the women back to life again. Frobenius, *Zeitalter*, p. 77.

[128] The eyes of the Son of Man are like a “flame of fire.” Rev. 1:14.

[129] “Apud urbem Romam specus quidam fuit in quo draco mirae magnitudinis mechanica arte formatus, gladium ore gestans, oculis rutilantibus gemmis metuendus ac terribilis apparebat. Huic annuae devotae virgines floribus exornatae, eo modo in sacrificio dabantur, quatenus inscias munera deferentes gradum scalae, quo certe ille arte diaboli draco pendebat, contingentes impetus venientis gladii perimeret, ut sanguinem funderet innocentem. Et hunc quidam monachus, bene ob meritum cognitus Stiliconi tunc patricio, eo modo subvertit; baculo, manu, singulos gradus palpandos inspiciens, statim ut illum tangens fraudem diabolicam repperit, eo transgresso descendens, draconem scidit, misitque in partes; ostendens et hic deos non esse qui manu fiunt.”—Cited in Cumont, *Textes*, I, p. 351.

[130] Cf. “The Psychology of Eastern Meditation,” pars. 943ff.

[131] Cf. Bousset, *The Antichrist Legend*.

[132] How very much Christ is the archetypal hero can be deduced from Cyril of Jerusalem (d. 386), who was of the opinion that Christ’s body was a bait for the devil. On swallowing the bait, however, the devil found it so indigestible that he had to yield it up again, as the whale spewed forth Jonah.

[133] Cited in Cumont, *Textes*, I, p. 352.

[134] Cf. Roscher, *Lexikon*, I, 1885ff.

[135] *Faust*, Part II, “The Mothers.” The key belongs to Hecate as the guardian of Hades and divine psychopomp. Cf. Janus, Peter, and Aion.

[136] An attribute of the Terrible Mother. Ishtar “chastised the horse with goad and whip and tortured him to death.” Jensen, *Gilgamesch-Epos*, p. 18. [Cf. Speiser trans., in Pritchard, p. 84.]

[137] [The relation of these words to one another and to the “mother” is etymologically apparent in the German: *Scheidung*, ‘parting’ in the sense of ‘division’; *Abschied*, ‘parting’ in the sense of ‘farewell’; *Scheide*, ‘parting’ in the sense of ‘line of separation,’ as in *Wasserscheide*, ‘watershed’; hence ‘sheath, scabbard.’ *Scheide* also means ‘vagina.’—TRANS.]

[138] Cf. the symbolism in the Melk hymn to Mary (12th century):

Sancta Maria,
Closed gate
Opened at God’s command—

Sealed fountain,
Locked garden,
Gate of Paradise. (Cf. Song of Solomon 4: 12.)

There is the same symbolism in the erotic verse:

Maiden, let me enter with you
Into your rose garden
Where the red rosebuds grow,
Those delicate and tender rosebuds,
With a tree nearby
Rustling to and fro,
And the deep cool well
That lies below.

[139] *Faust;* cf. above, p. 272.

[140] Herzog, “Aus dem Asklepieion von Kos,” pp. 219ff.

[141] A Mithraic sanctuary was, whenever possible, an underground grotto, and the cave was often only an imitation one. It is possible that the Christian crypts and underground churches had a similar meaning. (Cf. pl. XXXIII.)

[142] Cf. Schultze, *Die Katakomben*, pp. 9ff.

[143] Rohde, *Psyche*, p. 247. Further evidence in Herzog, p. 224.

[144] Further evidence in ibid., p. 225.

[145] Sacred snakes were, however, kept for display and other purposes.

[146] Herzog, p. 212.

[147] Rohde, *Psyche*, p. 163.

[148] *Vergleichendes Wörterbuch der indogermanischen Grundsprache*, I, p. 28.

[149] Also Lat. *cuturnium*, the vessel into which wine was poured for sacrifice.

[150] Fick, I, p. 424.

[151] Cf. the cleaning of the Augean stables. The stable, like the cave, is a place of birth; e.g., the cave and stable in which Christ was born. (See Robertson, *Christ and Krishna.)* Birth in a stable is also found in a Basuto myth (Frobenius, *Zeitalter)*. It belongs to the sphere of animal fables; hence the story of how the barren Sarah conceived is prefigured in the Egyptian fable of the Apis bull. Herodotus says: “This Apis—or Epaphus—is the calf of a cow which is never afterwards able to have another. The Egyptian belief is that a flash of light descends upon the cow from heaven, and this causes her to conceive Apis.” (III, 28; trans. by Selincourt, p. 186.) Apis is the sun, and his distinguishing marks are a white patch on the forehead, on his back the figure of an eagle, and on his tongue a beetle.

[152] Some authorities connect *κῦρος*, ‘supreme power,’ *κῦριος*, ‘lord,’ with OIran. *caur, cur*, ‘hero,’ *Skr*.ś *śura*-, ‘strong, hero.’ But the connection is regarded as doubtful or improbable.

[153] Maehly, *Die Schlange im Mythus und Kultus*, p. 7.

[154] A good example of this is the Yang-Yin doctrine in classical Chinese philosophy.

[155] [Etymologically, ‘devil’ and ‘divinity’ are both related to Skr. *deva*, ‘demon.’—TRANS.]

[156] Cf. the account of the orgies practised by certain Russian sects in Merezhkov-sky, *Peter and Alexis*. The orgiastic cult of Anahita or Anaitis, the Asiatic goddess of love, is still practised among the Ali Illahija, the self-styled “extinguishers of the light,” and the Yezidis and Dushik Kurds, who indulged nightly in religious orgies ending in a wild sexual debauch during which incestuous unions occur. (Spiegel, *Eränische Altertumskunde*, II, p. 64.) Further examples in Stoll, *Das Geschlechtsleben in der Völkerpsychologie*.

[157] Concerning the snake-kiss, see Grimm, *Teutonic Mythology*, III, p. 969. By this means a beautiful woman was set free. Spielrein’s patient (pp. 344f.) says: “Wine is the blood of Jesus.—The water must be blessed and was blessed by him.—He who is buried alive becomes a vineyard.—That wine turns to blood.—The water is mingled with childishness because God says ‘Become like children.’—There is also a spermatic water that can be steeped in blood. Maybe that is the water of Jesus.” This hotch-potch of ideas is characteristic. Wiedemann (“Die Toten und ihre Reiche,” p. 51, cited from Dieterich, p. 101) documents the Egyptian idea that man could drink immortality by sucking the breast of a goddess. Cf. the myth of Heracles, who became immortal after a single sip at the breast of Hera.

[158] From the *Geheimes Reskript* (1821) of Unternährer. I have to thank the Rev. O. Pfister for calling my attention to this document.

[159] Nietzsche: “And this parable I also give unto you: not a few who sought to cast out their devil, themselves entered into the swine” (*Zarathustra*).

[160] *Testis* originally had the double meaning of ‘testicle’ and ‘testimony.’ [Cf. the Biblical custom of swearing an oath by placing the hand “under the thigh”; Genesis 24: 2f and 47: 29f.—EDITORS.]

[161] Cf. Nietzsche’s poem: “Why hast thou enticed thyself / Into the old serpent’s Paradise?” [Cf. par. 459, above.]

[162] Nietzsche himself seems to have shown at times a certain predilection for loathsome animals. Cf. Bernoulli, *Franz Overbeck und Friedrich Nietzsche*, I, p. 166.

[163] Cf. Nietzsche’s dream, quoted at p. 34, n. 1, above.

[164] *Thus Spake Zarathustra* (in *Werke*, VI, pp. 233f.). This image is reminiscent of the myth of Dietrich of Bern: he was wounded in the forehead by an arrow, and because a piece remained lodged there, he was called the “immortal.” Similarly, half of Hrungnir’s stone club embedded itself in Thor’s skull. Grimm, I, pp. 371–72.

[165] Rig-Veda, X, 121, trans. from Deussen, *Geschichte*, I, p. 181.

[166] Ibid., pp. 181f.

[167] *Sa tapo atapyata*.

[168] *Geschichte*, I, p. 182.

[169] The Stoic conception of creative heat, which we have already recognized as libido (p. 67, n. 51, above), is a kindred idea, like the birth of Mithras from a stone “through the sole heat of libido.”

[170] Kama = Eros, and = the libido.

[171] Trans. from Deussen, I, p. 123.

[172] *Memoirs of My Nervous Illness*.

[173] “Glory and Eternity” (“Ruhm und Ewigkeit,” in *Werke*, VIII, I, p. 425).

[174] Grimm, IV, p. 1395. Sigurd was called “Ormr î Auga” (Snake’s Eyes).

[175] Galatians 3:27 contains an allusion to this primitive idea: “For as many of you as were baptized into Christ have put on Christ” (RSV). The word used here, *ένδύειν* (*induere*), means literally to ‘put on, clothe oneself, insinuate oneself into.’

[176] Cf. Robertson, *Christianity and Mythology*, p. 395.

[177] The mamba is the African cobra.

[178] Frazer, *The Golden Bough*, Part IV, p. 405.

[179] Ibid., p.242.

[180] Ibid., p.246.

[181] Ibid., p. 249. Concerning the flaying motif, see my “Transformation Symbolism in the Mass,” par. 348.

[182] Another attempt at a solution seems to be the Dioscuri motif: two brothers who resemble one another, one mortal, the other immortal. This motif is found in Indian mythology as the two Asvins, though here they are not differentiated. It appears very clearly in Shvetashvatara Upanishad (4, 6) as the companion birds who “clasp the selfsame tree,” i.e., as the personal and suprapersonal atman. In the Mithraic cult, Mithras is the father, Sol the son, and yet both are one as *δ μέγας θεὸς ῞Ηλιος Μίθρας*: “the great god Helios Mithras.” (Cf. Dieterich, p. 68.) That is to say, man does not change at death into his immortal part, but is mortal and immortal even in life, being both ego and self.

[183] *ταῦρος δράκοντος καὶ ταύρου δράκων πατήρ*.—Firmicus Maternus, *De errore profanarum religionum*, XXVI, 1, ρ. 67.

[184] *Werke*, VIII, p. 413.

[185] Wagner, *Siegfried*, li. 2088–2101, 2117–19, 2126–27, 2248–49.

[186] It is a striking fact that the lion-killing heroes Samson and Heracles fight *without weapons*. (Cf. fig. 17.) The lion is a symbol of the fierce heat of midsummer; astrologically he is the *domicilium solis*. Steinthal (“Die Sage von Simson,” p. 133) reasons as follows: “When, therefore, the sun-god fights the summer heat, he is fighting himself; if he kills it, he kills himself.… The Phoenicians and Assyrians and Lydians believed that their sun-god was committing suicide, for only as suicide could they comprehend how the sun’s heat could grow less. Therefore, when the sun stood at its height in summer and burnt everything with its scorching rays, they thought: thus the god burns himself, but he does not die, he only rejuvenates himself.… Heracles burns himself too, but mounts to Olympus in the flames. This is the contradiction in the pagan gods: as forces of nature they are both helpful and harmful to men. So, in order to do good and rescue mankind, they must work against themselves. The contradiction is mitigated if each of the two sides of the force of nature is personified as a separate god, or if both are conceived as a single divine person, the beneficent and injurious sides each being assigned a separate symbol. The symbol becomes more and more autonomous and in the end becomes a god itself; and whereas originally the god worked against himself and destroyed

himself, now symbol fights against symbol, god against god, or the god against the symbol.” The hero has no weapons precisely because he fights himself.

[187] “Voluntary Death,” in *Zarathustra*. [Cf. trans. by Common, p. 125.]

[188] *Siegfried*, li. 2478–82, 2496–2500, 2511–16, 2542–43, 2552–59. It was an Etruscan custom to bury the cinerary urn of the dead man in the earth and cover it with a shield.

[189] *Siegfried*, li. 2561–62, 2565–66, 2571–90, 2738–50, 2797–99, 2818–19, 2862–63.

[190] Although the unconscious is, in general, complementary to consciousness, the complementing is not of a mechanical nature that can be clearly predicted, but acts in each case purposively and intelligently, so that it is better to think of it as compensation.

[191] See “The Relations between the Ego and the Unconscious,” pars. 374ff.

[192] Identity of the personal and the suprapersonal atman.

[193] Cf. *Psychological Types* (1923 edn., pp. 245ff.), and *Aion*, the chapters on the symbolism of the self.

[1] [In the Swiss edition, Ch. VII, “Das Opfer” (“The Sacrifice”), embraces all of the text composing Chs. VII and VIII of the present edition. It contains a break in the text at this point, but no heading. The present arrangement corresponds to that of the original Swiss edition and its English trans.—EDITORS.]

[2] Cf. Harding, *The Way of All Women*.

[3] [Cf. MacNeice trans., p. 40.]

[4] Cf. Jaffé’s study of E. T. A. Hoffmann’s “Golden Bowl.”

[5] See my foreword to the 2nd (1925) edn. of the present work.

[6] *Gedichte*, p. 53. [As trans. in the Hinkle (1916) edn.]

[7] It is, indeed, the essence of the beloved and a designation for the Virgin Mary (mystical rose). Cf. Jung and Wilhelm, *The Secret of the Golden Flower* (1962 edn.), pp. 101f., and the mandala symbolism in *Psychology and Alchemy*, pars. 99 and 139; also Hartlaub, *Giorgiones Geheimnis*.

[8] *Gedichte*, p. 315. [Based on the trans. in the Hinkle (1916) edn.]

[9] *Zeitalter*, p. 68.

[10] Ibid., p. 269.

[11] *Gedichte*, p. 115.

[12] Robertson, *Christianity and Mythology*, p. 369.

[13] [Cf. Tacitus, *Historiae*, V, III, 4, and Josephus, *Against Apion*, II, 4.—EDITORS.]

[14] “After our discussion of Hölderlin’s last poem, it will be clear that Nature is to be understood as the mother. (Cf. fig. 1.) Here the poet imagines the mother as a tree upon which the child hangs like a bud. (Cf. pl. XXXIX.)

[15] In connection with his calling the stars his “brothers,” I would remind the reader of what I said in Part I (par. 130) about the mystic identification with the stars: “I am a star wandering together with you,” etc. Separation and differentiation from the mother, “individuation,” produces that confrontation of subject and object which is the foundation of consciousness. Before this, man was one with the mother; that is to say, he was merged with the world as a whole. He did not yet know the sun was his brother; only after the separation did he begin to realize his affinity with the stars. This is a not uncommon occurrence in psychosis. For instance, in the case of a young labouring-man who developed schizophrenia, the first symptoms of his illness consisted in the feeling that he had a special relation to the sun and the stars. The stars became full of meaning for him, he thought they had something to do with him personally, and the sun gave him all sorts of strange ideas. One finds this apparently quite novel feeling for Nature very often in this disease. Another patient began to understand the language of the birds, who brought him messages from his sweetheart. (Cf. Siegfried!)

[16] Springs, fountains, etc. are images of totality.

[17] This image expresses the state of divine or infantile beatitude, as in Hölderlin’s “Hyperion’s Song of Fate” (trans. by Hamburger, p. 113):

> “You walk above in the light
> On soft floors, O blessed genii!

Shining breezes of gods
Touch you lightly."

[18] This passage is specially significant: in childhood everything came as a gift, and he is unable to attain this state again, because it is won only through "effort and compulsion"—even love costs effort. In childhood the spring runs over in bubbling fulness, but in later life it needs a lot of hard work to keep it flowing at all, because the older we get the more it tends to flow back to its source.

[19] *Gedichte*, p. 57. [As trans. in the Hinkle (1916) edn., slightly modified.]

[20] Ibid., p. 156.

[21] Ibid., p. 142. [Cf. Leishman trans., p. 55.]

[22] *Ars poetica*, trans. by Fairclough, pp. 488–89.

[23] *Gedichte*, p. 157.

[24] Ibid., p. 244.

[25] Ibid., pp. 335ff. [For passages up to par. 642, from "Patmos," cf. Hamburger trans., pp. 217ff.]

[26] Cf. the passage in Odysseus' journey to Hades, where he meets his mother: "As my mother spoke, there came to me out of the confusion in my heart the one desire, to embrace her spirit, dead though she was. Thrice, in my eagerness to clasp her to me, I started forward with my hands outstretched. Thrice, like a shadow or a dream, she slipped through my arms and left me harrowed by an even sharper pain." (Odyssey, XI, 204–8, trans. by Rieu, p. 181.)

[27] Spielrein's patient (p. 345), in connection with the significance of the communion, speaks of "water mingled with childishness," "spermatic water," "blood and wine." On p. 368 she says: "The souls fallen in the water are saved by God: they fall on deeper ground. Souls are saved by the sun-god." Cf. also the miraculous properties of the alchemical *aqua permanens* (*Psychology and Alchemy*, pars. 94 and 336f.).

[28] *Thus Spake Zarathustra:* "The Seven Seals," trans. by Common, p. 272, modified.

[29] The *φάρμακον ἀθανασίας*, the soma-drink, the haoma of the Persians, may have been made from *Ephedra vulgaris*. Spiegel, *Eränische Altertumskunde*, I, p. 433.

[30] Like the heavenly city in Hauptmann's *Hannele* (trans. by Meltzer, pp. 91–92):

"The Realm of Righteousness is filled with light and joy,
God's everlasting peace reigns there without alloy,
Its mansions are marble, its roofs are of gold,
Through its rivulets ripple wines ruddy and old.
In its silver-white streets blow the lily and rose.
In its steeples the chiming of joy-bells grows.
The beautiful butterflies frolic and play
On its ramparts, rich-robed in the mosses of May …
The blessed below, in the regions of Light,
Wander on, hand in hand, and rejoice in their flight.
In the depths of the radiant, the ruby-red waves,
Swan dives after swan, as its plumage it laves.

So they wash themselves clean in the clear, deep red
Of the blood that their Lord, their dear Saviour, had shed."

[31] Judges 15:17f.

[32] Prellwitz, *Wörterbuch der griechischen Sprache*, S.V. *σκήπτω*.

[33] When writing this book I used an old edition of Hölderlin. Modern editions have "Christ" for "Geist." I have retained the old reading, because, on the internal evidence of the poem, I gathered that it meant Christ even before I saw the modern reading.

[34] I.e., the Father's.

[35] This was the real purpose of all the mystery religions. They created symbols of death and rebirth (cf. pl. LXI*a*). As Frazer points out in *The Golden Bough* (Part III: "The Dying God," pp. 214ff.), even primitive peoples have in their initiation mysteries the same symbolism of dying and being born again as Apuleius records in connection with the initiation of Lucius into the Isis mysteries (*The Golden Ass*, XI, 23, trans. by Graves, p. 286): "I approached the very gates of death and set one foot on Proserpine's threshold, yet was permitted to return, rapt through all the elements." The rites of initiation "approximate to a voluntary death" from which Lucius was "born again" (p. 284). (Cf. pl. VI.)

[36] From the sacrifice of the dragon in alchemy comes the microcosm of the philosophers' stone (*Psychology and Alchemy*, par. 404).

[37] Rig-Veda, X, 81, 4. This passage, and those in pars. 647 and 649, trans. from Deussen, *Geschichte*, pp. 136 and 156.

[38] Rig-Veda, X, 90. This passage, and those in pars. 650, 651, 656, trans. by W. Norman Brown, in the *Journal of the American Oriental Society*, LI (1931).

[39] "The Dynamics of the Transference," p. 105.

[40] Cf. my "Psychology of the Transference," pars. 433ff. and Layard, "The Incest Taboo and the Virgin Archetype," pp. 254ff.

[41] Trans. by W. Norman Brown.

[42] Trans. by Hume, *The Thirteen Principal Upanishads*, pp. 73—74, modified.

[43] The Bundahish (XV, 37) says that the bull Sarsaok will be sacrificed at the end of the world. Sarsaok helped to distribute the human race: he carried nine of the fifteen races on his back through the sea to the most distant parts of the earth. The primordial bull of Gayomart has, as we saw earlier, a maternal significance on account of his fertility.

[44] Deussen says (*Sechzig Upanishads*, III, p. 434): "'There,' on the horizon where the sky and the sea meet, between the two shells of the world egg, is a narrow crack through which one can get out onto 'the back of the sky,' where … union with Brahman takes place."

[45] Trans. by Hume, p. 111, modified.

[46] Symbol of Brahman (Deussen).

[47] If mythological symbolism is for Silberer ("Über die Symbolbildung." III. pp. 664ff.) a cognitional process on the mythological level, then there is complete agreement between his view and mine.

[48] The following interesting Sumerían-Assyrian fragment (Gressmann, *Altorientalische Texte*, I, p. 101) comes from the library of Assurbanipal: “To the wise man he said: A lamb is a substitute for a man. He gives the lamb for his life, he gives the head of a lamb for the head of a man.”

[49]

> “Grata deum matri, siquidem Cybeleius Attys
> Exuit hac hominem, truncoque induruit illo.”
>
> *Metamorphoses*, X, 104. [Cf. Miller trans., II, pp. 70—71.]

[50] Roscher, *Lexikon*, s.v. “Attis,” I, 722, 10.

[51] Firmicus Maternus, *De errore profanarum religionum*, XXVII, p. 69: “Per annos singulos arbor pinea caeditur, et in media arbore simulacrum iuvenis subligatur” (Each year a pine-tree is felled, and an effigy of a youth is tied to the middle of the tree).

[52] Preller, *Griechische Mythologie*, I, p. 555. Cited in Robertson, *Christianity and Mythology*, p. 407.

[53] Another hero with a serpent nature; his father was Echion, the adder.

[54] The typical sacrificial death in the Dionysus cult.

[55] Roscher, *Lexikon*, S.V. “Dionysus,” I, 1054, 56ff.

[56] For the festal processions they wore women’s clothes.

[57] In Bithynia, Attis was called πάπας (papa, pope) and Cybele, Mā. The Cybele cults of the Near and Middle East worshipped at the fish, and fish-eating was taboo for the priests of the mother-goddess. It is also worth knowing that the son of Atargatis, who is identical with Astarte, Cybele, etc., was called ‘χθύς. Roscher, S.V. “Ichthys.”

[58] Cf. Frobenius, *Zeitalter, passim*.

[59] Spiegel, *Erānische Altertumskunde*, II, p. 76.

[60] Nagel, “Der chinesische Küchengott (Tsau-kyun),” pp. 23ff.

[61] Spiegel, I, p. 510.

[62] Spiegel, *Grammatik der Parsisprache*, pp. 135, 166. [Cf. West trans., *Mainyo-i-Khard*, XXVII, 15 (p. 157).]

[63] Spiegel, *Altertumskunde*, II, p. 164. [Cf. West trans., VIII, 15 (p. 142).]

[64] Ibid., I, p. 708.

[65] Porphyry (*De antro nympharum*, 24, in Taylor trans., p. 190) says: “For Mithras, as well as the bull, is the demiurge and lord of generation.” (Cited in Dieterich, *Mithrasliturgie*, p. 72.)

[66] The death of the bull, too, is voluntary and involuntary. As Mithras stabs the bull a scorpion nips it in the testicles (cf. pl. XL). (Autumn equinox of the Taurus aeon.)

[67] Benndorf and Schöne, *Bildwerke des Lateranischen Museums*, No. 547.

[68] *Textes*, I, p. 182. In another passage (p. 183) Cumont speaks of the “sorrowful and almost morbid grace of the hero’s features.”

[69] [It has also been identified as Attis.—EDITORS.]

[70] The libido nature of the sacrificed is indubitable. In Persia it was a ram that induced the first man to commit the first sin (cohabitation); it is also the first animal they sacrifice (Spiegel, I, p. 511). The ram is therefore equivalent to the serpent in the Garden of Eden, which, according to the Manichaean view, was Christ. Melito of Sardis (2nd cent.) taught that Christ the Lamb was comparable to the ram caught in the thicket that Abraham sacrificed in place of his son, and that the thicket represented the Cross. (Fr. V, cited in Robertson, p. 412.)

[71] The original derivation from *religere* (to go through again, think over, recollect) is the more probable. (Cicero, *De inventione*, 2, 53, and *De natura deorum*, 1, 42.) Lactantius (*Divinae Institutiones*, 4, 28; in Fletcher trans., I, p. 282, modified) derives it from *religare:* “Hoc vinculo pietatis obstricti Deo et religati sumus” (We are bound and tied to God by this link of piety). Similarly St. Jerome and St. Augustine. See Walde, *Lateinisches Wörterbuch*, p. 233, “diligo.” The crucial contrast is between *religo* and *neglego*.

[72] Cf. Zipporah’s words to her son after she had circumcised him (Exodus 4 : 25): “Surely a bloody husband art thou to me.” [AV; RSV has “bridegroom of blood.”—TRANS.] Joshua 5 : 2ff. says that Joshua reintroduced circumcision for the benefit of the children born in the wilderness. “In this way he replaced the child sacrifices, which it had been customary to offer to Yahweh in early days, by the offering of the foreskin of the male” (Drews, *The Christ Myth*, p. 83).

[73] We learn from Porphyry (*De antr. nymph.)* that “instead of a fountain a mixing-bowl [*κρατήρ*] is placed near Mithras.” (Cited in Cumont, *Textes*, I, p. 101.) This is of some importance in interpreting the krater. Cf. also the krater of Zosimos (Berthelot, *Alchimistes grecs*, III, p. 235).

[74] Cumont, I, p. 100.

[75] As the zodiacal sign for the sun’s greatest heat.

[76] The end of Prometheus is a similar sacrificial death: he was chained to the rocks. In another version his chains were drawn through a pillar. He suffered as a punishment the fate that Christ took upon himself willingly. The fate of Prometheus is therefore reminiscent of the misfortune that befell Theseus and Peirithous, who grew fast to the rocks, the chthonic mother. According to Athenaeus, Jupiter, on setting Prometheus free again, commanded him to wear a willow crown and an iron ring, thus symbolizing his captivity and bondage. Robertson (p. 397) compares the crown of Prometheus to Christ’s crown of thorns. The devout wear crowns in honour of Prometheus, in order to represent his bondage. In this connection, therefore, the crown has the same meaning as *the* betrothal ring: the worshippers are *κάτοχοι τοῡ θεοῡ*, ‘captives of the god.’

[77] The spear wound given by Longinus takes the place of the dagger thrust in the Mithraic bull-sacrifice. Aeschylus says that the “jagged tooth of the brazen wedge” was driven through the breast of the enchained Prometheus (*Prometheus*, trans. by Smyth, I, pp. 220–21). Odin and Huitzilopochtli were pierced by the spear, Adonis was killed by the boar’s tusk.

[78] Sermo Suppositus 120, 8. [Cf. par. 411, above.]

[79] The same idea is found in Nordic mythology: through hanging on the tree of life Odin obtained knowledge of the runes and of the inspiriting drink that gave him immortality. People are inclined to trace this mythologem back to Christian influence. But what about Huitzilopochtli?

[80] Mithraism was the religion of the Roman legionaries and admitted only men as initiates.

[81] Cf. *Psychology and Alchemy*, par. 436: “Visio Arislei.”

[82] “The Psychology of Dementia Praecox,” par. 284.

[83] Spielrein, p. 366.

[84] For case material, cf. Gerhard Adler, *Studies*, Ch. V, “Consciousness and Cure.”

[85] See my “Archetypes of the Collective Unconscious,” par. 66.

[86] Bleuler called this “ambivalence” or “ambitendency,” and Stekel “the bipolarity of all psychic phenomena” (*Die Sprache des Traumes*, pp. 535f.).

[87] The role played by the serpent in mythology is analogous to the end of the world. It is said in the Völuspa that the deluge would begin when the Midgard Serpent rises up for universal destruction. The name of the Serpent is Jormungandr, which means literally ‘monstrous dragon’ [Paul, *Grundriss der germanischen Philologie*—EDITORS]. The world-destroying Fenris-Wolf likewise has connections with the sea. *Fen* is found in Fensalir (Meersäle), the dwelling-place of Frigga; originally it meant ‘sea’ (Frobenius, *Zeitalter*, p. 179). In the story of Red Riding Hood, the serpent or fish is replaced by a wolf, because he is the typical destroyer.

[88] Cf. Hölderlin’s longing in his poem “Empedocles,” also Zarathustra’s journey to Hades through the mouth of a volcano. I have shown elsewhere (“On the Psychology of Occult Phenomena,” pars. 140ff.; “Cryptomnesia,” 181ff.) that this passage in Nietzsche is a cryptomnesia. Death is a re-entry into the mother. Hence the Egyptian king Men-kau-Re (Mykerinos) had his daughter buried in a gilded wooden cow, as a guarantee of rebirth. The cow was placed in a gorgeous apartment and offerings were made to it. In an adjoining apartment were the images of the king’s concubines. Herodotus, II, 129, in Selincourt trans., p. 153.

[89] Kluge, *Wörterbuch*.

[90] *Poèmes saturniens* (1866).

[1] [In English in Flournoy’s publication.]

[2] [In English.]

[3] [In English.]

[4] [Both versions in English.]

[5] [Probably Haydn’s *Creation* is meant.—G.G.J.]

[6] [Quoted in English, preceded by the French.]

[7] [Title and poem in English.] Miss Miller has shown me her original draft, in pencil, written very irregularly on account of the movement of the train. It shows one or two crossings-out, or corrections of detail, in the same kind of scrawl as all the rest, which she had made immediately upon re-reading the piece as soon as it was completed. The only one that is noteworthy concerns the first line, which was first written as “I longed for thee when consciousness first woke”: the last three words are crossed out with a big stroke leading right down to the bottom of the page, where the variant is written—“first I crawled to consciousness.”—T.F.

[8] [A comedy, in three acts, by the American playwright Clyde Fitch, produced in New York on Apr. 11, 1898. The following synopsis of its plot (from a review in the *New York Dramatic Mirror*, Apr. 16, 1898), is given here *in extenso* because of the interesting pertinence of its heroine’s character and problems.

“*The Moth and the Flame* begins at a children’s party given by Mr. and Mrs. Wolton at their New York home. Their daughter, Marion, has rejected the love of Douglas Rhodes to become betrothed to Ned Fletcher, a man of somewhat shady record, whom she expects to reform. The children’s party is at its merriest moment when a thud above and a clattering chandelier announce the suicide of the host in his room. Wolton, knowing Fletcher to be a swindler and dreading the disgrace that must befall by Marion’s marriage to Fletcher, has killed himself. Yet the guests know not, and the fun goes on. Marion falters into the room after discovering the horrible thing, and falls into her mother’s arms, sobbing out the awful truth while a dozen unsuspecting revelers dance and sing about the stricken women. The family are threatened with terrible distress, and Fletcher, as Marion’s affianced lover, announces his purpose to stand by the Woltons.

“The next act presents St. Hubert’s Chapel, wherein is to occur the wedding of Fletcher and Marion, to which society has been invited by Mrs. Wolton. The ceremony is rudely interrupted by a woman who demands that Fletcher shall marry her and give his name to her child. Fletcher repudiates the woman’s story, and Marion believes him. But the interloper persists and steps between the bridal couple. Then Fletcher fells her with a cruel blow. Marion, horrified, cries ‘Coward!’ and, flinging the wedding bouquet at his feet, rushes from the chapel.

“In the last act, Fletcher seeks to frighten Marion into marrying him, telling her that her father had owed his respected position to the fact that his (Fletcher’s) money had preserved the honor of the Wolton name in the world’s eyes. But she rejects his advances and espouses the still faithful Rhodes. Fletcher, in contrition, vows to marry the woman he had scorned, and so ends the play.”—EDITORS.]

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

Second printing, 1974

First PRINCETON/BOLLINGEN PAPERBACK printing, with corrections, 1976

THIS EDITION IS BEING PUBLISHED IN THE UNITED STATES OF AMERICA BY PRINCETON UNIVERSITY PRESS AND IN ENGLAND BY ROUTLEDGE & KEGAN PAUL, LTD. IN THE AMERICAN EDITION, ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES. THE PRESENT VOLUME IS NUMBER 6 OF THE COLLECTED WORKS AND WAS THE SIXTEENTH TO APPEAR.

Except for the appendix, originally published in German as *Psychologische Typen*, Rascher Verlag, Zurich, 1921. Including appendix, published as volume 6 in the *Gesammelte Werke*, Rascher Verlag, Zurich, 1960; 2nd edition, 1967. The H. G. Baynes translation of *Psychological Types* was published in 1923 by Kegan Paul, London, and Harcourt, Brace and Co., New York.

ISBN 0-691-01813-8 (paperback edn.)
ISBN 0-691-09770-4 (hardcover edn.)

LIBRARY OF CONGRESS CATALOGUE CARD NUMBER: 75-156

MANUFACTURED IN THE U. S. A.

EDITORIAL NOTE

Jung was engaged in the preparatory work for *Psychological Types* during his so-called "fallow period," from 1913 to 1917 or 1918, a time of intense preoccupation with the images of his own unconscious, which he describes in the sixth and seventh chapters of *Memories, Dreams, Reflections*. As he wrote: "This work sprang originally from my need to define the ways in which my outlook differed from Freud's and Adler's. In attempting to answer this question, I came across the problem of types; for it is one's psychological type which from the outset determines and limits a person's judgment. My book, therefore, was an effort to deal with the relationship of the individual to the world, to people and things. It discussed the various aspects of consciousness, the various attitudes the conscious mind might take toward the world, and thus constitutes a psychology of consciousness regarded from what might be called a clinical angle."

Psychologische Typen was published by Rascher Verlag, of Zurich, in 1921. It was translated into English by H. G. Baynes (1882–1943), who during 1919–22 was Jung's assistant in Zurich and subsequently became one of the most prominent British analytical psychologists. His translation, subtitled "The Psychology of Individuation," was published in 1923 by Kegan Paul in London and Harcourt, Brace in New York. Some 22,000 copies of the Baynes version were sold. Translations have also appeared in Dutch, French, Greek, Italian, Japanese, Portuguese, Russian, Spanish,* and Swedish.

By 1950, the Swiss edition had gone through seven reprintings (some 15,000 copies), with little revision. The work was published as Band 6 in the *Gesammelte Werke* in 1960; for that edition the text was slightly revised, partly with the help of the author, quotations and references were checked and corrected, and a definition of the "self," formulated by Professor Jung for the edition, was added. In the original the "self" had figured under the concept of the ego. In accordance with the previously announced plan of the *Collected Works* in English, an appendix was added containing an important preliminary study for the present book, a lecture delivered at the Psychoanalytical Congress in Munich, 1913, entitled "A Contribution to the Study of Psychological Types," and three other short works on typology (1925, 1928, 1936). A corrected edition of Band 6 appeared in 1967.

The present volume is one of the last to appear in the *Collected Works*. Owing to the continued availability of the Baynes translation in Great Britain and the United States, and the fact that Jung never subjected this work to revision (other than in minor details), the Editors have given precedence to issuing other volumes of which translations were lacking or inadequate.

The *Gesammelte Werke* version, in its second, corrected edition, is the basis of the present translation. The paragraph numbering of the Swiss and English editions differs, chiefly because it is the policy of the *Collected Works* to print quotations in smaller type and not number them as paragraphs. Furthermore, some of the very long paragraphs in the Swiss text have been broken up. For the convenience of readers who wish to compare passages in the two editions, a table of comparative paragraph numbers is given in the back of this volume.

The numbers of the Definitions fail to correspond among the various editions, owing to the vagaries of alphabetical order.

When quoted translations contain modifications, the indication "Cf." is given in the pertinent footnote. Grateful acknowledgment is made for permission to quote as follows: to Pantheon Books, a Division of Random House, Inc., for Lawrence Grant White's translation of the *Divine Comedy*; to Penguin Books Ltd., for Philip Wayne's translation of Goethe's *Faust*; to Oxford University Press, New York, and Faber and Faber, Ltd., for Louis MacNeice's translation of *Faust*.

The Editors wish to acknowledge their gratitude to the late A.S.B. Glover, who contributed research assistance, various translations of Latin quotations, and wide-ranging advice, to this as all the other volumes in the edition.

VOLUME 6
PSYCHOLOGICAL TYPES

TABLE OF CONTENTS

FOREWORD TO THE FIRST SWISS EDITION

This book is the fruit of nearly twenty years’ work in the domain of practical psychology. It grew gradually in my thoughts, taking shape from the countless impressions and experiences of a psychiatrist in the treatment of nervous illnesses, from intercourse with men and women of all social levels, from my personal dealings with friend and foe alike, and, finally, from a critique of my own psychological peculiarity.

It is not my intention to burden the reader with case material; my concern is rather to show how the ideas I have abstracted from my practical work can be linked up, both historically and terminologically, with an existing body of knowledge. I have done this not so much from a need for historical justification as from a desire to bring the experiences of a medical specialist out of their narrow professional setting into a more general context, a context which will enable the educated layman to derive some profit from them. I would never have embarked upon this amplification, which might easily be misunderstood as an encroachment upon other spheres, were I not convinced that the psychological views presented in this book are of wide significance and application, and are therefore better treated in a general frame of reference than left in the form of a specialized scientific hypothesis.

With this aim in view I have confined myself to examining the ideas of comparatively few workers in this field, and have refrained from mentioning all that has already been said concerning our problem in general. Apart from the fact that even an approximately complete catalogue of the relevant material and opinions would far exceed my powers, such a compilation would not make any fundamental contribution to the discussion and development of the problem. Without regret, therefore, I have omitted much that I have collected in the course of the years, and confined myself as far as possible to essentials. A valuable document that was of very great help to me has also had to be sacrificed. This is a bulky correspondence which I exchanged with my friend Dr. Hans Schmid[1], of Basel, on the question of types. I owe a great deal of clarification to this interchange of ideas, and much of it, though of course in altered and greatly revised form, has gone into my book. The correspondence belongs essentially to the preparatory stage of the work, and its inclusion would create more confusion than clarity. Nevertheless, I owe it to the labours of my friend to express my thanks to him here.

FOREWORD TO THE SEVENTH SWISS EDITION

This new edition appears unaltered, which is not to say that the book is not in need of further additions, improvements, and supplementary material. In particular, the somewhat terse descriptions of the types could have been expanded. Also, a consideration of works on typology by psychologists since this book first appeared would have been desirable. But the present scope of the book is already so great that it ought not to be augmented unless urgently necessary. Moreover, there is little practical purpose in making the problems of typology still more complicated when not even the elements have been properly understood. Critics commonly fall into the error of assuming that the types were, so to speak, fancy free and were forcibly imposed on the empirical material. In face of this assumption I must emphasize that my typology is the result of many years of practical experience—experience that remains completely closed to the academic psychologist. I am first and foremost a doctor and practising psychotherapist, and all my psychological formulations are based on the experiences gained in the hard course of my daily professional work. What I have to say in this book, therefore, has, sentence by sentence, been tested a hundredfold in the practical treatment of the sick and originated with them in the first place. Naturally, these medical experiences are accessible and intelligible only to one who is professionally concerned with the treatment of psychic complications. It is therefore not the fault of the layman if certain of my statements strike him as strange, or if he thinks my typology is the product of idyllically undisturbed hours in the study. I doubt, however, whether this kind of ingenuousness is a qualification for competent criticism.

FOREWORD TO THE EIGHTH SWISS EDITION

The new edition again appears unaltered in essentials, but this time many small, long-necessary corrections have been made in the details. Also a new index has been compiled. I am especially indebted to Mrs. Lena Hurwitz-Eisner for this irksome work.

June 1949 C. G. JUNG

FOREWORD TO THE ARGENTINE EDITION[1]

No book that makes an essentially new contribution to knowledge enjoys the privilege of being thoroughly understood. Perhaps it is most difficult of all for new psychological insights to make any headway. A psychology that is grounded on experience always touches upon personal and intimate matters and thus arouses everything that is contradictory and unclarified in the human psyche. If one is plunged, as I am for professional reasons, into the chaos of psychological opinions, prejudices, and susceptibilites, one gets a profound and indelible impression of the diversity of individual psychic dispositions, tendencies, and convictions, while on the other hand one increasingly feels the need for some kind of order among the chaotic multiplicity of points of view. This need calls for a critical orientation and for general principles and criteria, not too specific in their formulation, which may serve as *points de repère* in sorting out the empirical material. What I have attempted in this book is essentially a critical psychology.

This fundamental tendency in my work has often been overlooked, and far too many readers have succumbed to the error of thinking that Chapter X ("General Description of the Types") represents the essential content and purpose of the book, in the sense that it provides a system of classification and a practical guide to a good judgment of human character. Indeed, even in medical circles the opinion has got about that my method of treatment consists in fitting patients into this system and giving them corresponding "advice." This regrettable misunderstanding completely ignores the fact that this kind of classification is nothing but a childish parlour game, every bit as futile as the division of mankind into brachycephalics and dolichocephalics. My typology is far rather a critical apparatus serving to sort out and organize the welter of empirical material, but not in any sense to stick labels on people at first sight. It is not a physiognomy and not an anthropological system, but a critical psychology dealing with the organization and delimitation of psychic processes that can be shown to be typical. For this reason I have placed the general typology and the Definitions at the end of the book, after having described, in chapters I to

IX, the processes in question with the help of various examples. I would therefore recommend the reader who really wants to understand my book to immerse himself first of all in chapters II and V. He will gain more from them than from any typological terminology superficially picked up, since this serves no other purpose than a totally useless desire to stick on labels.

It is now my pleasant duty to express my sincerest thanks to Madame Victoria Ocampo for her great help in securing the publication of this book, and to Señor Ramón de la Serna for his work of translation.

PSYCHOLOGICAL TYPES

Plato and Aristotle! These are not merely two systems, they are types of two distinct human natures, which from time immemorial, under every sort of disguise, stand more or less inimically opposed. The whole medieval world in particular was riven by this conflict, which persists down to the present day, and which forms the most essential content of the history of the Christian Church. Although under other names, it is always of Plato and Aristotle that we speak. Visionary, mystical, Platonic natures disclose Christian ideas and the corresponding symbols from the fathomless depths of their souls. Practical, orderly, Aristotelian natures build out of these ideas and symbols a fixed system, a dogma and a cult. Finally the Church embraces both natures, one of them entrenched in the clergy and the other in monasticism, but both keeping up a constant feud.

—Heine, *Deutschland*, I

INTRODUCTION

[1] In my practical medical work with nervous patients I have long been struck by the fact that besides the many individual differences in human psychology there are also typical differences. Two types especially become clear to me; I have termed them the introverted and the extraverted types.

[2] When we consider the course of human life, we see how the fate of one individual is determined more by the objects of his interest, while in another it is determined more by his own inner self, by the subject. Since we all swerve rather more towards one side or the other, we naturally tend to understand everything in terms of our own type.

[3] I mention this circumstance at once in order to avoid possible misunderstandings. It will be apparent that it is one which considerably aggravates the difficulty of a general description of types. I must presume unduly upon the goodwill of the reader if I may hope to be rightly understood. It would be relatively simple if every reader knew to which category he belonged. But it is often very difficult to find out whether a person belongs to one type or the other, especially in regard to oneself. In respect of one's own personality one's judgment is as a rule extraordinarily clouded. This subjective clouding of judgment is particularly common because *in* every pronounced type there is a special tendency to compensate the one-sidedness of that type, a tendency which is biologically purposive since it strives constantly to maintain the psychic equilibrium. The compensation gives rise to secondary characteristics, or secondary types, which present a picture that is extremely difficult to interpret, so difficult that one is inclined to deny the existence of types altogether and to believe only in individual differences.

[4] I must emphasize this difficulty in order to justify certain peculiarities in my presentation. It might seem as if the simplest way would be to describe two concrete cases and to dissect them side by side. But

everyone possesses both mechanisms, extraversion as well as introversion, and only the relative predominance of one or the other determines the type. Hence, in order to throw the picture into the necessary relief, one would have to retouch it rather vigorously, and this would amount to a more or less pious fraud. Moreover, the psychological reactions of a human being are so complicated that my powers of description would hardly suffice to draw an absolutely correct picture. From sheer necessity, therefore, I must confine myself to a presentation of principles which I have abstracted from a wealth of facts observed in many different individuals. In this there is no question of a *deductio a priori*, as it might appear; it is rather a deductive presentation of empirically gained insights. These insights will, I hope, help to clarify a dilemma which, not only in analytical psychology but in other branches of science as well, and especially in the personal relations of human beings with one another, has led and still continues to lead to misunderstanding and discord. For they explain how the existence of two distinct types is actually a fact that has long been known: a fact that in one form or another has struck the observer of human nature or dawned upon the brooding reflection of the thinker, presenting itself to Goethe’s intuition, for instance, as the all-embracing principle of systole and diastole. The names and concepts by which the mechanisms of extraversion and introversion have been grasped are extremely varied, and each of them is adapted to the standpoint of the observer in question. But despite the diversity of the formulations the fundamental idea common to them all constantly shines through: in one case an outward movement of interest towards the object, and in the other a movement of interest away from the object to the subject and his own psychological processes. In the first case the object works like a magnet upon the tendencies of the subject; it determines the subject to a large extent and even alienates him from himself. His qualities may become so transformed by assimilation to the object that one might think it possessed some higher and decisive significance for him. It might almost seem as if it were an absolute determinant, a special purpose of life or fate that he should abandon himself wholly to the object. But in the second case the subject is and remains the centre of every interest. It looks, one might say, as though all the life-energy were ultimately seeking the subject, and thus continually prevented the object from exercising any overpowering influence. It is as though the energy were flowing away from the object, and the subject were a magnet drawing the object to itself.

[5] It is not easy to give a clear and intelligible description of this two-way relationship to the object without running the risk of paradoxical formulations which would create more confusion than clarity. But in general one could say that the introverted standpoint is one which sets the ego and the subjective psychological process above the object and the objective process, or at any rate seeks to hold its ground against the object. This attitude, therefore, gives the subject a higher value than the object, and the object accordingly has a lower value. It is of secondary importance; indeed, sometimes the object represents no more than an outward token of a subjective content, the embodiment of an idea, the idea being the essential thing. If it is the embodiment of a feeling, then again the feeling is the main thing and not the object in its own right. The extraverted standpoint, on the contrary, subordinates the subject to the object, so that the object has the higher value. In this case the subject is of secondary importance, the subjective process appearing at times as no more than a disturbing or superfluous appendage of objective events. It is clear that the psychology resulting from these contrary standpoints must be classed as two totally different orientations. The one sees everything in terms of his own situation, the other in terms of the objective event.

[6] These contrary attitudes are in themselves no more than correlative mechanisms: a diastolic *going* out and seizing of the object, and a systolic concentration and detachment of energy from the object seized. Every human being possesses both mechanisms as an expression of his natural life-rhythm, a rhythm which Goethe, surely not by chance, described physiologically in terms of the heart’s activity. A rhythmical alternation of both forms of psychic activity would perhaps correspond to the normal course of life. But the complicated outer conditions under which we live and the even more complicated conditions of our individual psychic make-up seldom permit a completely undisturbed flow of psychic energy. Outer circumstances and inner disposition frequently favour one mechanism and restrict or hinder the other. One

mechanism will naturally predominate, and if this condition becomes in any way chronic a *type* will be produced; that is, an habitual attitude in which one mechanism predominates permanently, although the other can never be completely suppressed since it is an integral part of the psychic economy. Hence there can never be a pure type in the sense that it possesses only one mechanism with the complete atrophy of the other. A typical attitude always means merely the relative predominance of one mechanism.

[7] The hypothesis of introversion and extraversion allows us, first of all, to distinguish two large groups of psychological individuals. Yet this grouping is of such a superficial and general nature that it permits no more than this very general distinction. Closer investigation of the individual psychologies that fall into one group or the other will at once show great differences between individuals who nevertheless belong to the same group. If, therefore, we wish to determine wherein lie the differences between individuals belonging to a definite group, we must take a further step. Experience has taught me that in general individuals can be distinguished not only according to the broad distinction between introversion and extraversion, but also according to their basic psychological functions. For in the same measure as outer circumstances and inner disposition cause either introversion or extraversion to predominate, they also favour the predominance of one definite basic function in the individual. I have found from experience that the basic psychological functions, that is, functions which are genuinely as well as essentially different from other functions, prove to be *thinking*, *feeling*, *sensation*, and *intuition*. If one of these functions habitually predominates, a corresponding type results. I therefore distinguish a thinking, a feeling, a sensation, and an intuitive type. *Each of these types may moreover be either introverted or extraverted*, depending on its relation to the object as we have described above. In my preliminary work on psychological types[1] I did not carry out this differentiation, but identified the thinking type with the introvert and the feeling type with the extravert. A deeper study of the problem has shown this equation to be untenable. In order to avoid misunderstandings, I would ask the reader to bear in mind the differentiation I have developed here. For the sake of

clarity, which is essential in such complicated matters, I have devoted the last chapter of this book to the definition of my psychological concepts.

I

THE PROBLEM OF TYPES IN THE HISTORY OF CLASSICAL AND MEDIEVAL THOUGHT

1. PSYCHOLOGY IN THE CLASSICAL AGE: THE GNOSTICS, TERTULLIAN, ORIGEN

[8] So long as the historical world has existed there has always been psychology, but an objective psychology is only of recent growth. We could say of the science of former times that in proportion to the lack of objective psychology there is an increase in the rate of subjectivity. Hence, though the works of the ancients are full of psychology, only little of it can be described as objective psychology. This may be due in no small measure to the peculiar character of human relationships in classical and medieval times. The ancients had, so to speak, an almost entirely biological valuation of their fellow-men; this is everywhere apparent in their habits of life and in the legislation of antiquity. The medieval man, in so far as his value judgments found any expression at all, had on the contrary a metaphysical valuation of his fellows, and this had its source in the idea of the imperishable value of the human soul. This metaphysical valuation, which may be regarded as compensatory to the standpoint of antiquity, is just as unfavourable as the biological one so far as a *personal* valuation is concerned, which alone can form the basis of an objective psychology.

[9] Although not a few people think that a psychology can be written *ex cathedra*, nowadays most of us are convinced that an objective psychology must be founded above all on observation and experience. This foundation would be ideal if only it were possible. The ideal and aim of science do not consist in giving the most exact possible description of the facts—science cannot compete as a recording instrument with the camera and the gramophone—but in establishing certain laws, which are merely abbreviated expressions for many diverse processes that are yet conceived to be somehow correlated. This aim goes

beyond the purely empirical by means of the *concept*, which, though it may have general and proved validity, will always be a product of the subjective psychological constellation of the investigator. In the making of scientific theories and concepts many personal and accidental factors are involved. There is also a personal equation that is psychological and not merely psychophysical. We see colours but not wave-lengths. This well-known fact must nowhere be taken to heart more seriously than in psychology. The effect of the personal equation begins already in the act of observation. *One sees what one can best see oneself*. Thus, first and foremost, one sees the mote in one's brother's eye. No doubt the mote is there, but the beam sits in one's own eye—and may considerably hamper the act of seeing. I mistrust the principle of "pure observation" in so-called objective psychology unless one confines oneself to the eye-pieces of chronoscopes and tachistoscopes and suchlike "psychological" apparatus. With such methods one also guards against too embarrassing a yield of empirical psychological facts.

[10] But the personal equation asserts itself even more in the presentation and communication of one's own observations, to say nothing of the interpretation and abstract exposition of the empirical material. Nowhere is the basic requirement so indispensable as in psychology that the observer should be adequate to his object, in the sense of being able to see not only subjectively but also objectively. The demand that he should see *only* objectively is quite out of the question, for it is impossible. We must be satisfied if he does not see *too* subjectively. That the subjective observation and interpretation accord with the objective facts proves the truth of the interpretation only in so far as the latter makes no pretence to be generally valid, but valid only for that area of the object which is being considered. To this extent it is just the beam in one's own eye that enables one to detect the mote in one's brother's eye. The beam in one's own eye, as we have said, does not prove that one's brother has no mote in his. But the impairment of one's own vision might easily give rise to a general theory that all motes are beams.

[11] The recognition and taking to heart of the subjective determination of knowledge in general, and of psychological knowledge in particular, are basic conditions for the scientific and impartial evaluation of a psyche

different from that of the observing subject. These conditions are fulfilled only when the observer is sufficiently informed about the nature and scope of his own personality. He can, however, be sufficiently informed only when he has in large measure freed himself from the levelling influence of collective opinions and thereby arrived at a clear conception of his own individuality.

[12] The further we go back into history, the more we see personality disappearing beneath the wrappings of collectivity. And if we go right back to primitive psychology, we find absolutely no trace of the concept of an individual. Instead of individuality we find only collective relationship or what Lévy-Bruhl calls *participation mystique*. The collective attitude hinders the recognition and evaluation of a psychology different from the subject’s, because the mind that is collectively oriented is quite incapable of thinking and feeling in any other way than by projection. What we understand by the concept “individual” is a relatively recent acquisition in the history of the human mind and human culture. It is no wonder, therefore, that the earlier all-powerful collective attitude prevented almost completely an objective psychological evaluation of individual differences, or any scientific objectification of individual psychological processes. It was owing to this very lack of psychological thinking that knowledge became “psychologized,” i.e., filled with projected psychology. We find striking examples of this in man’s first attempts at a philosophical explanation of the cosmos. The development of individuality, with the consequent psychological differentiation of man, goes hand in hand with the de-psychologizing work of objective science.

[13] These reflections may explain why objective psychology has such a meagre source in the material handed down to us from antiquity. The differentiation of the four temperaments, which we took over from the ancients, hardly rates as a psychological typology since the temperaments are scarcely more than psychophysical colourings. But this lack of information does not mean that we can find no trace in classical literature of the effects of the psychological pairs of opposites we are discussing.

[14] Gnostic philosophy established three types, corresponding perhaps to three of the basic psychological functions: thinking, feeling, and sensation. The *pneumatikoi* could be correlated with thinking, the *psychikoi* with feeling, and the *hylikoi* with sensation. The inferior rating of the *psychikoi* was in accord with the spirit of Gnosticism, which, unlike Christianity, insisted on the value of knowledge. The Christian principles of love and faith kept knowledge at a distance. In the Christian sphere the *pneumatikoi* would accordingly get the lower rating, since they were distinguished merely by the possession of Gnosis, i.e., knowledge.

[15] Type differences should also be borne in mind when we consider the long and perilous struggle which the Church from its earliest beginnings waged against Gnosticism. Owing to the predominantly practical trend of early Christianity the intellectual hardly came into his own, except when he followed his fighting instincts by indulging in polemical apologetics. The rule of faith was too strict and allowed no freedom of movement. Moreover, it was poor in positive intellectual content. It boasted of few ideas, and though these were of immense practical value they were a definite obstacle to thought. The intellectual was much worse hit by the *sacrificium intellectus* than the feeling type. It is therefore understandable that the vastly superior intellectual content of Gnosis, which in the light of our present mental development has not lost but has considerably gained in value, must have made the greatest possible appeal to the intellectual within the Church. For him it held out in very truth all the temptations of this world. Docetism in particular caused grave trouble to the Church with its contention that Christ possessed only an apparent body and that his whole earthly existence and passion had been merely a semblance. In this contention the purely intellectual element predominates at the expense of human feeling.

[16] Perhaps the struggle with Gnosis is most vividly presented to us in two figures who were of the utmost significance not only as Church Fathers but as personalities. These are Tertullian and Origen, who lived towards the end of the second century. Schultz says of them:

One organism is able to take in nourishment and assimilate it almost completely into its own nature; another with equal persistence eliminates it with every sign of passionate resistance. Thus Origen on one side, and Tertullian on the other, reacted in diametrically opposite ways to Gnosis. Their reaction is not only characteristic of the two personalities and their philosophical outlook; it is of fundamental significance with regard to the position of Gnosis in the spiritual life and religious currents of that age.[1]

[17] Tertullian was born in Carthage somewhere about A.D. 160. He was a pagan, and he abandoned himself to the lascivious life of his city until about his thirty-fifth year, when he became a Christian. He was the author of numerous writings wherein his character, which is our especial interest, is unmistakably displayed. Most clearly of all we see his unparalleled noble-hearted zeal, his fire, his passionate temperament, and the profundity of his religious understanding. He was a fanatic, brilliantly one-sided in his defence of a recognized truth, possessed of a matchless fighting spirit, a merciless opponent who saw victory only in the total annihilation of his adversary, his language a flashing blade wielded with ferocious mastery. He was the creator of the Church Latin that lasted for more than a thousand years. It was he who coined the terminology of the early Church. "Once he had seized upon a point of view, he had to follow it through to its ultimate conclusion as though lashed by the legions of hell, even when right had long since ceased to be on his side and all reasonable order lay in shreds before him."[2] His impassioned thinking was so inexorable that again and again he alienated himself from the very thing for which he had given his heart's blood. Accordingly his ethical code was bitterly severe. Martyrdom he commanded to be sought and not shunned; he permitted no second marriage, and required the permanent veiling of persons of the female sex. Gnosis, which in reality is a passion for thinking and knowing, he attacked with unrelenting fanaticism, together with philosophy and science which differed from it so little. To him is ascribed the sublime confession: *Credo quia absurdum est* (I believe because it is absurd). This does not altogether accord with historical fact, for he merely said: "And the Son of God died, which is immediately credible because it is absurd. And buried he rose again, which is certain because it is impossible."[3]

[18] Thanks to the acuteness of his mind, he saw through the poverty of philosophical and Gnostic knowledge, and contemptuously rejected it. He invoked against it the testimony of his own inner world, his own inner realities, which were one with his faith. In shaping and developing these realities he became the creator of those abstract conceptions which still underlie the Catholic system of today. The irrational inner reality had for him an essentially dynamic nature; it was his principle, his foundation in face of the world and of all collectively valid and rational science and philosophy. I quote his own words:

> I summon a new witness, or rather a witness more known than any written monument, more debated than any system of life, more published abroad than any promulgation, greater than the whole of man, yea that which constitutes the whole of man. Approach then, O my soul, whether you be something divine and eternal, as many philosophers believe—the less then will you lie—or not wholly divine, because mortal, as Epicurus alone contends—the less then ought you to lie—whether you come from heaven or are born of earth, whether compounded of numbers or of atoms, whether you have your beginning with the body or are later joined to it; what matter indeed whence you come and how you make man to be what he is, a reasonable being, capable of perception and of knowledge. But I summon you not, O soul, as proclaiming wisdom, trained in the schools, conversant with libraries, fed and nourished in the academies and pillared halls of Athens. No, I would speak with you, O soul, as wondrous simple and unlearned, awkward and inexperienced, such as you are for those who possess nothing else but you, even as you come from the alleys, from the street-corners, and from the workshops. It is just your unknowingness that I need.[4]

[19] The self-mutilation performed by Tertullian in the *sacrificium intellectus* led him to an unqualified recognition of the irrational inner reality, the true rock of his faith. The necessity of the religious process which he sensed in himself he crystallized in the incomparable formula *anima naturaliter christiana* (the soul is by nature Christian). With the *sacrificium intellectus* philosophy and science, and hence also Gnosis, fell to the ground. In the further course of his life the qualities I have described became exacerbated. When the Church was driven to

compromise more and more with the masses, he revolted against it and became a follower of the Phrygian prophet Montanus, an ecstatic, who stood for the principle of absolute denial of the world and complete spiritualization. In violent pamphlets he now began to assail the policy of Pope Calixtus I, and this together with his Montanism put him more or less outside the pale of the Church. According to a report of Augustine, he even quarrelled with Montanism later and founded a sect of his own.

[20] Tertullian is a classic example of introverted thinking. His very considerable and keenly developed intellect was flanked by an unmistakable sensuality. The psychological process of development which we call specifically Christian led him to the sacrifice, the amputation, of the most valuable function—a mythical idea that is also found in the great and exemplary symbol of the sacrifice of the Son of God. His most valuable organ was the intellect and the clarity of knowledge it made possible. Through the *sacrificium intellectus* the way of purely intellectual development was closed to him; it forced him to recognize the irrational dynamism of his soul as the foundation of his being. The intellectuality of Gnosis, the specifically rational stamp it gave to the dynamic phenomena of the soul, must have been odious to him, for that was just the way he had to forsake in order to acknowledge the principle of feeling.

[21] In Origen we may recognize the absolute opposite of Tertullian. He was born in Alexandria about A.D. 185. His father was a Christian martyr. He himself grew up in that quite unique mental atmosphere where the ideas of East and West mingled. With an intense yearning for knowledge he eagerly absorbed all that was worth knowing, and accepted everything, whether Christian, Jewish, Hellenistic, or Egyptian, that the teeming intellectual world of Alexandria offered him. The pagan philosopher Porphyry, a pupil of Plotinus, said of him: “His outward life was that of a Christian and against the law; but in his opinions about material things and the Deity he thought like a Greek, and introduced Greek ideas into foreign fables.”[5]

[22] His self-castration had taken place sometime before A.D. 211; his inner motives for this may be guessed, but historically they are not

known to us. Personally he was of great influence, and had a winning speech. He was constantly surrounded by pupils and a whole host of amanuenses who gathered up the precious words that fell from the revered master's lips. As an author he was extraordinarily prolific and he developed into a great teacher. In Antioch he even delivered lectures on theology to the Emperor's mother Mammaea. In Caesarea he was the head of a school. His teaching activities were frequently interrupted by his extensive journeyings. He possessed an extraordinary erudition and had an astounding capacity for careful investigation. He hunted up old biblical manuscripts and earned special merit for his textual criticism. "He was a great scholar, indeed the only true scholar the early Church possessed," says Harnack. In complete contrast to Tertullian, Origen did not cut himself off from the influence of Gnosticism; on the contrary, he even channelled it, in attenuated form, into the bosom of the Church, or such at least was his aim. Indeed, judging by his thought and fundamental views, he was himself almost a Christian Gnostic. His position in regard to *faith* and *knowledge* is described by Harnack in the following psychologically significant words:

> The Bible is equally needful to both: the believers receive from it the facts and commandments they need, while the Gnostics decipher thoughts in it and gather from it the powers which guide them to the contemplation and love of God—whereby all material things, through spiritual interpretation (allegorical exegesis, hermeneutics), seem to be melted into a cosmos of ideas, until at last everything is surmounted and left behind as a stepping-stone, while only this remains: the blessed and abiding relationship of the God-created creaturely soul to God (*amor et visio*).[6]

[23] His theology as distinguished from Tertullian's was essentially philosophical; it fitted neatly into the framework of Neoplatonic philosophy. In Origen the two worlds of Greek philosophy and Gnosis on the one hand, and Christian ideas on the other, interpenetrate in a peaceful and harmonious whole. But this daring, perspicacious tolerance and fair-mindedness led Origen, too, to the fate of condemnation by the Church. Actually the final condemnation took place only posthumously, after Origen as an old man had been tortured in the persecution of the

Christians under Decius and had subsequently died from the effects of the torture. Pope Anastasius I pronounced the condemnation in 399, and in 543 his heretical teachings were anathematized at a synod convoked by Justinian, which judgment was upheld by later councils.

[24] Origen is a classic example of the extraverted type. His basic orientation was towards the object; this showed itself in his scrupulous regard for objective facts and their conditions, as well as in the formulation of that supreme principle: *amor et visio Dei*. The Christian process of development encountered in Origen a type whose ultimate foundation was the relation to the object—a relation that has always symbolically expressed itself in sexuality and accounts for the fact that there are certain theories today which reduce all the essential psychic functions to sexuality too. Castration was therefore an adequate expression of the sacrifice of the most valuable function. It is entirely characteristic that Tertullian should perform the *sacrificium intellectus*, whereas Origen was led to the *sacrificium phalli,* because the Christian process demands a complete abolition of the sensual tie to the object; in other words, it demands the sacrifice of the hitherto most valued function, the dearest possession, the strongest instinct. Considered biologically, the sacrifice serves the interests of domestication, but psychologically it opens a door for new possibilities of spiritual development through the dissolution of old ties.

[25] Tertullian sacrificed the intellect because it bound him most strongly to worldliness. He fought against Gnosis because for him it represented a deviation into intellectuality, which at the same time involved sensuality. In keeping with this fact we find that in reality Gnosticism also was divided into two schools: one school striving after a spirituality that exceeded all bounds, the other losing itself in an ethical anarchism, an absolute libertinism that shrank from no lewdness and no depravity however atrocious and perverse. A definite distinction was made between the Encratites, who practised continence, and the Antitactae or Antinomians, who were opposed to law and order, and who in obedience to certain doctrines sinned on principle and purposely gave themselves up to unbridled debauchery. To the latter school belong the Nicolaitans, Archontics, etc., and the aptly named Borborians. How closely the

seeming contraries lay side by side is shown by the example of the Archontics, for this same sect was divided into an Encratite and an Antinomian school, both of which pursued their aims logically and consistently. If anyone wants to know what are the ethical consequences of intellectualism pushed to the limit and carried out on a grand scale, let him study the history of Gnostic morals. He will then fully understand the *sacrificium intellectus*. These people were also consistent in practice and carried their crazy ideas to absurd lengths in their actual lives.

[26] Origen, by mutilating himself, sacrificed his sensual tie to the world. For him, evidently, the specific danger was not the intellect but feeling and sensation, which bound him to the object. Through castration he freed himself from the sensuality that was coupled with Gnosticism; he could then surrender without fear to the treasures of Gnostic thought, whereas Tertullian through his sacrifice of the intellect turned away from Gnosis but also reached a depth of religious feeling that we miss in Origen. "In one way he was superior to Origen," says Schultz, "because in his deepest soul he lived every one of his words; it was not reason that carried him away, like the other, but the heart. Yet in another respect Tertullian stands far behind him, inasmuch as he, the most passionate of all thinkers, was on the verge of rejecting knowledge altogether, for his battle against Gnosis was tantamount to a complete denial of human thought."[7]

[27] We see here how, in the Christian process, the original type has actually become reversed: Tertullian, the acute thinker, becomes the man of feeling, while Origen becomes the scholar and loses himself in intellectuality. Logically, of course, it is quite easy to put it the other way round and say that Tertullian had always been the man of feeling and Origen the intellectual. Apart from the fact that the difference of type is not thereby done away with but exists as before, the reversal does not explain how it comes that Tertullian saw his most dangerous enemy in the intellect, and Origen in sexuality. One could say they were both deceived, adducing as evidence the fatal outcome of both lives by way of argument. If that were the case, one would have to assume that they both sacrificed the less important thing, and that both of them made a crooked bargain with fate. That is certainly a point of view whose validity should

be recognized in principle. Are there not just such slyboots among primitives who approach their fetish with a black hen under the arm, saying; “See, here is thy sacrifice, a beautiful black pig.” I am, however, of the opinion that the depreciatory method of explanation, notwithstanding the unmistakable relief which the ordinary mortal feels in dragging down something great, is not under all circumstances the correct one, even though it may appear to be very “biological.” From what we can personally know of these two great figures in the realm of the spirit, we must say that their whole nature was so sincere that their conversion to Christianity was neither an underhand trick nor a fraud, but had both reality and truthfulness.

[28] We shall not be digressing if we take this opportunity to try to grasp the psychological meaning of this rupture of the natural course of instinct, which is what the Christian process of sacrifice appears to be. From what has been said it follows that conversion signifies at the same time a transition to another attitude. This also makes it clear from what source the impelling motive for conversion comes, and how far Tertullian was right in conceiving the soul as *naturaliter Christiana*. The natural course of instinct, like everything in nature, follows the line of least resistance. One man is rather more gifted here, another there; or again, adaptation to the early environment of childhood may demand relatively more reserve and reflection or relatively more empathy and participation, according to the nature of the parents and the circumstances. In this way a certain preferential attitude is built up automatically, resulting in different types. Since every man, as a relatively stable being, possesses all the basic psychological functions, it would be a psychological necessity with a view to perfect adaptation that he should also employ them in equal measure. For there must be a reason why there are different modes of psychological adaptation: evidently one alone is not enough, since the object seems to be only partially comprehended when, for example, it is something that is merely thought or merely felt. A one-sided (“typical”) attitude leaves a deficiency in the adaptive performance which accumulates during the course of life, and sooner or later this will produce a disturbance of adaptation that drives the subject toward some kind of compensation. But the compensation can be obtained only by

means of an amputation (sacrifice) of the hitherto one-sided attitude. This results in a temporary accumulation of energy and an overflow into channels not used consciously before though lying ready unconsciously. The adaptive deficiency, which is the *causa efficiens* of the process of conversion, is subjectively felt as a vague sense of dissatisfaction. Such an atmosphere prevailed at the turning-point of our era. A quite astonishing need of redemption came over mankind, and brought about that unparalleled efflorescence of every sort of possible and impossible cult in ancient Rome. Nor was there any lack of advocates of "living life to the full," who operated with arguments based on the science of that day instead of with biological ones. They, too, could never be done with speculations as to why mankind was in such a bad way. Only, the causalism of that epoch, as compared with our science, was considerably less restricted; they could hark back far beyond childhood to cosmogony, and numerous systems were devised proving that what had happened in the remote abyss of time was the source of insufferable consequences for mankind.

[29] The sacrifice that Tertullian and Origen carried out was drastic—too drastic for our taste—but it was in keeping with the spirit of the age, which was thoroughly concretistic. Because of this spirit the Gnostics took their visions as absolutely real, or at least as relating directly to reality, and for Tertullian the reality of his feeling was objectively valid. The Gnostics projected their subjective inner perception of the change of attitude into a cosmogonic system and believed in the reality of its psychological figures.

[30] In my book *Wandlungen und Symbole der Libido*[8] I left the whole question open as to the origin of the peculiar course the libido took in the Christian process of development. I spoke of a splitting of libido into two halves, each directed against the other. The explanation of this is to be found in a one-sided psychological attitude so extreme that compensations from the unconscious became an urgent necessity. It is precisely the Gnostic movement in the early centuries of our era that most clearly demonstrates the breakthrough of unconscious contents at the moment of compensation. Christianity itself signified the collapse and sacrifice of the cultural values of antiquity, that is, of the classical

attitude. At the present time it is hardly necessary to remark that it is a matter of indifference whether we speak of today or of that age two thousand years ago.

2. THE THEOLOGICAL DISPUTES OF THE ANCIENT CHURCH

[31] It is more than probable that the contrast of types will also be found in the history of the schisms and heresies that were so frequent in the disputes of the early Church. The Ebionites or Jewish Christians, who were probably identical with the primitive Christians generally, believed in the exclusive humanity of Christ and held him to be the son of Mary and Joseph, only subsequently receiving his consecration through the Holy Ghost. On this point the Ebionites were diametrically opposed to the Docetists. The effects of this opposition endured long after. The conflict came to light again in an altered form—which, though doctrinally attenuated, had an even graver effect on Church politics—about the year 320 in the Arian heresy. Arius denied the formula propounded by the orthodox Church: τῶ Πατρὶ ὁμοούσιος (of one substance with the Father), in favour of τῶ Πατρὶ ὁμοιούσιος (of like substance with the Father). When we examine more clearly the history of the great Arian controversy concerning *homoousia* and *homoiousia* (the complete identity as against the similarity of Christ's substance with God), it seems to us that *homoiousia* definitely puts the accent on the sensuous and humanly perceptible, in contrast to the purely conceptual and abstract standpoint of *homoousia*. In the same way it would appear to us that the revolt of the Monophysites (who upheld the absolute unity of Christ's nature) against the Dyophysite formula of the Council of Chalcedon (which upheld the inseparable duality of Christ, his human and divine nature coexisting in one body) once more asserted the standpoint of the abstract and inconceivable as against the sensuous and naturalistic formula of the Dyophysites.

[32] At the same time it becomes overwhelmingly clear to us that, in the Arian movement as in the Monophysite dispute, although the subtle dogmatic question was the main issue for the minds that originally conceived it, this was not so for the great mass of people who took part in

the controversy. Even in those early days so subtle a question had no motivating force with the masses, who were stirred rather by the problems and claims of political power that had nothing to do with differences of theological opinion. If type differences had any significance at all here, it was merely because they provided catchwords that gave a flattering label to the crude instincts of the mass. But this should in no way blind us to the fact that, for those who kindled the quarrel, *homoousia* and *homoiousia* were a very serious matter. For concealed within it, both historically and psychologically, lay the Ebionite creed of a purely human Christ with only relative ("apparent") divinity, and the Docetist creed of a purely divine Christ with only apparent corporeality. And beneath this level in turn lies the great psychological schism. The one position attaches supreme value and importance to the sensuously perceptible, whose subject, though it may not always be human and personal, is nevertheless always a projected human sensation; the other maintains that the chief value lies with the abstract and extra-human, whose subject is the function; in other words, with the objective process of nature, that runs its course determined by impersonal law, beyond human sensation, of which it is the actual foundation. The former standpoint overlooks the function in favour of the function-complex, if man may be so regarded; the latter overlooks man as the indispensable subject in favour of the function. Each standpoint denies the principal value of the other. The more resolutely the adherents of either standpoint identify themselves with it, the more they strive, with the best intentions perhaps, to force it on the other, and thereby violate the other's supreme value.

[33] Another aspect of the type conflict appears in the Pelagian controversy at the beginning of the fifth century. The experience so profoundly felt by Tertullian, that man cannot avoid sin even after baptism, grew with Augustine—who in many ways was not unlike Tertullian—into that thoroughly characteristic, pessimistic doctrine of original sin, whose essence consists in the concupiscence[9] inherited from Adam. Over against the fact of original sin there stood, according to Augustine, the redeeming grace of God, with the institution of the Church ordained by his grace to administer the means of salvation. In this

scheme of things the value of man stands very low. He is really nothing but a miserable rejected creature, who is delivered over to the devil under all circumstances, unless through the medium of the Church, the sole means of salvation, he is made a participator of the divine grace. Not only man’s value, but his moral freedom and his self-determination crumbled away accordingly, with the result that the value and significance of the Church as an *idea* were so much the more enhanced, as was altogether in keeping with Augustine’s explicit programme in the *Civitas Dei*.

[34] Against such a stifling conception there rises ever anew the feeling of man’s freedom and moral value—a feeling that will not long endure suppression whether by insight however searching, or logic however keen. The rightness of the feeling of human value found its defenders in Pelagius, a British monk, and Celestius, his pupil. Their teaching was founded on the moral freedom of man as a given fact. It is characteristic of the psychological kinship existing between the Pelagian standpoint and the Dyophysite view that the persecuted Pelagians found an advocate in Nestorius, the Metropolitan of Constantinople. Nestorius stressed the separation of the two natures of Christ in contrast to the Cyrillian doctrine of the φυσικὴ ἕνωσις, physical oneness of Christ as the God-man. Also, Nestorius definitely did not want Mary to be understood as the Θεοτόκος (God-bearer), but merely as the Χριστοτόκος (Christ-bearer). With some justification he even called the idea that Mary was the mother of God heathenish. From him originated the Nestorian controversy, which finally ended with the secession of the Nestorian Church.

3. THE PROBLEM OF TRANSUBSTANTIATION

[35] With the immense political upheavals of that age, the collapse of the Roman Empire, and the decay of ancient civilization, these controversies likewise passed into oblivion. But when, after several centuries, a state of stability was again reached, the psychological differences also reappeared in their characteristic ways, tentatively at first but becoming ever more intense with advancing civilization. No longer was it the problems that

had thrown the early Church into an uproar; new forms had been devised, but underneath them the same psychology was concealed.

[36] About the middle of the ninth century the Abbot Paschasius Radbertus appeared on the scene with a treatise on the Communion, in which he propounded the doctrine of the transubstantiation, i.e., the assertion that the wine and holy wafer become transformed into the actual blood and body of Christ. As is well known, this view became a dogma, according to which the transformation is accomplished *vere, realiter, substantialiter* (in truth, in reality, in substance). Although the “accidentals,” the bread and wine, preserve their outward aspect, they are substantially the flesh and blood of Christ. Against this extreme concretization of a symbol Ratramnus, a monk of the same monastery where Radbertus was abbot, ventured to raise some opposition. However, Radbertus found a more resolute opponent in Scotus Erigena, one of the great philosophers and daring thinkers of the early Middle Ages, who, as Hase says in his *History of the Christian Church,* towered so high and solitary above his time that his doctrines were not sufficiently understood to be condemned by the Church until the thirteenth century. As abbot of Malmesbury, he was butchered by his own monks about the year 889. Scotus Erigena, for whom true philosophy was also true religion, was no blind follower of authority and the “once accepted” because, unlike the majority of his age, he himself could think. He set reason above authority, very unseasonably perhaps but in a way that assured him the acclaim of later centuries. Even the Church Fathers, who were considered to be above discussion, he held as authorities only in so far as the treasures of human reason were contained in their writings. Thus he also held that the Communion was nothing more than a commemoration of that last supper which Jesus celebrated with his disciples, a view in which all reasonable men in every age will concur. Scotus Erigena, clear and humanistic as he was in his thinking, and however little disposed to detract from the significance and value of the sacred ceremony, was not attuned to the spirit of his age and the desires of the world around him, a fact that might, indeed, be inferred from his assassination by his own comrades of the cloister. Because he could think rationally and logically success did not come to him; instead, it fell to Radbertus, who assuredly

could not think, but who “transubstantiated” the symbolic and meaningful and made it coarse and sensual, attuned as he obviously was to the spirit of his age, which was all for the concretization of religious experiences.

[37] Again in this controversy we can easily recognize the basic elements we have already met in the disputes discussed earlier: the abstract standpoint that abhors any contamination with the concrete object, and the concretistic that is turned towards the object.

[38] Far be it from us to pronounce, from the intellectual standpoint, a one-sided, depreciatory judgment on Radbertus and his achievement. Although to the modern mind this dogma must appear simply absurd, we should not be misled on that account into declaring it historically worthless. Certainly it is a showpiece for every collection of human aberrations, but that does not establish its worthlessness *eo ipso*. Before passing judgment, we must carefully examine what this dogma accomplished in the religious life of that epoch, and what our age still owes indirectly to its effect. It must not be overlooked, for instance, that it is precisely the belief in the reality of this miracle that demands a detachment of the psychic process from the purely sensual, and this cannot remain without influence on the psychic process itself. Directed thinking becomes absolutely impossible when the sensual has too high a threshold value. Because its value is too high it constantly intrudes into the psyche, where it disrupts and destroys the function of directed thinking which is based on the exclusion of everything incompatible with thought. From this elementary consideration follows the practical importance of rites and dogmas that prove their value not only from this point of view but from a purely opportunistic and biological one, not to speak of the immediate, specifically religious effects accruing to individuals from a belief in this dogma. Highly as we esteem Scotus Erigena, the less is it permitted to despise the achievement of Radbertus. But what we may learn from this example is that the thinking of the introvert is incommensurable with the thinking of the extravert, since the two forms of thinking, as regards their determinants, are wholly and fundamentally different. We might perhaps say that the thinking of the introvert is *rational*, while that of the extravert is *programmatic*.

[39] These arguments, I wish particularly to emphasize, do not pretend to have said anything decisive about the individual psychology of our two protagonists. What we know of Scotus Erigena personally—it is little enough—is not sufficient for us to make a sure diagnosis of his type. What we do know speaks in favour of the introverted type. Of Radbertus we know next to nothing. We know only that he said something that contradicted ordinary human thinking, but with surer logic of feeling surmised what his age was prepared to accept as suitable. This would speak in favour of the extraverted type. For insufficient knowledge we must suspend judgment on both personalities, since, particularly in the case of Radbertus, the matter might well be decided quite differently. He might equally well have been an introvert, but with limited reasoning powers that in no way rose above the conceptions of his milieu, and with a logic so lacking in originality that it was just sufficient to draw the obvious conclusion from the premises already laid down in the writings of the Church Fathers. Conversely, Scotus Erigena might as well have been an extravert, if it could be shown that he lived in a milieu that was distinguished in any case by common sense and that considered a corresponding assertion suitable and desirable. But this has in no sense been demonstrated. On the other hand, we do know how great was the yearning of that age for the reality of religious miracles. To an age so constituted, the views of Scotus Erigena must have seemed cold and deadening, whereas the assertion of Radbertus must have been felt as life-promoting, since it concretized what everyone desired.

4. NOMINALISM AND REALISM

[40] The Communion controversy of the ninth century was merely the signal for a much greater controversy that divided the minds of men for centuries and had incalculable consequences. This was the conflict between nominalism and realism. By nominalism is meant that school which asserted that the so-called universals, namely generic or universal concepts such as beauty, goodness, animal, man, etc., are nothing but *nomina*, names, or words, derisively called *flatus vocis*. Anatole France says: “What is thinking? And how does one think? We think with words;

that in itself is sensual and brings us back to nature. Think of it! A metaphysician has nothing with which to construct his world system except the perfected cries of monkeys and dogs."[10] This is extreme nominalism, as it is when Nietzsche says that reason is "speech metaphysics."

[41] Realism, on the contrary, affirms the existence of universals *ante rem*, and holds that general concepts exist in themselves after the manner of Platonic ideas. In spite of its ecclesiastical associations, nominalism is a sceptical tendency that denies the separate existence characteristic of abstractions. It is a kind of scientific scepticism coupled with the most rigid dogmatism. Its concept of reality necessarily coincides with the sensuous reality of things; their individuality represents the real as opposed to the abstract idea. Strict realism, on the contrary, transfers the accent on reality to the abstract, the idea, the universal, which it posits before the thing (*ante rem*).

a. The Problem of Universals in Antiquity

[42] As our reference to the doctrine of Platonic ideas shows, we are dealing with a conflict that reaches very far back in time. Certain envenomed remarks in Plato concerning "grey-bearded schoolboys" and the "mentally poverty-stricken" are innuendos aimed at the adherents of two allied schools of philosophy that were at odds with the Platonic spirit, these being the Cynics and the Megarians. Antisthenes, the leader of the former school, although by no means a stranger to the Socratic ambiance and even a friend of Xenophon, was nevertheless avowedly inimical to Plato's beautiful world of ideas. He even wrote a pamphlet against Plato, in which he scurrilously changed Plato's name to *Σάθων*. *Σάθων* means 'boy' or 'man,' but under his sexual aspect, since *σάθων* comes from *σάθη*, 'penis,' 'cock'; whereby Antisthenes, through the time-honoured method of projection, delicately suggests what cause he is defending against Plato. For Origen, as we saw, this was also a prime cause, the very devil whom he sought to lay low by means of self-castration, in order to pass without hindrance into the richly furnished world of ideas. Antisthenes, however, was a pre-Christian pagan, and for him what the phallus has stood for from time immemorial as the

acknowledged symbol was of heartfelt interest, namely the delights of the senses—not that he was alone in this, for as we know it affected the whole Cynic school, whose cry was “Back to Nature!” There were plenty of reasons that might have thrust his concrete feeling and sensation into the foreground; he was before everything a proletarian, who made a virtue of his envy. He was no ἰθαγενής, no thoroughbred Greek. He was an outsider, and he taught outside too, before the gates of Athens, where he flaunted his proletarian behaviour, a model of Cynic philosophy. Moreover, the whole school was composed of proletarians, or at least of people on the fringe, all of whom indulged in corrosive criticism of the traditional values.

[43] After Antisthenes one of the most prominent members of the school was Diogenes, who conferred on himself the title of Κϓύν, ‘dog,’ and whose tomb was adorned by a dog in Parian marble. Despite his warm love of man, for his whole nature was suffused with human understanding, he nonetheless pitilessly satirized everything that the men of his time held sacred. He ridiculed the horror that gripped the spectator in the theatre at the sight of Thyestes’ repast,[11] or the incestuous tragedy of Oedipus; anthropophagy was not so bad, since human flesh can claim no exceptional position among meats, and furthermore the mishap of an incestuous affair is not such a disaster after all, as the instructive example of our domestic animals makes plain to us. In many respects the Megarian school was akin to the Cynics. Was not Megara the unsuccessful rival of Athens? After a most promising start, when Megara rose to prominence through the founding of Byzantium and Hyblaeaic Megara in Sicily, internal squabbles broke out, after which Megara sickened and wasted away, and was in every respect outstripped by Athens. Loutish peasant wit was known in Athens as “Megarian jesting.” This envy, which in the defeated is imbibed with the mother’s milk, might explain not a little that is characteristic of Megarian philosophy. Like that of the Cynics, it was thoroughly nominalistic and utterly opposed to the realism of Plato’s ideology.

[44] Another leading figure in this school was Stilpon of Megara, about whom the following characteristic anecdote is related. One day Stilpon came to Athens and saw on the Acropolis the wondrous statue of Pallas

Athene made by Phidias. A true Megarian, he remarked that it was not the daughter of Zeus but of Phidias. This jest catches the whole spirit of Megarian thinking, for Stilpon taught that generic concepts are without reality and objective validity. Anyone, therefore, who speaks of “man” speaks of nobody, because he is designating τόνδε οὔτε τόνδε (neither this nor that). Plutarch ascribes to him the statement ἕτερον ἑτέρου μὴ κατηγορεῖσθαι (one thing can affirm nothing concerning [the nature of] another).[12] The teaching of Antisthenes was very similar. The oldest exponent of this type of propositional thinking seems to have been Antiphon of Rhamnos, a sophist and contemporary of Socrates. One of his propositions runs: “A man who perceives long objects neither sees the length with his eyes nor can perceive it with his mind.”[13] The denial of the substantiality of generic concepts follows directly from this proposition. Naturally the whole position of Platonic ideas is undermined by this type of thinking, for with Plato it is just the ideas that have eternal and immutable validity, while the “real” and the “many” are merely their fugitive reflections. From the realist standpoint, the Cynic-Megarian critique breaks down generic concepts into purely sophisticated and descriptive nomina lacking any substantiality, and lays the accent on the individual thing.

[45] This manifest and fundamental opposition was clearly conceived by Gomperz[14] as the problem of *inherence* and *predication*. When, for instance, we speak of “warm” and “cold,” we speak of warm and cold things, to which “warm” and “cold” belong as attributes, predicates, or assertions. The assertion refers to something perceived and actually existing, namely to a warm or a cold body. From a plurality of similar cases we abstract the concepts of “warmth” and “coldness,” which again we immediately connect in our thoughts with something concrete, thing-like. Thus “warmth” and “coldness” are thing-like for us because of the reverberation of sense-perception in the abstraction. It is extremely difficult for us to strip the abstraction of its “thingness,” for there naturally clings to every abstraction the thing it is abstracted from. In this sense the thingness of the predicate is actually an *a priori*. If we now pass to the next higher generic concept, “temperature,” we still have no difficulty in perceiving its thingness, which, though it has lost its

definiteness for the senses, nevertheless retains the quality of representability that adheres to every sense-perception. If we then ascend to a very much higher generic concept, such as “energy,” its thing-like character quite disappears, and with it, to a certain extent, goes the quality of representability. At this point the conflict arises about the “nature” of energy: whether energy is purely conceptual and abstract, or whether it is something “real.” The learned nominalist of our day is quite convinced that energy is nothing but a name, a mere counter in our mental calculus; but in spite of this, in our everyday speech we treat energy as though it were thing-like, thus sowing in our heads the greatest confusion from the standpoint of the theory of knowledge.

[46] The thing-likeness of the purely conceptual, which creeps so naturally into the process of abstraction and brings about the “reality” of the predicate or the abstract idea, is no artificial product, no arbitrary hypostatizing of a concept, but a natural necessity. It is not that the abstract idea is arbitrarily hypostatized and transplanted into a transcendental world of equally artificial origin; the actual historical process is quite the reverse. Among primitives, for instance, the imago, the psychic reverberation of the sense-perception, is so strong and so sensuously coloured that when it is reproduced as a spontaneous memory-image it sometimes even has the quality of an hallucination. Thus when the memory-image of his dead mother suddenly reappears to a primitive, it is as if it were her ghost that he sees and hears. We only “think” of the dead, but the primitive actually perceives them because of the extraordinary sensuousness of his mental images. This explains the primitive’s belief in ghosts and spirits; they are what we quite simply call “thoughts.” When the primitive “thinks,” he literally has visions, whose reality is so great that he constantly mistakes the psychic for the real. Powell says: “The confusion of confusions is that universal habit of savagery—the confusion of the objective with the subjective.”[15] Spencer and Gillen observe: “What a savage experiences during a dream is just as real to him as what he sees when he is awake.”[16] What I myself have seen of the psychology of the Negro completely endorses these findings. From this basic fact of the psychic realism and autonomy of the image vis-à-vis the autonomy of the sense-perception springs the belief in

spirits, and not from any need of explanation on the part of the primitive, which is merely imputed to him by Europeans. For the primitive, thought is visionary and auditory, hence it also has the character of revelation. Thus the sorcerer, the visionary, is always the thinker of the tribe, who brings about the manifestation of the spirits or gods. This also explains the magical effect of thought; it is as good as the deed, just because it is real. In the same way the word, the outer covering of thought, has a "real" effect because it calls up "real" memory-images. Primitive superstition surprises us only because we have largely succeeded in desensualizing the psychic image; we have learnt to think abstractly—always, of course, with the above-mentioned limitations. Nevertheless, as anybody who is engaged in the practice of analytical psychology knows, even "educated" European patients constantly need reminding that thinking is not doing—one patient because he believes that to think something is enough, another because he feels he must not think something or he would immediately have to go and do it.

[47] How easily the primitive reality of the psychic image reappears is shown by the dreams of normal people and the hallucinations that accompany mental derangement. The mystics even endeavour to recapture the primitive reality of the imago by means of an artificial introversion, in order to counterbalance extraversion. There is an excellent example of this in the initiation of the Mohammedan mystic Tewekkul-Beg, by Molla-Shah. Tewekkul-Beg relates:

> After these words he called me to seat myself opposite to him, while still my senses were as though bemused, and commanded me to create his own image in my inner self; and after he had bound my eyes, he bade me gather all the forces of the soul into my heart. I obeyed, and in the twinkling of an eye, by divine favour and with the spiritual succour of the Sheik, my heart was opened. I beheld there in my innermost self something resembling an overturned bowl; when this vessel was righted, a feeling of boundless joy flooded through my whole being. I said to the Master: "From this cell, in which I am seated before you, I behold within me a true vision, and it is as though another Tewekkul-Beg were seated before another Molla-Shah."[17]

> The Master explained this to him as the first phenomenon of his initiation. Other visions soon followed, once the way to the primitive image of the real had been opened.

[48] The reality of the predicate is given *a priori* since it has always existed in the human mind. Only by subsequent criticism is the abstraction deprived of the quality of reality. Even in Plato's time the belief in the magical reality of verbal concepts was so great that it was worth the philosopher's while to devise traps or fallacies by which he was able, through the absolute significance of words, to elicit an absurd reply. A simple example is the Enkekalymmenos (veiled man) fallacy devised by the Megarian philosopher Eubulides: "Can you recognize your father? — Yes. Can you recognize this veiled man? — No. You contradict yourself; this veiled man is your father. Thus you can recognize your father and at the same time not recognize him." The fallacy merely lies in this, that the person questioned naïvely assumes the word "recognize" refers in all cases to the same objective fact, whereas in reality its validity is restricted to certain definite cases. The Keratines (horned man) fallacy is based on the same principle: "What you have not lost, you still have. You have not lost horns, therefore you have horns." Here too the fallacy lies in the naïveté of the subject, who assumes in the premise a specific fact. With the help of this method it could be convincingly shown that the absolute significance of words was an illusion. As a result, the reality of the generic concept, which in the form of the Platonic idea had a metaphysical existence and exclusive validity, was put in jeopardy. Gomperz says:

> Men were not as yet possessed of that distrust of language which animates us moderns and frequently causes us to see in words a far from adequate expression of the facts. On the contrary, there was a simple and unsuspecting faith that the range of an idea and the range of the word roughly corresponding to it must in every case exactly coincide.[18]

[49] In view of this magical, absolute significance of words, which presupposes that words also imply the objective behaviour of things, the Sophist critique was very much in place. It offered a striking proof of the impotence of language. In so far as ideas are merely names—a

supposition that remains to be proved—the attack upon Plato was justified. But generic concepts cease to be mere names when they designate the similarities or conformities of things. The question then arises whether these conformities are objective realities or not. These conformities actually exist, hence the generic concept also corresponds with some kind of reality. It contains as much reality as does the exact description of a thing. The generic concept differs from the description only in that it describes or designates the conformities of things. The weakness, therefore, lies neither in the generic concept nor in the Platonic idea, but in its verbal expression, which obviously under no circumstances adequately reproduces either the thing or the conformity. The nominalist attack on the doctrine of ideas was thus in principle an unwarrantable encroachment, and Plato's exasperated counterstroke was fully justified.

[50] According to Antisthenes, the principle of inherence consists in this, that not only can no kind of predicate be asserted of a subject which differs from it, but no predicate at all. Antisthenes granted as valid only those predicates that were identical with the subject. Apart from the fact that such statements of identity ("sweet is sweet") affirm nothing at all and are, therefore, meaningless, the weakness of the principle of inherence is that a statement of identity has also nothing to do with the thing: the word "grass" has no connection with the thing "grass." The principle of inherence suffers just as much from the old word-fetishism, which naïvely supposes that the word coincides with the thing. So when the nominalist tells the realist: "You are dreaming—you think you are dealing with things, but all the time you are fighting verbal chimeras!" the realist can answer the nominalist in precisely the same words; for neither is the nominalist dealing with things in themselves but with the words he has put in the place of things. Even when he uses a separate word for each individual thing, they are always only words and not the things themselves.

[51] Now though the idea of energy is admittedly a mere verbal concept, it is nevertheless so extraordinarily real that your Electricity Company pays dividends out of it. The board of directors would certainly allow no metaphysical argument to convince them of the unreality of energy.

“Energy” designates simply the conformity of the phenomena of force—a conformity that cannot be denied and that daily gives striking proof of its existence. So far as a thing is real, and a word conventionally designates that thing, the word also acquires reality-significance. And so far as the conformity of things is real, the generic concept designating that conformity likewise acquires reality-significance, a significance that is neither greater nor less than that of the word designating the individual thing. The shifting of the accent of value from one side to the other is a matter of individual attitude and the psychology of the time. Gomperz was also aware of these underlying psychological factors in Antisthenes, and brings out the following points:

> Sound common sense, a resistance to all dreamy enthusiasm, perhaps also the strength of individual feeling that endows the personality and hence, probably, the individual’s whole character with the stamp of complete reality—these may well have been among the forces that swelled the tide of reaction.[19]

To this we might add the envy of a man without full rights of citizenship, a proletarian, a man upon whom fate had bestowed but little beauty, and who at best could only climb to the heights by demolishing the values of others. This was especially characteristic of the Cynic, who must forever be carping at others, and to whom nothing was sacred if it happened to belong to somebody else; he even had no compunction about destroying the peace of the home if he might seize an occasion to parade his invaluable advice.

[52] To this essentially critical attitude of mind Plato’s world of ideas with their eternal reality stands diametrically opposed. It is evident that the psychology of the man who fashioned that world had an orientation altogether foreign to the carping, corrosive judgments described above. From the world of multiplicity Plato’s thinking abstracted and created synthetic constructive concepts, which designate and express the general conformities of things as that which truly exists. Their invisible and suprahuman quality is the direct opposite of the concretism of the principle of inherence, which would reduce the stuff of thought to the unique, the individual, the objective. This attempt is just as impossible as the exclusive acceptance of the principle of predication, which would

exalt what has been affirmed of many isolated things to an eternally existing substance above all decay. Both forms of judgment are justifiable, as both are naturally present in every man. This is best seen, in my view, from the fact that the very founder of the Megarian school, Eucleides of Megara, established an “All-oneness” that was immeasurably far above the individual and particular. For he linked together the Eleatic principle of “being” with “good,” so that for him “being” and “good” were identical. As opposed to this there was only “non-existing evil.” This optimistic All-oneness was, of course, nothing but a generic concept of the highest order, one that simply included “being” but at the same time contradicted all evidence, far more so even than the Platonic ideas. With this concept Eucleides produced a compensation for the negatively critical dissolution of constructive judgments into mere verbalities. His All-oneness was so remote and so vague that it utterly failed to express the conformity of things; it was no type at all, but rather the product of a desire for a unity that would embrace the disordered multitude of individual things. This desire forces itself on all those who pay homage to extreme nominalism, in so far as they make any attempt to escape from their negatively critical attitude. Hence it is not uncommon to find in people of this sort an idea of fundamental uniformity that is superlatively improbable and arbitrary. It is manifestly impossible to base oneself entirely on the principle of inherence. Gomperz pertinently observes:

> Attempts of this nature are foredoomed to failure in every age. Their success was completely out of the question in an age that was destitute of historical understanding, and in which there was next to no insight into the deeper problems of psychology. It was not a mere risk, it was an absolute certainty that the more patent and palpable, but on the whole less important, values would thrust into the background others of greater moment, though less easily discerned. In taking the brute and the savage for a model in their efforts to lop off the excrescences of civilization, men laid a destroying hand upon much that was the fruit of an ascending process of development which must be measured in myriads of years.[20]

[53] Constructive judgment—which, unlike inherence, is based on the conformity of things—has created general ideas that must be counted

among the highest values of civilization. Even if these ideas relate only to the dead, we are nevertheless still bound to them by threads which, as Gomperz says, have gained an almost unbreakable strength. He continues:

> Thus it is with the body bereft of life; but things which never possessed life may also have a claim on our forbearance, our reverence, even our self-sacrificing devotion; for example, statues, graves, the soldier's flag. And if we do violence to our nature, if we succeed in breaking by main force the bonds of association, we lapse into savagery, we suffer injury in our own souls by the loss of all those feelings which, so to speak, clothe the hard bedrock of naked reality with a garniture of verdant life. On the maintenance of these overgrowths of sentiment, on the due treasuring of acquired values, depend all the refinement, the beauty, and the grace of life, all ennobling of the animal instincts, together with all enjoyment and the pursuit of art—all, in short, that the Cynics set themselves to root up without scruple and without pity. There is, no doubt, a limit—so much we may readily concede to them and their not inconsiderable imitators of the present day—beyond which we cannot allow ourselves to be ruled by the principle of association without incurring the charge of that same folly and superstition which quite certainly grew out of the unlimited sway of that principle.[21]

[54] We have gone so thoroughly into the problem of inherence and predication not only because this problem was revived in the nominalism and realism of the Scholastics but because it has never yet been finally set at rest and presumably never will be. For here again the question at issue is the typical opposition between the abstract standpoint, where the decisive value lies with the mental process itself, and the personal thinking and feeling which, consciously or unconsciously, underlie orientation by the objects of sense. In the latter case the mental process is simply a means for accentuating the personality. It is small wonder that it was precisely the proletarian philosophy that adopted the principle of inherence. Wherever sufficient reasons exist for laying the emphasis on personal feeling, thinking and feeling necessarily become negatively critical through lack of positive creative energy, which is all diverted to personal ends; they become a mere analytical organ that reduces

everything to the concrete and particular. The resultant accumulation of disordered particulars is at best subordinated to a vague feeling of All-oneness, the wishful character of which is plain to see. But when the accent lies on the mental process, the product of the mind's activity is exalted above the disordered multiplicity as an *idea*. The idea is depersonalized as much as possible, while personal feeling passes over almost entirely into the mental process, which it hypostatizes.

[55] Before proceeding further we might inquire whether the psychology of the Platonic doctrine of ideas justifies us in the supposition that Plato may personally have belonged to the introverted type, and whether the psychology of the Cynics and Megarians allows us to count such figures as Antisthenes, Diogenes, and Stilpon among the extraverts. Put in this form, the question is absolutely impossible to answer. An extremely careful examination of Plato's authentic writings considered as *documents humains* might perhaps enable one to conclude to which type he belonged, but I for my part would not venture to pronounce any positive judgment. If someone were to furnish evidence that Plato belonged to the extraverted type, it would not surprise me. What has been handed down concerning the others is so very fragmentary that in my opinion a decision is out of the question. Since the two types of thinking we have been discussing depend on a displacement of the accent of value, it is of course equally possible that in the case of the introvert personal feeling may, for various reasons, be pushed into the foreground and will subordinate thinking, so that his thinking becomes negatively critical. For the extravert, the accent of value lies on his relation to the object as such, and not necessarily on his personal relation to it. When the relation to the object occupies the foreground, the mental process is already subordinate; but, if it concerns itself exclusively with the nature of the object and avoids the admixture of personal feeling, it does not possess a destructive character. We have, therefore, to class the particular conflict between the principles of inherence and predication as a special case, which in the further course of our investigation will be examined more thoroughly. The special nature of this case lies in the positive and negative parts played by personal feeling. When the type (generic concept) reduces the individual thing to a shadow, the type has acquired

the reality of a collective idea. But when the value of the individual thing abolishes the type (generic concept), anarchic disintegration is at work. Both positions are extreme and unfair, but they form a contrasting picture whose clear outlines, by their very exaggeration, throw into relief features which, in a milder and more covert form, are also inherent in the nature of the introverted and extraverted types, even in the case of individuals in whom personal feeling is not pushed into the foreground. For instance, it makes a considerable difference whether the mental function is master or servant. The master thinks and feels differently from the servant. Even the most far-reaching abstraction of the personal in favour of the general value can never quite eliminate the personal admixtures. And in so far as these exist, thinking and feeling will contain destructive tendencies that come from the self-assertion of the person in the face of unfavourable social conditions. But it would surely be a great mistake if, for the sake of personal tendencies, we were to reduce the traditional universal values to personal undercurrents. That would be pseudo-psychology, but it nevertheless exists.

b. The Problem of Universals in Scholasticism

[56] The problem of the two forms of judgment remained unsolved because—*tertium non datur*. Porphyry handed down the problem to the Middle Ages thus: “As regards universal and generic concepts, the real question is whether they are substantial or merely intellectual, whether corporeal or incorporeal, whether separate from sensible things or in and around them.”[22] The Scholastics took up the problem in this form. They started with the Platonic view, the *universalia ante rem*, the universal idea as the pattern or exemplar above all individual things and altogether detached from them, existing ἐν οὐρανίῳ τόπῳ, ‘in a heavenly place.’ As the wise Diotima says to Socrates in the dialogue on beauty:

> Nor again will this beauty appear to him like the beauty of a face or hands or anything else corporeal, or like the beauty of a thought or a science, or like beauty which has its seat in something other than itself, be it a living thing or the earth or the sky or anything else whatever; he will see it as absolute, existing alone with itself, unique, eternal, and all other beautiful things as partaking of it, yet in such manner that, while

they come into being and pass away, it neither undergoes any increase or diminution nor suffers any change.[23]

[57] Opposed to the Platonic form, as we saw, was the critical assumption that generic concepts are mere words. Here the real is *prius*, the ideal *posterius*. This view was designated *universalia post rem*. Between the two conceptions stood the moderate, realistic view of Aristotle which we might call *universalia in re*, that form (εἰδος) and matter coexist. The Aristotelian standpoint is a concretistic attempt at mediation fully in accord with Aristotle’s nature. As against the transcendentalism of his teacher Plato, whose school afterwards relapsed into Pythagorean mysticism, Aristotle was entirely a man of reality—of classical reality, one should add, which contained much in concrete form that later ages abstracted and added to the inventory of the human mind. His solution reflected the concretism of classical common sense.

[58] These three forms also reveal the structure of medieval opinion in the great controversy about universals, which was the quintessence of Scholasticism. It cannot be my task—even if I were competent—to probe more deeply into the details of this controversy. I must content myself with hints for the purpose of general orientation. The dispute began with the views of Johannes Roscellinus towards the end of the eleventh century. Universals were for him nothing but *nomina rerum*, names of things, or, as tradition says, *flatus vocis*. For him there were only individual things. He was, as Taylor aptly observes, “strongly held by the reality of individuals.”[24] To think of God, too, as only individual was the next obvious conclusion, though actually it dissolved the Trinity into three separate persons, so that Roscellinus arrived at tritheism. This was intolerable to the prevailing realism of the times, and in 1092 his views were condemned by a synod at Soissons. The opposing side was represented by William of Champeaux, the teacher of Abelard, an extreme realist but of Aristotelian complexion. According to Abelard, he taught that one and the same thing existed in its totality and at the same time in separate individual things. There were no essential differences between individual things, but merely a multitude of “accidentals.” By this concept the actual differences between things were explained as

fortuitous, just as in the dogma of transubstantiation the bread and wine, as such, were only "accidentals."

[59] On the realist side there was also Anselm of Canterbury, the father of Scholasticism. A true Platonist, the universals resided for him in the divine Logos. It is in this spirit that we must understand the psychologically important proof of God advanced by Anselm, which is known as the ontological proof. This proof demonstrates the existence of God from the idea of God. Fichte formulates it trenchantly as follows: "The existence of the idea of an Absolute in our consciousness proves the real existence of this Absolute."[25] Anselm held that the concept of a Supreme Being present in the intellect also implied the quality of existence (*non potest esse in intellectu solo*). He continued: "So, then, there truly is a being than which a greater cannot be thought—so truly that it cannot even be thought of as not existing. And thou art this being, O Lord our God."[26] The logical weakness of the ontological argument is so obvious that it even requires a psychological explanation to show how a mind like Anselm's could advance such an argument. The immediate cause is to be sought in psychological disposition of realism in general, namely in the fact that there was not only a certain class of men but, in keeping with the current of the age, also certain groups of men for whom the accent of value lay on the idea, so that the idea represented for them a higher reality or value for life than the reality of individual things. Hence it seemed simply impossible to suppose that what to them was most valuable and significant should not *really* exist. Indeed, they had the most striking proof of its efficacy in their own hands, since their whole lives, their thinking and feeling, were entirely oriented by this point of view. The invisibility of an idea mattered little in comparison with its extraordinary efficacy, which was indeed a reality. They had an ideal, and not a sensual, concept of the real.

[60] A contemporary opponent of Anselm's, Gaunilo, raised the objection that the oft-recurring idea of the Islands of the Blessed (based on Homer's land of the Phaeacians, *Odyssey*, VIII) does not necessarily prove their actual existence. This objection is palpably reasonable. Similar objections were raised in the course of the centuries, though they did nothing to prevent the ontological argument surviving even down to

quite recent times, it being espoused in the nineteenth century by Hegel, Fichte, and Lotze. Such contradictory statements cannot be ascribed to some peculiar defect in the logic of these thinkers or to an even greater delusion on one side or the other. That would be absurd. Rather is it a matter of deep-seated psychological differences which must be acknowledged and clearly stated. The assumption that only *one* psychology exists or only *one* fundamental psychological principle is an intolerable tyranny, a pseudo-scientific prejudice of the common man. People always speak of man and his "psychology" as though there were "nothing but" that psychology. In the same way one always talks of "reality" as though it were the only one. Reality is simply what works in a human soul and not what is assumed by certain people to work there, and about which prejudiced generalizations are wont to be made. Even when this is done in a scientific spirit, it should not be forgotten that science is not the *summa* of life, that it is actually only one of the psychological attitudes, only one of the forms of human thought.

[61] The ontological argument is neither argument nor proof, but merely the psychological demonstration of the fact that there is a class of men for whom a definite idea has efficacy and reality—a reality that even rivals the world of perception. The sensualist brags about the undeniable certainty of his reality, and the idealist insists on his. Psychology has to resign itself to the existence of these two (or more) types, and must at all costs avoid thinking of one as a misconception of the other; and it should never seriously try to reduce one type to the other, as though everything "other" were merely a function of the one. This does not mean that the scientific axiom known as Occam's razor—"explanatory principles should not be multiplied beyond the necessary"—should be abrogated. But the need for a plurality of psychological explanatory principles still remains. Aside from the arguments already adduced in favour of this, our eyes ought to have been opened by the remarkable fact that, notwithstanding the apparently final overthrow of the ontological proof by Kant, there are still not a few post-Kantian philosophers who have taken it up again. And we are today just as far or perhaps even further from an understanding of the pairs of opposites—idealism / realism, spiritualism / materialism, and all the subsidiary questions they raise—

than were the men of the early Middle Ages, who at least had a common philosophy of life.

[62] There can surely be no logical argument that appeals to the modern intellect in favour of the ontological proof. The ontological argument in itself has really nothing to do with logic; in the form in which Anselm bequeathed it to history it is a subsequently intellectualized or rationalized *psychological fact*, and naturally this could never have come about without begging the question and sundry other sophistries. But it is just here that the unassailable validity of the argument shows itself—in the fact that it exists, and that the *consensus gentium* proves it to be a fact of universal occurrence. It is the fact that has to be reckoned with, not the sophistry of its proof. The mistake of the ontological argument consists simply and solely in its trying to argue logically, when in reality it is very much more than a merely logical proof. The real point is that it is a psychological fact whose existence and efficacy are so overwhelmingly clear that no sort of argumentation is needed to prove it. The *consensus gentium* proves that, in the statement "God *is*, because he is thought," Anselm was right. It is an obvious truth, indeed nothing but a statement of identity. The "logical" argumentation about it is quite superfluous, and false to boot, inasmuch as Anselm wanted to establish his idea of God as a concrete reality. He says: "Without doubt, therefore, there exists, both in the understanding and in reality [*in intellectu et in re*], something than which a greater cannot be thought."[27] For the Scholastics, the concept *res* was something that existed on the same level as thought. Thus Dionysius the Areopagite, whose writings exercised a considerable influence on early medieval philosophy, distinguished the categories *entia rationalia*, *intellectualia*, *sensibilia*, *simpliciter existentia*. For Thomas Aquinas, *res* was *quod est in anima* (what is in the soul) as well as *quod est extra animam* (what is outside the soul).[28] This remarkable equation allows us to discern the primitive "thing-likeness" (*res* = "reality") of thought in the conceptions of that time. It is a state of mind that makes the psychology of the ontological proof readily understandable. The hypostatizing of the idea was not at all an essential step, but was implicit as a reverberation of the primitive sensuousness of thought. Gaunilo's counter-argument was psychologically unsatisfactory, for although, as the

consensus gentium proves, the idea of the Islands of the Blessed frequently occurs, it is unquestionably less effective than the idea of God, which consequently acquires a higher reality-value.

[63] Later writers who took up the ontological argument again all fell, at least in principle, into Anselm's error. Kant's reasoning should be final. We will therefore briefly outline it. He says:

> The concept of an absolutely necessary being is a concept of pure reason, that is, a mere idea the objective reality of which is very far from being proved by the fact that reason requires it. … But the unconditioned necessity of judgments is not the same as an absolute necessity of things. The absolute necessity of the judgment is only a conditioned necessity of the thing, or of the predicate in the judgment.[29]

[64] Immediately prior to this Kant shows, as an example of a necessary judgment, that a triangle must have three angles. He is referring to this proposition when he continues:

> The above proposition does not declare that three angles are absolutely necessary, but that, under the condition that there is a triangle (that is, that a triangle is given), three angles will necessarily be found in it. So great, indeed, is the power of illusion exercised by this logical necessity that, by the simple device of forming an *a priori* concept of a thing in such a manner as to include existence within the scope of its meaning, we have supposed ourselves to have justified the conclusion that because existence necessarily belongs to the object of this concept—always under the condition that we posit the thing as given (as existing)—we are also of necessity, in accordance with the law of identity, required to posit the existence of its object, and that this being is therefore itself absolutely necessary—and this, to repeat, for the reason that the existence of this being has already been thought in a concept which is assumed arbitrarily and on condition that we posit its object.[30]

[65] The "power of illusion" referred to here is nothing else than the primitive, *magical power of the word*, which likewise mysteriously inhabits the concept. It needed a long process of development before man recognized once and for all that the word, the *flatus vocis*, does not

always signify a reality or bring it into being. The fact that certain men have realized this has not by any means been able to uproot in every mind the power of superstition that dwells in formulated concepts. There is evidently something in this “instinctive” superstition that refuses to be exterminated, because it has some sort of justification which till now has not been sufficiently appreciated. In like manner the false conclusion creeps into the ontological argument, through an illusion which Kant now proceeds to elucidate. He begins with the assertion of “absolutely necessary subjects,” the conception of which is inherent in the concept of existence, and which therefore cannot be dismissed without inner contradiction. This conception would be that of the “supremely real being”:

> It is declared that it possesses all reality, and that we are justified in assuming that such a being is possible. … Now the “all reality” includes existence; existence is therefore contained in the concept of a thing that is possible. If, then, this thing is rejected, the internal possibility of the thing is rejected—which is self-contradictory … in that case either the thought, which is in us, is the thing itself, or we have presupposed an existence as belonging to the realm of the possible, and have then, on that pretext, inferred its existence from its internal possibility—which is nothing but a miserable tautology.[31]
>
> *Being* is evidently not a real predicate; that is, it is not a concept of something which could be added to the concept of a thing. It is merely the positing of a thing, or of certain of its determinants. In logical usage, it is merely the copula of a judgment. The proposition “God is omnipotent” contains two concepts, each of which has its object—God and omnipotence. The little word “is” adds no new predicate, but only serves to posit the predicate *in its relation* to the subject. If, now, we take the subject (God) with all its predicates (among which is omnipotence) and say “God is” or “There is a God,” we attach no new predicate to the concept of God, but only posit the subject in itself with all its predicates, and indeed posit it as being an *object* that stands in relation to my *concept*. The content of both must be one and the same; nothing can have been added to the concept, which expresses merely what is possible, by my thinking its object (through the expression “it is”) as given absolutely.

> Otherwise stated, the real contains no more than the merely possible. A hundred real thalers do not contain a cent more than a hundred possible thalers. … My financial position is, however, affected very differently by a hundred real thalers than it is by the mere concept of them (that is, of their possibility).[32]
>
> Whatever, therefore, and however much, our concept of an object may contain, we must go outside it, if we are to ascribe existence to the object. In the case of objects of the senses, this takes place through their connection with some one of our perceptions, in accordance with empirical laws. But in dealing with objects of pure thought, we have no means whatsoever of knowing their existence, since it would have to be known in a completely *a priori* manner. Our consciousness of all existence (whether immediately through perception, or mediately through inferences which connect something with perception) belongs exclusively to the unity of experience; any [alleged] existence outside this field, while not indeed such as we can declare to be absolutely impossible, is of the nature of an assumption which we can never be in a position to justify.[33]

[66] This detailed reminder of Kant's fundamental exposition seems to me necessary, because it is precisely here that we find the clearest division between *esse in intellectu* and *esse in re*. Hegel cast the reproach at Kant that one could not compare the concept of God with an imaginary hundred thalers. But, as Kant rightly pointed out, logic strips away all content, for it would no longer be logic if a content were to prevail. From the standpoint of logic, there is, as always, no *tertium* between the logical either-or. But between *intellectus* and *res* there is still *anima*, and this *esse in anima* makes the whole ontological argument superfluous. Kant himself, in his *Critique of Practical Reason*, made an attempt on a grand scale to evaluate the *esse in anima* in philosophical terms. There he introduces God as a postulate of practical reason resulting from the *a priori* recognition of "respect for moral law necessarily directed towards the highest good, and the consequent supposition of its objective reality."[34]

[67] The *esse in anima*, then, is a psychological fact, and the only thing that needs ascertaining is whether it occurs but once, often, or universally in human psychology. The datum which is called "God" and is formulated as the "highest good" signifies, as the term itself shows, the supreme psychic value. In other words it is a concept upon which is conferred, or is actually endowed with, the highest and most general significance in determining our thoughts and actions. In the language of analytical psychology, the God-concept coincides with the particular ideational complex which, in accordance with the foregoing definition, concentrates in itself the maximum amount of libido, or psychic energy. Accordingly, the actual God-concept is, psychologically, completely different in different people, as experience testifies. Even as an idea God is not a single, constant being, and still less so in reality. For, as we know, the highest value operative in a human soul is variously located. There are men "whose God is the belly" (Phil. 3 : 19), and others for whom God is money, science, power, sex, etc. The whole psychology of the individual, at least in its essential aspects, varies according to the localization of the highest good, so that a psychological theory based exclusively on one fundamental instinct, such as power or sex, can explain no more than secondary features when applied to an individual with a different orientation.

c. Abelard's Attempt at Conciliation

[68] It is not without interest to inquire how the Scholastics themselves attempted to settle the dispute about universals and to create a balance between the typical opposites that were divided by the *tertium non datur*. This attempt was the work of Abelard, that unhappy man who burned with love for Héloise and who paid for his passion with the loss of his manhood. Anyone acquainted with the life of Abelard will know how intensely his own soul harboured those separated opposites whose philosophical reconciliation was for him such a vital issue. De Rémusat in his book[35] characterizes him as an eclectic, who criticized and rejected every accepted theory of universals but freely borrowed from them what was true and tenable. Abelard's writings, so far as they relate to the universals controversy, are difficult and confusing, because the author

was constantly engaged in weighing every argument and aspect of the case. It is precisely because he considered none of the accepted standpoints right, but always sought to comprehend and conciliate the contrary view, that he was never properly understood even by his own pupils. Some understood him as a nominalist, others as a realist. This misunderstanding is characteristic: it is much easier to think in terms of one definite type, because in it one can remain logical and consistent, than it is to think in terms of both types, since the intermediate position is lacking. Realism as well as nominalism if pursued consistently lead to precision, clarity, uniformity. But the weighing and balancing of opposites lead to confusion and, so far as the types are concerned, to an unsatisfactory conclusion, since the solution is completely satisfying neither to the one nor to the other. De Rémusat has collected from Abelard's writings a whole series of almost contradictory assertions on the subject, and exclaims: "Must we suppose that one man's head contained so vast and incoherent a collection of teachings? Is Abelard's philosophy a chaos?"[36]

[69] From nominalism Abelard took over the truth that universals are words, in the sense that they are intellectual conventions expressed by language, and also the truth that a thing in reality is never a universal but always an individual fact. From realism he took over the truth that genera and species are combinations of individual facts and things by reason of their unquestionable similarities. For him the intermediate position was *conceptualism*. This is to be understood as a function which apprehends the individual objects perceived, classifies them into genera and species by reason of their similarities, and thus reduces their absolute multiplicity to a relative unity. However indisputable the multiplicity and diversity of individual things may be, the existence of similarities, which makes their combination possible in a concept, is equally beyond dispute. For anyone who is psychologically so constituted as to perceive chiefly the similarity of things, the inclusive concept is, as it were, given from the start; it forcibly obtrudes itself with the undeniable actuality of a sense-perception. But for one who is psychologically so constituted as to perceive chiefly the diversity of things, their similarity is not clearly

given; what he sees is their difference, which forces itself upon him with as much actuality as similarity does upon the other.

[70] It seems as if *empathy into* the object were the psychological process which brings the distinctiveness of the object into more than usually clear focus, and as if *abstraction from* the object were the psychological process most calculated to blind one's eyes to the distinctiveness of individual things in favour of their general similarity, which is the actual foundation of the idea. Empathy and abstraction combined produce the function that underlies the concept of conceptualism. It is grounded, therefore, on the only psychological function that has any real possibility of bringing nominalism and realism together on the middle way.

[71] Although the Scholastics knew how to wax grandiloquent on the subject of the soul, there was as yet no psychology, which is one of the youngest of the sciences. If a psychology had existed at that time, Abelard would surely have made *esse in anima* his mediatory formula. De Rémusat clearly discerned this when he said:

> In pure logic, universals are only the terms of a conventional language. In physics, which for him is transcendent rather than experimental, and is his real ontology, genera and species are based on the way in which beings are really produced and formed. Finally, between his pure logic and his physics there is a kind of mediatory or half-way science—we may call it psychology—in which Abelard examines how our concepts come into being, and retraces the whole intellectual genealogy of beings, a picture or symbol of their hierarchy and their real existence.[37]

[72] The *universalia ante rem* and *post rem* remained a matter of controversy for every century that followed, even though they cast aside their scholastic gown and appeared under a new guise. Fundamentally it was the same old problem. Sometimes the attempted solution veered towards realism, sometimes towards nominalism. The scientism of the nineteenth century gave the problem a push once more towards the nominalist side after the early philosophy of that century had done full justice to realism. The opposites are no longer so far apart as they were in Abelard's day. We have a psychology, a mediatory science, and this alone is capable of uniting the idea and the thing without doing violence to

either. This capacity inheres in the very nature of psychology, though no one would contend that psychology so far has accomplished this task. One has to agree with De Rémusat:

> Abelard, then, has triumphed; for in spite of the serious limitations which a discerning critique discovers in the nominalism or conceptualism imputed to him, his view is really the modern view in its first form. He heralds it, foretells it, he is its promise. The light that silvers the horizon at dawn is that of the star, as yet invisible, which is about to give light to the world.[38]

[73] If one disregards the existence of psychological types, and also the fact that the truth of the one is the error of the other, then Abelard's labours will mean nothing but one scholastic sophistry the more. But if we acknowledge the existence of the two types, Abelard's efforts must appear to us of the greatest importance. He sought the mediatory position in the *sermo*, by which he meant not so much a "discourse" as a formal proposition joined to a definite meaning—in fact, a definition requiring several words for its meaning to be established. He did not speak of *verbum*, for in the nominalist sense this was nothing more than a *vox*, a *flatus vocis*. Indeed, it is the great psychological achievement of both classical and medieval nominalism that it completely abolished the primitive, magical, mystical identity of the word with the thing—too completely for the type of man who has his foothold not in things but in the abstraction of the idea from things. Abelard's horizon was too wide for him to have overlooked the value of nominalism in this sense. For him the word was indeed a *vox*, but the *sermo*, as he understood it, was something more; it carried with it a fixed meaning, it described the common factor, the idea—what in fact has been thought and perceptively discerned about things. In the *sermo* the universal lived, and there alone. It is readily understandable, therefore, that Abelard was counted among the nominalists, though this was incorrect because the universal was for him a greater reality than a *vox*.

[74] The expression of his conceptualism must have been difficult enough for Abelard, as he had necessarily to construct it out of contradictions.

An epitaph in an Oxford manuscript gives us, I think, a profound glimpse into the paradoxical nature of his teaching:

He taught what words signify in relation to things,
And that words denote things by signification;
He corrected the errors about genera and species,
And taught that genera and species were matters of words alone,
And made it clear that genera and species were sermones.
…
Thus he proved that both "living thing" and "no living thing" are each a genus,
And "man" and "no man" both rightly called species.[39]

[75] The opposites can hardly be expressed otherwise than in paradoxes, in so far as an expression is striven for that is based in principle on one standpoint, in Abelard's case the intellectual. We must not forget that the radical difference between nominalism and realism is not purely logical and intellectual, but a psychological one, which in the last resort amounts to a typical difference of psychological attitude to the object as well as to the idea. The man who is oriented to the idea apprehends and reacts from the standpoint of the idea. But the man who is oriented to the object apprehends and reacts from the standpoint of sensation. For him the abstract is of secondary importance, since what must be thought about things seems to him relatively inessential, while for the former it is just the reverse. The man who is oriented to the object is by nature a nominalist—"name is sound and smoke" (*Faust*)—in so far as he has not yet learnt to compensate his object-oriented attitude. Should this happen, he will become, if he has the necessary equipment, a hair-splitting logician, unequalled for meticulousness, methodicalness, and dullness. The idea-oriented man is by nature logical; that is why, when all is said and done, he can neither understand nor appreciate textbook logic. Compensation of his type makes him, as we saw from Tertullian, a man of passionate feeling, though his feelings still remain under the spell of his ideas. Conversely, the man who is a logician by compensation remains, along with his ideas, under the spell of the object.

[76] These reflections bring us to the shadow-side of Abelard's thought. His attempted solution was one-sided. If the conflict between nominalism and realism had been merely a matter of logical-intellectual argumentation, it would be incomprehensible why nothing except a paradoxical end-formulation was possible. But since it was essentially a psychological conflict, a one-sided logical-intellectual formulation had to end in paradox: "Thus both man and no man are rightly called species." Logical-intellectual expression is simply incapable, even in the form of the *sermo,* of providing the mediatory formula that will be fair to the real nature of the two opposing psychological attitudes, for it derives exclusively from the abstract side and lacks all recognition of concrete reality.

[77] Every logical-intellectual formulation, however perfect it may be, strips the objective impression of its vitality and immediacy. It must do this in order to arrive at any formulation whatever. But then just that is lost which seems to the extravert the most important of all—the relation to the object. There is no possibility, therefore, of finding any satisfactory, reconciling formula by pursuing the one or the other attitude. And yet, even if his mind could, man cannot remain thus divided, for the split is not a mere matter of some off-beat philosophy, but the daily repeated problem of his relation to himself and to the world. And because this is basically the problem at issue, the division cannot be resolved by a discussion of the nominalist and realist arguments. For its solution a third, mediating standpoint is needed. *Esse in intellectu* lacks tangible reality, *esse in re* lacks mind. Idea and thing come together, however, in the human psyche, which holds the balance between them. What would the idea amount to if the psyche did not provide its living value? What would the thing be worth if the psyche withheld from it the determining force of the sense-impression? What indeed is reality if it is not a reality in ourselves, an *esse in anima?* Living reality is the product neither of the actual, objective behaviour of things nor of the formulated idea exclusively, but rather of the combination of both in the living psychological process, through *esse in anima*. Only through the specific vital activity of the psyche does the sense-impression attain that intensity,

and the idea that effective force, which are the two indispensable constituents of living reality.

[78] This autonomous activity of the psyche, which can be explained neither as a reflex action to sensory stimuli nor as the executive organ of eternal ideas, is, like every vital process, a continually creative act. The psyche creates reality every day. The only expression I can use for this activity is *fantasy*. Fantasy is just as much feeling as thinking; as much intuition as sensation. There is no psychic function that, through fantasy, is not inextricably bound up with the other psychic functions. Sometimes it appears in primordial form, sometimes it is the ultimate and boldest product of all our faculties combined. Fantasy, therefore, seems to me the clearest expression of the specific activity of the psyche. It is, pre-eminently, the creative activity from which the answers to all answerable questions come; it is the mother of all possibilities, where, like all psychological opposites, the inner and outer worlds are joined together in living union. Fantasy it was and ever is which fashions the bridge between the irreconcilable claims of subject and object, introversion and extraversion. In fantasy alone both mechanisms are united.

[79] Had Abelard probed deeply enough to discern the psychological difference between the two standpoints, he would logically have had to enlist the aid of fantasy in developing his mediating formula. But in the world of science, fantasy is just as much taboo as feeling. Once, however, we recognize the underlying opposition as a psychological one, psychology will be obliged to acknowledge not only the standpoint of feeling but the mediating standpoint of fantasy as well. But here comes the great difficulty: fantasy is for the most part a product of the unconscious. Though it undoubtedly includes conscious elements, it is none the less an especial characteristic of fantasy that it is essentially involuntary and, by reason of its strangeness, directly opposed to the conscious contents. It has these qualities in common with the dream, though the latter of course is involuntary and strange in a much higher degree.

[80] The relation of the individual to his fantasy is very largely conditioned by his relation to the unconscious in general, and this in turn

is conditioned in particular by the spirit of the age. According to the degree of rationalism that prevails, the individual will be more disposed or less to have dealings with the unconscious and its products. Christianity, like every closed system of religion, has an undoubted tendency to suppress the unconscious in the individual as much as possible, thus paralyzing his fantasy activity. Instead, religion offers stereotyped symbolic concepts that are meant to take the place of his unconscious once and for all. The symbolic concepts of all religions are recreations of unconscious processes in a typical, universally binding form. Religious teaching supplies, as it were, the final information about the “last things” and the world beyond human consciousness. Wherever we can observe a religion being born, we see how the doctrinal figures flow into the founder himself as revelations, in other words as concretizations of his unconscious fantasy. The forms welling up from his unconscious are declared to be universally valid and thus replace the individual fantasies of others. The evangelist Matthew has preserved for us a fragment of this process from the life of Christ: in the story of the temptation we see how the idea of kingship rises out of the founder’s unconscious in the visionary form of the devil, who offers him power over all the kingdoms of the earth. Had Christ misunderstood the fantasy and taken it concretely, there would have been one madman the more in the world. But he rejected the concretism of his fantasy and entered the world as a king to whom the kingdoms of *heaven* are subject. He was therefore no paranoiac, as the result also proved. The views advanced from time to time from the psychiatric side concerning the morbidity of Christ’s psychology are nothing but ludicrous rationalistic twaddle, with no comprehension whatever of the meaning of such processes in the history of mankind.

[81] The form in which Christ presented the content of his unconscious to the world became accepted and was declared valid for all. Thereafter all individual fantasies became otiose and worthless, and were persecuted as heretical, as the fate of the Gnostic movement and of all later heresies testifies. The prophet Jeremiah is speaking just in this vein when he warns (ch. 23):

> 16. Thus saith the Lord of hosts, Hearken not unto the words of the prophets that prophesy unto you: they make you vain: they speak a vision of their own heart, and not out of the mouth of the Lord.
>
> 25. I have heard what the prophets said that prophesy lies in my name, saying, I have dreamed, I have dreamed.
>
> 26. How long shall this be in the heart of the prophets that prophesy lies? yea, they are prophets of the deceit of their own heart;
>
> 27. Which think to cause my people to forget my name by their dreams which they tell every man to his neighbour, as their fathers have forgotten my name for Baal.
>
> 28. The prophet that hath a dream, let him tell a dream; and he that hath my word, let him speak my word faithfully. What is the chaff to the wheat? saith the Lord.

[82] Similarly, we see in early Christianity how the bishops zealously strove to stamp out the activity of the individual unconscious among the monks. The archbishop Athanasius of Alexandria in his biography of St. Anthony gives us particularly valuable insights in this respect. By way of instruction to his monks, he describes the apparitions and visions, the perils of the soul, which befall those that pray and fast in solitude. He warns them how cleverly the devil disguises himself in order to bring saintly men to their downfall. The devil is, of course, the voice of the anchorite's own unconscious, in revolt against the forcible suppression of his nature. I give a number of excerpts from this rather inaccessible book.[40] They show very clearly how the unconscious was systematically suppressed and devalued.

> There is a time when we see no man and yet the sound of the working of the devils is heard by us, and it is like the singing of a song in a loud voice; and there are times when the words of the Scriptures are heard by us, just as if a living man were repeating them, and they are exactly like the words which we should hear if a man were reading the Book. And it also happens that they [the devils] rouse us up to the night prayer, and incite us to stand up; and they make apparent unto us also the similitudes of monks and the forms of those who mourn; and they draw nigh unto us as if they had come from a long way off, and they begin to utter words

like unto these, that they may make lax the understanding of those who are little of soul:—“It is now a law unto all creation that we love desolation, but we were unable, by reason of God, to enter into our houses when we came unto them, and to do fair things.” And when they are unable to work their will by means of a scheme of this kind, they depart from this kind of deceit unto another, and say: “How now is it possible for thee to live? For thou hast sinned and committed iniquity in many things. Thinkest thou, that the Spirit hath not revealed unto me what hath been done by thee, or that I know not that thou hast done such and such a thing?” If therefore a simple brother hear these things, and feel within himself that he has done even as the Evil One has said, and he be not acquainted with his craftiness, his mind shall be troubled straightway, and he shall fall into despair and turn backwards.

It is then, O my beloved, unnecessary for us to be terrified at these things, and we have need to fear only when the devils multiply the speaking of the things *which are true* and then we must rebuke them severely. … Let us then take heed that we incline not our hearing to their words, even though they be words of truth which they utter; for it would be a disgrace unto us that those who have rebelled against God should become our teachers. And let us, O my brethren, arm ourselves with the armour of righteousness, and let us put on the helmet of redemption, and in the time of contending let us shoot out from a believing mind spiritual arrows as from a bow which is stretched. For they [the devils] are nothing at all, and even if they were, their strength has in it nothing which would enable it to resist the might of the Cross.[41]

And again on another occasion

there appeared unto me a devil of an exceedingly haughty and insolent appearance, and he stood up before me with the tumultuous noise of many people, and he dared to say unto me: “I, even I, am the power of God,” and “I, even I, am the Lord of the worlds.” And he said unto me: “What dost thou wish me to give thee? Ask, and thou shalt receive.” Then I blew a puff of wind at him, and I rebuked him in the name of Christ. …

And on another occasion, when I was fasting, the crafty one appeared to me in the form of a brother monk carrying bread, and he began to speak unto me words of counsel, saying, “Rise up, and stay thy heart with bread and water, and rest a little from thine excessive labours, for thou art a man, and howsoever greatly thou mayest be exalted thou art clothed with a mortal body and thou shouldest fear sickness and tribulations.” Then I regarded his words, and I held my peace and refrained from giving an answer. And I bowed myself down in quietness, and I began to make supplications in prayer, and I said: “O Lord, make Thou an end of him, even as Thou hast been wont to do him away at all times.” And as I concluded my words he came to an end and vanished like dust, and went forth from the door like smoke.

Now on one occasion Satan approached the house one night and knocked at the door, and I went out to see who was knocking, and I lifted up mine eyes and saw the form of an exceedingly tall and strong man; and, having asked him “Who art thou?,” he answered and said unto me: “I am Satan.” And after this I said unto him: “What seekest thou?” and he answered unto me: “Why do the monks and the anchorites, and the other Christians revile me, and why do they at all times heap curses upon me?” And having clasped my head firmly in wonder at his mad folly, I said unto him: “Wherefore dost thou give them trouble?” Then he answered and said unto me: “It is not I who trouble them, but it is they who trouble themselves. For there happened to me on a certain occasion that which did happen to me, and had I not cried out to them that I was the Enemy, his slaughters would have come to an end for ever. I have therefore no place to dwell in and not one glittering sword, and not even people who are really subject unto me, for those who are in service to me hold me wholly in contempt; and moreover, I have to keep them in fetters, for they do not cleave to me because they esteem it right to do so, and they are ever ready to escape from me in every place. The Christians have filled the whole world, and behold, even the desert is filled full with their monasteries and habitations. Let them then take good heed to themselves when they heap abuse upon me.”

Then, wondering at the grace of our Lord I said unto him: “How doth it happen that whilst thou hast been a liar on every other occasion, at this present the truth is spoken by thee? And how is it that thou speakest the truth now when thou art wont to utter lies? It is indeed true that when Christ came into this world, thou wast brought down to the lowest depths, and that the root of thine error was plucked up from the earth." And when Satan heard the name of Christ his form vanished and his words came to an end.[42]

[83] These quotations show how, with the help of the general belief, the unconscious of the individual was rejected despite the fact that it transparently spoke the truth. There are in the history of the mind especial reasons for this rejection, but it is not incumbent on us to discuss them here. We must be content with the fact that the unconscious was suppressed. Psychologically, the suppression consists in a withdrawal of libido. The libido thus gained promotes the growth and development of the conscious attitude, with the result that a new picture of the world is gradually built up. The undoubted advantages accruing from this process naturally consolidate the new attitude. It is, therefore, not surprising that the psychology of our time is characterized by a predominantly unfavourable attitude towards the unconscious.

[84] It is easy to understand why all sciences have excluded the standpoints of both feeling and fantasy, and indeed it was absolutely necessary for them to do so. They are sciences for that very reason. How is it then with psychology? If it is to be regarded as a science, it must do the same. But will it then do justice to its material? Every science ultimately seeks to formulate and express its material in abstractions; thus psychology could, and actually does, grasp the processes of feeling, sensation, and fantasy in abstract intellectual form. This treatment certainly establishes the rights of the abstract intellectual standpoint, but not the claims of other quite possible psychological points of view. These others can receive only a bare mention in a scientific psychology; they cannot emerge as independent scientific principles. Science is under all circumstances an affair of the intellect, and the other psychological functions are subordinated to it as objects. The intellect is the sovereign of the scientific realm. But it is another matter when science steps over into the realm of its practical application. The intellect, which was formerly king, is now merely a minister—a scientifically refined

instrument it is true, but still only a tool; no longer an end in itself, but merely a precondition. The intellect, and along with it science, is now placed at the service of a creative power and purpose. Yet this is still "psychology" although no longer science; it is psychology in the wider meaning of the word, a psychological activity of a creative nature, in which creative fantasy is given prior place. Instead of using the term "creative fantasy," it would be just as true to say that in practical psychology of this kind the leading role is given to *life* itself; for while it is undoubtedly fantasy, procreative and productive, which uses science as a tool, it is the manifold demands of external reality which in turn stimulate the activity of creative fantasy. Science as an end in itself is assuredly a high ideal, yet its consistent fulfilment brings about as many "ends in themselves" as there are sciences and arts. Naturally this leads to a high differentiation and specialization of the particular functions concerned, but also to their detachment from the world and from life, as well as to a multiplication of specialized fields which gradually lose all connection with one another. The result is an impoverishment and desiccation not merely in the specialized fields but also in the psyche of every man who has differentiated himself up or sunk down to the specialist level. Science must prove her value for life; it is not enough that she be mistress, she must also be the maid. By so serving she in no way dishonours herself.

[85] Although science has granted us insight into the irregularities and disturbances of the psyche, thus meriting our profound respect for her intrinsic intellectual gifts, it would nevertheless be a grave mistake to impute to her an absolute aim which would incapacitate her from being simply an instrument. For when we approach the actual business of living from the side of the intellect and science, we immediately come up against barriers that shut us out from other, equally real provinces of life. We are therefore compelled to acknowledge that the universality of our ideal is a limitation, and to look round for a *Spiritus rector* which, bearing in mind the claims of a fuller life, can offer us a greater guarantee of psychological universality than the intellect alone can compass. When Faust exclaims "feeling is all," he is expressing merely the antithesis of the intellect, and so only goes to the other extreme; he does not achieve

that totality of life and of his own psyche in which feeling and thinking are united in a third and higher principle. This higher third, as I have already indicated, can be understood either as a practical goal or as the creative fantasy that creates the goal. The goal of totality can be reached neither by science, which is an end in itself, nor by feeling, which lacks the visionary power of thought. The one must lend itself as an auxiliary to the other, yet the opposition between them is so great that a bridge is needed. This bridge is already given us in creative fantasy. It is not born of either, for it is the mother of both—nay more, it is pregnant with the child, that final goal which unites the opposites.

[86] If psychology remains for us only a science, we do not penetrate into life—we merely serve the absolute aim of science. It leads us, certainly, to a knowledge of the objective situation, but it always opposes every other aim but its own. The intellect remains imprisoned in itself just so long as it does not willingly sacrifice its supremacy by recognizing the value of other aims. It shrinks from the step which takes it out of itself and which denies its universal validity, since from the standpoint of the intellect everything else is *nothing but fantasy*. But what great thing ever came into existence that was not first fantasy? Inasmuch as the intellect rigidly adheres to the absolute aim of science it cuts itself off from the springs of life. For it fantasy is nothing but a wish dream, and herein is expressed all that depreciation of fantasy which for science is so welcome and so necessary. Science as an end in itself is inevitable so long as the development of science is the sole question at issue. But this at once becomes an evil when it is a question of life itself demanding development. Thus it was an historical necessity in the Christian process of culture that unbridled fantasy should be suppressed, just as it was also necessary, though for different reasons, that fantasy should be suppressed in our age of natural science. It must not be forgotten that creative fantasy, if not restrained within just bounds, can degenerate into the rankest of growths. But these bounds are never artificial limitations imposed by the intellect or by rational feeling; they are boundaries set by necessity and irrefutable reality.

[87] The tasks of every age differ, and it is only in retrospect that we can discern with certainty what had to be and what should not have been. In

the momentary present the conflict of opinions will always rage, for “war is the father of all.”[43] History alone decides the issue. Truth is not eternal, it is a programme to be fulfilled. The more “eternal” a truth is, the more lifeless it is and worthless; it says nothing more to us because it is self-evident.

[88] How fantasy is assessed by psychology, so long as this remains merely science, is illustrated by the well-known views of Freud and Adler. The Freudian interpretation reduces fantasy to causal, elementary, instinctive processes. Adler’s conception reduces it to the elementary, final aims of the ego. Freud’s is a psychology of instinct, Adler’s an ego-psychology. Instinct is an impersonal biological phenomenon. A psychology founded on instinct must by its very nature neglect the ego, since the ego owes its existence to the *principium individuationis,* i.e., to individual differentiation, whose isolated character removes it from the realm of general biological phenomena. Although biological instinctive processes also contribute to the formation of the personality, individuality is nevertheless essentially different from collective instincts; indeed, it stands in the most direct opposition to them, just as the individual as a personality is always distinct from the collective. His essence consists precisely in this distinction. Every ego-psychology must necessarily exclude and ignore just the collective element that is bound to a psychology of instinct, since it describes that very process by which the ego becomes differentiated from collective drives. The characteristic animosity between the adherents of the two standpoints arises from the fact that either standpoint necessarily involves a devaluation and disparagement of the other. So long as the radical difference between ego-psychology and the psychology of instinct is not recognized, either side must naturally hold its respective theory to be universally valid. This is not to say that a psychology of instinct could not devise a theory of the ego-process. It can very well do so, but in a way which to the ego-psychologist looks too much like a negation of his theory. Hence we find that with Freud the “ego-instincts” do occasionally emerge, but for the most part they eke out a very modest existence. With Adler, on the other hand, it would seem as though sexuality were the merest vehicle, which in one way or another serves the elementary aims of power. The Adlerian

principle is the safeguarding of personal power which is superimposed on the collective instincts. With Freud it is instinct that makes the ego serve its purposes, so that the ego appears as a mere function of instinct.

[89] The scientific tendency in both is to reduce everything to their own principle, from which their deductions in turn proceed. In the case of fantasies this operation is particularly easy to accomplish because, unlike the functions of consciousness, they are not adapted to reality and therefore do not have an objectively oriented character, but express purely instinctive as well as pure ego-tendencies. Anyone who adopts the standpoint of instinct will have no difficulty in discovering in them the "wish-fulfillment," the "infantile wish," the "repressed sexuality." And the man who adopts the standpoint of the ego can just as easily discover those elementary aims concerned with the security and differentiation of the ego, since fantasies are mediating products between the ego and the instincts. Accordingly they contain elements of both sides. Interpretation from either side is always somewhat forced and arbitrary, because one side is always suppressed. Nevertheless, a demonstrable truth does on the whole emerge; but it is only a partial truth that can lay no claim to general validity. Its validity extends only so far as the range of its principle. But in the domain of the other principle it is invalid.

[90] Freudian psychology is characterized by one central idea, the repression of incompatible wish-tendencies. Man appears as a bundle of wishes which are only partially adaptable to the object. His neurotic difficulties are due to the fact that environmental influences, education, and objective conditions put a considerable check on the free expression of instinct. Other influences, productive of moral conflicts or infantile fixations that compromise later life, emanate from the father and mother. The original instinctive disposition is a fundamental datum which undergoes disturbing modifications mainly through objective influences; hence the most untrammelled expression of instinct in respect of suitably chosen objects would appear to be the needful remedy. Adler's psychology, on the other hand, is characterized by the central concept of ego-superiority. Man appears primarily as an ego-point which must not under any circumstances be subordinated to the object. While the craving for the object, the fixation on the object, and the impossible nature of

certain desires for the object play a paramount role with Freud, with Adler everything is directed to the superiority of the subject. Freud's repression of instinct in respect of the object corresponds to the security of the subject in Adler. For Adler the remedy is the removal of the security that isolates the subject; for Freud it is the removal of the repression that makes the object inaccessible.

[91] The basic formula with Freud is therefore sexuality, which expresses the strongest relation between subject and object; with Adler it is the power of the subject, which secures him most effectively against the object and guarantees him an impregnable isolation that abolishes all relationships. Freud would like to ensure the undisturbed flow of instinct towards its object; Adler would like to break the baleful spell of the object in order to save the ego from suffocating in its own defensive armour. Freud's view is essentially extraverted, Adler's introverted. The extraverted theory holds good for the extraverted type, the introverted theory for the introverted type. Since a pure type is a product of a wholly one-sided development it is also necessarily unbalanced. Overaccentuation of the one function is synonymous with repression of the other.

[92] Psychoanalysis fails to remove this repression just in so far as the method it employs is oriented according to the theory of the patient's own type. Thus the extravert, in accordance with his theory, will reduce the fantasies rising out of his unconscious to their instinctual content, while the introvert will reduce them to his power aims. The gains resulting from such an analysis merely increase the already existing imbalance. This kind of analysis simply reinforces the existing type and renders any mutual understanding between the two types impossible. On the contrary the gap is widened, both without and within. An inner dissociation arises, because portions of other functions coming to the surface in unconscious fantasies, dreams, etc., are each time devalued and again repressed. On these grounds a certain critic was justified up to a point when he described Freud's as a neurotic theory, though the tinge of malice in this statement is merely intended to absolve us from the duty of seriously coming to grips with the problem. The standpoints of Freud and Adler are equally one-sided and characteristic only of one type.

[93] Both theories reject the principle of imagination since they reduce fantasies to something else and treat them merely as a semiotic[44] expression. In reality fantasies mean much more than that, for they represent at the same time the other mechanism—of repressed extraversion in the introvert, and of repressed introversion in the extravert. But the repressed function is unconscious, and hence undeveloped, embryonic, and archaic. In this condition it cannot be united with the higher level of the conscious function. The unacceptable nature of fantasy derives chiefly from this peculiarity of the unrecognized, unconscious function. For everyone whose guiding principle is adaptation to external reality, imagination is for these reasons something reprehensible and useless. And yet we know that every good idea and all creative work are the offspring of the imagination, and have their source in what one is pleased to call infantile fantasy. Not the artist alone, but every creative individual whatsoever owes all that is greatest in his life to fantasy. The dynamic principle of fantasy is *play*, a characteristic also of the child, and as such it appears inconsistent with the principle of serious work. But without this playing with fantasy no creative work has ever yet come to birth. The debt we owe to the play of imagination is incalculable. It is therefore short-sighted to treat fantasy, on account of its risky or unacceptable nature, as a thing of little worth. It must not be forgotten that it is just in the imagination that a man’s highest value may lie. I say “may” advisedly, because on the other hand fantasies are also valueless, since in the form of raw material they possess no realizable worth. In order to unearth the treasures they contain they must be developed a stage further. But this development is not achieved by a simple analysis of the fantasy material; a synthesis is also needed by means of a constructive method.[45]

[94] It remains an open question whether the opposition between the two standpoints can ever be satisfactorily resolved in intellectual terms. Although in one sense Abelard’s attempt must be rated very highly, in practice no consequences worth mentioning have resulted from it, for he was unable to establish any mediatory psychological principle beyond conceptualism or “sermonism,” which is merely a revised edition, altogether one-sided and intellectual, of the ancient Logos conception.

The Logos, as mediator, had of course this advantage over the *sermo*, that in its human manifestation it also did justice to man’s non-intellectual aspirations.

[95] I cannot, however, rid myself of the impression that Abelard’s brilliant mind, which so fully comprehended the great Yea and Nay of life, would never have remained satisfied with his paradoxical conceptualism, and would not have renounced a further creative effort, if the impelling force of passion had not been lost to him through his tragic fate. In confirmation of this we need only compare conceptualism with what the great Chinese philosophers Lao-tzu and Chuang-tzu, or the poet Schiller, made of this same problem.

5. THE HOLY COMMUNION CONTROVERSY BETWEEN LUTHER AND ZWINGLI

[96] Of the later dissensions that stirred men’s minds, Protestantism and the Reformation movement should really receive our first attention. Only, this phenomenon is of such complexity that it would first have to be resolved into many separate psychological processes before it could become an object of analytical investigation. But this lies outside my competence. I must therefore content myself with selecting a specific instance of that great dispute, namely the Holy Communion controversy between Luther and Zwingli. The dogma of transubstantiation, mentioned earlier, was sanctioned by the Lateran Council of 1215, and thenceforward became an established article of faith, in which tradition Luther grew up. Although the notion that a ceremony and its concrete performance have an objective redemptory significance is really quite unevangelical, since the evangelical movement was actually directed against the values of Catholic institutions, Luther was nevertheless unable to free himself from the immediately effective sensuous impression in the taking of bread and wine. He was unable to perceive in it a mere sign; the sensuous reality and the immediate experience of it were for him an indispensable religious necessity. He therefore claimed the actual presence of the body and blood of Christ in the Communion. “In and beneath” the bread and wine he received the body and blood of

Christ. For him the religious significance of the immediate experience of the object was so great that his imagination was spellbound by the concretism of the material presence of the sacred body. All his attempts at explanation are under the spell of this fact: the body of Christ is present, albeit "non-spatially." According to the doctrine of so-called consubstantiation, the actual substance of the sacred body was also really present beside the bread and wine. The ubiquity of Christ's body, which this assumption postulated, proved especially discomforting to human intelligence and was later replaced by the concept of *volipresence*, which means that God is present wherever he wills to be. But Luther, unperturbed by all these difficulties, held unswervingly to the immediate experience of the sensuous impression and preferred to thrust aside all the scruples of human reason with explanations that were either absurd or at best unsatisfying.

[97] It can hardly be supposed that it was merely the force of tradition that made Luther determined to cling to this dogma, for he of all people gave abundant proof of his ability to throw aside traditional forms of belief. Indeed, we should not go far wrong in assuming that it was rather the actual contact with the "real" and material in the Communion, and the feeling-value of this contact for Luther himself, that prevailed over the evangelical principle, which maintained that the word was the sole vehicle of grace and not the ceremony. For Luther the word certainly had redeeming power, but the partaking of the Communion was also a mediator of grace. This, I repeat, must have been only an apparent concession to the institutions of the Catholic Church; in reality it was an acknowledgement, demanded by Luther's own psychology, of the fact of feeling grounded upon the immediate sense-impression.

[98] In contrast to the Lutheran standpoint, Zwingli championed a purely symbolic conception of the Communion. What really mattered for him was a "spiritual" partaking of the body and blood of Christ. This standpoint is characterized by reason and by an ideal conception of the ceremony. It had the advantage of not violating the evangelical principle, and at the same time it avoided all hypotheses contrary to reason. However, it did scant justice to the thing that Luther wished to preserve —the reality of the sense-impression and its particular feeling-value.

Zwingli, it is true, also administered the Communion, and like Luther partook of the bread and wine, but his conception contained no formula that could adequately reproduce the unique sensory and feeling-value of the object. Luther provided a formula for this, but it was contrary to reason and to the evangelical principle. From the standpoint of sensation and feeling this matters little, and indeed rightly so, for the idea, the principle, is just as little concerned with the sensation of the object. In the last resort, both points of view are mutually exclusive.

[99] Luther's formulation favours the extraverted conception of things, while Zwingli's favours the ideal standpoint. Although Zwingli's formula does no violence to feeling and sensation, merely offering an ideal conception, it nevertheless appears to leave room for the efficacy of the object. But it seems as though the extraverted standpoint—Luther's—is not content with just leaving room for the object; it also demands a formulation in which the ideal subserves the sensory, exactly as the ideal formulation demands the subservience of feeling and sensation.

[100] At this point, with the consciousness of having done no more than pose the question, I close this chapter on the problem of types in the history of classical and medieval thought. I lack the competence to treat so difficult and far-reaching a problem in any way exhaustively. If I have succeeded in conveying to the reader some idea of the existence of typical differences of standpoint, my purpose will have been achieved. I need hardly add that I am aware that none of the material here touched upon has been dealt with conclusively. I must leave this task to those who command a wider knowledge of the subject than myself.

II

SCHILLER’S IDEAS ON THE TYPE PROBLEM

1. LETTERS ON THE AESTHETIC EDUCATION OF MAN

a. The Superior and the Inferior Functions

[101] So far as I have been able to ascertain with my somewhat limited knowledge, Friedrich Schiller seems to have been the first to attempt a conscious differentiation of typical attitudes on a large scale and to give a detailed account of their peculiarities. This important endeavour to present the two mechanisms in question, and at the same time to discover a possible way of reconciling them, is to be found in his essay first published in 1795: “Über die ästhetische Erziehung des Menschen.” The essay consists of a number of letters which Schiller addressed to the Duke of Holstein-Augustenburg.[1]

[102] Schiller’s essay, by its profundity of thought, psychological penetration, and wide view of a possible psychological solution of the conflict, prompts me to a rather lengthy discussion and evaluation of his ideas, for it has never yet been their lot to be treated in such a context. The service rendered by Schiller from our psychological point of view, as will become clear in the course of our exposition, is by no means inconsiderable, for he offers us carefully worked out lines of approach whose value we, as psychologists, are only just beginning to appreciate. My undertaking will not be an easy one, for I may well be accused of putting a construction on Schiller’s ideas which his actual words do not warrant. Although I shall try to quote his actual words at every essential point, it may not be altogether possible to introduce his ideas into the present context without putting certain interpretations and constructions upon them. This is a possibility I must not overlook, but on the other hand we must remember that Schiller himself belonged to a definite type, and was therefore compelled, even in spite of himself, as I am, to give a one-sided presentation of his ideas. The limitations of our views and our

knowledge are nowhere more apparent than in psychological discussions, where it is almost impossible for us to project any other picture than the one whose main outlines are already laid down in our own psyche.

[103] From various characteristics I have come to the conclusion that Schiller belongs to the introverted type, whereas Goethe—if we disregard his overriding intuition—inclines more to the extraverted side. We can easily discover Schiller's own image in his description of the idealistic type. Because of this identification, an inevitable limitation is imposed on his formulations, a fact we must never lose sight of if we wish to gain a fuller understanding. It is owing to this limitation that the one function is presented by Schiller in richer outline than the other, which is still imperfectly developed in the introvert, and just because of its imperfect development it must necessarily have certain inferior characteristics attached to it. At this point the author's exposition requires our criticism and correction. It is evident, too, that this limitation of Schiller's impelled him to use a terminology which lacks general applicability. As an introvert he had a better relation to ideas than to things. The relation to ideas can be more emotional or more reflective according to whether the individual belongs more to the feeling or to the thinking type. And here I would request the reader, who may perhaps have been led by my earlier publications to identify feeling with extraversion and thinking with introversion, to bear in mind the definitions given in Chapter XI of this book. By the introverted and extraverted types I distinguish two general classes of men, which can be further subdivided into function-types, i.e., thinking, feeling, sensation, and intuitive types. Hence an introvert can be either a thinking or a feeling type, since feeling as well as thinking can come under the supremacy of the idea, just as both can be dominated by the object.

[104] If, then, I consider that Schiller, in his nature and particularly in his characteristic opposition to Goethe, corresponds to the introverted type, the question next arises as to which subdivision he belongs. This is hard to answer. Without doubt intuition plays a great role with him; we might on this account, or if we regard him exclusively as a poet, reckon him an intuitive. But in the letters on the aesthetic education of man it is unquestionably Schiller the thinker who confronts us. Not only from

these, but from his own repeated admissions, we know how strong the reflective element was in Schiller. Consequently we must shift his intuitiveness very much towards the side of thinking, thus approaching him also from the angle of the psychology of the *introverted thinking* type. It will, I hope, become sufficiently clear from what follows that this hypothesis is in accord with reality, for there are not a few passages in Schiller's writings that speak distinctly in its favour. I would, therefore, beg the reader to remember that the hypothesis I have just advanced underlies my whole argument. This reminder seems to me necessary because Schiller approaches the problem from the angle of his own inner experience. In view of the fact that another psychology, i.e., another type of man, would have approached the same problem in quite another way, the very broad formulation which Schiller gives might be regarded as a subjective bias or an ill-considered generalization. But such a judgment would be incorrect, since there actually is a large class of men for whom the problem of the separated functions is exactly the same as it was for Schiller. If, therefore, in the ensuing argument I occasionally emphasize Schiller's one-sidedness and subjectivity, I do not wish to detract from the importance and general validity of the problem he has raised, but rather to make room for other formulations. Such criticisms as I may occasionally offer have more the character of a transcription into another language which will relieve Schiller's formulation of its subjective limitations. My argument, nevertheless, follows Schiller's very closely, since it is concerned much less with the general question of introversion and extraversion—which exclusively engaged our attention in Chapter I—than with the *typical conflict of the introverted thinking type*.

[105] Schiller concerns himself at the very outset with the question of the cause and origin of the separation of the two functions. With sure instinct he hits on the differentiation of the individual as the basic motive. "It was culture itself that inflicted this wound upon modern humanity."[2] This one sentence shows Schiller's wide grasp of the problem. The breakdown of the harmonious cooperation of psychic forces in instinctive life is like an ever open and never healing wound, a veritable Amfortas' wound, because the differentiation of one function among several inevitably

leads to the hypertrophy of the one and the neglect and atrophy of the others:

> I do not fail to appreciate the advantages to which the present generation, considered as a unity and weighed in the scales of reason, may lay claim in the face of the best of antiquity, but it has to enter the contest in close order and let whole compete with whole. What individual modern will emerge to contend in single combat with the individual Athenian for the prize of humanity? Whence comes this disadvantageous relation of individuals in spite of all the advantages of the race?[3]

[106] Schiller places the responsibility for this decline of the modern individual on culture, that is, on the differentiation of functions. He next points out how, in art and learning, the intuitive and the speculative minds have become estranged, and how each has jealously excluded the other from its respective field of application:

> By confining our activity to a single sphere we have handed ourselves over to a master who is not infrequently to end up by suppressing the rest of our capacities. While in one place a luxuriant imagination ravages the hard-earned fruits of the intellect, in another the spirit of abstraction stifles the fire at which the heart might have warmed itself and the fancy been enkindled.[4]
>
> If the community makes the function the measure of a man, if it respects in one of its citizens only memory, in another a tabulating intellect, in a third only mechanical skill; if, indifferent to character, it here lays stress upon knowledge alone, and there pardons the profoundest darkness of the intellect so long as it co-exists with a spirit of order and a law-abiding demeanour—if at the same time it requires these special aptitudes to be exercised with an intensity proportionate to the loss of extensity which it permits in the individuals concerned—can we then wonder that the remaining aptitudes of the mind become neglected in order to bestow every attention upon the only one which brings honour and profit?[5]

[107] There is volume indeed in these thoughts of Schiller's. It is understandable that Schiller's generation, who with their imperfect

knowledge of the Greek world judged the Greeks by the grandeur of the works they left behind them, should also have overestimated them beyond all measure, since the peculiar beauty of Greek art is due not least to its contrast with the milieu from which it arose. The advantage enjoyed by the Greek was that he was less differentiated than modern man, if indeed one is disposed to regard that as an advantage—for the disadvantage of such a condition must be equally obvious. The differentiation of functions was assuredly not the result of human caprice, but, like everything else in nature, of necessity. Could one of those late admirers of the "Grecian heaven" and Arcadian bliss have visited the earth as an Attic helot, he might well have surveyed the beauties of Greece with rather different eyes. Even if it were true that the primitive conditions of the fifth century before Christ gave the individual a greater opportunity for an all-round development of his qualities and capacities, this was possible only because thousands of his fellow men were cramped and crippled by circumstances that were all the more wretched. A high level of individual culture was undoubtedly reached by certain exemplary personalities, but a collective culture was quite unknown to the ancient world. This achievement was reserved for Christianity. Hence it comes about that, as a mass, the moderns can not only measure up to the Greeks, but by every standard of collective culture easily surpass them. On the other hand, Schiller is perfectly right in his contention that our individual culture has not kept pace with our collective culture, and it has certainly not improved during the hundred and twenty years that have passed since Schiller wrote. Quite the reverse—for, if we had not strayed even further into the collective atmosphere so detrimental to individual development, the violent reactions personified by Stirner or Nietzsche would scarcely have been needed as a corrective. Schiller's words, therefore, still remain valid today.

[108] Just as the ancients, with an eye to individual development, catered to the well-being of an upper class by an almost total suppression of the great majority of the common people (helots, slaves), the Christian world reached a condition of collective culture by transferring this same process, as far as possible, to the psychological sphere *within* the individual himself—raising it, one might say, to the subjective level. As

the chief value of the individual was proclaimed by Christian dogma to be an imperishable soul, it was no longer possible for the inferior majority of the people to be suppressed in actual fact for the freedom of a more valuable minority. Instead, the more valuable function within the individual was preferred above the inferior functions. In this way the chief importance was attached to the one valued function, to the detriment of all the rest. Psychologically this meant that the external form of society in classical civilization was transferred into the subject, so that a condition was produced within the individual which in the ancient world had been external, namely a dominating, privileged function which was developed and differentiated at the expense of an inferior majority. By means of this psychological process a collective culture gradually came into existence, in which the "rights of man" were guaranteed for the individual to an immeasurably greater degree than in antiquity. But it had the disadvantage of depending on a subjective slave culture, that is to say on a transfer of the old mass enslavement into the psychological sphere, with the result that, while collective culture was enhanced, individual culture was degraded. Just as the enslavement of the masses was the open wound of the ancient world, so the enslavement of the inferior functions is an ever-bleeding wound in the psyche of modern man.

[109] "One-sidedness in the exercise of powers, it is true, inevitably leads the individual into error, but the race to truth,"[6] says Schiller. The privileged position of the superior function is as detrimental to the individual as it is valuable to society. This detrimental effect has reached such a pitch that the mass organizations of our present-day culture actually strive for the complete extinction of the individual, since their very existence depends on a mechanized application of the privileged functions of individual human beings. It is not man who counts, but his one differentiated function. Man no longer appears as man in our collective culture: he is merely represented by a function, what is more he identifies himself completely with this function and denies the relevance of the other inferior functions. Thus modern man is debased to a mere function, because it is this that represents a collective value and alone guarantees a possible livelihood. But, as Schiller clearly sees, a differentiation of function could have come in no other way:

> There was no other way of developing the manifold capacities of man than by placing them in opposition to each other. This antagonism of powers is the great instrument of culture, but it is only the instrument; for as long as it persists, we are only on the way towards culture.[7]

[110] According to this view the present state of our warring capacities would not be a state of culture, but only a stage on the way. Opinions will, of course, be divided about this, for by culture one man will understand a state of collective culture, while another will regard this state merely as *civilization*[8] and will expect of culture the sterner demands of individual development. Schiller is, however, mistaken when he allies himself exclusively with the second standpoint and contrasts our collective culture unfavourably with that of the individual Greek, since he overlooks the defectiveness of the civilization of that time, which makes the unlimited validity of that culture very questionable. Hence no culture is ever really complete, for it always swings towards one side or the other. Sometimes the cultural ideal is extraverted, and the chief value then lies with the object and man's relation to it: sometimes it is introverted, and the chief value lies with subject and his relation to the idea. In the former case, culture takes on a collective character, in the latter an individual one. It is therefore easy to understand how under the influence of Christianity, whose principle is Christian love (and by counter-association, also its counterpart, the violation of individuality), a collective culture came about in which the individual is liable to be swallowed up because individual values are depreciated on principle. Hence there arose in the age of the German classicists that extraordinary yearning for the ancient world which for them was a symbol of individual culture, and on that account was for the most part very much overvalued and often grossly idealized. Not a few attempts were even made to imitate or recapture the spirit of Greece, attempts which nowadays appear to us somewhat silly, but must none the less be appreciated as forerunners of an individual culture.

[111] In the hundred and twenty years that have passed since Schiller wrote his letters, conditions with respect to individual culture have gone from bad to worse, since the interest of the individual is invested to a far greater extent in collective occupations, and therefore much less leisure is

left over for the development of individual culture. Hence we possess today a highly developed collective culture which in organization far exceeds anything that has gone before, but which for that very reason has become increasingly injurious to individual culture. There is a deep gulf between what a man is and what he represents, between what he is as an individual and what he is as a collective being. His function is developed at the expense of his individuality. Should he excel, he is merely identical with his collective function; but should he not, then, though he may be esteemed as a function in society, his individuality is wholly on the level of his inferior, undeveloped functions, and he is simply a barbarian, while in the former case he has happily deceived himself as to his actual barbarism. This one-sidedness has undoubtedly brought society advantages that should not be underestimated, and acquisitions that could have been gained in no other way, as Schiller finely observes:

> Only by concentrating the whole energy of our spirit in one single focus, and drawing together our whole being into one single power, do we attach wings, so to say, to this individual power and lead it by artifice far beyond the bounds which nature seems to have imposed upon it.[9]

[112] But this one-sided development must inevitably lead to a reaction, since the suppressed inferior functions cannot be indefinitely excluded from participating in our life and development. The time will come when the division in the inner man must be abolished, in order that the undeveloped may be granted an opportunity to live.

[113] I have already indicated that the process of differentiation in cultural development ultimately brings about a dissociation of the basic functions of the psyche, going far beyond the differentiation of individual capacities and even encroaching on the sphere of the psychological attitude in general, which governs the way in which those capacities are employed. At the same time, culture effects a differentiation of the function that already enjoys a better capacity for development through heredity. In one man it is the capacity for thought, in another feeling, which is particularly amenable to development, and therefore, impelled by cultural demands, he will concern himself in special degree with developing an aptitude to which he is already favourably disposed by

nature. Its cultivation does not mean that the function in question has an *a priori* claim to any particular proficiency; on the contrary, one might say, it presupposes a certain delicacy, lability, pliability, on which account the highest individual value is not always to be sought or found in this function, but rather, perhaps, only the highest collective value, in so far as this function is developed for a collective end. It may well be, as I have said, that beneath the neglected functions there lie hidden far higher individual values which, though of small importance for collective life, are of the greatest value for individual life, and are therefore vital values that can endow the life of the individual with an intensity and beauty he will vainly seek in his collective function. The differentiated function procures for him the possibility of a collective existence, but not that satisfaction and *joie de vivre* which the development of individual values alone can give. Their absence is often sensed as a profound lack, and the severance from them is like an inner division which, with Schiller, one might compare with a painful wound. He goes on to say:

> Thus, however much may be gained for the world as a whole by this fragmentary cultivation of human powers, it is undeniable that the individuals whom it affects suffer under the curse of this universal aim. Athletic bodies are certainly developed by means of gymnastic exercises, but only through the free and equable play of the limbs is beauty formed. In the same way the exertion of individual talents certainly produces extraordinary men, but only their even tempering makes full and happy men. And in what relation should we stand to past and future ages if the cultivation of human nature made such a sacrifice necessary? We should have been the bondslaves of humanity, we should have drudged for it for centuries on end, and branded upon our mutilated nature the shameful traces of this servitude—in order that a later generation might devote itself in blissful indolence to the care of its moral health, and develop the free growth of its humanity! But can man really be destined to neglect himself for any end whatever? Should Nature be able, by her designs, to rob us of a completeness which Reason prescribes to us by hers? It must be false that the cultivation of individual powers necessitates the sacrifice of their totality; or however much the law of Nature did have that

tendency, *we must be at liberty to restore by means of a higher Art this wholeness in our nature which Art has destroyed*.[10]

[114] It is evident that Schiller in his personal life had a profound sense of this conflict, and that it was just this antagonism in himself that generated a longing for the coherence or homogeneity which should bring deliverance to the suppressed functions languishing in servitude and a restoration of harmonious living. This idea is also the *leit-motif* of Wagner's *Parsifal*, and it is given symbolic expression in the restoration of the missing spear and the healing of the wound. What Wagner tried to say in artistic terms Schiller laboured to make clear in his philosophical reflections. Although it is nowhere openly stated, the implication is clear enough that his problem revolved round the resumption of a classical mode of life and view of the world; from which one is bound to conclude that he either overlooked the Christian solution or deliberately ignored it. In any case his spiritual eye was focussed more on the beauty of antiquity than on the Christian doctrine of redemption, which, nevertheless, has no other aim than what Schiller himself strove for—the deliverance from evil. The heart of man is "filled with raging battle," says Julian the Apostate in his discourse on King Helios;[11] and with these words he aptly characterizes not only himself but his whole age—the inner laceration of late antiquity which found expression in an unexampled, chaotic confusion of hearts and minds, and from which the Christian doctrine promised deliverance. What Christianity offered was not, of course, a solution but a breaking free, a detachment of the one valuable function from all the other functions which, at that time, made an equally peremptory claim to government. Christianity offered one definite direction to the exclusion of all others. This may have been the essential reason why Schiller passed over in silence the possibility of salvation offered by Christianity. The pagan's close contact with nature seemed to promise just that possibility which Christianity did not offer:

> Nature in her physical creation indicates to us the way we should pursue in moral creation. Not until the struggle of elementary powers in the lower organizations has been assuaged does she rise to the noble formation of the physical man. In the same way the strife of elements in the ethical man, the conflict of blind instincts, must first be allayed, and

> the crude antagonism within him must have ceased, before we may dare to promote his diversity. On the other hand, the independence of his character must be assured, and subjection to alien despotic forms have given place to a decent freedom, before we can submit the multiplicity in him to the unity of the ideal.[12]

[115] Thus it is not to be a detachment or redemption of the inferior function, but an acknowledgement of it, a coming to terms with it, that unites the opposites on the path of nature. But Schiller feels that the acceptance of the inferior function might lead to a "conflict of blind instincts," just as, conversely, the unity of the ideal might re-establish the supremacy of the valuable function over the less valuable ones and thereby restore the original state of affairs. The inferior functions are opposed to the superior, not so much in their essential nature as because of their momentary form. They were originally neglected and repressed because they hindered civilized man from attaining his aims. But these consist of one-sided interests and are by no means synonymous with the perfection of human individuality. If that were the aim, these unacknowledged functions would be indispensable, and as a matter of fact they do not by nature contradict it. But so long as the cultural aim does not coincide with the ideal of perfecting the human individuality, these functions are subject to depreciation and some degree of repression. The conscious acceptance of repressed functions is equivalent to an internal civil war; the opposites, previously restrained, are unleashed and the "independence of character" is abolished forthwith. This independence can be attained only by a settlement of the conflict, which appears to be impossible without despotic jurisdiction over the opposing forces. In that way freedom is compromised, and without it the building up of a morally free personality is equally impossible. But if freedom is preserved, one is delivered over to the conflict of instincts:

> Terrified of the freedom which always declares its hostility to their first attempts, men will in one place throw themselves into the arms of a comfortable servitude, and in another, driven to despair by a pedantic tutelage, they will break out into the wild libertinism of the natural state. Usurpation will plead the weakness of human nature, insurrection its dignity, until at length the great sovereign of all human affairs, blind

> force, steps in to decide the sham conflict of principles like a common prize-fight.[13]

[116] The contemporary revolution in France gave this statement a living, albeit bloody background: begun in the name of philosophy and reason, with a soaring idealism, it ended in blood-drenched chaos, from which arose the despotic genius of Napoleon. The Goddess of Reason proved herself powerless against the might of the unchained beast. Schiller felt the defeat of reason and truth and therefore had to postulate that truth herself should become a *power:*

> If she has hitherto displayed so little of her conquering power, the fault lies not so much with the intellect that knew not how to unveil her, as with the heart that shut her out, and with the instinct that would not serve her. Whence arises this still universal sway of prejudice, this intellectual darkness, beside all the light that philosophy and experience have shed? *The age is enlightened*, that is to say knowledge has been discovered and publicly disseminated, which would at least suffice to set right our practical principles. The spirit of free enquiry has scattered the delusions which for so long barred the approach to truth, and is undermining the foundations upon which fanaticism and fraud have raised their thrones. Reason has been purged of the illusions of the senses and of deceitful sophistry, and philosophy itself, which first caused us to forsake Nature, is calling us loudly and urgently back to her bosom—why is it that we still remain barbarians?[14]

[117] We feel in these words of Schiller the proximity of the French Enlightenment and the fantastic intellectualism of the Revolution. “The age is enlightened”—what an overvaluation of the intellect! “The spirit of free enquiry has scattered the delusions”—what rationalism! One is vividly reminded of the Proktophantasmist in *Faust:* “Vanish at once, you’ve been explained away!” Even though the men of that age were altogether too prone to overestimate the importance and efficacy of reason, quite forgetting that if reason really possessed such a power, she had long had the amplest opportunity to demonstrate it, the fact should not be overlooked that not all the influential minds of the age thought that way; consequently this soaring flight of rationalistic intellectualism may

equally well have sprung from a particularly strong subjective development of this same propensity in Schiller himself. In him we have to reckon with a predominance of intellect, not at the expense of his poetic intuition but at the cost of feeling. To Schiller himself it seemed as though there were a perpetual conflict in him between imagination and abstraction, that is, between intuition and thinking. Thus he wrote to Goethe (August 31, 1794):

> This is what gave me, especially in early years, a certain awkwardness both in the realm of speculation and in that of poetry; as a rule the poet would overtake me when I would be a philosopher, and the philosophic spirit hold me when I would be a poet. Even now it happens often enough that the power of imagination disturbs my abstraction, and cold reasoning my poetry.[15]

[118] His extraordinary admiration for Goethe's mind, and his almost feminine empathy and sympathy with his friend's intuition, to which he so often gives expression in his letters, spring from a piercing awareness of this conflict, which he must have felt doubly hard in comparison with the almost perfect synthesis of Goethe's nature. This conflict was due to the psychological fact that the energy of feeling lent itself in equal measure to his intellect and to his creative imagination. Schiller seems to have suspected this, for in the same letter to Goethe he makes the observation that no sooner has he begun to "know and to use" his moral forces, which should set proper limits to imagination and intellect, than a physical illness threatens to undermine them. As has been pointed out already, it is characteristic of an imperfectly developed function to withdraw itself from conscious control and, thanks to its own autonomy, to get unconsciously contaminated with other functions. It then behaves like a purely dynamic factor, incapable of differentiated choice, an impetus or surcharge that gives the conscious, differentiated function the quality of being carried away or coerced. In one case the conscious function is transported beyond the limits of its intentions and decisions, in another it is arrested before it attains its aim and is diverted into a side-track, and in a third it is brought into conflict with the other conscious functions—a conflict that remains unresolved so long as the unconscious contaminating and disturbing force is not differentiated and subjected to

conscious control. We may safely conjecture that the exclamation “Why is it that we are still barbarians?” was rooted not merely in the spirit of the age but in Schiller’s subjective psychology. Like other men of his time, he sought the root of the evil in the wrong place; for barbarism never did and never does consist in reason or truth having so little effect but in expecting from them far too much, or even in ascribing such efficacy to reason out of a superstitious overvaluation of “truth.” Barbarism consists in one-sidedness, lack of moderation—bad measure in general.

[119] From the spectacular example of the French Revolution, which had just then reached the climax of terror, Schiller could see how far the sway of the Goddess of Reason extended, and how far the unreasoning beast in man was triumphant. It was doubtless these contemporary events that forced the problem on Schiller with particular urgency; for it often happens that, when a problem which is at bottom personal, and therefore apparently subjective, coincides with external events that contain the same psychological elements as the personal conflict, it is suddenly transformed into a general question embracing the whole of society. In this way the personal problem acquires a dignity it lacked hitherto, since the inner discord always has something humiliating and degrading about it, so that one sinks into an ignominious condition both within and without, like a state dishonoured by civil war. It is this that makes one shrink from displaying before the public a purely personal conflict, provided of course that one does not suffer from an overdose of self-esteem. But if the connection between the personal problem and the larger contemporary events is discerned and understood, it brings a release from the loneliness of the purely personal, and the subjective problem is magnified into a general question of our society. This is no small gain as regards the possibility of a solution. For whereas only the meagre energies of one’s conscious interest in one’s own person were at the disposal of the personal problem, there are now assembled the combined forces of collective instinct, which flow in and unite with the interests of the ego; thus a new situation is brought about which offers new possibilities of a solution. For what would never have been possible to the personal power of the will or to courage is made possible by the

force of collective instinct; it carries a man over obstacles which his own personal energy could never overcome.

[120] We may therefore conjecture that it was largely the impressions of contemporary events that gave Schiller the courage to undertake this attempt to solve the conflict between the individual and the social function. The same antagonism was also deeply felt by Rousseau—indeed it was the starting-point for his work *Emile, ou l'éducation* (1762). We find there several passages that are of interest as regards our problem:

> The citizen is but the numerator of a fraction, whose value depends on its denominator; his value depends on the whole, that is, on the community. Good social institutions are those best fitted to make a man unnatural, to exchange his independence for dependence, to merge the unit in the group.[16]
>
> He who would preserve the supremacy of natural feelings in social life knows not what he asks. Ever at war with himself, hesitating between his wishes and his duties, he will be neither a man nor a citizen. He will be of no use to himself nor to others.[17]

[121] Rousseau opens his work with the famous sentence: "Everything as it leaves the hands of the Author of things is good; everything degenerates under the hands of man."[18] This statement is characteristic not only of Rousseau but of the whole epoch.

[122] Schiller likewise looks back, not of course to Rousseau's natural man—and here lies the essential difference—but to the man who lived "under a Grecian heaven." This retrospective orientation is common to both and is inextricably bound up with an idealization and overvaluation of the past. Schiller, marvelling at the beauties of antiquity, forgets the actual everyday Greek, and Rousseau mounts to dizzy heights with the sentence: "The natural man is wholly himself; he is an integral unity, an absolute whole,"[19] quite forgetting that the natural man is thoroughly collective, i.e., just as much in others as in himself, and is anything rather than a unity. Elsewhere Rousseau says:

> We grasp at everything, we clutch on to everything, times, places, men, things; all that is, all that will be, matters to each of us; we ourselves are but the least part of ourselves. We spread ourselves, so to speak, over the whole world, and become sensitive over this whole vast expanse…. Is it nature which thus bears men so far from themselves?[20]

[123] Rousseau is deceived; he believes this state of affairs is a recent development. But it is not so; we have merely become conscious of it recently; it was always so, and the more so the further we descend into the beginnings of things. For what Rousseau describes is nothing but that primitive collective mentality which Lévy-Bruhl has aptly termed *participation mystique*. This suppression of individuality is nothing new, it is a relic of that archaic time when there was no individuality whatever. So it is not by any means a recent suppression we are dealing with, but merely a new sense and awareness of the overwhelming power of the collective. One naturally projects this power into the institutions of Church and State, as though there were not already ways and means enough of evading even moral commands when occasion offered! In no sense do these institutions possess the omnipotence ascribed to them, on account of which they are from time to time assailed by innovators of every sort; the suppressive power lies unconsciously in ourselves, in our own barbarian collective mentality. To the collective psyche every individual development is hateful that does not directly serve the ends of collectivity. Hence although the differentiation of the one function, about which we have spoken above, is a development of an individual value, it is still so largely determined by the views of the collective that, as we have seen, it becomes injurious to the individual himself.

[124] It was their imperfect knowledge of earlier conditions of human psychology that led both our authors into false judgments about the values of the past. The result of this false judgment is a belief in the illusory picture of an earlier, more perfect type of man, who somehow fell from his high estate. Retrospective orientation is itself a relic of pagan thinking, for it is a well-known characteristic of the archaic and barbarian mentality that it imagined a paradisal Golden Age as the forerunner of the present evil times. It was the great social and spiritual achievement of Christianity that first gave man hope for the future, and

promised him some possibility of realizing of his ideals.[21] The emphasizing of this retrospective orientation in the more recent development of the mind may be connected with the phenomenon of that widespread regression to paganism which has made itself increasingly felt ever since the Renaissance.

[125] To me it seems certain that this retrospective orientation must also have a decided influence on the choice of the methods of human education. The mind thus oriented is ever seeking support in some phantasmagoria of the past. We could make light of this were it not that the knowledge of the conflict between the types and the typical mechanisms compels us to look round for something that would establish their harmony. As we shall see from the following passages, this is also what Schiller had at heart. His fundamental thought is expressed in these words, which sum up what we have just said:

> Let some beneficent deity snatch the infant betimes from his mother's breast, nourish him with the milk of a better age and suffer him to grow up to full maturity under that far-off Grecian heaven. Then when he has become a man, let him return, a stranger, to his own century; not to gladden it by his appearance, but rather, terrible like Agamemnon's son, to cleanse it.[22]

[126] The predilection for the Grecian prototype could hardly be expressed more clearly. But in this stern formulation one can also glimpse a limitation which impels Schiller to a very essential broadening of perspective:

> He will indeed take his material from the present age, but his form he will borrow from a nobler time—nay, from beyond all time, from the absolute unchangeable unity of his being.[23]

Schiller clearly felt that he must go back still further, to some primeval heroic age where men were still half divine. He continues:

> Here, from the pure aether of his daemonic nature, gushes down the well-spring of Beauty, untainted by the corruption of generations and ages which wallow in the dark eddies far below.[24]

> Here we have the beautiful illusion of a Golden Age when men were still gods and were ever refreshed by the vision of eternal beauty. But here, too, the poet has overtaken Schiller the thinker. A few pages further on the thinker gets the upper hand again:

> It must indeed set us thinking when we find that in almost every epoch of history when the arts are flourishing and taste prevails, humanity is in a state of decline, and cannot produce a single example where a high degree and wide diffusion of aesthetic culture among a people has gone hand in hand with political freedom and civic virtue, fine manners with good morals, or polished behaviour with truth.[25]

[127] In accordance with this familiar and in every way undeniable experience those heroes of olden time must have led a none too scrupulous life, and indeed not a single myth, Greek or otherwise, claims that they ever did anything else. All that beauty could revel in its existence only because there was as yet no penal code and no guardian of public morals. With the recognition of the psychological fact that living beauty spreads her golden shimmer only when soaring above a reality full of misery, pain, and squalor, Schiller cuts the ground from under his own feet; for he had undertaken to prove that what was divided would be united by the vision, enjoyment, and creation of the beautiful. Beauty was to be the mediator which should restore the primal unity of human nature. On the contrary, all experience goes to show that beauty needs her opposite as a condition of her existence.

[128] As before it was the poet, so now it is the thinker that carries Schiller away: he *mistrusts* beauty, he even holds it possible, arguing from experience, that she may exercise a deleterious influence:

> Whenever we turn our gaze in the ancient world, we find taste and freedom mutually avoiding each other, and Beauty establishing her sway only on the ruins of heroic virtues.[26]

This insight, gained by experience, can hardly sustain the claim that Schiller makes for beauty. In the further pursuit of his theme he even gets to the point where he depicts the reverse side of beauty with an all too glaring clarity:

> If then we keep solely to what experience has taught us hitherto about the influence of Beauty, we cannot certainly be much encouraged in the development of feelings which are so dangerous to the true culture of mankind; and we should rather dispense with the melting power of Beauty, even at the risk of coarseness and austerity, than see ourselves, for all the advantages of refinement, consigned to her enervating influence.[27]

[129] The quarrel between the poet and the thinker could surely be composed if the thinker took the words of the poet not literally but *symbolically*, which is how the tongue of the poet desires to be understood. Can Schiller have misunderstood himself? It would almost seem so, otherwise he could not argue thus against himself. The poet speaks of a spring of unsullied beauty which flows beneath every age and generation, and is constantly welling up in every human heart. It is not the man of Greek antiquity whom the poet has in mind, but the old pagan in ourselves, that bit of eternally unspoiled nature and pristine beauty which lies unconscious but living within us, whose reflected splendour transfigures the shapes of the past, and for whose sake we fall into the error of thinking that those heroes actually possessed the beauty we seek. It is the archaic man in ourselves, who, rejected by our collectively oriented consciousness, appears to us as hideous and unacceptable, but who is nevertheless the bearer of that beauty we vainly seek elsewhere. This is the man the poet Schiller means, but the thinker mistakes him for his Greek prototype. What the thinker cannot deduce logically from his evidential material, what he labours for in vain, the poet in symbolic language reveals as the promised land.

[130] From all this it is abundantly clear that any attempt to equalize the one-sided differentiation of the man of our times has to reckon very seriously with an acceptance of the inferior, because undifferentiated, functions. No attempt at mediation will be successful if it does not understand how to release the energies of the inferior functions and lead them towards differentiation. This process can take place only in accordance with the laws of energy, that is, a gradient must be created which offers the latent energies a chance to come into play.

[131] It would be a hopeless task—which nevertheless has often been undertaken and as often has foundered—to transform an inferior function directly into a superior one. It would be as easy to make a *perpetuum mobile*. No lower form of energy can simply be converted into a higher form unless a source of higher value simultaneously lends its support; that is, the conversion can be accomplished only at the expense of the superior function. But under no circumstances can the initial value of the higher form of energy be attained by the lower forms as well or be resumed by the superior function: an equalization at some intermediate level must inevitably result. For every individual who identifies with his one differentiated function, this entails a descent to a condition which, though balanced, is of a definitely lower value as compared with the initial value. This conclusion is unavoidable. All education that aspires to the unity and harmony of man's nature has to reckon with this fact. In his own fashion, Schiller draws the same conclusion, but he struggles against accepting its consequences, even to the point where he has to renounce beauty. But when the thinker has uttered his harsh judgment, the poet speaks again:

> But perhaps experience is not the tribunal before which such a question is to be decided, and before we allow any weight to its testimony it must first be established, beyond doubt, that it is the self-same Beauty about which we are speaking and against which those examples testify.[28]

[132] It is evident that Schiller is here attempting to stand above experience; in other words he bestows on beauty a quality which experience does not warrant. He believes that "Beauty must be exhibited as a necessary condition of humanity,"[29] that is, as a necessary, compelling category; therefore he speaks also of a purely intellectual concept of beauty, and of a "transcendental way" that removes us from "the round of appearances and from the living presence of things." "Those who do not venture out beyond actuality will never capture Truth."[30] His subjective resistance to what experience has shown to be the ineluctable downward way impels Schiller to press the logical intellect into the service of feeling, forcing it to come up with a formula

that makes the attainment of the original aim possible after all, despite the fact that its impossibility has already been sufficiently demonstrated.

[133] A similar violation is committed by Rousseau in his assumption that whereas dependence on nature does not involve depravity, dependence on man does, so that he can arrive at the following conclusion:

> If the laws of nations, like the laws of nature, could never be broken by any human power, dependence on men would become dependence on things; all the advantages of a state of nature could be combined with all the advantages of social life in the commonwealth. The liberty which preserves a man from vice would be united with the morality which raises him to virtue.[31]

On the basis of these reflections he gives the following advice:

> Keep the child dependent solely on things, and you will have followed the order of nature in the progress of his education…. Do not make him sit still when he wants to run about, nor run when he wants to stay quiet. If we did not spoil our children's wills by our blunders, their desires would be free from caprice.[32]

[134] The misfortune is that never under any circumstances are the laws of nations in such concord with those of nature that the civilized state is at the same time the natural state. If such concord is to be *conceived* as possible at all, it can be conceived only as a compromise in which neither state could attain its ideal but would remain far below it. Whoever wishes to attain one or the other of the ideals will have to rest content with Rousseau's own formulation: "You must choose between making a man or a citizen, you cannot make both at once."[33]

[135] Both these necessities exist in us: nature and culture. We cannot only be ourselves, we must also be related to others. Hence a way must be found that is not a mere rational compromise; it must be a state or process that is wholly consonant with the living being, "a highway and a holy way," as the prophet says, "a straight way, so that fools shall not err therein."[34] I am therefore inclined to give the poet in Schiller his due, though in this case he has encroached somewhat violently on the thinker, for rational truths are not the last word, there are also irrational ones. In

human affairs, what appears impossible by way of the intellect has often become true by way of the irrational. Indeed, all the greatest transformations that have ever befallen mankind have come not by way of intellectual calculation, but by ways which contemporary minds either ignored or rejected as absurd, and which only long afterwards were recognized because of their intrinsic necessity. More often than not they are never recognized at all, for the all-important laws of mental development are still a book with seven seals.

[136] I am, however, little inclined to concede any particular value to the philosophical gesturings of the poet, for in his hands the intellect is a deceptive instrument. What the intellect can achieve it has already achieved in this case; it has uncovered the contradiction between desire and experience. To persist, then, in demanding a solution of this contradiction from philosophical thinking is quite useless. And even if a solution could finally be thought out, the real obstacle would still confront us, for the solution does not lie in the possibility of thinking it or in the discovery of a rational truth, but in the discovery of a way which real life can accept. There has never been any lack of suggestions and wise precepts. If it were only a question of that, mankind would have had the finest opportunity of reaching the heights in every respect at the time of Pythagoras. That is why what Schiller proposes must not be taken in a literal sense but, as I have said, as a symbol, which in accordance with Schiller’s philosophical proclivities appears under the guise of a philosophical concept. Similarly, the “transcendental way” which Schiller sets out to tread must not be understood as a piece of critical ratiocination based on knowledge, but symbolically as the way a man always follows when he encounters an obstacle that cannot be overcome by reason, or when he is confronted with an insoluble task. But in order to find and follow this way, he must first have lingered a long time with the opposites into which his former way forked. The obstacle dams up the river of his life. Whenever a damming up of libido occurs, the opposites, previously united in the steady flow of life, fall apart and henceforth confront one another like antagonists eager for battle. They then exhaust themselves in a prolonged conflict the duration and upshot of which

cannot be foreseen, and from the energy which is lost to them is built that third thing which is the beginning of the new way.

[137] In accordance with this law, Schiller now devotes himself to a profound examination of the nature of the opposites at work. No matter what obstacle we come up against—provided only it be a difficult one—the discord between our own purpose and the refractory object soon becomes a discord in ourselves. For, while I am striving to subordinate the object to my will, my whole being is gradually brought into relationship with it, following the strong libido investment which, as it were, draws a portion of my being across into the object. The result of this is a partial identification of certain portions of my personality with similar qualities in the object. As soon as this identification has taken place, the conflict is transferred into my own psyche. This "introjection" of the conflict with the object creates an inner discord, making me powerless against the object and also releasing affects, which are always symptomatic of inner disharmony. The affects, however, prove that I am sensing myself and am therefore in a position—if I am not blind—to apply my attention to myself and to follow up the play of opposites in my own psyche.

[138] This is the way that Schiller takes. The discord he finds is not between the State and the individual, but, at the beginning of the eleventh letter, he conceives it as the duality of "person and condition,"[35] that is, as the ego and its changing states of affect. For whereas the ego has a relative constancy, its relatedness, or proneness to affect, is variable. Schiller thus tries to grasp the discord at its root. And as a matter of fact the one side of it is the conscious ego-function, while the other side is the ego's relation to the collective. Both determinants are inherent in human psychology. But the various types will each see these basic facts in a different light. For the introvert the idea of the ego is the continuous and dominant note of consciousness, and its antithesis for him is relatedness or proneness to affect. For the extravert, on the contrary, the accent lies more on the continuity of his relation to the object and less on the idea of the ego. Hence for him the problem is different. This point must be borne in mind as we follow Schiller's further reflections. When, for instance, he says that the "person" reveals itself "in the eternally constant ego, and in

this alone,”[36] this is viewed from the standpoint of the introvert. From the standpoint of the extravert we would have to say that the person reveals itself simply and solely in its relatedness, in the function of relationship to the object. For only with the introvert is the “person” exclusively the ego; with the extravert it lies in his affectivity and not in the affected ego. His ego is, as it were, of less importance than his affectivity, i.e., his relatedness. The extravert discovers himself in the fluctuating and changeable, the introvert in the constant. The ego is not “eternally constant,” least of all in the extravert, who pays little attention to it. For the introvert, on the other hand, it has too much importance; he therefore shrinks from every change that is at all liable to affect his ego. Affectivity for him can be something positively painful, while for the extravert it must on no account be missed. Schiller at once reveals himself as an introvert in the following formulation:

> To remain constantly himself throughout all change, to turn every perception into experience, that is, into the unity of knowledge, and to make each of his manifestations in time a law for all time, that is the rule which is prescribed for him by his rational nature.[37]

[139] The abstracting, self-contained attitude is evident; it is even made the supreme rule of conduct. Every occurrence must at once be raised to the level of an experience, and from the sum of these experiences a law for all time must instantly emerge; though the other attitude, that no occurrence should become an experience lest it produce laws that might hamper the future, is equally human.

[140] It is altogether in keeping with Schiller’s attitude that he cannot think of God as *becoming*, but only as *eternally being*; hence with unerring intuition he recognizes the “godlikeness” of the introverted ideal state:

> Man conceived in his perfection would accordingly be the constant unity which amidst the tides of change remains eternally the same…,[38] Beyond question man carries the potentiality for divinity within himself.[39]

[141] This conception of the nature of God ill accords with his Christian incarnation and with similar Neoplatonic views of the mother of the gods and of her son who descends as the demiurge into creation.[40] But it is

clear what is the function to which Schiller attributes the highest value, divinity: it is the constancy of the idea of the ego. The ego that abstracts itself from affectivity is for him the most important thing, consequently this is the idea he has differentiated most, as is the case with every introvert. His god, his highest value, is the abstraction and conservation of the ego. For the extravert, on the contrary, the god is the experience of the object, complete immersion in reality; hence a god who became man is more sympathetic to him than an eternal, immutable lawgiver. These views, if I may anticipate a little, are valid only for the *conscious* psychology of the types. In the unconscious the relations are reversed. Schiller seems to have had an inkling of this: although with his conscious mind he believes in an immutably existing God, yet the way to divinity is revealed to him through the *senses,* through affectivity, through the living process of change. But for him this is a function of secondary importance, and to the extent that he identifies with his ego and abstracts it from change, his conscious attitude also becomes entirely abstract, while his affectivity, his relatedness to the object, necessarily lapses into the unconscious.

[142] From the abstracting attitude of consciousness, which in pursuit of its ideal makes an experience of every occurrence and from the sum of experience a law, a certain limitation and impoverishment result which are characteristic of the introvert. Schiller clearly sensed this in his relation to Goethe, for he felt Goethe’s more extraverted nature as something objectively opposed to himself.[41] Of himself Goethe significantly says:

> As a contemplative man I am an arrant realist, so that I am capable of desiring nothing from all the things that present themselves to me, and of wishing nothing added to them. I make no sort of distinction among objects beyond whether they interest me or not.[42]

Concerning Schiller’s effect upon him, Goethe very characteristically says:

> If I have served you as the representative of certain objects, you have led me from a too rigorous observation of external things and their relations

> back into myself. You have taught me to view the many-sidedness of the inner man with more justice.[43]

[143] In Goethe, on the other hand, Schiller finds an often accentuated complement or fulfillment of his own nature, at the same time sensing the difference, which he indicates in the following way:

> Expect of me no great material wealth of ideas, for that is what I find in you. My need and endeavour is to make much out of little, and, if ever you should realize my poverty in all that men call acquired knowledge, you will perhaps find that in some ways I may have succeeded. Because my circle of ideas is smaller, I traverse it more quickly and oftener, and for that reason can make better use of what small ready cash I own, creating through the form a diversity which is lacking in the content. You strive to simplify your great world of ideas, while I seek variety for my small possessions. You have a kingdom to rule, and I only a somewhat numerous family of ideas which I would like to expand into a little universe.[44]

[144] If we subtract from this statement a certain feeling of inferiority that is characteristic of the introvert, and add to it the fact that the "great world of ideas" is not so much ruled by the extravert as he himself is subject to it, then Schiller's plaint gives a striking picture of the poverty that tends to develop as the result of an essentially abstracting attitude.

[145] A further result of the abstracting attitude of consciousness, and one whose significance will become more apparent in the course of our exposition, is that the unconscious develops a compensating attitude. For the more the relation to the object is restricted by abstraction (because too many "experiences" and "laws" are made), the more insistently does a craving for the object develop in the unconscious, and this finally expresses itself in consciousness as a compulsive sensuous tie to the object. The sensuous relation to the object then takes the place of a feeling relation, which is lacking, or rather suppressed, because of abstraction. Characteristically, therefore, Schiller regards the *senses*, and not *feelings*, as the way to divinity. His ego makes use of thinking, but his affections, his feelings, make use of sensation. Thus for him the schism is between spirituality in the form of thinking, and sensuousness in the form

of affectivity or feeling. For the extravert the situation is reversed: his relation to the object is highly developed, but his world of ideas is sensory and concrete.

[146] Sensuous feeling, or rather the feeling that is present in the sensuous state, is collective. It produces a relatedness or proneness to affect which always puts the individual in a state of *participation mystique*, a condition of partial identity with the sensed object. This identity expresses itself in a compulsive dependence on that object, and in turn, after the manner of a vicious circle, causes in the introvert an intensification of abstraction for the purpose of abolishing the burdensome dependence and the compulsion it evokes. Schiller recognized this peculiarity of sensuous feeling:

> So long as he merely senses, merely desires and acts from mere appetite, man is still nothing but *world*.

But since the introvert cannot go on abstracting indefinitely in order to escape being affected, he sees himself forced in the end to give shape to externals. Schiller goes on:

> Thus in order not to be merely world, he must impart form to matter; he must externalize all within, and shape everything without. Both tasks, in their highest fulfilment, lead back to the concept of divinity from which I started.[45]

[147] This is an important point. Let us suppose the sensuously felt object to be a human being—will he accept this prescription? Will he permit himself to be shaped as though the person to whom he is related were his creator? Man is certainly called upon to play the god on a small scale, but ultimately even inanimate things have a divine right to their own existence, and the world ceased to be chaos long ago when the first hominids began to sharpen stones. It would indeed be a dubious undertaking if every introvert wanted to externalize his limited world of ideas and to shape the external world accordingly. Such attempts happen daily, but the individual suffers, and rightly so, under this “godlikeness.”

[148] For the extravert, Schiller’s formula should run: “Internalize all without and shape everything within.” This was the reaction that, as we

saw, Schiller evoked in Goethe. Goethe supplies a telling parallel to this when he writes to Schiller:

> On the other hand in every sort of activity I am, one might almost say, completely idealistic: I ask nothing at all from objects, but instead I demand that everything shall conform to my conceptions.[46]

This means that when the extravert thinks, things go just as autocratically as when the introvert acts upon the external world.[47] The formula can therefore hold good only when an almost perfect state has been reached, when in fact the introvert has attained a world of ideas so rich and flexible and capable of expression that it no longer forces the object on to a procrustean bed, and the extravert such an ample knowledge of and respect for the object that it no longer gives rise to a caricature when he operates with it in his thinking. Thus we see that Schiller bases his formula on the highest possible criterion and so makes almost prohibitive demands on the psychological development of the individual—assuming that he is thoroughly clear in his own mind what his formula means in every particular.

[149] Be that as it may, it is at least fairly clear that the formula "Externalize all within and shape everything without" is the ideal of the conscious attitude of the introvert. It is based, on the one hand, on the assumption of an ideal range of his inner conceptual world, of the formal principle, and, on the other, on the assumption of the possibility of an ideal application of the sensuous principle, which then no longer appears as affectivity, but as an active potency. So long as man is "sensuous" he is "nothing but world," and "in order not to be merely world he must impart form to matter." This implies a reversal of the passive, receptive, sensuous principle. Yet how can such a reversal come about? That is the whole point. It can scarcely be supposed that a man can give his world of ideas that extraordinary range which would be necessary in order to impose a congenial form on the material world, and at the same time convert his affectivity, his sensuous nature, from a passive to an active state in order to bring it up to the level of his world of ideas. Somewhere or other man must be related, must be subject to something, otherwise he would be really godlike. One is forced to conclude that Schiller would let

it go so far that violence was done to the object. But that would be to concede to the archaic, inferior function an unlimited right to existence, which as we know Nietzsche, at least in theory, actually did. This conclusion is by no means applicable to Schiller, since, so far as I am aware, he nowhere consciously expressed himself to this effect. His formula has instead a thoroughly naïve and idealistic character, quite consistent with the spirit of his time, which was not yet vitiated by that deep distrust of human nature and of human truth which haunted the epoch of psychological criticism inaugurated by Nietzsche.

[150] Schiller’s formula could be carried out only by applying a ruthless power standpoint, with never a scruple about justice for the object nor any conscientious examination of its own competence. Only under such conditions, which Schiller certainly never contemplated, could the inferior function participate in life. In this way the archaic elements, naïve and unconscious and decked in the glamour of mighty words and fair gestures, also came bursting through and helped to build our present “civilization,” concerning the nature of which humanity is at this moment in some measure of disagreement. The archaic power instinct, hitherto hidden behind the façade of civilized living, finally came to the surface in its true colours, and proved beyond question that we are “still barbarians.” For it should not be forgotten that, in the same measure as the conscious attitude may pride itself on a certain godlikeness by reason of its lofty and absolute standpoint, an unconscious attitude develops with a godlikeness oriented downwards to an archaic god whose nature is sensual and brutal. The enantiodromia of Heraclitus ensures that the time will come when this *deus absconditus* shall rise to the surface and press the God of our ideals to the wall. It is as though men at the close of the eighteenth century had not really seen what was taking place in Paris, but lingered on in an aesthetic, enthusiastic, or trifling attitude in order to delude themselves about the real meaning of that glimpse into the abysses of human nature.

> In that nether world is terror,
> And man shall not tempt the gods.
> Let him never yearn to see
> What they veil with night and horror![48]

[151] When Schiller lived, the time for dealing with that nether world had not yet come. Nietzsche at heart was much nearer to it; to him it was certain that we were approaching an epoch of unprecedented struggle. He it was, the only true pupil of Schopenhauer, who tore through the veil of naïveté and in his *Zarathustra* conjured up from the nether region ideas that were destined to be the most vital content of the coming age.

b. Concerning the Basic Instincts

[152] In this twelfth letter Schiller comes to grips with the two basic instincts, to which he devotes a detailed description. The "sensuous" instinct is concerned with "setting man within the bounds of time and turning him into matter."[49] This instinct demands

> that there be change, so that time should have a content. This state of merely filled time is called *sensation*.
>
> Man in this state is nothing but a unit of magnitude, a filled moment of time—or rather, he is not even that, for his personality is extinguished so long as sensation rules him and time whirls him along.
>
> With unbreakable bonds this instinct chains the upward-striving spirit to the world of sense, and summons abstraction from its unfettered wanderings in the infinite back into the confines of the present.[50]

[153] It is entirely characteristic of Schiller's psychology that he should conceive the expression of this instinct as *sensation*, and not as active, sensuous *desire*. This shows that for him sensuousness has the character of *reactiveness*, of affectivity, which is altogether typical of the introvert. An extravert would undoubtedly emphasize the element of desire. It is further significant that it is this instinct which demands *change*. The idea wants changelessness and eternity. Whoever lives under the supremacy of the idea strives for permanence; hence everything that pushes towards change must be opposed to the idea. In Schiller's case it is feeling and sensation, which as a rule are fused together on account of their undeveloped state. Schiller does not in fact discriminate sufficiently between feeling and sensation as the following passage proves:

> Feeling can only say: this is true for this subject and at this moment; another moment another subject may come and revoke the statement of

the present sensation.[51]

[154] This passage clearly shows that for Schiller feeling and sensation are actually interchangeable terms, and it reveals an inadequate evaluation and differentiation of feeling as distinct from sensation. Differentiated feeling can establish universal values as well as those that are merely specific and individual. But it is true that the "feeling-sensation" of the introverted thinking type, because of its passive and reactive character, is purely specific; it can never rise above the individual case, by which alone it is stimulated, to an abstract comparison of all cases, since with the introverted thinking type this duty is performed not by the feeling function but by the thinking function. Conversely, with the introverted feeling type, feeling attains an abstract and universal character and can establish universal and permanent values.

[155] From a further analysis of Schiller's description we find that "feeling-sensation" (by which term I mean the characteristic fusion of the two in the introverted thinking type) is the function with which the ego does not declare itself identical. It has the character of something inimical and foreign, that "extinguishes" the personality, whirls it away, setting the subject outside himself and alienating him from himself. Hence Schiller likens it to affect, which sets a man "beside himself" (= extraverted). When one has collected oneself he says this is called, "just as correctly, going into oneself [= introverted], that is, returning to one's ego, re-establishing the personality."[52] From this it is quite evident that it seems to Schiller as though "feeling-sensation" does not really belong to the person, but is a rather precarious accessory "to which a firm will may triumphantly oppose its demands."[53] But to the extravert it is just this side of him which seems to constitute his true nature; it is as if he were actually himself only when he is being affected by the object—as we can well understand when we consider that for him the relation to the object is his superior, differentiated function, to which abstract thinking and feeling are just as much opposed as they are indispensable to the introvert. The thinking of the extraverted feeling type is just as prejudiced by the sensuous instinct as is the feeling of the introverted thinking type. For both it means extreme restriction to the material and

specific. Living through the object also has its “unfettered wanderings in the infinite,” and not abstraction alone, as Schiller thinks.

[156] By excluding sensuousness from the concept and scope of the “person” Schiller is able to assert that the “person, being an absolute and indivisible unity, can never be at variance with itself.”[54] This unity is a desideratum of the intellect, which would like to preserve the subject in its most ideal integrity; hence as the superior function it must exclude the ostensibly inferior function of sensuousness. The result is that very mutilation of human nature which is the motive and starting-point of Schiller’s quest.

[157] Since, for Schiller, feeling has the quality of “feeling-sensation” and is therefore merely specific, the supreme value, a really eternal value, is naturally assigned to formative thought, or what Schiller calls the “formal instinct”:[55]

> But when once thought pronounces: *that is*, it decides for ever and aye, and the validity of its pronouncement is vouched for by the personality itself, which defies all change.[56]

One cannot refrain from asking: Do the meaning and value of the personality really lie only in what is permanent? May it not be that change, becoming, and development represent actually higher values than mere “defiance” of change?[57] Schiller continues:

> When therefore the formal instinct holds sway, and the pure object acts within us, there is the highest expansion of being, all barriers disappear, and from a unit of magnitude to which the needy senses confined him, man has risen to a unity of idea embracing the whole realm of phenomena. By this operation we are no more in time, but time, with its complete and infinite succession, is in us. We are no longer individuals, but species; the judgment of all minds is pronounced by our own, the choice of all hearts is represented by our deed.[58]

[158] There can be no doubt that the thinking of the introvert aspires to this Hyperion; it is only a pity that the “unity of idea” is the ideal of such a very limited class of men. Thinking is merely a function which, when fully developed and exclusively obeying its own laws, naturally sets up a

claim to universal validity. Only one part of the world, therefore, can be grasped by thinking, another part only by feeling, a third only through sensation, and so on. That is probably why there are different psychic functions; for, biologically, the psychic system can be understood only as a system of adaptation, just as eyes exist presumably because there is light. Thinking can claim only a third or a fourth part of the total significance, although in its own sphere it possesses exclusive validity—just as sight is the exclusively valid function for the perception of light waves, and hearing for that of sound waves. Consequently a man who puts the unity of idea on a pinnacle, and for whom "feeling-sensation" is something antipathetic to his personality, can be compared to a man who has good eyes but is totally deaf and suffers from anaesthesia.

[159] "We are no longer individuals, but species": certainly, if we identify ourselves exclusively with thinking, or with any one function whatsoever; for then we are collective beings with universal validity although quite estranged from ourselves. Outside this quarter-psyche, the three other quarters languish in the darkness of repression and inferiority. "Is it nature which thus bears men so far from themselves?" we might ask with Rousseau—nature, or is it not rather our own psychology, which so barbarously overvalues the one function and allows itself to be swept away by it? This impetus is of course a piece of nature too, that untamed instinctive energy before which the differentiated type recoils if ever it should "accidentally" manifest itself in an inferior function instead of in the ideal function, where it is prized and honoured as a divine afflatus. As Schiller truly says:

> But your individuality and your present need will be swept away by change, and what you now ardently desire will one day become the object of your abhorrence.[59]

[160] Whether the untamed, extravagant, disproportionate energy shows itself in sensuality—in *abjectissimo loco*—or in an overestimation and deification of the most highly developed function, it is at bottom the same: barbarism. But naturally one has no insight into this so long as one is still hypnotized by the *object* of the deed and ignores *how* it is done.

[161] Identification with the one differentiated function means that one is in a collective state—not, of course, identical with the collective, as is the primitive, but collectively adapted so far as “the judgment of all minds is pronounced by our own” and our thought and speech exactly conform to the general expectations of those whose thinking is differentiated and adapted to the same degree. Furthermore, “the choice of all hearts is represented by our deed” so far as we think and do as all desire it to be thought and done. And in fact everyone thinks and believes that it is the best and most desirable thing when there is the maximum of identity with the one differentiated function, for that brings the most obvious social advantages, but at the same time the greatest disadvantages to those lesser developed sides of our human nature, which sometimes constitute a large part of our individuality. Schiller goes on:

> Once we assert the primary, and therefore necessary, antagonism of the two instincts, there is really no other means of preserving the unity in man except by the absolute subordination of the sensuous instinct to the rational. But the only result of that is mere uniformity, not harmony, and man still remains for ever divided.[60]
>
> Because it is difficult to remain true to our principles amidst all the ardour of the feelings, we adopt the more comfortable expedient of making the character more secure by blunting them; for it is infinitely easier to keep calm in the face of an unarmed adversary than to master a spirited and active foe. In this operation, then, consists for the most part what we call the forming of a human being; and that in the best sense of the term, as signifying the cultivation of the inner, not merely the outward, man. A man so formed will indeed be secured against being crude Nature, and from appearing as such; but he will at the same time be armed by his principles against every sensation of Nature, so that humanity can reach him as little from without as from within.[61]

[162] Schiller was also aware that the two functions, thinking and affectivity (feeling-sensation), can take one another’s place, which happens, as we saw, when one function is privileged:

> He can assign to the passive function [feeling-sensation] the intensity which the active function requires, forestall the formal by means of the

> material instinct, and make the receptive faculty the determining one. Or he can assign to the active function [positive thinking] the extensity which is proper to the passive, forestall the material instinct by means of the formal, and substitute the determining for the receptive faculty. In the first case he will never be himself, in the second he will never be anything else. Consequently, in both cases he is neither the one nor the other, and is therefore a nonentity.[62]

[163] In this very remarkable passage much is contained that we have already discussed. When the energy of positive thinking is supplied to feeling-sensation, which would amount to a reversal of the introverted thinking type, the qualities of undifferentiated, archaic feeling-sensation become paramount: the individual relapses into an extreme relatedness, or identity with the sensed object. This state is one of *inferior extraversion*, an extraversion which, as it were, detaches the individual entirely from his ego and dissolves him into archaic collective ties and identifications. He is then no longer "himself," but sheer relatedness, identical with the object and therefore without a standpoint. The introvert instinctively feels the greatest resistance to this condition, which is no guarantee that he will not unconsciously fall into it. It should on no account be confused with the extraversion of the extraverted type, inclined as the introvert is to make this mistake and to display for this extraversion the same contempt which, at bottom, he always feels for his own.[63] Schiller's second instance, on the other hand, is the purest illustration of the introverted thinking type, who by amputating his inferior feeling-sensations condemns himself to sterility, to a state in which "humanity can reach him as little from without as from within."

[164] Here again it is obvious that Schiller is writing, as always, only from the standpoint of the introvert. The extravert, whose ego resides not in thinking but in the feeling relation to the object, actually finds himself through the object, whereas the introvert loses himself in it. But when the extravert proceeds to introvert, he arrives at a state of inferior relatedness to collective ideas, an identity with collective thinking of an archaic, concretistic kind, which one might call *sensation-thinking*. He loses himself in this inferior function just as much as the introvert in his

inferior extraversion. Hence the extravert has the same repugnance, fear, or silent contempt for introversion as the introvert for extraversion.

[165] Schiller senses this opposition between the two mechanisms—in his case between sensation and thinking, or, as he puts it, "matter and form," "passivity and activity"[64]—as *unbridgeable*.

> The distance between matter and form, between passivity and activity, between sensation and thought, is infinite, and the two cannot conceivably be reconciled. The two conditions are opposed to each other and can never be made one.[65]

But both instincts want to exist, and as "energies"—Schiller's own very modern word for them—they need and demand a "depotentiation."[66]

> The material instinct and the formal are equally earnest in their demands, since in cognition the one relates to the reality, the other to the necessity, of things.[67]
>
> But this depotentiation of the sensuous instinct should never be the effect of a physical incapacity and a blunting of sensation which everywhere merits nothing but contempt; it must be an act of freedom, an activity of the person, tempering the sensual by its moral intensity…. For sense must lose only to the advantage of mind.[68]

It follows, then, that mind must lose only to the advantage of sense. Schiller does not actually say this, but it is surely implied when he continues:

> Just as little should the depotentiation of the formal instinct be the effect of spiritual incapacity and a feebleness of thought and will that would degrade humanity. Abundance of sensations must be its glorious source; sensuousness itself must maintain its territory with triumphant power, and resist the violence which by its usurping activity the mind would inflict upon it.[69]

[166] With these words Schiller acknowledges the equal rights of sensuousness and spirituality. He concedes to sensation the right to its own existence. But at the same time we can see in this passage the outlines of a still deeper thought: the idea of a "reciprocity" between the

> two instincts, a community of interest, or, in modern language, a *symbiosis* in which the waste products of the one would be the food supply of the other.
>
> We have now reached the conception of a reciprocal action between the two instincts, of such a kind that the operation of the one at the same time establishes and restricts the operation of the other, and each reaches its highest manifestation precisely through the activity of the other.[70]

[167] Hence, if we follow out this idea, their opposition must not be conceived as something to be done away with, but on the contrary as something useful and life-promoting that should be preserved and strengthened. This is a direct attack on the predominance of the one differentiated and socially valuable function, since that is the prime cause of the suppression and depletion of the inferior functions. It would amount to a slave rebellion against the heroic ideal which compels us to sacrifice everything else for the sake of the one. If this principle, which, as we saw, was developed in particularly high degree by Christianity for the spiritualizing of man, and then proved equally effective in furthering his materialistic ends, were once finally broken, the inferior functions would find a natural release and would demand, rightly or wrongly, the same recognition as the differentiated function. The complete opposition between sensuousness and spirituality, or between the feeling-sensation and thinking of the introverted thinking type, would then be openly revealed. But, as Schiller says, this complete opposition also entails a reciprocal limitation, equivalent psychologically to an abolition of the power principle, i.e., to a renunciation of the claim to a universally valid standpoint on the strength of one differentiated and adapted collective function.

[168] The direct outcome of this renunciation is *individualism*,[71] that is, the need for a realization of individuality, a realization of man as he *is*. But let us hear how Schiller tries to tackle the problem:

> This reciprocal relation of the two instincts is purely a task of reason, which man will be able to solve fully only through the perfection of his being. It is in the truest sense of the term the idea of his humanity, and

consequently something infinite to which he can approach ever nearer in the course of time, without ever reaching it.[72]

[169] It is a pity that Schiller is so conditioned by his type, otherwise it could never have occurred to him to look upon the co-operation of the two instincts as a "task of reason," for opposites are not to be united rationally: *tertium non datur*—that is precisely why they are called opposites. It must be that Schiller understands by reason something other than *ratio*, some higher and almost mystical faculty. In practice, opposites can be united only in the form of a compromise, or *irrationally*, some new thing arising between them which, although different from both, yet has the power to take up their energies in equal measure as an expression of both and of neither. Such an expression cannot be contrived by reason, it can only be created through living. As a matter of fact Schiller means just this, as we can see from the following passage:

> But if there were cases when [man] had this twofold experience at the same time, when he was at once conscious of his freedom and sensible of his existence, when he at once felt himself as matter and came to know himself as mind, he would in such cases, and positively in them alone, have a complete intuition of his humanity, and the object which afforded him this intuition would serve him as a symbol of his accomplished destiny.[73]

Thus if a man were able to live both faculties or instincts at the same time, i.e., thinking by sensing and sensing by thinking, then, out of that experience (which Schiller calls the object), a *symbol* would arise which would express his accomplished destiny, i.e., his individual way on which the Yea and Nay are united.

[170] Before we take a closer look at the psychology of this idea, it would be as well for us to ascertain how Schiller *conceives* the nature and origin of the symbol:

> The object of the sensuous instinct … may be called *life* in its widest meaning; a concept that signifies all material being, and all that is directly present to the senses. The object of the formal instinct … may be called *form*, both in the figurative and in the literal sense; a concept that

includes all formal qualities of things and all their relations to the intellectual faculties.[74]

[171] The object of the mediating function, therefore, according to Schiller, is “living form,” for this would be precisely a symbol in which the opposites are united; “a concept that serves to denote all aesthetic qualities of phenomena and, in a word, what we call *Beauty* in the widest sense of the term.”[75] But the symbol presupposes a function that creates symbols, and in addition a function that understands them. This latter function takes no part in the creation of the symbol, it is a function in its own right, which one could call symbolic thinking or symbolic understanding. The essence of the symbol consists in the fact that it represents in itself something that is not wholly understandable, and that it hints only intuitively at its possible meaning. The creation of a symbol is not a rational process, for a rational process could never produce an image that represents a content which is at bottom incomprehensible. To understand a symbol we need a certain amount of intuition which apprehends, if only approximately, the meaning of the symbol that has been created, and then incorporates it into consciousness. Schiller calls the symbol-creating function a third instinct, the *play* instinct; it bears no resemblance to the two opposing functions, but stands between them and does justice to both their natures—always provided (a point Schiller does not mention) that sensation and thinking are *serious* functions. But there are many people for whom neither function is altogether serious, and for them seriousness must occupy the middle place instead of play. Although elsewhere Schiller denies the existence of a third, mediating, basic instinct,[76] we will nevertheless assume, though his conclusion is somewhat at fault, his intuition to be all the more accurate. For, as a matter of fact, something does stand between the opposites, but in the pure differentiated type it has become invisible. In the introvert it is what I have called feeling-sensation. On account of its relative repression, the inferior function is only partly attached to consciousness; its other part is attached to the unconscious. The differentiated function is the most fully adapted to external reality; it is essentially the reality-function; hence it is as much as possible shut off from any admixture of fantastic elements. These elements, therefore, become associated with the inferior functions,

which are similarly repressed. For this reason the sensation of the introvert, which is usually sentimental, has a very strong tinge of unconscious fantasy. *The third element, in which the opposites merge, is fantasy activity, which is creative and receptive at once*. This is the function Schiller calls the play instinct, by which he means more than he actually says. He exclaims: “For, to declare it once and for all, man plays only when he is in the full sense of the word a man, and he is only wholly man when he is playing.” For him the object of the play instinct is beauty. “Man shall only *play* with Beauty, and only with *Beauty* shall he play.”[77]

[172] Schiller was in fact aware what it might mean to give first place to the play instinct. As we have seen, the release of repression brings a collision between the opposites, causing an equalization that necessarily results in a lowering of the value that was highest. For culture, as we understand it today, it is certainly a catastrophe when the barbarian side of the European comes uppermost, for who can guarantee that such a man, when he begins to play, will make the aesthetic temper and the enjoyment of genuine beauty his goal? That would be an entirely unjustifiable anticipation. From the inevitable lowering of the cultural level a very different result is to be expected. Schiller rightly says:

> The aesthetic play instinct will then be hardly recognizable in its first attempts, as the sensuous instinct is incessantly intervening with its headstrong caprice and its savage appetite. Hence we see crude taste first seizing on what is new and startling, gaudy, fantastic, and bizarre, on what is violent and wild, and avoiding nothing so much as simplicity and quietude.[78]

[173] From this we must conclude that Schiller was aware of the dangers of this development. It also follows that he himself could not acquiesce in the solution found, but felt a compelling need to give man a more substantial foundation for his humanity than the somewhat insecure basis which a playful aesthetic attitude can offer him. And that must indeed be so. For the opposition between the two functions, or function groups, is so great and so inveterate that play alone would hardly suffice to counterbalance the full gravity and seriousness of this conflict. *Similia*

similibus curantur—a third factor is needed, which at least can equal the other two in seriousness. With the attitude of play all seriousness must vanish, and this opens the way for what Schiller calls an "unlimited determinability."[79] Sometimes instinct will allow itself to be allured by sensation, sometimes by thinking; now it will play with objects, now with ideas. But in any case it will not play exclusively with beauty, for then man would be no longer a barbarian but already aesthetically educated, whereas the question at issue is: How is he to emerge from the state of barbarism? Above all else, therefore, it must definitely be established where man actually stands in his innermost being. *A priori* he is as much sensation as thinking; he is in opposition to himself, hence he must stand somewhere in between. In his deepest essence he must be a being who partakes of both instincts, yet may also differentiate himself from them in such a way that, though he must suffer them and in some cases submit to them, he can also use them. But first he must differentiate himself from them, as from natural forces to which he is subject but with which he does not declare himself identical. On this point Schiller says:

> Moreover, this indwelling of the two fundamental instincts in no way contradicts the absolute unity of the mind, provided only that we distinguish it in itself from both instincts. Both certainly exist and operate within it, but the mind itself is neither matter nor form, neither sensuousness nor reason.[80]

[174] Here, it seems to me, Schiller has put his finger on something very important, namely, *the possibility of separating out an individual nucleus,* which can be at one time the subject and at another the object of the opposing functions, though always remaining distinguishable from them. This separation is as much an intellectual as a moral judgment. In one case it comes about through thinking, in another through feeling. If the separation is unsuccessful, or if it is not made at all, a dissolution of the individuality into pairs of opposites inevitably follows, since it becomes identical with them. A further consequence is disunion with oneself, or an arbitrary decision in favour of one or the other side, together with a violent suppression of its opposite. This train of thought is a very ancient one, and so far as I know its most interesting formulation, psychologically speaking, may be found in Synesius, the

Christian bishop of Ptolemais and pupil of Hypatia. In his book *De insomniis* he assigns to the *spiritus phantasticus* practically the same psychological role as Schiller to the play instinct and I to creative fantasy; only his mode of expression is not psychological but metaphysical, an ancient form of speech which is not suitable for our purpose. He says of this spirit: “The fantastic spirit is the medium between the eternal and the temporal, and in it we are most alive.”[81] It unites the opposites in itself; hence it also participates in instinctive nature right down to the animal level, where it becomes instinct and arouses daemonic desires:

> For this spirit borrows anything that is suitable to its purpose, taking it from both extremes as it were from neighbours, and so unites in one essence things that dwell far apart. For Nature has extended the reach of fantasy through her many realms, and it descends even to the animals, which do not yet possess reason…. It is itself the intelligence of the animal, and the animal understands much through this power of fantasy…. All classes of demons derive their essence from the life of fantasy. For they are in their whole being imaginary, and are images of that which happens within.

[175] Indeed, from the psychological point of view demons are nothing other than intruders from the unconscious, spontaneous irruptions of unconscious complexes into the continuity of the conscious process. Complexes are comparable to demons which fitfully harass our thoughts and actions; hence in antiquity and the Middle Ages acute neurotic disturbances were conceived as possession. Thus, when the individual consistently takes his stand on one side, the unconscious ranges itself on the other and rebels—which is naturally what struck the Neoplatonic and Christian philosophers most, since they represented the standpoint of exclusive spirituality. Particularly valuable is Synesius’ reference to the imaginary nature of demons. It is, as I have already pointed out, precisely the fantastic element that becomes associated in the unconscious with the repressed functions. Hence, if the individuality (as we might call the “individual nucleus” for short) fails to differentiate itself from the opposites, it becomes identical with them and is inwardly torn asunder,

so that a state of agonizing disunion arises. Synesius expresses this as follows:

> Thus this animal spirit, which devout men have also called the spiritual soul, becomes both idol and god and demon of many shapes. In this also does the soul exhibit her torment.

[176] By participating in the instinctive forces the spirit becomes a "god and demon of many shapes." This strange idea becomes immediately intelligible when we remember that in themselves sensation and thinking are collective functions, into which the individuality (or mind, according to Schiller) is dissolved by non-differentiation. It becomes a collective entity, i.e., godlike, since God is a collective idea of an all-pervading essence. In this state, says Synesius, "the soul exhibits her torment." But deliverance is won through differentiation; for, he continues, when the spirit becomes "moist and gross" it sinks into the depths, i.e., gets entangled with the object, but when purged through pain it becomes "dry and hot" and rises up again, for it is just this fiery quality that differentiates it from the humid nature of its subterranean abode.

[177] Here the question naturally arises: By virtue of what power does that which is indivisible, i.e., the individual, defend himself against the divisive instincts? That he can do this by means of the play instinct even Schiller, at this point, no longer believes; it must be something serious, some considerable power, that can effectively detach the individuality from both the opposites. From one side comes the call of the highest value, the highest ideal; from the other the allure of the strongest desire. Schiller says:

> Each of these two fundamental instincts, as soon as it is developed, strives by its nature and by necessity towards satisfaction; but just because both are necessary and both are yet striving towards opposite objectives, this twofold compulsion naturally cancels itself out, and the *will* preserves complete freedom between them both. Thus it is the will which acts as a power against both instincts, but neither of the two can of its own accord act as a power against the other…. There is in man no other power but his will, and only that which abolishes man, death and every destroyer of consciousness, can abolish this inner freedom.[82]

[178] That the opposites must cancel each other is *logically* correct, but *practically* it is not so, for the instincts are in mutual, active opposition and cause a temporarily insoluble conflict. The will could indeed decide the issue, but only if we anticipate the very condition that must first be reached. However, the problem of how man is to emerge from barbarism is not yet solved, neither is that condition established which alone could impart to the will a direction that would be fair to both opposites and so unite them. It is truly a sign of the barbarian state that the will is determined unilaterally by one function, for the will must have some content, some aim, and how is this aim set? How else than by an antecedent psychic process which through an intellectual or an emotional judgment, or a sensuous desire, provides the will with both a content and an aim? If we allow sensuous desire to be a motive of the will, we act in accordance with one instinct against our rational judgment. Yet if we leave it to our rational judgment to settle the dispute, then even the fairest arbitration will always be based on that, and will give the formal instinct priority over the sensuous. In any event, the will is determined more from this side or from that, so long as it depends for its content on one side or the other. But, to be really able to settle the conflict, it must be grounded on an intermediate state or process, which shall give it a content that is neither too near nor too far from either side. According to Schiller, this must be a *symbolic* content, since the mediating position between the opposites can be reached only by the symbol. The reality presupposed by one instinct is different from the reality of the other. To the other it would be quite unreal or bogus, and vice versa. This dual character of real and unreal is inherent in the symbol. If it were only real, it would not be a symbol, for it would then be a real phenomenon and hence unsymbolic. Only that can be symbolic which embraces both. And if it were altogether unreal, it would be mere empty imagining, which, being related to nothing real, would not be a symbol either.

[179] The rational functions are, by their very nature, incapable of creating symbols, since they produce only rationalities whose meaning is determined unilaterally and does not at the same time embrace its opposite. The sensuous functions are equally unfitted to create symbols, because their products too are determined unilaterally by the object and

contain only themselves and not their opposites. To discover, therefore, that impartial basis for the will, we must appeal to another authority, where the opposites are not yet clearly separated but still preserve their original unity. Manifestly this is not the case with consciousness, since the whole essence of consciousness is *discrimination*, distinguishing ego from non-ego, subject from object, positive from negative, and so forth. The separation into pairs of opposites is entirely due to conscious differentiation; only consciousness can recognize the suitable and distinguish it from the unsuitable and worthless. It alone can declare one function valuable and the other non-valuable, thus bestowing on one the power of the will while suppressing the claims of the other. But, where no consciousness exists, where purely unconscious instinctive life still prevails, there is no reflection, no *pro et contra*, no disunion, nothing but simple happening, self-regulating instinctivity, living proportion. (Provided, of course, that instinct does not come up against situations to which it is unadapted, in which case blockage, affects, confusion, and panic arise.)

[180] It would, therefore, be pointless to call upon consciousness to decide the conflict between the instincts. A conscious decision would be quite arbitrary, and could never supply the will with a symbolic content that alone can produce an irrational solution of a logical antithesis. For this we must go deeper; we must descend into the foundations of consciousness which have still preserved their primordial instinctivity—that is, into the unconscious, where all psychic functions are indistinguishably merged in the original and fundamental activity of the psyche. The lack of differentiation in the unconscious arises in the first place from the almost direct association of all the brain centres with each other, and in the second from the relatively weak energie value of the unconscious elements.[83] That they possess relatively little energy is clear from the fact that an unconscious element at once ceases to be subliminal as soon as it acquires a stronger accent of value; it then rises above the threshold of consciousness, and it can do this only by virtue of the energy accruing to it. It becomes a “lucky idea” or “hunch,” or, as Herbart calls it, a “spontaneously arising presentation.” The strong energic value of the conscious contents has the effect of intense illumination, whereby their

differences become clearly perceptible and any confusion between them is ruled out. In the unconscious, on the contrary, the most heterogeneous elements possessing only a vague analogy can be substituted for one another, just because of their low luminosity and weak energic value. Even heterogeneous sense-impressions coalesce, as we see in "photisms" (Bleuler) or in colour hearing. Language, too, contains plenty of these unconscious contaminations, as I have shown in the case of sound, light, and emotional states.[84]

[181] The unconscious, then, might well be the authority we have to appeal to, since it is a neutral region of the psyche where everything that is divided and antagonistic in consciousness flows together into groupings and configurations. These, when raised to the light of consciousness, reveal a nature that exhibits the constituents of one side as much as the other; they nevertheless belong to neither but occupy an independent middle position. It is this position that constitutes both their value and their non-value for consciousness. They are worthless in so far as nothing clearly distinguishable can be perceived from their configuration, thus leaving consciousness embarrassed and perplexed; but valuable in so far as it is just their undifferentiated state that gives them that symbolic character which is essential to the content of the mediating will.

[182] Thus, besides the will, which is entirely dependent on its content, man has a further auxiliary in the unconscious, that maternal womb of creative fantasy, which is able at any time to fashion symbols in the natural process of elementary psychic activity, symbols that can serve to determine the mediating will. I say "can" advisedly, because the symbol does not of its own accord step into the breach, but remains in the unconscious just so long as the energic value of the conscious contents exceeds that of the unconscious symbol. Under normal conditions this is always the case; but under abnormal conditions a reversal of value sets in, whereby the unconscious acquires a higher value than the conscious. The symbol then rises to the surface without, however, being taken up by the will and the executive conscious functions, since these, on account of the reversal of value, have now become *subliminal*. The unconscious, on the other hand, has become *supraliminal*, and an abnormal state, a psychic disturbance, has supervened.

[183] Under normal conditions, therefore, energy must be artificially supplied to the unconscious symbol in order to increase its value and bring it to consciousness. This comes about (and here we return again to the idea of differentiation provoked by Schiller) through a differentiation of the self[85] from the opposites. This differentiation amounts to a detachment of libido from both sides, in so far as the libido is disposable. For the libido invested in the instincts is only in part freely disposable, just so far in fact as the power of the will extends. This is represented by the amount of energy which is at the "free" disposal of the ego. The will then has the self as a possible aim, and it becomes the more possible the more any further development is arrested by the conflict. In this case, the will does not decide between the opposites, but purely for the self, that is, the disposable energy is withdrawn into the self—in other words, it is *introverted*. The introversion simply means that the libido is retained by the self and is prevented from taking part in the conflict of opposites. Since the way outward is barred to it, it naturally turns towards thought, where again it is in danger of getting entangled in the conflict. The act of differentiation and introversion involves the detachment of disposable libido not merely from the outer object but also from the inner object, the thought. The libido becomes wholly objectless, it is no longer related to anything that could be a content of consciousness, and it therefore sinks into the unconscious, where it automatically takes possession of the waiting fantasy material, which it thereupon activates and forces to the surface.

[184] Schiller's term for the symbol, "living form," is happily chosen, because the constellated fantasy material contains images of the psychological development of the individuality in its successive states—a sort of preliminary sketch or representation of the onward way between the opposites. Although it may frequently happen that the discriminating activity of consciousness does not find much in these images that can be immediately understood, these intuitions nevertheless contain a living power which can have a determining effect on the will. But the determining of the will has repercussions on both sides, so that after a while the opposites recover their strength. The renewed conflict again demands the same treatment, and each time a further step along the way

is made possible. This function of mediation between the opposites I have termed the *transcendent function*, by which I mean nothing mysterious, but merely a combined function of conscious and unconscious elements, or, as in mathematics, a common function of real and imaginary quantities.[86]

[185] Besides the will—whose importance should not on that account be denied—we also have creative fantasy, an irrational, instinctive function which alone has the power to supply the will with a content of such a nature that it can unite the opposites. This is the function that Schiller intuitively apprehended as the source of symbols; but he called it the "play instinct" and could therefore make no further use of it for the motivation of the will. In order to obtain a content for the will he reverted to the intellect and thus allied himself to one side only. But he comes surprisingly close to our problem when he says:

> The sway of sensation must therefore be destroyed before the law [i.e., of the rational will] can be set up in its place. So it is not enough for something to begin which previously did not exist; something must first cease which previously did exist. Man cannot pass directly from sensation to thinking; he must take a step backwards, since only by the removal of one determinant can its opposite appear. In order, therefore, to exchange passivity for self-dependence, an inactive determinant for an active one, he must be momentarily free from all determinacy and pass through a state of pure determinability. Consequently, he must somehow return to that negative state of sheer indeterminacy in which he existed before anything at all made an impression on his senses. But that state was completely empty of content, and it is now a question of uniting an equal indeterminacy with an equally unlimited determinability possessing the greatest possible fulness of content, since something positive is to result directly from this condition. The determinacy which he received by means of sensation must therefore be preserved, because he must not lose hold of reality; but at the same time it must, in so far as it is a limitation, be removed, because an unlimited determinability is to make its appearance.[87]

[186] With the help of what has been said above, this difficult passage can be understood easily enough if we bear in mind that Schiller constantly tends to seek a solution in the rational will. Making allowance for this fact, what he says is perfectly clear. The “step backwards” is the differentiation from the contending instincts, the detachment and withdrawal of libido from all inner and outer objects. Here, of course, Schiller has the sensuous object primarily in mind, since, as we have said, his constant aim is to get across to the side of rational thinking, which seems to him an indispensable factor in determining the will. Nevertheless, he is still driven by the necessity of abolishing all determinacy, and this also implies detachment from the inner object, the thought—otherwise it would be impossible to achieve that complete indeterminacy and emptiness of content which is the original state of unconsciousness, with no discrimination of subject and object. It is obvious that Schiller means a process which might be formulated as an *introversion into the unconscious*.

[187] “Unlimited determinability” clearly means something very like the unconscious, a state in which everything acts on everything else without distinction. This empty state of consciousness must be united with the “greatest possible fulness of content.” This fulness, the counterpart of the emptiness of consciousness, can only be the content of the unconscious, since no other content is given. Schiller is thus expressing the union of conscious and unconscious, and from this state “something positive is to result.” This “positive” something is for us a symbolic determinant of the will. For Schiller it is a “mediatory condition,” by which the union of sensation and thinking is brought about. He also calls it a “mediatory disposition” where sensuousness and reason are simultaneously active; but just because of that each cancels the determining power of the other and their opposition ends in negation. This cancelling of the opposites produces a void, which we call the unconscious. Because it is not determined by the opposites, this condition is susceptible to every determinant. Schiller calls it the “aesthetic condition.”[88] It is remarkable that he overlooks the fact that sensuousness and reason cannot both be “active” in this condition, since, as he himself says, they are already cancelled by mutual negation. But, since something must be active and

Schiller has no other function at his disposal, the pairs of opposites must, according to him, become active again. Their activity is there all right, but since consciousness is "empty," it must necessarily be in the unconscious.[89] But this concept was unknown to Schiller—hence he contradicts himself at this point. His mediating aesthetic function would thus be the equivalent of our symbol-forming activity (creative fantasy). Schiller defines the "aesthetic character" of a thing as its relation to "the totality of our various faculties, without being a specific object for any single one of them."[90] Instead of this vague definition, he would perhaps have done better to return to his earlier concept of the symbol; for the symbol has the quality of being related to all psychic functions without being a specific object for any single one. Having now reached this "mediatory disposition," Schiller perceives that "it is henceforth possible for man, by the way of nature, to make of himself what he will—the freedom to be what he ought to be is completely restored to him."[91]

[188] Because by preference Schiller proceeds rationally and intellectually, he falls a victim to his own conclusion. This is already demonstrated in his choice of the word "aesthetic." Had he been acquainted with Indian literature, he would have seen that the *primordial image* which floated before his mind's eye had a very different character from an "aesthetic" one. His intuition seized on the unconscious model which from time immemorial has lain dormant in our mind. Yet he interpreted it as "aesthetic," although he himself had previously emphasized its symbolic character. The primordial image I am thinking of is that particular configuration of Eastern ideas which is condensed in the *brahman-atman* teaching of India and whose philosophical spokesman in China is Lao-tzu.

[189] The Indian conception teaches liberation from the opposites, by which are to be understood every sort of affective state and emotional tie to the object. Liberation follows the withdrawal of libido from all contents, resulting in a state of complete introversion. This psychological process is, very characteristically, known as *tapas*, a term which can best be rendered as "self-brooding." This expression clearly pictures the state of meditation without content, in which the libido is supplied to one's

own self somewhat in the manner of incubating heat. As a result of the complete detachment of all affective ties to the object, there is necessarily formed in the inner self an equivalent of objective reality, or a complete identity of inside and outside, which is technically described as *tat tvam asi* (that art thou). The fusion of the self with its relations to the object produces the identity of the self (*atman*) with the essence of the world (i.e., with the relations of subject to object), so that the identity of the inner with the outer *atman* is cognized. The concept of *brahman* differs only slightly from that of *atman*, for in *brahman* the idea of the self is not explicitly given; it is, as it were, a general indefinable state of identity between inside and outside.

[190] Parallel in some ways with *tapas* is the concept of yoga, understood not so much as a state of meditation as a conscious technique for attaining the *tapas* state. Yoga is a method by which the libido is systematically "introverted" and liberated from the bondage of opposites. The aim of *tapas* and yoga alike is to establish a mediatory condition from which the creative and redemptive element will emerge. For the individual, the psychological result is the attainment of *brahman*, the "supreme light," or *ananda* (bliss). This is the whole purpose of the redemptory exercises. At the same time, the process can also be thought of as a cosmogonic one, since *brahman-atman* is the universal Ground from which all creation proceeds. The existence of this myth proves, therefore, that creative processes take place in the unconscious of the yogi which can be interpreted as new adaptations to the object. Schiller says:

> As soon as it is light in man, it is no longer night without. As soon as it is hushed within him, the storm in the universe is stilled, and the contending forces of nature find rest between lasting bounds. No wonder, then, that age-old poetry speaks of this great event in the inner man as though it were a revolution in the world outside him.[92]

[191] Yoga introverts the relations to the object. Deprived of energic value, they sink into the unconscious, where, as we have shown, they enter into new relations with other unconscious contents, and then reassociate themselves with the object in new form after the completion of the *tapas*

exercise. The transformation of the relation to the object has given the object a new face. It is as though newly created; hence the cosmogonic myth is an apt symbol for the outcome of the *tapas* exercise. The trend of Indian religious practice being almost exclusively introverted, the new adaptation to the object has of course little significance; but it still persists in the form of an unconsciously projected, doctrinal cosmogonic myth, though without leading to any practical innovations. In this respect the Indian religious attitude is the diametrical opposite of the Christian, since the Christian principle of love is extraverted and positively demands an object. The Indian principle makes for riches of knowledge, the Christian for fulness of works.

[192] The *brahman* concept also contains the concept of *rta*, right order, the orderly course of the world. In *brahman*, the creative universal essence and universal Ground, all things come upon the right way, for in it they are eternally dissolved and recreated; all development in an orderly way proceeds from *brahman*. The concept of *rta* is a stepping-stone to the concept of *tao* in Lao-tzu. *Tao* is the right way, the reign of law, the middle road between the opposites, freed from them and yet uniting them in itself. The purpose of life is to travel this middle road and never to deviate towards the opposites. The ecstatic element is entirely absent in Lao-tzu; its place is taken by sublime philosophic lucidity, an intellectual and intuitive wisdom obscured by no mystical haze—a wisdom that represents what is probably the highest attainable degree of spiritual superiority, as far removed from chaos as the stars from the disorder of the actual world. It tames all that is wild, without denaturing it and turning it into something higher.

[193] It could easily be objected that the analogy between Schiller’s train of thought and these apparently remote ideas is very far-fetched. But it must not be forgotten that not so long after Schiller’s time these same ideas found a powerful spokesman through the genius of Schopenhauer and became intimately wedded to Germanic mind, never again to depart from it. In my view it is of little importance that whereas the Latin translation of the Upanishads by Anquetil du Perron (published 1801–2) was available to Schopenhauer, Schiller took at least no conscious note of the very meagre information that was available in his time.[93] I have seen

enough in my own practical experience to know that no direct communication is needed in the formation of affinities of this kind. We see something very similar in the fundamental ideas of Meister Eckhart and also, in some respects, of Kant, which display a quite astonishing affinity with those of the Upanishads, though there is not the faintest trace of any influence either direct or indirect. It is the same as with myths and symbols, which can arise autochthonously in every corner of the earth and yet are identical, because they are fashioned out of the same worldwide human unconscious, whose contents are infinitely less variable than are races and individuals.

[194] I also feel it necessary to draw a parallel between Schiller's ideas and those of the East because in this way Schiller's might be freed from the all too constricting mantle of aestheticism.[94] Aestheticism is not fitted to solve the exceedingly serious and difficult task of educating man, for it always presupposes the very thing it should create—the capacity to love beauty. It actually hinders a deeper investigation of the problem, because it always averts its face from anything evil, ugly, and difficult, and aims at pleasure, even though it be of an edifying kind. Aestheticism therefore lacks all moral force, because *au fond* it is still only a refined hedonism. Certainly Schiller is at pains to introduce an absolute moral motive, but with no convincing success since, just because of his aesthetic attitude, it is impossible for him to see the consequences which a recognition of the other side of human nature would entail. The conflict thus engendered involves such confusion and suffering for the individual that, although the spectacle of beauty may with luck enable him to repress its opposite again, he still does not escape from it, so that, even at best, the old condition is re-established. In order to help him out of this conflict, another attitude than the aesthetic is needed. This is shown nowhere more clearly than in the parallel with Oriental ideas. The religious philosophy of India grasped this problem in all its profundity and showed the kind of remedy needed to solve the conflict. What is needed is a supreme moral effort, the greatest self-denial and sacrifice, the most intense religious austerity and true saintliness.

[195] Schopenhauer, despite his regard for the aesthetic, most emphatically pointed out just this side of the problem. But we must not delude

ourselves that the words “aesthetic,” “beauty,” etc. had the same associations for Schiller as they have for us. I am not, I think, putting it too strongly when I say that for him “beauty” was a *religious ideal*. Beauty was his religion. His “aesthetic mood” might equally well be called “devoutness.” Without definitely expressing anything of that kind, and without explicitly characterizing his central problem as a religious one, Schiller’s intuition none the less arrived at the religious problem. It was, however, the religious problem of the primitive, which he even discussed at some length in his letters, though without following out this line of thought to the end.

[196] It is worth noting that in the further course of his argument the question of the play instinct retires into the background in favour of the aesthetic mood, which seems to have acquired an almost mystical value. This, I believe, is no accident, but has a quite definite cause. Often it is the best and most profound ideas in a man’s work which most obstinately resist a clear formulation, even though they are hinted at in various places and should therefore really be ripe enough for a lucid synthesis to be possible. It seems to me that we are faced with some such difficulty here. To the concept of an aesthetic mood as a mediating creative state Schiller himself brings thoughts which at once reveal its depth and seriousness. And yet, quite as clearly, he picks on the play instinct as the long-sought mediating activity. Now it cannot be denied that these two concepts are in some sort opposed, since play and seriousness are scarcely compatible. Seriousness comes from a profound inner necessity, but play is its outward expression, the face it turns to consciousness. It is not, of course, a matter of *wanting* to play, but of *having* to play; a playful manifestation of fantasy from inner necessity, without the compulsion of circumstance, without even the compulsion of the will.[95] *It is serious play*. And yet it is certainly play in its outward aspect, as seen from the standpoint of consciousness and collective opinion. That is the ambiguous quality which clings to everything creative.

[197] If play expires in itself without creating anything durable and vital, it is only play, but in the other case it is called creative work. Out of a playful movement of elements whose interrelations are not immediately apparent, patterns arise which an observant and critical intellect can only

evaluate afterwards. The creation of something new is not accomplished by the intellect, but by the play instinct acting from inner necessity. The creative mind plays with the object it loves.

[198] Hence it is easy to regard every creative activity whose potentialities remain hidden from the multitude as play. There are, indeed, very few artists who have not been accused of playing. With the man of genius, which Schiller certainly was, one is inclined to let this label stick. But he himself wanted to go beyond the exceptional man and his nature, and to reach the common man, that he too might share the help and deliverance which the creative artist, acting from inner necessity, cannot escape anyway. But the possibility of extending such a viewpoint to the education of the common man is not guaranteed in advance, or at least it would seem not to be.

[199] To resolve this question we must appeal, as in all such cases, to the testimony of the history of human thought. But first we must once more be clear in our own minds from what angle we are approaching the question. We have seen how Schiller demands a detachment from the opposites even to the point of a complete emptying of consciousness, in which neither sensations, nor feelings, nor thoughts, nor intentions play any sort of role. The condition striven for is one of undifferentiated consciousness, a consciousness in which, by the depotentiation of energic values, all contents have lost their distinctiveness. But real consciousness is possible only when values facilitate a discrimination of contents. Where discrimination is lacking, no real consciousness can exist. Accordingly such a state might be called “unconscious,” although the possibility of consciousness is present all the time. It is a question of an *abaissement du niveau mental* (Janet), which bears some resemblance to the yogic and trance states of hysterical *engourdissement*.

[200] So far as I know, Schiller never expressed any views concerning the actual technique—if one may use such a word—for inducing the “aesthetic mood.” The example of the Juno Ludovici that he mentions incidentally in his letters[96] testifies to a state of “aesthetic devotion” consisting in a complete surrender to, and empathy for, the object of contemplation. But such a state of devotion lacks the essential

characteristics of being without any content or determinant. Nevertheless, in conjunction with other passages, this example shows that the idea of devotion or devoutness was constantly present in Schiller's mind.[97] This brings us back to the religious problem, but at the same time it gives us a glimpse of the actual possibility of extending Schiller's viewpoint to the common man. *For religious devotion is a collective phenomenon that does not depend on individual endowment*.

[201] There are, however, yet other possibilities. We have seen that the empty state of consciousness, the unconscious condition, is brought about by the libido sinking into the unconscious. In the unconscious feeling-toned contents lie dormant memory-complexes from the individual's past, above all the parental complex, which is identical with the childhood complex in general. Devotion, or the sinking of libido into the unconscious, reactivates the childhood complex so that the childhood reminiscences, and especially the relations with the parents, become suffused with life. The fantasies produced by this reactivation give rise to the birth of father and mother divinities, as well as awakening the childhood relations with God and the corresponding childlike feelings. Characteristically, it is *symbols* of the parents that become activated and by no means always the images of the real parents, a fact which Freud explains as repression of the parental imago through resistance to incest. I agree with this interpretation, yet I believe it is not exhaustive, since it overlooks the extraordinary significance of this *symbolic substitution*. Symbolization in the shape of the God-image is an immense step beyond the concretism, the sensuousness, of memory, since, through acceptance of the "symbol" as a real symbol, the regression to the parents is instantly transformed into a progression, whereas it would remain a regression if the symbol were to be interpreted merely as a *sign* for the actual parents and thus robbed of its independent character.[98]

[202] Humanity came to its gods by accepting the reality of the symbol, that is, it came to the *reality of thought*, which has made man lord of the earth. Devotion, as Schiller correctly conceived it, is a regressive movement of libido towards the primordial, a diving down into the source of the first beginnings. Out of this there rises, as an image of the incipient progressive movement, the symbol, which is a condensation of

all the operative unconscious factors—“living form,” as Schiller says, and a God-image, as history proves. It is therefore no accident that he should seize on a divine image, the Juno Ludovici, as a paradigm. Goethe makes the divine images of Paris and Helen float up from the tripod of the Mothers[99]—on the one hand the rejuvenated pair, on the other the symbol of a process of inner union, which is precisely what Faust passionately craves for himself as the supreme inner atonement. This is clearly shown in the ensuing scene as also from the further course of the drama. As we can see from the example of Faust, the vision of the symbol is a pointer to the onward course of life, beckoning the libido towards a still distant goal—but a goal that henceforth will burn unquenchably within him, so that his life, kindled as by a flame, moves steadily towards the far-off beacon. This is the specific life-promoting significance of the symbol, and such, too, is the meaning and value of religious symbols. I am speaking, of course, not of symbols that are dead and stiffened by dogma, but of living symbols that rise up from the creative unconscious of the living man.

[203] The immense significance of such symbols can be denied only by those for whom the history of the world begins with the present day. It ought to be superfluous to speak of the significance of symbols, but unfortunately this is not so, for the spirit of our time thinks itself superior to its own psychology. The moralistic and hygienic temper of our day must always know whether such and such a thing is harmful or useful, right or wrong. A real psychology cannot concern itself with such queries; to recognize how things are in themselves is enough.

[204] The symbol-formation resulting from “devotion” is another of those collective religious phenomena that do not depend on individual endowment. So in this respect too we may assume the possibility of extending Schiller’s viewpoint to the common man. I think that at least its theoretical possibility for human psychology in general has now been sufficiently demonstrated. For the sake of completeness and clarity I should add that the question of the relation of the symbol to consciousness and the conscious conduct of life has long occupied my mind. I have come to the conclusion that, in view of its great significance as an exponent of the unconscious, too light a value should not be set on

the symbol. We know from daily experience in the treatment of neurotic patients what an eminently practical importance the interventions from the unconscious possess. The greater the dissociation, i.e., the more the conscious attitude becomes alienated from the individual and collective contents of the unconscious, the more harmfully the unconscious inhibits or intensifies the conscious contents. For quite practical reasons, therefore, the symbol must be credited with a not inconsiderable value. But if we grant it a value, whether great or small, the symbol acquires a conscious motive force—that is, it is *perceived*, and its unconscious libido-charge is thereby given an opportunity to make itself felt in the conscious conduct of life. Thus, in my view, a practical advantage of no small consequence is gained, namely, the *collaboration of the unconscious*, its participation in the conscious psychic performance, and hence the elimination of disturbing influences from the unconscious.

[205] This common function, the relation to the symbol, I have termed the *transcendent function*. I cannot at this point submit this question to a thorough investigation, as it would be absolutely necessary to bring together all the material that comes up as a result of the activity of the unconscious. The fantasies hitherto described in the specialist literature give no conception of the symbolic creations we are concerned with. There are, however, not a few examples of such fantasies in *belles-lettres*; but these, of course, are not observed and reported in their “pure” state—they have undergone an intensive “aesthetic” elaboration. From all these examples I would single out two works of Meyrink for special attention: *The Golem* and *Das grüne Gesicht*. I must reserve the treatment of this aspect of the problem for a later investigation.

[206] Although these observations concerning the mediatory state were prompted by Schiller, we have already gone far beyond his conceptions. In spite of his having discerned the opposites in human nature with such keen insight, he remained stuck at an early stage in his attempt at a solution. For this failure, it seems to me, the term “aesthetic mood” is not without blame. Schiller makes the “aesthetic mood” practically identical with “beauty,” which of its own accord precipitates our sentiments into this mood.[100] Not only does he blend cause with effect, he also, in the teeth of his own definition, gives the state of “indeterminacy” an

unequivocally determined character by equating it with beauty. From the very outset, therefore, the edge is taken off the mediating function, since beauty immediately prevails over ugliness, whereas it is equally a question of ugliness. We have seen that Schiller defines a thing's "aesthetic character" as its relation to "the totality of our various faculties."[101] Consequently "beautiful" cannot coincide with "aesthetic," since our various faculties also vary aesthetically: some are beautiful, some ugly, and only an incorrigible idealist and optimist could conceive the "totality" of human nature as simply beautiful. To be quite accurate, human nature is simply what it is; it has its dark and its light sides. The sum of all colours is grey—light on a dark background or dark on light.

[207] This conceptual flaw also accounts for the fact that it remains far from clear *how* this mediatory condition is to be brought about. There are numerous passages which state unequivocally that it is called into being by "the enjoyment of pure beauty." Thus Schiller says:

> Whatever flatters our senses in immediate sensation opens our soft and sensitive nature to every impression, but it also makes us in the same measure less capable of exertion. What braces our intellectual powers and invites us to abstract concepts strengthens our mind for every kind of resistance, but also hardens it proportionately, and deprives us of sensibility just as much as it helps us towards a greater spontaneity. For that very reason the one no less than the other must in the end necessarily lead to exhaustion.… On the other hand, when we have abandoned ourselves to the enjoyment of pure beauty, we are at such a moment masters in equal degree of our passive and active powers, and shall turn with equal facility to seriousness or to play, to rest or to movement, to compliance or to resistance, to abstract thought or to contemplation.[102]

[208] This statement is in direct contradiction to the earlier definitions of the "aesthetic condition," where man was to be "empty," a "cipher," "undetermined," whereas here he is in the highest degree determined by beauty ("abandoned" to it). But it is not worth while pursuing this question further with Schiller. Here he comes up against a barrier common both to himself and his time which it was impossible for him to

overstep, for everywhere he encountered the invisible “Ugliest Man,” whose discovery was reserved for our age by Nietzsche.

[209] Schiller was intent on making the sensuous man into a rational being “by first making him aesthetic.”[103] He himself says that “we must first alter his nature,”[104] “we must subject man to form even in his purely physical life,”[105] “he must carry out his physical determination … according to the laws of Beauty,”[106] “on the neutral plane of physical life man must start his moral life,”[107] “though still within his sensuous limits he must begin his rational freedom,”[108] “he must already be imposing the law of his will upon his inclinations,”[109] “he must learn to desire more *nobly*.”[110]

[210] That “must” of which our author speaks is the familiar “ought” which is always invoked when one can see no other way. Here again we come up against the inevitable barriers. It would be unfair to expect one individual mind, were it never so great, to master this gigantic problem which times and nations alone can solve, and even then by no conscious purpose, but only as fate would have it.

[211] The greatness of Schiller’s thought lies in his psychological observation and in his intuitive grasp of the things observed. There is yet another of his trains of thought I would like to mention, as it deserves special emphasis. We have seen that the mediatory condition is characterized as producing “something positive,” namely the symbol. The symbol unites antithetical elements within its nature; hence it also unites the antithesis between real and unreal, because on the one hand it is a psychic reality (on account of its efficacy), while on the other it corresponds to no physical reality. It is *reality* and *appearance* at once. Schiller clearly emphasizes this in order to append an apologia for appearance, which is in every respect significant:

> Extreme stupidity and extreme intelligence have a certain affinity with each other, in that both seek only the *real* and are wholly insensible to mere *appearance*. Only through the immediate presence of an object in the senses is stupidity shaken from its repose, and intelligence is granted its repose only through relating its concepts to the data of experience; in a

> word, stupidity cannot rise above reality and intelligence cannot remain below truth. In so far, then, as the need for reality and attachment to the real are merely the results of deficiency, it follows that indifference to reality and interest in appearance are a true enlargement of humanity and a decisive step towards culture.[111]

[212] When speaking earlier of an assignment of value to the symbol, I showed the practical advantages of an appreciation of the unconscious. We exclude an unconscious disturbance of the conscious functions when we take the unconscious into our calculations from the start by paying attention to the symbol. It is well known that the unconscious, when not realized, is ever at work casting a false glamour over everything, a false appearance: *it appears to us always on objects*, because everything unconscious is projected. Hence, when we can apprehend the unconscious as such, we strip away the false appearance from objects, and this can only promote truth. Schiller says:

> Man exercises this human right to sovereignty in the *art of appearance*, and the more strictly he here distinguishes between *mine* and *thine*, the more carefully he separates form from being, and the more independence he learns to give to this form, the more he will not merely extend the realm of Beauty but even secure the boundaries of Truth; for he cannot cleanse appearance from reality without at the same time liberating reality from appearance.[112]
>
> To strive after absolute appearance demands greater capacity for abstraction, more freedom of heart, more vigour of will than man needs if he confines himself to reality, and he must already have put this behind him if he wishes to arrive at appearance.[113]

2. A DISCUSSION ON NAÏVE AND SENTIMENTAL POETRY

[213] For a long time it seemed to me as though Schiller's division of poets into *naïve* and *sentimental*[114], were a classification that accorded with the type psychology here expounded. After mature reflection, however, I have come to the conclusion that this is not so. Schiller's definition is very simple: "The naïve poet *is* Nature, the sentimental poet *seeks* her."

This simple formula is beguiling, since it postulates two different kinds of relation to the object. It is therefore tempting to say: He who seeks or desires Nature as an object does not possess her, and such a man would be an introvert; while conversely, he who already is Nature, and therefore stands in the most intimate relation with the object, would be an extravert. But a rather forced interpretation such as this would have little in common with Schiller's point of view. His division into naïve and sentimental is one which, in contrast to our type division, is not in the least concerned with the individual mentality of the poet, but rather with the character of his creative activity, or of its product. The same poet can be sentimental in one poem, naïve in another. Homer is certainly naïve throughout, but how many of the moderns are not, for the most part, sentimental? Evidently Schiller felt this difficulty, and therefore asserted that the poet was conditioned by his time, not as an individual but as a poet. He says:

> All real poets will belong either to the naïve or sentimental, depending on whether the conditions of the age in which they flourish, or accidental circumstances, exert an influence on their general make-up and on their passing emotional mood.[115]

[214] Consequently it is not a question of fundamental types for Schiller, but of certain characteristics or qualities of the individual product. Hence it is at once obvious that an introverted poet can, on occasion, be just as naïve as he is sentimental. It therefore follows that to identify naïve and sentimental respectively with extravert and introvert would be quite beside the point so far as the question of *types* is concerned. Not so, however, so far as it is a question of *typical mechanisms*.

a. The Naïve Attitude

[215] I will first present the definitions which Schiller gives of this attitude. As has already been said, the naïve poet is "Nature." He "simply follows Nature and sensation and confines himself to the mere copying of reality."[116] "With naïve poetry we delight in the living presence of objects in our imagination."[117] "Naïve poetry is a boon of Nature. It is a lucky throw, needing no improvement when it succeeds, but fit for

nothing when it fails."[118] "The naïve genius has to do everything through his nature; he can do little through his freedom, and he will accomplish his idea only when Nature works in him from inner necessity."[119] Naïve poetry is "the child of life and unto life it returns."[120] The naïve genius is wholly dependent on "experience," on the world, with which he is in "direct touch." He "needs succour from without."[121] For the naïve poet the "common nature" of his surroundings can "become dangerous," because "sensibility is always more or less dependent on the external impression, and only a constant activity of the productive faculty, which is not to be expected of human nature, would be able to prevent mere matter from exercising at times a blind power over his sensibility. But whenever this happens, the poetic feeling will be commonplace."[122] "The naïve genius allows Nature unlimited sway in him."[123]

[216] From these definitions the dependence of the naïve poet on the object is especially clear. His relation to the object has a compelling character, because he introjects the object—that is, he unconsciously identifies with it or has, as it were, an *a priori* identity with it. Lévy-Bruhl describes this relation to the object as *participation mystique*. This identity always derives from an analogy between the object and an unconscious content. One could also say that the identity comes about through the projection of an unconscious association by analogy with the object. An identity of this kind has a compelling character too, because it expresses a certain quantity of libido which, like all libido operating from the unconscious, is not at the disposal of consciousness and thus exercises a compulsion on its contents. The attitude of the naïve poet is, therefore, in a high degree conditioned by the object; the object operates independently in him, as it were; it fulfils itself in him because he himself is identical with it. He lends his expressive function to the object and represents it in a certain way, not in the least actively or intentionally, but because it represents itself that way in him. He is himself Nature: Nature creates in him the product. He "allows Nature unlimited sway in him." Supremacy is given to the object. To this extent the naïve attitude is extraverted.

b. The Sentimental Attitude

[217] The sentimental poet *seeks* Nature. He “reflects on the impression objects make on him, and on that reflection alone depends the emotion with which he is exalted, and which likewise exalts us. Here the object is related to an idea, and on this relation alone depends his poetic power.”[124] He “is always involved with two opposing ideas and sensations, with reality as finite, and with the idea as infinite: the mixed feeling he arouses always bears witness to this dual origin.”[125] “The sentimental mood is the result of an effort to reproduce the naïve sensation, the content of it, even under conditions of reflection.”[126] “Sentimental poetry is the product of abstraction.”[127] “As a result of his effort to remove every limitation from human nature, the sentimental genius is exposed to the danger of abolishing human nature altogether; not merely mounting, as he must and should, above every fixed and limited reality to absolute possibility: which is to *idealize*, but even transcending possibility itself: which is to *fantasize*…. The sentimental genius abandons reality in order to soar into the world of ideas and rule his material with absolute freedom.”[128]

[218] It is easy to see that the sentimental poet, contrasted with the naïve, is characterized by a reflective and abstract attitude to the object. *He reflects on the object by abstracting himself from it*. He is, as it were, separated from the object *a priori* as soon as his work begins; it is not the object that operates in him, he himself is the operator. He does not, however, work in towards himself, but out beyond the object. He is distinct from the object, not identical with it; he seeks to establish *his* relation to it, to “rule his material.” From his distinction from the object comes that sense of duality which Schiller refers to; for the sentimental poet draws his creativity from two sources: from the object and/or his perception of it, and from himself. For him the external impression of the object is not something absolute, but material which he handles as directed by his own contents. He thus stands above the object and yet has a relation to it—not a relation of mere impressionability or receptivity, but one in which by his own free choice he bestows value or quality on the object. His is therefore an introverted attitude.

[219] By characterizing these two attitudes as extraverted and introverted we have not, however, exhausted Schiller's conception. Our two mechanisms are merely basic phenomena of a rather general nature, which only vaguely indicate what is specific about those attitudes. To understand the naïve and sentimental types we must enlist the help of two further functions, *sensation* and *intuition*. I shall discuss these in greater detail at a later stage of our investigation. I only wish to say at this point that the naïve is characterized by a preponderance of sensation, and the sentimental by a preponderance of intuition. Sensation creates ties to the object, it even pulls the subject into the object; hence the "danger" for the naïve type consists in his vanishing in it altogether. Intuition, being a perception of one's own unconscious processes, withdraws one from the object; it mounts above it, ever seeking to rule its material, to shape it, even violently, in accordance with one's own subjective viewpoint, though without being aware of doing so. The danger for the sentimental type, therefore, is a complete severance from reality and a vanishing in the fluid fantasy world of the unconscious.

c. The Idealist and the Realist

[220] In the same essay Schiller's reflections lead him to postulate two fundamental psychological types. He says:

> This brings me to a very remarkable psychological antagonism among men in an age of progressive culture, an antagonism which, because it is radical and grounded in the innate emotional constitution, is the cause of a sharper division among men than the random conflict of interests could ever bring about; which robs the poet and artist of all hope of making a universal appeal and giving pleasure to every one—although this is his task; which makes it impossible for the philosopher, in spite of every effort, to be universally convincing—although this is implied in the very idea of philosophy; and which, finally, will never permit a man in practical life to see his mode of behaviour universally applauded: in short, an antagonism which is to blame for the fact that no work of the mind and no deed of the heart can have a decisive success with one class of men without incurring the condemnation of the other. This antagonism is, without doubt, as old as the beginning of culture, and to the end it can

> hardly be otherwise, save in rare individual cases, such as have always existed and, it is to be hoped, will always exist. But although it lies in the very nature of its operations that it frustrates every attempt at a settlement, because no party can be brought to admit either a deficiency on his own side or a reality on the other's, yet there is always profit enough in following up such an important antagonism to its final source, thus at least reducing the actual point at issue to a simpler formulation.[129]

[221] It follows conclusively from this passage that by observing the antagonistic mechanisms Schiller arrived at a conception of two psychological types which claim the same significance in his scheme of things as I ascribe to the introverted and extraverted in mine. With regard to the reciprocal relation of the two types postulated by me I can endorse almost word for word what Schiller says of his. In agreement with what I said earlier, Schiller proceeds from the mechanism to the type, by "isolating from the naïve and the sentimental character alike the poetic quality common to both."[130] If we perform this operation too, subtracting the creative genius from both, then what is left to the naïve is his attachment to the object and its autonomy in the subject, and to the sentimental his superiority over the object, which expresses itself in his more or less arbitrary judgment or treatment of it. Schiller continues:

> After this nothing remains of the [naïve], on the theoretical side, but a sober spirit of observation and a fixed dependence on the uniform testimony of the senses; and, on the practical, a resigned submission to the exigencies of Nature…. Of the sentimental character nothing remains, on the theoretical side, but a restless spirit of speculation that insists on the absolute in every act of cognition, and, on the practical, a moral rigorism that insists on the absolute in every act of the will. Whoever counts himself among the former can be called a *realist*, and, among the latter, an *idealist*.[131]

[222] Schiller's further observations on his two types relate almost exclusively to the familiar phenomena of the realist and idealist attitudes and are therefore without interest for our investigation.

III

THE APOLLINIAN AND THE DIONYSIAN

[223] The problem discerned and partially worked out by Schiller was taken up again in a new and original way by Nietzsche in his book *The Birth of Tragedy* (1871). This early work is more nearly related to Schopenhauer and Goethe than to Schiller. But it at least appears to share Schiller's aestheticism and Hellenism, while having pessimism and the motif of deliverance in common with Schopenhauer and unlimited points of contact with Goethe's *Faust*. Among these connections, those with Schiller are naturally the most significant for our purpose. Yet we cannot pass over Schopenhauer without paying tribute to the way in which he gave reality to those dawning rays of Oriental wisdom which appear in Schiller only as insubstantial wraiths. If we disregard his pessimism which springs from the contrast with the Christian's enjoyment of faith and certainty of redemption, Schopenhauer's doctrine of deliverance is seen to be essentially Buddhist. He was captivated by the East. This was undoubtedly a reaction against our Occidental atmosphere. It is, as we know, a reaction that still persists today in various movements more or less completely oriented towards India. For Nietzsche this pull towards the East stopped in Greece. Also, he felt Greece to be the midpoint between East and West. To this extent he maintains contact with Schiller—but how utterly different is his conception of the Greek character! He sees the dark foil upon which the serene and golden world of Olympus is painted:

> In order to make life possible, the Greeks had to create those gods from sheer necessity. … They knew and felt the terror and frightfulness of existence; to be able to live at all, the Greeks had to interpose the shining, dream-born Olympian world between themselves and that dread. That tremendous mistrust of the titanic powers of Nature, Moira pitilessly enthroned above all knowledge, the vulture of Prometheus the great

> friend of man, the awful fate of the wise Oedipus, the family curse of the Atrides that drove Orestes to matricide … all this dread was ever being conquered anew by the Greeks with the help of that visionary, intermediate world of the Olympians, or was at least veiled and withdrawn from sight.[1]

> That Greek "serenity," that smiling heaven of Hellas seen as a shimmering illusion hiding a sombre background—this insight was reserved for the moderns, and is a weighty argument against moral aestheticism.

[224] Here Nietzsche takes up a standpoint differing significantly from Schiller's. What one might have guessed with Schiller, that his letters on aesthetic education were also an attempt to deal with his own problems, becomes a complete certainty in this work of Nietzsche's: it is a "profoundly personal" book. Whereas Schiller begins to paint light and shade almost timorously and in pallid hues, apprehending the conflict in his own psyche as "naïve" versus "sentimental," and excluding everything that belongs to the background and abysmal depths of human nature, Nietzsche has a profounder grasp and spans an opposition which, in one aspect, is no whit inferior to the dazzling beauty of Schiller's vision, while its other aspect reveals infinitely darker tones that certainly enhance the effect of the light but allow still blacker depths to be divined.

[225] Nietzsche calls his fundamental pair of opposites the *Apollinian* and the *Dionysian*. We must first try to picture to ourselves the nature of this pair. For this purpose I shall select a number of quotations which will enable the reader, even though unacquainted with Nietzsche's work, to form his own judgment and at the same time to criticize mine.

> We shall have gained much for the science of aesthetics when once we have perceived not only by logical inference, but by the immediate certainty of intuition, that the continuous development of art is bound up with the duality of the Apollinian and the Dionysian, in much the same way as generation depends on the duality of the sexes, involving perpetual conflicts with only periodic reconciliations.[2]

From the two deities of the arts, Apollo and Dionysus, we derive our knowledge that a tremendous opposition existed in the Greek world, both as to their origin and their aim, between the Apollinian art of the shaper and the non-figurative Dionysian art of music. These two very different impulses run side by side, for the most part openly at variance, each continually rousing the other to new and mightier births, in order to perpetuate in them the warring antagonism that is only seemingly bridged by the common term “Art”; until finally, by a metaphysical miracle of the Hellenic “will,” they appear paired one with the other, and from this mating the equally Apollinian and Dionysian creation of Attic tragedy is at last brought to birth.[3]

[226] In order to characterize these two “impulses” more closely, Nietzsche compares the peculiar psychological states they give rise to with those of *dreaming* and *intoxication*. The Apollinian impulse produces the state comparable to dreaming, the Dionysian the state comparable to intoxication. By “dreaming” Nietzsche means, as he himself says, essentially an “inward vision,” the “lovely semblance of dream-worlds.”[4] Apollo “rules over the beautiful illusion of the inner world of fantasy,” he is “the god of all shape-shifting powers.”[5] He signifies measure, number, limitation, and subjugation of everything wild and untamed. “One might even describe Apollo himself as the glorious divine image of the *principium individuationis.”*[6]

[227] The Dionysian impulse, on the other hand, means the liberation of unbounded instinct, the breaking loose of the unbridled dynamism of animal and divine nature; hence in the Dionysian rout man appears as a satyr, god above and goat below.[7] The Dionysian is the horror of the annihilation of the *principium individuationis* and at the same time “rapturous delight” in its destruction. It is therefore comparable to intoxication, which dissolves the individual into his collective instincts and components—an explosion of the isolated ego through the world. Hence, in the Dionysian orgy, man finds man: “alienated Nature, hostile or enslaved, celebrates once more her feast of reconciliation with her prodigal son—Man.”[8] Each feels himself “not only united, reconciled, merged with his neighbour, but one with him.”[9] His individuality is

entirely obliterated. “Man is no longer the artist, he has become the work of art.”[10] “All the artistry of Nature is revealed in the ecstasies of intoxication.”[11] Which means that the creative dynamism, libido in instinctive form, takes possession of the individual as though he were an object and uses him as a tool or as an expression of itself. If it is permissible to conceive the natural creature as a “work of art,” then of course man in the Dionysian state has become a natural work of art too; but in so far as the natural creature is decidedly not a work of art in the ordinary sense of the word, he is nothing but sheer Nature, unbridled, a raging torrent, not even an. animal that is restricted to itself and the laws of its being. I must emphasize this point for the sake of clarity in the ensuing discussion, since for some reason Nietzsche has omitted to make it clear, and has consequently shed a deceptive aesthetic veil over the problem, which at times he himself has involuntarily to draw aside. Thus, in connection with the Dionysian orgies, he says:

> Practically everywhere the central point of these festivals lay in exuberant sexual licence, which swamped all family life and its venerable traditions; the most savage bestialities of nature were unleashed, including that atrocious amalgam of lust and cruelty which has always seemed to me the true witch’s broth.[12]

[228] Nietzsche considers the reconciliation of the Delphic Apollo with Dionysus a symbol of the reconciliation of these opposites in the breast of the civilized Greek. But here he forgets his own compensatory formula, according to which the gods of Olympus owe their splendour to the darkness of the Greek psyche. By this token, the reconciliation of Apollo and Dionysus would be a “beautiful illusion,” a desideratum evoked by the need of the civilized Greek in his struggle with his own barbarian side, the very element that broke out unchecked in the Dionysian rout.

[229] Between the religion of a people and its actual mode of life there is always a compensatory relation, otherwise religion would have no practical significance at all. Beginning with the highly moral religion of the Persians and the notorious dubiousness, even in antiquity, of Persian

habits of life, right down to our own "Christian" era, when the religion of love assisted at the greatest blood-bath in the world's history—wherever we turn this rule holds true. We may therefore infer from the symbol of the Delphic reconciliation an especially violent split in the Greek character. This would also explain the longing for deliverance which gave the mysteries their immense significance for the social life of Greece, and which was completely overlooked by the early admirers of the Greek world. They were content with naïvely attributing to the Greeks everything they themselves lacked.

[230] Thus in the Dionysian state the Greek was anything but a "work of art"; on the contrary, he was gripped by his own barbarian nature, robbed of his individuality, dissolved into his collective components, made one with the collective unconscious (through the surrender of his individual aims), and one with "the genius of the race, even with Nature herself."[13] To the Apollinian side which had already achieved a certain amount of domestication, this intoxicated state that made man forget both himself and his humanity and turned him into a mere creature of instinct must have been altogether despicable, and for this reason a violent conflict between the two impulses was bound to break out. Supposing the instincts of civilized man were let loose! The culture-enthusiasts imagine that only sheer beauty would stream forth. This error is due to a profound lack of psychological knowledge. The dammed-up instinctual forces in civilized man are immensely destructive and far more dangerous than the instincts of the primitive, who in a modest degree is constantly living out his negative instinct. Consequently no war of the historical past can rival in grandiose horror the wars of civilized nations. It will have been the same with the Greeks. It was just their living sense of horror that gradually brought about a reconciliation of the Apollinian with the Dionysian—"through a metaphysical miracle," as Nietzsche says. This statement, as well as the other where he says that the antagonism between them is "only seemingly bridged by the common term 'Art,'" must constantly be borne in mind, because Nietzsche, like Schiller, had a pronounced tendency to credit art with a mediating and redeeming role. The problem then remains stuck in aesthetics—the ugly is also "beautiful," even beastliness and evil shine forth enticingly in the false

glamour of aesthetic beauty. The artistic nature in both Schiller and Nietzsche claims a redemptive significance for itself and its specific capacity for creation and expression.

[231] Because of this, Nietzsche quite forgets that in the struggle between Apollo and Dionysus and in their ultimate reconciliation the problem for the Greeks was never an aesthetic one, but was essentially religious. The Dionysian satyr festival, to judge by all the analogies, was a kind of totem feast involving a regressive identification with the mythical ancestors or directly with the totem animal. The cult of Dionysus had in many places a mystical and speculative streak, and in any case exercised a very strong religious influence. The fact that Greek tragedy arose out of an originally religious ceremony is at least as significant as the connection of our modern theatre with the medieval Passion play, which was exclusively religious in origin; we are not permitted, therefore, to judge the problem under its purely aesthetic aspect. Aestheticism is a modern bias that shows the psychological mysteries of the Dionysus cult in a light in which they were assuredly never seen or experienced by the ancients. With Nietzsche as with Schiller the religious viewpoint is entirely overlooked and is replaced by the aesthetic. These things obviously have their aesthetic side and it should not be neglected.[14] Nevertheless, if medieval Christianity is understood only aesthetically its true character is falsified and trivialized, just as much as if it were viewed exclusively from the historical standpoint. A true understanding is possible only on a common ground—no one would wish to maintain that the nature of a railway bridge is adequately understood from a purely aesthetic angle. In adopting the view that the antagonism between Apollo and Dionysus is purely a question of conflicting artistic impulses, the problem is shifted to the aesthetic sphere in a way that is both historically and materially unjustified, and is subjected to a partial approach which can never do justice to its real content.

[232] This shifting of the problem must doubtless have its psychological cause and purpose. The advantages of such a procedure are not far to seek: the aesthetic approach immediately converts the problem into a picture which the spectator can contemplate at his ease, admiring both its beauty and its ugliness, merely re-experiencing its passions at a safe

distance, with no danger of becoming involved in them. The aesthetic attitude guards against any real participation, prevents one from being personally implicated, which is what a religious understanding of the problem would mean. The same advantage is ensured by the historical approach—an approach which Nietzsche himself criticized in a series of very valuable essays.[15] The possibility of taking such a tremendous problem—"a problem with horns," as he calls it—merely aesthetically is of course very tempting, for its religious understanding, which in this case is the only adequate one, presupposes some actual experience of it which modern man can rarely boast of. Dionysus, however, seems to have taken his revenge on Nietzsche, as we can see from "An Attempt at Self-Criticism," which dates from 1886 and was added as a preface to the reissue that year of *The Birth of Tragedy:*

> What is a Dionysian? In this book may be found an answer: a "knowing one" speaks here, the votary and disciple of his god.[16]

But that was not the Nietzsche who wrote *The Birth of Tragedy*; at that time he was a votary of aestheticism, and he became a Dionysian only at the time of writing *Zarathustra* and that memorable passage with which he concludes "An Attempt at Self-Criticism":

> Lift up your hearts, my brethren, high, higher! And forget not the legs! Lift up your legs also, you good dancers, and better still if also you stand on your heads![17]

[233] Nietzsche's profound grasp of the problem in spite of his aesthetic defences was already so close to the real thing that his later Dionysian experience seems an almost inevitable consequence. His attack on Socrates in *The Birth of Tragedy* is aimed at the rationalist, who proves himself impervious to Dionysian orgiastics. This outburst is in line with the analogous error into which the aesthete always falls: he holds himself aloof from the problem. But even at that time, in spite of his aestheticism, Nietzsche had an inkling of the real solution when he said that the antagonism was not bridged by art but by "a metaphysical miracle of the Hellenic 'will.'" He puts "will" in inverted commas, which, considering

how strongly he was at that time influenced by Schopenhauer, we might well interpret as a reference to concept of the metaphysical Will. “Metaphysical” has for us the psychological connotation “unconscious.” If, then, we replace “metaphysical” in Nietzsche’s formula by “unconscious,” the desired key to the problem would be an unconscious “miracle.” A “miracle” is irrational, hence the act is an unconscious irrational happening, shaping itself without the assistance of reason and conscious purpose. It happens of itself, it just grows, like a phenomenon of creative Nature, and not from any clever trick of human wit; it is the fruit of yearning expectation, of faith and hope.

[234] At this point I must leave the problem for the time being, as we shall have occasion to discuss it more fully later. Let us turn instead to a closer examination of the Apollinian and Dionysian for their psychological qualities. First we will consider the Dionysian. From Nietzsche’s description it is immediately apparent that an unfolding is meant, a streaming outwards and upwards, a diastole, as Goethe called it; a motion embracing the whole world, as Schiller also describes it in his “Ode to Joy”:

> Approach, ye millions, and embrace!
> To the whole world my kiss shall swell!
> …
> All the world may draughts of joy
> From the breasts of Nature take;
> Good and ill alike employ
> Pains to trace joy’s rosy wake.
> Kisses gave she and the grape,
> And the faithful, lifelong friend;
> Even the worm its joy can shape,
> Heavenwards the cherubs wend.[18]

This is Dionysian expansion. It is a flood of overpowering universal feeling which bursts forth irresistibly, intoxicating the senses like the strongest wine. It is intoxication in the highest sense of the word.

[235] In this state the psychological function of sensation, whether it be sensory or affective, participates to the highest degree. It is an

extraversion of all those feelings which are inextricably bound up with sensation, for which reason we call it feeling-sensation. What breaks out in this state has more the character of pure affect, something instinctive and blindly compelling, that finds specific expression in an affection of the bodily sphere.

[236] In contrast to this, the Apollinian is a perception of inner images of beauty, of measure, of controlled and proportioned feelings. The comparison with dreaming clearly indicates the character of the Apollinian state: it is a state of introspection, of contemplation turned inwards to the dream world of eternal ideas, and hence a state of introversion.

[237] So far the analogy with our mechanisms is unarguable. But if we were to be content with the analogy, it would be a limitation of outlook that does violence to Nietzsche's concepts by putting them on a Procrustean bed.

[238] We shall see in the course of our investigation that the state of introversion, if habitual, always entails a differentiation of the relation to the world of ideas, while habitual extraversion involves a similar differentiation of the relation to the object. We see nothing of this differentiation in Nietzsche's two concepts. Dionysian feeling has the thoroughly archaic character of affective sensation. It is therefore not pure feeling, abstracted and differentiated from instinct and becoming a mobile element, which, in the extraverted type, is obedient to the dictates of reason and lends itself to them as their willing instrument. Similarly, Nietzsche's conception of introversion is not that pure, differentiated relation to ideas which has freed itself from the perception of inner images whether sensuously determined or creatively produced, and has become a contemplation of pure and abstract forms. The Apollinian mode is an inner perception, and intuition of the world of ideas. The parallel with dreaming clearly shows that Nietzsche thinks of this state as on the one hand merely perceptive and on the other merely eidetic.

[239] These characteristics are individual peculiarities which we must not import into our conception of the introverted or extraverted attitude. In a man whose attitude is predominantly reflective, the Apollinian perception

of inner images produces an elaboration of the perceived material in accordance with the nature of intellectual thinking. In other words, it produces ideas. In a man whose attitude is predominated by feeling a similar process results: a “feeling through” of the images and the production of a feeling-toned idea, which may coincide in essentials with an idea produced by thinking. Ideas, therefore, are just as much feelings as thoughts, examples being the idea of the fatherland, freedom, God, immortality, etc. In both elaborations the principle is a rational and logical one. But there is also a quite different standpoint, from which the rational and logical elaboration is not valid. This is the *aesthetic* standpoint. In introversion it dwells on the *perception* of ideas, it develops intuition, the inner vision; in extraversion it dwells on sensation and develops the senses, instinct, affectivity. From this standpoint, thinking is not the principle of an inner perception of ideas, and feeling just as little; instead, thinking and feeling are mere derivatives of inner perception and outer sensation.

[240] Nietzsche’s concepts thus lead us to the principles of a third and a fourth psychological type, which one might call “aesthetic” types as opposed to the rational types (thinking and feeling). These are the intuitive and sensation types. Both of them have the mechanisms of introversion and extraversion in common with the rational types, but they do not—like the thinking type—differentiate the perception and contemplation of inner images into thought, nor—like the feeling type—differentiate the affective experience of instinct and sensation into feeling. On the contrary, the intuitive raises unconscious perception to the level of a differentiated function, by which he also achieves his adaptation to the world. He adapts by means of unconscious directives, which he receives through an especially sensitive and sharpened perception and interpretation of dimly conscious stimuli. To describe such a function is naturally very difficult on account of its irrational and quasi-unconscious character. In a sense one might compare it to the daemon of Socrates—with the qualification, however, that the strongly rationalistic attitude of Socrates repressed the intuitive function as far as possible, so that it had to make itself felt in the form of concrete

hallucinations since it had no direct access to consciousness. But this is not the case with the intuitive type.

[241] The sensation type is in every respect the converse of the intuitive. He relies almost exclusively on his sense impressions, and his whole psychology is oriented by instinct and sensation. He is therefore entirely dependent on external stimuli.

[242] The fact that it is just the psychological functions of intuition on the one hand and sensation and instinct on the other that Nietzsche emphasizes must be characteristic of his own personal psychology. He must surely be reckoned an intuitive with leanings towards introversion. As evidence of the former we have his pre-eminently intuitive-artistic manner of production, of which *The Birth of Tragedy* is very characteristic, while his masterpiece *Thus Spake Zarathustra* is even more so. His aphoristic writings express his introverted intellectual side. These, in spite of a strong admixture of feeling, display a pronounced critical intellectualism in the manner of the intellectuals of the eighteenth century. His lack of rational moderation and conciseness argues for the intuitive type in general. Under these circumstances it is not surprising that in his early work he unwittingly sets the facts of his personal psychology in the foreground. This is quite in accord with the intuitive attitude, which perceives the outer primarily through the medium of the inner, sometimes even at the expense of reality. By means of this attitude he also gained deep insight into the Dionysian qualities of his unconscious, the crude forms of which, so far as we know, reached the surface of his consciousness only after the outbreak of his illness, although they had previously revealed their presence in various erotic allusions. It is extremely regrettable, therefore, from the standpoint of psychology, that the fragmentary writings—so significant in this respect—which were found in Turin after the onset of his malady should have met with destruction in deference to moral and aesthetic scruples.

IV

THE TYPE PROBLEM IN HUMAN CHARACTER

1. GENERAL REMARKS ON JORDAN'S TYPES

[243] Continuing my chronological survey of previous contributions to this interesting problem of psychological types, I now come to a small and rather odd work, my acquaintance with which I owe to my esteemed colleague Dr. Constance Long, of London: *Character as Seen in Body and Parentage*, by Furneaux Jordan, F.R.C.S.

[244] In this little book of one hundred and twenty-six pages, Jordan describes in the main two characterological types, the definition of which is of interest to us in more than one respect. Although—to anticipate slightly—the author is really concerned with only one half of our types, thinking and feeling, he nevertheless introduces the standpoint of the other half, the intuitive and sensation types, and blends the two together. I will first let the author speak for himself in his introductory definition:

> There are two generic fundamental biases in character … two conspicuous types of character (with a third, an intermediate one) … one in which the tendency to action is extreme and the tendency to reflection slight, and another in which the proneness to reflection greatly predominates and the impulse for action is feebler. Between the two extremes are innumerable gradations; it is sufficient to point only to a third type … in which the powers of reflection and action tend to meet in more or less equal degree. … In an intermediate class may also be placed the characters which tend to eccentricity, or in which other possibly abnormal tendencies predominate over the emotional and non-emotional.[1]

[245] It is clear from this definition that Jordan contrasts reflection, or thinking, with action. It is readily understandable that an observer of men, not probing too deeply, would first be struck by the contrast

between reflective and active natures, and would therefore tend to define the observed antithesis in those terms. The simple reflection, however, that activity is not necessarily the product of mere impulse, but can also proceed from thinking, would make it seem necessary to carry the definition a stage further. Jordan himself reaches this conclusion, for on page 6 he introduces a further element which for us has a particular value, the element of feeling. He states here that the active type is less passionate, while the reflective temperament is distinguished by its passionate feelings. Hence he calls his types the "less impassioned" and the "more impassioned." Thus the element he overlooked in his introductory definition subsequently acquires the status of a fixed term. But what mainly distinguishes his conception from ours is that he makes the "less impassioned" type active and the "more impassioned" inactive.

[247] This combination seems to me unfortunate, since highly passionate and profound natures exist which at the same time are very energetic and active, and conversely, there are less passionate and superficial natures which are in no way distinguished by activity, not even by the low form of activity that consists in being busy. In my view, his otherwise valuable conception would have gained much in clarity if he had left the factors of activity and inactivity altogether out of account, as belonging to a quite different point of view, although in themselves they are important characterological determinants.

[246] It will be seen from the arguments which follow that the "less impassioned and more active" type describes the extravert, and the "more impassioned and less active" type the introvert. Either can be active or inactive without changing his type, and for this reason the factor of activity should, in my opinion, be ruled out as a main characteristic. As a determinant of secondary importance, however, it still plays a role, since the whole nature of the extravert appears more mobile, more full of life and activity than that of the introvert. But this quality entirely depends on the phase in which the individual momentarily finds himself vis-à-vis the external world. An introvert in an extraverted phase appears active, while an extravert in an introverted phase appears passive. Activity itself, as a fundamental trait of character, can sometimes be introverted; it is then all directed inwards, developing a lively activity of thought or feeling behind

an outward mask of profound repose. Or else it can be extraverted, showing itself a vigorous action while behind the scenes there stands a firm unmoved thought or untroubled feeling.

[248] Before we examine Jordan's arguments more closely, I must, for greater clarity, stress yet another point which, if not borne in mind, may give rise to confusion. I remarked at the beginning of this book that in my earlier publications I identified the introvert with the thinking and the extravert with the feeling type. As I have said before, it became clear to me only later that introversion and extraversion are to be distinguished as general basic attitudes from the function-types. These two attitudes may be recognized with the greatest ease, while it requires considerable experience to distinguish the function-type. At times it is uncommonly difficult to find out which function holds prior place. The fact that the introvert, because of his abstracting attitude, naturally has a reflective and contemplative air is misleading. One is inclined to assume that in him the primacy falls to thinking. The extravert, on the contrary, naturally displays many immediate reactions, which easily lead one to conjecture a predominance of feeling. These suppositions are deceptive, since the extravert may well be a thinking, and the introvert a feeling type. Jordan describes in general merely the introvert and the extravert. But, when he goes into details, his description becomes misleading, because traits of different function-types are blended together which a more thorough examination of the material would have kept apart. In its general outline, however, the picture of the introverted and extraverted attitudes is unmistakable, so that the nature of the two basic attitudes can plainly be discerned.

[249] The characterization of types in terms of affectivity seems to me the really important aspect of Jordan's work. We have already seen that the reflective, contemplative nature of the introvert is compensated by a condition in which instinct and sensation are unconscious and archaic. We might even say this is just why he is introverted: he has to rise above his archaic, impulsive nature to the safe heights of abstraction in order to dominate from there his unruly and turbulent affects. This point of view is not at all wide of the mark in many cases. We might also say, conversely, that the affective life of the extravert, being less deeply

rooted, lends itself more readily to differentiation and domestication than his unconscious, archaic thinking and feeling, and that this fantasy life of his can have a dangerous influence on his personality. Hence he is always the one who seeks life and experience as busily and abundantly as possible in order not to have to come to himself and face his evil thoughts and feelings. These observations, which can easily be verified, help to explain an otherwise paradoxical passage in Jordan, where he says (p. 6) that in the "less impassioned" (= extraverted) temperament the intellect predominates and has an unusually large share in the regulation of life, whereas in the "reflective" (= introverted) temperament it is affects that claim the greater importance.

[250] At first glance, this view would seem to fly in the face of my assertion that the "less impassioned" type corresponds to the extravert. But closer scrutiny proves that this is not so, since the reflective character, the introvert, though certainly *trying* to deal with his unruly affects, is in reality more influenced by his passions than the man whose life is consciously guided by desires oriented to objects. The latter, the extravert, tries to get away with this all the time, but is forced to experience how his subjective thoughts and feelings constantly stand in his way. He is far more influenced by his psychic inner world than he suspects. He cannot see it himself, but the people around him, if observant, will always detect the personal purpose in his striving. Hence his golden rule should always be to ask himself: "What am I really after? What is my secret intention?" The other, the introvert, with his conscious thought-out intentions, always overlooks what the people around him see only too clearly, that his intentions are really subservient to powerful impulses, lacking both aim and object, and are in a high degree influenced by them. The observer and critic of the extravert is liable to take the parade of thinking and feeling as a thin covering that only imperfectly conceals a cold and calculated personal aim. Whereas the man who tries to understand the introvert will readily conclude that vehement passions are only with difficulty held in check by apparent sophistries.

[251] Either judgment is both true and false. It is *false* when the conscious standpoint, or consciousness itself, is strong enough to offer resistance to

the unconscious; but it is *true* when a weaker conscious standpoint encounters a strong unconscious and eventually has to give way to it. Then the motive that was kept in the background breaks through: in one case the egoistic aim, in the other the unsubdued passion, the elemental affect, that throws every consideration to the winds.

[252] These reflections enable us to discern Jordan's mode of observation: he is evidently preoccupied with the affectivity of the observed type, hence his nomenclature: "less impassioned," "more impassioned." When, therefore, from the standpoint of affect, he conceives the introvert as the more impassioned, and the extravert as the less impassioned and even as the intellectual type, he displays a peculiar kind of discernment which one must describe as *intuitive*. I have already pointed out that Jordan blends the standpoint of the rational types with that of the "aesthetic" types.[2] So when he characterizes the introvert as passionate and the extravert as intellectual he is obviously seeing the two types from the unconscious side, that is, he *perceives them through the medium of his own unconscious*. He observes and cognizes intuitively, and this must always be the case, more or less, with a practical observer of men.

[253] But however true and profound such an apprehension may sometimes be, it suffers from one very important limitation: it overlooks the living reality of the person observed, since it always judges him by his unconscious mirror-image instead of by his actual appearance. This error is inseparable from all intuition, and reason has always been at loggerheads with it on that account, only grudgingly admitting its right to exist despite the fact that in many cases the objective rightness of the intuition cannot be denied. Thus Jordan's formulations accord on the whole with reality, though not with reality as it is understood by the rational types, but with the reality which for them is unconscious. Naturally these conditions are calculated to confuse all judgment of the observed and to make agreement about it all the more difficult. One should therefore not quarrel over the nomenclature but should stick exclusively to the observable differences. Although I, in accordance with my nature, express myself quite differently from Jordan, we are—allowing for certain divergences—nevertheless at one in our classification of the observed material.

[254] Before going on to discuss Jordan’s typology, I should like to return for a moment to the third or “intermediate” type which he postulates. Under this heading he includes on the one hand characters that are entirely balanced, and on the other those that are unbalanced or “eccentric.” It will not be superfluous to recall at this point the classification of the Valentinian school, according to which the *hylic* man is inferior to the psychic and the pneumatic man. The hylic man corresponds by definition to the sensation type, whose ruling determinants are supplied by the senses. The sensation type possesses neither differentiated thinking nor differentiated feeling, but his sensuousness is well developed. This, as we know, is also the case with the primitive. The instinctive sensuousness of the primitive has its counterpart in the spontaneity of his psychic processes: his mental products, his thoughts, just appear to him, as it were. It is not he who makes them or thinks them—he is not capable of that—they make themselves, they happen to him, they even confront him as hallucinations. Such a mentality must be termed intuitive, for intuition is the instinctive perception of an emergent psychic content. Although the principal psychological function of the primitive is as a rule sensation, the less conspicuous compensatory function is intuition. On the higher levels of civilization, where one man has thinking more more or less differentiated and another feeling, there are also quite a number who have developed intuition to a high degree and can employ it as the essentially determining function. From these we get the intuitive type. It is my belief, therefore, that Jordan’s intermediate group can be resolved into the sensation and intuitive types.

2. SPECIAL DESCRIPTION AND CRITICISM OF JORDAN’S TYPES

[255] As regards the general characterization of the two types, Jordan emphasizes (p. 17) that the more impassioned type includes far fewer prominent and striking personalities than the less impassioned. This assertion derives from the fact that Jordan identifies the active type with the less impassioned, which in my opinion is inadmissible. But if we discount this error, it is certainly true that the behaviour of the less

impassioned or extraverted type makes him more conspicuous than the more impassioned or introverted type.

a. The Introverted Woman ("The More Impassioned Woman")

[256] We will first summarize the chief points in Jordan's discussion of the introverted woman:

> She has quiet manners, and a character not easy to read: she is occasionally critical, even sarcastic, but though bad temper is sometimes noticeable, she is not habitually fitful, or restless, or captious, or censorious, nor is she a "nagging" woman. She diffuses an atmosphere of repose, and unconsciously she consoles and heals, but under the surface emotions and passions lie dormant. Her emotional nature matures slowly. As she grows older the charm of her character increases. She is "sympathetic," i.e., she brings insight and experience to bear on the problems of others. Yet the very worst characters are found among the more impassioned women. They are the cruellest stepmothers. They make most affectionate wives and mothers, but their passions and emotions are so strong that these frequently hold reason in subjection or carry it away with them. They love too much, but they also hate too much. Jealousy can make wild beasts of them. Stepchildren, if hated by them, may even be done to death. If evil is not in the ascendant, morality itself is associated with deep feeling, and may take a profoundly reasoned and independent course which will not always fit itself to conventional standards. It will not be an imitation or a submission; not a bid for a reward here or hereafter. It is only in intimate relations that the excellences and drawbacks of the impassioned woman are seen. Here she unfolds herself; here are her joys and sorrows, here her faults and weaknesses are seen, perhaps slowness to forgive, implacability, sullenness, anger, jealousy, or degraded uncontrolled passions. She is charmed with the moment, and less apt to think of the comfort and welfare of the absent. She is disposed to forget others and forget time. If she is affected, her affectation is less an imitation than a pronounced change of manners and speech with changing shades of thought and especially of feeling. In social life she tends to be the same in all circles. In both domestic and social life she is as a rule not difficult to please, she

spontaneously appreciates, congratulates, and praises. She can soothe the mentally bruised and encourage the unsuccessful. She rises to the high and stoops to the low, she is the sister and playmate of all nature. Her judgment is mild and lenient. When she reads she tries to grasp the inmost thought and deepest feeling of the book; she reads and rereads the book, marks it freely, and turns down its corners.[3]

[257] From this description it is not difficult to recognize the introverted character. But it is, in a certain sense, one-sided, because the chief stress is laid on feeling, without considering the one characteristic to which I attach special value—the *conscious inner life*. Jordan mentions in passing that the introverted woman is "contemplative" (p. 18), but he does not pursue the matter further. His description, however, seems to me a confirmation of my comments on his mode of observation. It is chiefly the outward behaviour constellated by feeling, and the expressions of passion that strike him; he does not probe into the conscious life of this type. He never mentions that the inner life plays an altogether decisive role in the introvert's conscious psychology. Why, for example, does the introverted woman read so attentively? Because above everything else she loves to understand and grasp ideas. Why is she restful and soothing? Because she usually keeps her feelings to herself, expressing them in her thoughts instead of unloading them on others. Her unconventional morality is backed by deep reflection and convincing inner feelings. The charm of her quiet and intelligent character depends not merely on a peaceful attitude, but on the fact that one can talk with her reasonably and coherently, and that she is able to appreciate the value of her partner's argument. She does not interrupt him with impulsive exclamations, but accompanies his meaning with her thoughts and feelings, which none the less remain steadfast, never yielding to the opposing argument.

[258] This compact and well-developed ordering of the conscious psychic contents is a stout defence against a chaotic and passionate emotional life of which the introvert is very often aware, at least in its personal aspect: she fears it because she knows it too well. She meditates about herself, and is therefore outwardly calm and can acknowledge and accept others without overwhelming them with praise or blame. But because her

emotional life would devastate these good qualities, she rejects as far as possible her instincts and affects, though without mastering them. In contrast, therefore, to her logical and well-knit consciousness, her affective life is elemental, confused, and ungovernable. It lacks the true human note, it is out of proportion, irrational, a *phenomenon of nature* that breaks through the human order. It lacks any kind of palpable afterthought or purpose, so at times it is purely destructive, a raging torrent that neither intends destruction nor avoids it, ruthless and necessary, obedient only to its own laws, a process that is its own fulfillment. Her good qualities depend on her thinking, which by its tolerant or benevolent outlook has succeeded in influencing or restraining one part of her instinctive life, though without being able to embrace and transform the whole. The introverted woman is far less conscious of the full range of her affectivity than she is of her rational thoughts and feelings. Her affectivity is much less mobile than her intellectual content; it is, as it were, viscous and curiously inert, therefore hard to change; it is persevering, hence her unconscious steadiness and equability, but also her self-will and her occasional unreasonable inflexibility in things that touch her emotions.

[259] These reflections may explain why any judgment on the introverted woman in terms of affectivity alone is incomplete and unfair in good and bad alike. If Jordan finds the vilest characters among introverted women, this, in my opinion, is due to the fact that he lays too great a stress on affectivity, as if passion alone were the mother of all evil. We can torture children to death in other ways than the merely physical. And, conversely, that wondrous wealth of love in the introverted woman is not by any means always her own possession; she is more often possessed by it and cannot choose but love, until one day a favourable opportunity occurs, when suddenly, to the amazement of her partner, she displays an inexplicable coldness. The emotional life of the introverted woman is generally her weak side, it is not absolutely trustworthy. She deceives herself about it; others also are deceived and disappointed in her if they rely too much on her emotionality. Her mind is more to be relied on, because more adapted. Her affect is too close to sheer untamed nature.

b. The Extraverted Woman (“The Less Impassioned Woman”)

[260] Let us now turn to Jordan's description of the "less impassioned" woman. Here too I must reject everything the author has confused by the introduction of activity, since this admixture is only calculated to make the typical character less recognizable. Thus when he speaks of a certain "quickness" of the extravert, this does not mean vivacity or activity, but merely the mobility of active psychological processes.

[261] Of the extraverted woman Jordan says:

> She is marked by activity, vivacity, quickness, and opportuneness rather than by persistence or consistency. Her life is almost wholly occupied with little things. She goes even further than Lord Beaconsfield in the belief that unimportant things are not very unimportant, and important things not very important. She likes to dwell on the way her grandmother did things, and how her grandchildren will do them, and on the universal degeneracy of human beings and affairs. Her daily wonder is how things would go on if she were not there to look after them. She is frequently invaluable in social movements. She expends her energies in household cleanliness, which is the end and aim of existence to not a few women. Frequently she is "idea-less, emotionless, restless and spotless." Her emotional development is usually precocious, and at eighteen she is little less wise than at twenty-eight or forty-eight. Her mental outlook usually lacks range and depth, but it is clear from the first. When intelligent, she is capable of taking a leading position. In society she is kindly, generous and hospitable. She judges her neighbours and friends, forgetful that she is herself being judged, but she is active in helping them in misfortune. Deep passion is absent in her, love is simply preference, hatred merely dislike, and jealousy only injured pride. Her enthusiasm is not sustained, and she is more alive to the beauty of poetry than she is to its passion and pathos. Her beliefs and disbeliefs are complete rather than strong. She has no convictions, but she has no misgivings. She does not believe, she adopts, she does not disbelieve, she ignores. She never enquires and she never doubts. In large affairs she defers to authority; in small affairs she jumps to conclusions. In the detail of her own little world, whatever is, is wrong: in the larger world outside, whatever is, is right. She instinctively rebels against carrying the conclusions of reason into practice.

> At home she shows quite a different character from the one seen in society. With her, marriage is much influenced by ambition, or a love of change, or obedience to well-recognized custom and a desire to be "settled in life," or from a sincere wish to enter a greater sphere of usefulness. If her husband belongs to the impassioned type, he will love children more than she does.
>
> In the domestic circle, her least pleasing characteristics are evident. Here she indulges in disconnected, disapproving comment, and none can foresee when there will be a gleam of sunshine through the cloud. The unemotional woman has little or no self-analysis. If she is plainly accused of habitual disapproval she is surprised and offended, and intimates that she only desires the general good, "but some people do not know what is good for them." She has one way of doing good to her family, and quite another way where society is concerned. The household must always be ready for social inspection. Society must be encouraged and propitiated. Its upper section must be impressed and its lower section kept in order. Home is her winter, society her summer. If the door but opens and a visitor is announced, the transformation is instant.
>
> The less emotional woman is by no means given to asceticism; respectability and orthodoxy do not demand it of her. She is fond of movement, recreation, change. Her busy day may open with a religious service, and close with a comic opera. She delights, above all, to entertain her friends and to be entertained by them. In society she finds not only her work and her happiness, but her rewards and her consolations. She believes in society, and society believes in her. Her feelings are little influenced by prejudice, and as a rule she is "reasonable." She is very imitative and usually selects good models, but is only dimly conscious of her imitations. The books she reads must deal with life and action.[4]

[262] This familiar type of woman is extraverted beyond a doubt. Her whole demeanour indicates a character that by its very nature must be called extraverted. The continual criticizing, which is never based on real reflection, is an extraversion of a fleeting impression that has nothing to do with real thinking. I remember a witty aphorism I once read

somewhere: “Thinking is difficult, therefore let the herd pass judgment!” Reflection demands time above everything: hence the man who reflects has no opportunity for continual criticism. Incoherent and inconsequential criticism, dependent on tradition and authority, reveals the absence of any independent reflection; similarly the lack of self-criticism and the dearth of independent ideas betray a defect in the function of judgment. The absence of inner mental life in this type comes out much more clearly than its presence in the introverted type described earlier. From this sketch one might easily conclude that there is just as great or even greater a lack of affectivity, for it is obviously superficial, shallow, almost spurious, because the ulterior motive always bound up with it or discernible behind it makes the affective output practically worthless. I am, however, inclined to assume that our author is undervaluing here, just as much as he overvalued in the former case. In spite of an occasional admission of good qualities, the type on the whole comes out of it very badly. I believe this is due to a bias on the part of the author. It is usually enough to have had bitter experiences with one or more representatives of the same type for one’s taste to be spoiled for all of them. One must not forget that, just as the good sense of the introverted woman depends on a careful accommodation of her mental contents to the general thinking, the affectivity of the extraverted woman possesses a certain lability and shallowness because it is adapted to the ordinary life of human society. It is thus a socially differentiated affectivity with an incontestable general value, which compares very favourably with the heavy, sultry, passionate affect of the introvert. This differentiated affectivity has sloughed off everything chaotic and pathetic and become a disposable function of adaptation, even though it be at the expense of the inner mental life, which is conspicuous by its absence. It none the less exists in the unconscious, and moreover in a form corresponding to the passion of the introvert, i.e., it is in an undeveloped, archaic, infantile state. Working from the unconscious, the undeveloped mentality supplies the affective output with contents and hidden motives that cannot fail to make a bad impression on the critical observer, although they may be unperceived by the uncritical eye. The disagreeable impression that the constant perception of thinly veiled egoistic motives has on the observer makes him only too prone to forget the actual reality and adapted usefulness of the affective output displayed. All that is easy-going, unforced, temperate, harmless, and superficial in life would disappear if there were no differentiated affects. One would either be stifled in perpetual pathos or engulfed in the yawning abyss of repressed passion. If the social function of the introvert concentrates mainly on individuals, it is usually true that the extravert promotes the life of the community, which also has a right to exist. For this extraversion is needed, because it is first and foremost the bridge to one's neighbour.

[263] As we all know, the expression of affect works by suggestion, whereas the mind can operate only indirectly, after arduous translation into another medium. The affects required by the social function need not be at all deep, otherwise they beget passion in others, and passion upsets the life and wellbeing of society. Similarly, the adapted, differentiated mentality of the introvert has extensity rather than intensity; hence it is not disturbing and provocative but reasonable and calming. But, just as the introvert causes trouble by the violence of his passions, the extravert irritates by his half-unconscious thoughts and feelings, incoherently and abruptly applied in the form of tactless and unsparing judgments on his fellow men. If we were to make a collection of such judgments and tried to construct a psychology out of them, they would build up into an utterly brutal outlook, which in chilling savagery, crudity, and stupidity rivals the murderous affectivity of the introvert. Hence I cannot subscribe to Jordan's view that the very worst characters are to be found among passionate introverted natures. Among extraverts there is just as much inveterate wickedness. But whereas introverted passion expresses itself in brutal actions, the vulgarity of the extravert's unconscious thoughts and feelings commits crimes against the soul of the victim. I do not know which is worse. The drawback in the former case is that the deed is visible, while the latter's vulgarity of mind is concealed behind the veil of acceptable behaviour. I would like, however, to stress the social thoughtfulness of this type, his active concern for the general welfare, as well as a decided tendency to give pleasure to others. The introvert as a rule has these qualities only in his fantasies.

[264] Differentiated affects have the further advantage of charm and elegance. They spread about them an air that is aesthetic and beneficial.

A surprising number of extraverts practise an art—chiefly music—not so much because they are specially qualified for it as from a desire to make their contribution to social life. Nor is their fault-finding always unpleasant or altogether worthless. Very often it is no more than a well-adapted educative tendency which does a great deal of good. Equally, their dependence on the judgment of others is not necessarily a bad thing, as it often conduces to the suppression of extravagances and pernicious excesses which in no way further the life and welfare of society. It would be altogether unjustifiable to maintain that one type is in any respect more valuable than the other. The types are mutually complementary, and their differences generate the tension that both the individual and society need for the maintenance of life.

c. The Extraverted Man ("The Less Impassioned Man")

[265] Of the extraverted man Jordan says:

> He is fitful and uncertain in temper and behaviour, given to petulance, fuss, discontent and censoriousness. He makes depreciatory judgments on all and sundry, but is ever well satisfied with himself. His judgment is often at fault and his projects often fail, but he never ceases to place unbounded confidence in both. Sidney Smith, speaking of a conspicuous statesman of his time, said he was ready at any moment to command the Channel Fleet or amputate a limb. He has an incisive formula for everything that is put before him—either the thing is not true, or everybody knows it already. In his sky there is not room for two suns. If other suns insist on shining, he has a curious sense of martyrdom.
>
> He matures early. He is fond of administration, and is often an admirable public servant. At the committee of his charity he is as much interested in the selection of its washer-woman as in the selection of its chairman. In company he is usually alert, to the point, witty, and apt at retort. He resolutely, confidently, and constantly shows himself. Experience helps him and he insists on getting experience. He would rather be the *known* chairman of a committee of three than the *unknown* benefactor of a nation. When he is less gifted he is probably not less self-

important. Is he busy? He believes himself to be energetic. Is he loquacious? He believes himself to be eloquent.

He rarely puts forth new ideas, or opens new paths, but he is quick to follow, to seize, to apply, to carry out. His natural tendency is to ancient, or at least accepted, forms of belief and policy. Special circumstances may sometimes lead him to contemplate with admiration the audacity of his own heresy. Not rarely the less emotional intellect is so lofty and commanding that no disturbing influence can hinder the formation of broad and just views in all the provinces of life. His life is usually characterized by morality, truthfulness, and high principle; sometimes his desire to produce an immediate effect however leads to later trouble.

If, in public assembly, adverse fates have given him nothing to do,—nothing to propose, or second, or support, or amend, or oppose—he will rise and ask for some window to be closed to keep out a draught, or, which is more likely, that one be opened to let in more air; for, physiologically, he commonly needs much air as well as much notice. He is especially prone to do what he is not asked to do—what, perhaps, he is not best fitted to do; nevertheless he constantly believes that the public sees him as he wishes it to see him, as he sees himself—a sleepless seeker of the public good. He puts others in his debt, and he cannot go unrewarded. He may, by well-chosen language, move his audience although he is not moved himself. He is probably quick to understand his time or at least his party; he warns it of impending evil, organizes its forces, deals smartly with its opponents. He is full of projects and prophecies and bustle. Society must be pleased if possible; if it will not be pleased it must be astonished; if it will neither be pleased nor astonished it must be pestered and shocked. He is a saviour by profession and as an acknowledged saviour is not ill pleased with himself. We can of ourselves do nothing right—but we can believe in him, dream of him, thank God for him, and ask him to address us.

He is unhappy in repose, and rests nowhere long. After a busy day he must have a pungent evening. He is found in the theatre, or concert, or church, or the bazaar, at the dinner, or conversazione or club, or all these, turn and turn about. If he misses a meeting, a telegram announces a more ostentatious call.[5]

[266] From this description, too, the type can easily be recognized. But, perhaps even more than in the description of the extraverted woman, there emerges, in spite of occasional appreciative touches, an element of depreciation that amounts to caricature. It is due partly to the fact that this method of description cannot hope to be fair to the extraverted nature in general, because it is virtually impossible for the intellectual approach to put the specific value of the extravert in the right light. This is much more possible with the introvert, because his essential reasonableness and his conscious motivation can be expressed in intellectual terms as readily as his passions can and the actions resulting from them. With the extravert, on the other hand, the specific value lies in his relation to the object. It seems to me that only life itself can grant the extravert the just dues that intellectual criticism cannot give him. Life alone reveals his values and appreciates them. We can, of course, establish that the extravert is socially useful, that he has made great contributions to the progress of human society, and so on. But any analysis of his resources and motives will always yield a negative result, because his specific value lies in the reciprocal relation to the object and not in himself. The relation to the object is one of those imponderables that an intellectual formulation can never grasp.

[267] Intellectual criticism cannot help proceeding analytically and bringing the observed type to full clarity by pinning down its motives and aims. But this, as we have said, results in a picture that amounts to a caricature of the psychology of the extravert, and anyone who believes he has found the right attitude to an extravert on the basis of such a description would be astonished to see how the actual personality turns the description into a mockery. Such a one-sided view of things makes any adaptation to the extravert impossible. In order to do him justice, *thinking* about him must be altogether excluded, while for his part the extravert can properly adapt to the introvert only when he is prepared to accept his mental contents in themselves regardless of their practical utility. Intellectual analysis cannot help attributing to the extravert every conceivable design, stratagem, ulterior motive, and so forth, though they have no actual existence but at most are shadowy effects leaking in from the unconscious background.

[268] It is certainly true that the extravert, if he has nothing else to say, will at least demand that a window be open or shut. But who notices, who is struck by it? Only the man who is trying to account for all the possible reasons and intentions behind such an action, who reflects, dissects, puts constructions on it, while for everyone else this little stir vanishes in the general bustle of life without their seeing in it anything sinister or remarkable. But this is just the way the psychology of the extravert manifests itself: it is part and parcel of the happenings of daily human life, and it signifies nothing more than that, neither better nor worse. But the man who reflects sees further and—so far as actual life is concerned—sees crooked, though his vision is sound enough as regards the unconscious background of the extravert's thought. He does not see the positive man, but only his *shadow*. And the shadow proves the judgment right at the expense of the conscious, positive man. For the sake of understanding, it is, I think, a good thing to detach the man from his shadow, the unconscious, otherwise the discussion is threatened with an unparalleled confusion of ideas. One sees much in another man that does not belong to his conscious psychology, but is a gleam from his unconscious, and one is deluded into attributing the observed quality to his conscious ego. Life and fate may do this, but the psychologist, to whom knowledge of the structure of the psyche and the possibility of a better understanding of man are of the deepest concern, must not. A clear differentiation of the conscious man from his unconscious is imperative, since only by the assimilation of conscious standpoints will clarity and understanding be gained, but never by a process of reduction to the unconscious backgrounds, sidelights, quarter-tones.

d. The Introverted Man ("The More Impassioned Man")

[269] Of the introverted man Jordan says:

> He may spend his evenings in pleasure from a genuine love of it; but his pleasures do not change every hour, and he not driven to them from mere restlessness. If he takes part in public work he is probably invited to do so from some special fitness; or it may be that he has at heart some movement—beneficent or mischievous—which he wishes to promote. When his work is done he willingly retires. He is able to see what others

> can do better than he; and he would rather that his cause should prosper in other hands than fail in his own. He has a hearty word of praise for his fellow-workers. Probably he errs in estimating too generously the merits of those around him. He is never, and indeed cannot be, an habitual scold. … Men of profound feeling and illimitable pondering tend to suspense or even hesitation; they are never the founders of religions; never leaders of religious movements; they neither receive nor deliver divine messages. They are moreover never so supremely confident as to what is error that they burn their neighbours for it; never so confident that they possess infallible truth that, although not wanting in courage, they are prepared to be burnt in its behalf.[6]

[270] To me it seems significant that in his chapter on the introverted man Jordan says no more in effect than what is given in the above excerpts. What we miss most of all is a description of the passion on account of which the introvert is called "impassioned" in the first place. One must, of course, be cautious in making diagnostic conjectures, but this case seems to invite the supposition that the introverted man has received such niggardly treatment for subjective reasons. After the elaborately unfair description of the extraverted type, one might have expected an equal thoroughness in the description of the introvert. Why is it not forthcoming?

[271] Let us suppose that Jordan himself is on the side of the introverts. It would then be intelligible that a description like the one he gives of his opposite number with such pitiless severity would hardly have suited his book. I would not say from lack of objectivity, but rather from lack of knowledge of his own shadow. The introvert cannot possibly know or imagine how he appears to his opposite type unless he allows the extravert to tell him to his face, at the risk of having to challenge him to a duel. For as little as the extravert is disposed to accept Jordan's description as an amiable and apposite picture of his character is the introvert inclined to let his picture be painted by an extraverted observer and critic. The one would be as depreciatory as the other. Just as the introvert who tries to get hold of the nature of the extravert invariably goes wide of the mark, so the extravert who tries to understand the

other's inner life from the standpoint of externality is equally at sea. The introvert makes the mistake of always wanting to derive the other's actions from the subjective psychology of the extravert, while the extravert can conceive the other's inner life only as a consequence of external circumstances. For the extravert an abstract train of thought must be a fantasy, a sort of cerebral mist, when no relation to an object is in evidence. And as a matter of fact the introvert's brain-weavings are often nothing more. At all events a lot more could be said of the introverted man, and one could draw a shadow portrait of him no less complete and no less unfavourable than the one Jordan drew of the extravert.

[272] His observation that the introvert's love of pleasure is "genuine" seems to me important. This appears to be a peculiarity of introverted feeling in general: it is genuine because it is there of itself, rooted in the man's deeper nature; it wells up out of itself, having itself as its own aim; it will serve no other ends, lending itself to none, and is content to be an end in itself. This hangs together with the spontaneity of any archaic and natural phenomenon that has never yet bowed to the ends and aims of civilization. Rightly or wrongly, or at any rate without regard to right or wrong, suitability or unsuitability, the affective state bursts out, forcing itself on the subject even against his will and expectation. There is nothing about it that suggests a calculated motivation.

[273] I do not wish to discuss the remaining chapters of Jordan's book. He cites historical personalities as examples, presenting numerous distorted points of view which all derive from the fallacy already referred to, of introducing the criterion of active and passive and mixing it up with the other criteria. This leads to the frequent conclusion that an active personality must be reckoned a passionless type and, conversely, that a passionate nature must be passive. I seek to avoid this error by excluding the factor of activity as a criterion altogether.

[274] To Jordan, however, belongs the credit for having been the first, so far as I know, to give a relatively appropriate character sketch of the emotional types.

V

THE TYPE PROBLEM IN POETRY

Carl Spitteler: *Prometheus and Epimetheus*

1. INTRODUCTORY REMARKS ON SPITTELER'S TYPOLOGY

[275] If, besides the themes offered to the poet by the complications of emotional life, the type problem did not also play a significant role, it would almost amount to a proof that the problem did not exist. But we have already seen how in Schiller this problem stirred the poet in him as deeply as the thinker. In this chapter we shall turn our attention to a poetic work based almost exclusively on the type problem: Carl Spitteler's *Prometheus and Epimetheus*, published in 1881.

[276] I have no wish to declare at the outset that Prometheus, the "forethinker," stands for the introvert, and Epimetheus, the man of action and "afterthinker," for the extravert. The conflict between these two figures is essentially a struggle between the introverted and extraverted lines of development in one and the same individual, though the poet has embodied it in two independent figures and their typical destinies.

[277] There can be no mistaking the fact that Prometheus exhibits introverted character traits. He presents the picture of a man introverted to his inner world, true to his "soul." He expresses his nature perfectly in the reply he gives to the angel:

> But it does not lie with me to judge of the face of my soul, for lo, she is my Lady and Mistress, and she is my God in joy and sorrow, and all that I am, I owe to her alone. And so I will share my honour with her, and, if needs must, I am ready to forego it altogether.[1]

[278] Prometheus surrenders himself, come honour or dishonour, to his soul, that is, to the function of relation to the inner world. That is why the soul has a mysterious, metaphysical character, precisely on account of

her relation to the unconscious. Prometheus concedes her an absolute significance, as mistress and guide, in the same unconditional manner in which Epimetheus surrenders himself to the world. He sacrifices his individual ego to the soul, to the relation with the unconscious as the matrix of eternal images and meanings, and becomes de-individualized, because he has lost the counterweight of the persona,[2] the function of relation to the external object. With this surrender to his soul Prometheus loses all connection with the surrounding world, and hence also the very necessary corrective offered by external reality. But this loss cannot be reconciled with the nature of the real world. Therefore an angel appears to Prometheus, evidently a representative of the powers-that-be; in psychological terms, he is the projected image of a tendency aiming at adaptation to reality. The angel accordingly says to Prometheus:

> It shall come to pass, if you do not prevail and free yourself from your froward soul, that you shall lose the great reward of many years, and the joy of your heart, and all the fruits of your richly endowed mind.[3]

And again:

> You shall be cast out on the day of your glory on account of your soul, for she knows no god and obeys no law, and nothing is sacred to her pride, either in heaven or on earth.[4]

[279] Because Prometheus has a one-sided orientation to his soul, all tendencies to adapt to the external world are repressed and sink into the unconscious. Consequently, if perceived at all, they appear as not belonging to his own personality but as projections. There would seem to be a contradiction in the fact that the soul, whose cause Prometheus has espoused and whom he has, as it were, fully assimilated into consciousness, appears at the same time as a projection. But since the soul, like the persona, is a function of relationship, it must consist in a certain sense of two parts—one part belonging to the individual, and the other adhering to the object of relationship, in this case the unconscious. Unless one frankly subscribes to von Hartmann’s philosophy, one is generally inclined to grant the unconscious only a conditional existence

as a psychological factor. On epistemological grounds, we are at present quite unable to make any valid statement about the objective reality of the complex psychological phenomenon we call the unconscious, just as we are in no position to say anything valid about the essential nature of real things, for this lies beyond our psychological ken. On the grounds of practical experience, however, I must point out that, in relation to the activity of consciousness, the contents of the unconscious lay the same claim to reality on account of their obstinate persistence as do the real things of the external world, even though this claim must appear very improbable to a mind that is "outer-directed." It must not be forgotten that there have always been many people for whom the contents of the unconscious possessed a greater reality than the things of the outside world. The history of human thought bears witness to both realities. A more searching investigation of the human psyche shows beyond question that there is in general an equally strong influence from both sides on the activity of consciousness, so that, psychologically, we have a right on purely empirical grounds to treat the contents of the unconscious as just as *real* as the things of the outside world, even though these two realities are mutually contradictory and appear to be entirely different in their natures. But to subordinate one reality to the other would be an altogether unjustifiable presumption. Theosophy and spiritualism are just as violent in their encroachments on other spheres as materialism. We have to accommodate ourselves to our psychological capacities, and be content with that.

[280] The peculiar reality of unconscious contents, therefore, gives us the same right to describe them as *objects* as the things of the outside world. Now just as the persona, being a function of relationship, is always conditioned by the external object and is anchored as much in it as in the subject, so the soul, as a function of relationship to the inner object, is represented by that object; hence she is always distinct from the subject in one sense and is actually perceived as something different. Consequently, she appears to Prometheus as something quite separate from his individual ego. In the same way as a man who surrenders entirely to the outside world still has the world as an object distinct from himself, the unconscious world of images behaves as an object distinct

from the subject even when a man surrenders to it completely. And, just as the unconscious world of mythological images speaks indirectly, through the experience of external things, to the man who surrenders wholly to the outside world, so the real world and its demands find their way indirectly to the man who has surrendered wholly to the soul; for no man can escape both realities. If he is intent only on the outer reality, he must live his myth; if he is turned only towards the inner reality, he must dream his outer, so-called real life. Accordingly the soul says to Prometheus:

> I told you I was a wayward goddess, who would lead you astray on untrodden paths. But you would not listen to me, and now it has come to pass according to my words: for my sake they have robbed you of the glory of your name and stolen from you your life's happiness.[5]

[281] Prometheus refuses the kingdom the angel offers him, which means that he refuses to adapt to things as they are because his soul is demanded from him in exchange. The subject, Prometheus, is essentially human, but his soul is of a quite different character. She is daemonic, because the inner object, the suprapersonal, collective unconscious with which she is connected as the function of relationship, gleams through her. The unconscious, considered as the historical background of the human psyche, contains in concentrated form the entire succession of engrams (imprints) which from time immemorial have determined the psychic structure as it now exists. These engrams are nothing other than function-traces that typify, on average, the most frequently and intensively used functions of the human psyche. They present themselves in the form of mythological motifs and images, appearing often in identical form and always with striking similarity among all races; they can also be easily verified in the unconscious material of modern man. It is therefore understandable that decidedly animal traits or elements should appear among the unconscious contents side by side with those sublime figures which from ancient times have been man's companions on the road of life. The unconscious is a whole world of images whose range is as boundless as that of the world of "real" things. Just as the man who has surrendered entirely to the outside world encounters it in the form of

some intimate and beloved being through whom, should his destiny lie in extreme devotion to a personal object, he will experience the whole ambivalence of the world and of his own nature, so the other, who has surrendered to the soul, will encounter her as a daemonic personification of the unconscious, embodying the totality, the utter polarity and ambivalence of the world of images. These are borderline phenomena that overstep the norm; hence the normal, middle-of-the-road man knows nothing of these cruel enigmas. They do not exist for him. It is always only a few who reach the rim of the world, where its mirror-image begins. For the man who always stands in the middle the soul has a human and not a dubious, daemonic character, neither does his neighbour appear to him in the least problematical. Only complete surrender to one world or the other evokes their ambivalence. Spitteler's intuition caught a soul-image which would have appeared to a less profound nature at most in a dream:

> And while he thus bore himself in the frenzy of his ardour, a strange quiver played about her lips and face, and her eyelids flickered, opening and closing quickly. And behind the soft and delicate fringe of her eyelashes something menacing lurked and prowled, like the fire that steals through a house maliciously and stealthily, or like the tiger that winds through the jungle, showing amid the dark leaves glimpses of its striped and yellow body.[6]

[282] The life-line that Prometheus chooses is unmistakably introverted. He sacrifices all connection with the present in order to create by forethought a distant future. It is very different with Epimetheus: he realizes that his aim is the world and what the world values. Therefore he says to the angel:

> But now my desire is for truth and my soul lies in my hand, and if it please you, pray give me a conscience that I may mind my “p's” and “q's” and everything that is just.[7]

Epimetheus cannot resist the temptation to fulfil his own destiny and submit to the “soulless” point of view. This alliance with the world is immediately rewarded:

> And it came to pass that as Epimetheus stood upon his feet, he felt his stature was increased and his courage firmer, and all his being was at one with itself, and all his feeling was sound and mightily at ease. And thus he strode with bold steps through the valley, following the straight path as one who fears no man, with free and open bearing, like a man inspired by the contemplation of his own right-doing.[8]

[283] He has, as Prometheus says, bartered his soul for the "p's" and "q's".[9] He has lost his soul—to his brother's gain. He has followed his extraversion, and, because this orients him to the external object, he is caught up in the desires and expectations of the world, seemingly at first to his great advantage. He has become an extravert, after having lived many solitary years under the influence of his brother as an *extravert falsified by imitating the introvert*. This kind of involuntary "simulation dans le caractère" (Paulhan) is not uncommon. His conversion to true extraversion is therefore a step towards "truth" and brings him a just reward.

[284] Whereas Prometheus, through the tyrannical claims of his soul, is hampered in every relation to the external object and has to make the cruellest sacrifices in the service of the soul, Epimetheus is armed with an effective shield against the danger that most threatens the extravert—the danger of complete surrender to the external object. This protection consists in a conscience that is backed by the traditional "right ideas," that is, by the not-to-be-despised treasures of worldly wisdom, which are employed by public opinion in much the same way as the judge uses the penal code. This provides Epimetheus with a protective barrier that restrains him from surrendering to the object as boundlessly as Prometheus does to his soul. This is forbidden him by his conscience, which deputizes for his soul. When Prometheus turns his back on the world of men and their codified conscience, he plays into the hands of his cruel soul-mistress and her caprices, and only after endless suffering does he atone for his neglect of the world.

[285] The prudent restraint of a blameless conscience puts such a bandage over Epimetheus' eyes that he must blindly live his myth, but ever with the sense of doing right, because he always does what is expected of him,

and with success ever at his side, because he fulfils the wishes of all. That is how men desire to see their king, and thus Epimetheus plays his part to the inglorious end, never forsaken by the spine-stiffening approval of the public. His self-assurance and self-righteousness, his unshakable confidence in his own worth, his indubitable "right-doing" and good conscience, present an easily recognizable portrait of the extraverted character as depicted by Jordan. Let us hear how Epimetheus visits the sick Prometheus, desiring to heal his sufferings:

> When all was set in order, King Epimetheus stepped forward supported by a friend on either side, greeted Prometheus, and spoke to him these well-meant words: "I am heartily sorry for you, Prometheus, my dear brother! But nonetheless take courage, for look, I have a salve here which is a sure remedy for every ill and works wondrously well in heat and in frost, and moreover can be used alike for solace as for punishment."
>
> So saying, he took his staff and tied the box of ointment to it, and reached it carefully and with all due solemnity towards his brother. But as soon as he saw and smelt the ointment, Prometheus turned away his head in disgust. At that the King changed his tone, and shouted and began to read his brother a lesson with great zest: "Of a truth it seems you have need of yet greater punishment, since your present fate does not suffice to teach you."
>
> And as he spoke, he drew a mirror from the folds of his robe, and made everything clear to him from the beginning, and waxed very eloquent and knew all his faults.[10]

[286] This scene is a perfect illustration of Jordan's words: "Society must be pleased if possible; if it will not be pleased, it must be astonished; if it will neither be pleased nor astonished, it must be pestered and shocked."[11] In the East a rich man proclaims his rank by never showing himself in public unless supported by two slaves. Epimetheus affects this pose in order to make an impression. Well-doing must at the same time be combined with admonition and moral instruction. And, as that does not produce an effect, the other must at least be horrified by the picture of his own baseness. Everything is aimed at creating an impression. There is

an American saying that runs: "In America two kinds of men make good—the man who can *do*, and the man who can *bluff."* Which means that pretence is sometimes just as successful as actual performance. An extravert of this kind prefers to work by *appearance*. The introvert tries to do it by *force* and *misuses* his work to that end.

[287] If we fuse Prometheus and Epimetheus into one personality, we should have a man outwardly Epimethean and inwardly Promethean—an individual constantly torn by both tendencies, each seeking to get the ego finally on its side.

2. A COMPARISON OF SPITTELER'S WITH GOETHE'S PROMETHEUS

[288] It is of considerable interest to compare this conception of Prometheus with Goethe's. I believe I am justified in the conjecture that Goethe belongs more to the extraverted than to the introverted type, while Spitteler would seem to belong to the latter. Only an exhaustive examination and analysis of Goethe's biography would be able to establish the rightness of this supposition. My conjecture is based on a variety of impressions, which I refrain from mentioning here for lack of sufficient evidence to support them.

[289] The introverted attitude need not necessarily coincide with the figure of Prometheus, by which I mean that the traditional Prometheus can be interpreted quite differently. This other version is found, for instance, in Plato's *Protagoras*, where the bestower of vital powers on the creatures the gods have created out of fire and water is not Prometheus but Epimetheus. Here, as in the myth, Prometheus (conforming to classical taste) is the crafty and inventive genius. There are two versions of Prometheus in Goethe's works. In the "Prometheus Fragment" of 1773 Prometheus is the defiant, self-sufficient, godlike, god-disdaining creator and artist. His soul is Minerva, daughter of Zeus. The relation of Prometheus to Minerva is very like the relation of Spitteler's Prometheus to his soul:

> From the beginning thy words have been celestial light to me!

Always as though my soul spoke to herself
Did she reveal herself to me,
And in her of their own accord
Sister harmonies rang out.
And when I deemed it was myself,
A goddess spoke,
And when I deemed a goddess was speaking,
It was myself.
So it was between thee and me,
So fervently one.
Eternal is my love for thee![12]

And again:

As the twilight glory of the departed sun
Hovers over the gloomy Caucasus
And encompasses my soul with holy peace,
Parting, yet ever present with me,
So have my powers waxed strong
With every breath drawn from thy celestial air.[13]

[290] So Goethe’s Prometheus, too, is dependent on his soul. The resemblance between this relationship and that of Spitteler’s Prometheus to his soul is very striking. The latter says to his soul:

> And though I be stripped of all, yet am I rich beyond all measure so long as you alone remain with me, and name me “my friend” with your sweet mouth, and the light of your proud and gracious countenance go not from me.[14]

[291] But for all the similarity of the two figures and their relations with the soul, one essential difference remains. Goethe’s Prometheus is a creator and artist, and Minerva inspires his clay images with life. Spitteler’s Prometheus is suffering rather than creative; only his soul is creative, but her work is secret and mysterious. She says to him in farewell:

> And now I depart from you, for a great work awaits me, a work of immense labour, and I must hasten to accomplish it.[15]

[292] It would seem that, with Spitteler, the Promethean creativity falls to the soul, while Prometheus himself merely suffers the pangs of the creative soul within him. But Goethe's Prometheus is self-activating, he is essentially and exclusively creative, defying the gods out of the strength of his own creative power:

> Who helped me
> Against the pride of the Titans?
> Who saved me from death?
> And slavery?
> Did you not do it all alone,
> O ardent, holy heart?[16]

[293] Epimetheus in this fragment is only sparingly sketched, he is thoroughly inferior to Prometheus, an advocate of collective feeling who can only understand the service of the soul as "obstinacy." He says to Prometheus:

> You stand alone!
> You in your obstinacy know not that bliss
> When the gods, you, and all that you have,
> Your world, your heaven,
> Are enfolded in one embracing unity.[17]

[294] Such indications as are to be found in the Prometheus fragments are too sparse to enable us to discern the character of Epimetheus. But Goethe's delineation of Prometheus shows a typical difference from the Prometheus of Spitteler. Goethe's Prometheus creates and works outwards into the world, he peoples space with the figures he has fashioned and his soul has animated, he fills the earth with the offspring of his creativeness, he is at once the master and teacher of man. But with the Prometheus of Spitteler everything goes inwards and vanishes in the darkness of the soul's depths, just as he himself disappears from the world of men, even wandering from the narrow confines of his homeland as though to make himself the more invisible. In accordance with the principle of compensation in analytical psychology, the soul, the

personification of the unconscious, must then be especially active, preparing a work that is not yet visible. Besides the passage already quoted, there is in Spitteler a full description of this expected compensatory process. We find it in the Pandora interlude.

[295] Pandora, that enigmatical figure in the Prometheus myth, is in Spitteler's version the divine maiden who lacks every relation with Prometheus but the very deepest. This conception is based on a version of the myth in which the woman who enters into relation with Prometheus is either Pandora or Athene. The Prometheus of mythology has his soul-relation with Pandora or Athene, as in Goethe. But, in Spitteler, a noteworthy departure is introduced, though it is already indicated in the historical myth, where Prometheus and Pandora are contaminated with Hephaestus and Athene. In Goethe, the Prometheus-Athene version is given preference. In Spitteler, Prometheus is removed from the divine sphere and granted a soul of his own. But his divinity and his original relation with Pandora in the myth are preserved as a cosmic counterplot, enacted independently in the celestial sphere. The happenings in the other world are what takes place on the further side of consciousness, that is in the unconscious. The Pandora interlude, therefore, is an account of what goes on in the unconscious during the sufferings of Prometheus. When Prometheus vanishes from the world, destroying every link that binds him to mankind, he sinks into his own depths, and the only thing around him, his only object, is himself. He has become "godlike," for God is by definition a Being who everywhere reposes in himself and by virtue of his omnipresence has himself always and everywhere for an object. Naturally Prometheus does not feel in the least godlike—he is supremely wretched. After Epimetheus has come to spit upon his misery, the interlude in the other world begins, and that naturally is just at the moment when all Prometheus' relations to the world are suppressed to the point of extinction. Experience shows that at such moments the contents of the unconscious have the best opportunity to assert their independence and vitality, so much so that they may even overwhelm consciousness.[18] Prometheus' condition in the unconscious is reflected in the following scene:

> And on the dark morning of that very day, in a still and solitary meadow above all the worlds, wandered God, the creator of all life, pursuing the accursed round in obedience to the strange nature of his mysterious and grievous sickness.
>
> For because of this sickness, he could never make an end of the weariness of his walk, might never find rest on the path of his feet, but ever with measured tread, day after day, year after year, must make the round of the still meadow, with plodding steps, bowed head, furrowed brow, and distorted countenance, his beclouded gaze turned always towards the midpoint of the circle.
>
> And when today as on all other days he made the inevitable round and his head sank deeper for sorrow and his steps dragged the more for weariness and the wellspring of his life seemed spent by the sore vigils of the night, there came to him through night and early dawn Pandora, his youngest daughter, who with uncertain step demurely approached the hallowed spot, and stood there humbly at his side, greeting him with modest glance, and questioning him with lips that held a reverential silence.[19]

[296] It is evident at a glance that God has caught the sickness of Prometheus. For just as Prometheus makes all his passion, his whole libido flow inwards to the soul, to his innermost depths, dedicating himself entirely to his soul's service, so God pursues his course round and round the pivot of the world and exhausts himself exactly like Prometheus, who is near to self-extinction. All his libido has gone into the unconscious, where an equivalent must be prepared; for libido is energy, and energy cannot disappear without a trace, but must always produce an equivalent. This equivalent is Pandora and the gift she brings to her father: a precious jewel which she wants to give to mankind to ease their sufferings.

[297] If we translate this process into the human sphere of Prometheus, it would mean that while Prometheus lies suffering in his state of "godlikeness," his soul is preparing a work destined to alleviate the sufferings of mankind. His soul wants to get to men. Yet the work which

his soul actually plans and carries out is not identical with the work of Pandora. Pandora's jewel is an unconscious mirror-image that *symbolizes* the real work of the soul of Prometheus. The text shows unmistakably what the jewel signifies: it is a *God-redeemer*, a renewal of the sun.[20] The sickness of God expresses his longing for rebirth, and to this end his whole life-force flows back into the centre of the self, into the depths of the unconscious, out of which life is born anew. That is why the appearance of the jewel in the world is described in a way that reflects the imagery of the birth of the Buddha in the *Lalita-Vistara:*[21] Pandora lays the jewel beneath a walnut-tree, just as Maya bears her child under a fig-tree:

> In the midnight shade beneath the tree it glows and sparkles and flames evermore, and, like the morning star in the dark sky, its diamond lightning flashes afar.
>
> And the bees also, and the butterflies, which danced over the flowery mead, hurried up, and played and rocked around the wonder-child … and the larks dropped down sheer from the upper air, all eager to pay homage to the new and lovelier sun-countenance, and as they drew near and beheld the dazzling radiance, their hearts swooned …
>
> And, enthroned over all, fatherly and benign, the chosen tree with his giant crown and heavy mantle of green, held his kingly hands protectingly over the faces of his children. And his many branches bent lovingly down and bowed themselves towards the earth as though they wished to screen and ward off alien glances, jealous that they alone might enjoy the unearned grace of the gift; while all the myriads of gently moving leaves fluttered and trembled with rapture, murmuring in joyous exultation a soft, clear-voice chorus in rustling accord: "Who could know what lies hidden beneath this lowly roof, or guess the treasure reposing in our midst!"[22]

[298] So Maya, when her hour was come, bore her child beneath the *plaksa* tree, which bowed its crown shelteringly to earth. From the incarnate Bodhisattva an immeasurable radiance spread through the world; gods and all nature took part in the birth. At his feet there grew up an immense lotus, and standing in the lotus he scanned the world. Hence the Tibetan

prayer: *Om mani padme hum* (Om! Behold the jewel in the lotus). And the moment of rebirth found the Bodhisattva beneath the chosen *bodhi* tree, where he became the Buddha, the Enlightened One. This rebirth or renewal was attended by the same light-phenomena, the same prodigies of nature and apparitions of gods, as the birth.

[299] In Spitteler's version, the inestimable treasure gets lost in the kingdom of Epimetheus, where only conscience reigns and not the soul. Raging over the stupidity of Epimetheus, the angel upbraids him: "And had you no soul, that like the dumb and unreasoning beasts you hid from the wondrous divinity?"[23]

[300] It is clear that Pandora's jewel symbolizes a renewal of God, a new God, but this takes place in the divine sphere, i.e., in the unconscious. The intimations of the process that filter through into consciousness are not understood by the Epimethean principle, which governs the relation to the world. This is elaborated by Spitteler in the ensuing sections,[24] where we see how the world of consciousness with its rational attitude and orientation to objects is incapable of appreciating the true value and significance of the jewel. Because of this, it is irretrievably lost.

[301] The renewed God signifies a regenerated attitude, a renewed possibility of life, a recovery of vitality, because, psychologically speaking, God always denotes the highest value, the maximum sum of libido, the fullest intensity of life, the optimum of psychological vitality. But in Spitteler the Promethean attitude proves to be just as inadequate as the Epimethean. The two tendencies get dissociated: the Epimethean attitude is adapted to the world as it actually is, but the Promethean is not, and for that reason it has to work for a renewal of life. It also produces a new attitude to the world (symbolized by the jewel given to mankind), though this does not find favour with Epimetheus. Nevertheless, we recognize in Pandora's gift a symbolic attempt to solve the problem discussed in the chapter on Schiller's *Letters*—the problem of uniting the differentiated with the undifferentiated function.

[302] Before proceeding further with this problem, we must turn back to Goethe's Prometheus. As we have seen, there are unmistakable differences between the creative Prometheus of Goethe and the suffering

figure presented by Spitteler. Another and more important difference is the relation to Pandora. In Spitteler, Pandora is a duplicate of the soul of Prometheus belonging to the other world, the sphere of the gods; in Goethe she is entirely the creature and daughter of the Titan, and thus absolutely dependent on him. The relation of Goethe's Prometheus with Minerva puts him in the place of Vulcan, and the fact that Pandora is wholly his creature, and does not figure as a being of divine origin, makes him a creator-god and removes him altogether from the human sphere. Hence Prometheus says:

> And when I deemed it was myself,
> A goddess spoke,
> And when I deemed a goddess was speaking,
> It was myself.

[303] With Spitteler, on the other hand, Prometheus is stripped of divinity, even his soul is only an unofficial daemon; his divinity is hypostatized, quite detached from everything human. Goethe's version is classical to this extent: it emphasizes the divinity of the Titan. Accordingly Epimetheus too must diminish in stature, whilst in Spitteler he emerges as a much more positive character. Now in Goethe's "Pandora" we are fortunate in possessing a work which conveys a far more complete portrait of Epimetheus than the fragment we have been discussing. Epimetheus introduces himself as follows:

> For me day and night are not clearly divided,
> Always I carry the old evil of my name:
> My progenitors named me Epimetheus.
> Brooding on the past with its hasty actions,
> Glancing back, troubled in thought,
> To the melancholy realm of fugitive forms
> Interfluent with the opportunities of past days.
> Such bitter toil was laid on my youth
> That turning impatiently towards life
> I seized heedlessly the present moment
> And won tormenting burdens of fresh care.[25]

[304] With these words Epimetheus reveals his nature: he broods over the past, and can never free himself from Pandora, whom (according to the classical myth) he has taken to wife. He cannot rid himself of her

memory-image, although she herself has long since deserted him, leaving him her daughter Epimeleia (Care), but taking with her Elpore (Hope). Epimetheus is portrayed so clearly that we are at once able to recognize what psychological function he represents. While Prometheus is still the same creator and modeller, who daily rises early from his couch with the same inexhaustible urge to create and to set his stamp on the world, Epimetheus is entirely given up to fantasies, dreams, and memories, full of anxious misgivings and troubled deliberations. Pandora appears as the creature of Hephaestus, rejected by Prometheus but chosen by Epimetheus for a wife. He says of her: “Even the pains which such a treasure brings are pleasure.” Pandora is to him a precious jewel, the supreme value:

> And forever she is mine, the glorious one!
> From her I have received supreme delight.
> I possessed Beauty, and Beauty enfolded me,
> Splendidly she came in the wake of the spring.
> I knew her, I caught her, and then it was done.
> Clouding thoughts vanished like mist,
> She raised me from earth and up to heaven.
> You seek for words worthy to praise her,
> You would extol her, she wanders already on high.
> Set your best beside her, you’ll see it is bad.
> Her words bewilder, yet she is right.
> Struggle against her, she’ll win the fight.
> Faltering to serve her, you’re still her slave.
> Kindness and love she loves to fling back.
> What avails high esteem? She will strike it down.
> She sets her goal and wings on her way.
> If she blocks your path, she at once holds you up.
> Make her an offer and she’ll raise your bid,
> You’ll give riches and wisdom and all in the bargain.
> She comes down to earth in a thousand forms,
> Hovering the waters, striding the meadows.
> Divinely proportioned she dazzles and thrills,
> Her form ennobling the content within,
> Lending it and herself the mightiest power.
> She came radiant with youth and the flesh of woman.[26]

[305] For Epimetheus, as these verses clearly show, Pandora has the value of a soul-image—she stands for his soul; hence her divine power, her unshakable supremacy. Whenever such attributes are conferred upon a personality, we may conclude with certainty that such a personality is a *symbol-carrier*, or an image of projected unconscious contents. For it is the contents of the unconscious that have the supreme power Goethe has described, incomparably characterized in the line: “Make her an offer and she’ll raise your bid.” In this line the peculiar emotional reinforcement of conscious contents by association with analogous contents of the unconscious is caught to perfection. This reinforcement has in it something daemonic and compelling, and thus has a “divine” or “devilish” effect.

[306] We have already described Goethe’s Prometheus as extraverted. It is still the same in his “Pandora,” although here the relation of Prometheus with the soul, the unconscious feminine principle, is missing. To make up for this, Epimetheus emerges as the introvert turned to the inner world. He broods, he calls back memories from the grave of the past, he “reflects.” He differs absolutely from Spitteler’s Epimetheus. We could therefore say that in Goethe’s “Pandora” the situation suggested in his earlier fragment has actually come about. Prometheus represents the extraverted man of action, and Epimetheus the brooding introvert. This Prometheus is, in extraverted form, what Spitteler’s is in introverted form. In Goethe’s “Pandora” he is purely creative for collective ends—he sets up a regular factory in his mountain, where articles of use for the whole world are produced. He is cut off from his inner world, which relation devolves this time on Epimetheus, i.e., on the secondary and purely reactive thinking and feeling of the extravert which possess all the characteristics of the undifferentiated function. Thus it comes about that Epimetheus is wholly at the mercy of Pandora, because she is in every respect superior to him. This means, psychologically, that the unconscious Epimethean function of the extravert, namely that fantastic, brooding, ruminative fancy, is intensified by the intervention of the soul. If the soul is coupled with the less differentiated function, one must conclude that the superior, differentiated function is too collective; it is the servant of the collective conscience (Spitteler’s “p’s” and “q’s”) and

not the servant of freedom. Whenever this is so—and it happens very frequently—the less differentiated function or the "other side" is reinforced by a pathological egocentricity. The extravert then fills up his spare time with melancholic or hypochondriacal brooding and may even have hysterical fantasies and other symptoms,[27] while the introvert grapples with compulsive feelings of inferiority[28] which take him unawares and put him in a no less dismal plight.

[307] The resemblance between the Prometheus of "Pandora" and the Prometheus of Spitteler ends here. He is merely a collective itch for action, so one-sided that it amounts to a repression of eroticism. His son Phileros ('lover of Eros') is simply erotic passion; for, as the son of his father, he must, as is often the case with children, re-enact under unconscious compulsion the unlived lives of his parents.

[308] The daughter of Pandora and Epimetheus, the man who always broods afterwards on his unthinking actions, is fittingly named Epimeleia, Care. Phileros loves Epimeleia, and thus the guilt of Prometheus in rejecting Pandora is expiated. At the same time, Prometheus and Epimetheus become reconciled when the industriousness of Prometheus is shown to be nothing but unadmitted eroticism, and Epimetheus' constant broodings on the past to be rational misgivings which might have checked the unremitting productivity of Prometheus and kept it within reasonable bounds.

[309] This attempt of Goethe's to find a solution, which appears to have evolved from his extraverted psychology, brings us back to Spitteler's attempt, which we left for the time being in order to discuss Goethe's Prometheus.

[310] Spitteler's Prometheus, like his God, turns away from the world, from the periphery, and gazes inwards to the centre, the "narrow passage"[29] of rebirth. This concentration or introversion pipes the libido into the unconscious. The activity of the unconscious is increased—the psyche begins to "work" and creates a product that wants to get out of the unconscious into consciousness. But consciousness has two attitudes: the Promethean, which withdraws the libido from the world, introverting without giving out, and the Epimethean, constantly giving out and

responding in a soulless fashion, fascinated by the claims of external objects. When Pandora makes her gift to the world it means, psychologically, that an unconscious product of great value is on the point of reaching the extraverted consciousness, i.e., it is seeking a relation to the real world. Although the Promethean side, or in human terms the artist, intuitively apprehends the great value of the product, his personal relations to the world are so subordinated to the tyranny of tradition that it is appreciated merely as a work of art and not taken for what it actually is, a symbol that promises a renewal of life. In order to transform it from a purely aesthetic interest into a living reality, it must be assimilated into life and actually lived. But when a man's attitude is mainly introverted and given to abstraction, the function of extraversion is inferior, in the grip of collective restraints. These restraints prevent the symbol created by the psyche from living. The jewel gets lost, but one cannot really live if "God," the supreme vital value that is expressed in the symbol, cannot become a living fact. Hence the loss of the jewel signifies at the same time the beginning of Epimetheus' downfall.

[311] And now the enantiodromia begins. Instead of taking for granted, as every rationalist and optimist is inclined to do, that a good state will be followed by a better, because everything tends towards an "ascending development," Epimetheus, the man of blameless conscience and universally acknowledged moral principles, makes a pact with Behemoth and his evil host, and even the divine children entrusted to his care are bartered to the devil.[30] Psychologically, this means that the collective, undifferentiated attitude to the world stifles a man's highest values and becomes a destructive force, whose influence increases until the Promethean side, the ideal and abstract attitude, places itself at the service of the soul's jewel and, like a true Prometheus, kindles for the world a new fire. Spitteler's Prometheus has to come out of his solitude and tell men, even at the risk of his life, that they are in error, and where they err. He must acknowledge the pitilessness of truth, just as Goethe's Prometheus has to experience in Phileros the pitilessness of love.

[312] That the destructive element in the Epimethean attitude is actually this traditional and collective restraint is shown in Epimetheus' raging fury against the "little lamb," an obvious caricature of traditional

Christianity. In this outburst of affect something breaks through that is familiar to us from the Ass Festival in *Zarathustra*. It is the expression of a contemporary tendency.

[313] Man is constantly inclined to forget that what was once good does not remain good eternally. He follows the old ways that once were good long after they have become bad, and only with the greatest sacrifices and untold suffering can he rid himself of this delusion and see that what was once good is now perhaps grown old and is good no longer. This is so in great things as in small. The ways and customs of childhood, once so sublimely good, can hardly be laid aside even when their harmfulness has long since been proved. The same, only on a gigantic scale, is true of historical changes of attitude. A collective attitude is equivalent to a religion, and changes of religion constitute one of the most painful chapters in the world's history. In this respect our age is afflicted with a blindness that has no parallel. We think we have only to declare an accepted article of faith incorrect and invalid, and we shall be psychologically rid of all the traditional effects of Christianity or Judaism. We believe in enlightenment, as if an intellectual change of front somehow had a profounder influence on the emotional processes or even on the unconscious. We entirely forget that the religion of the last two thousand years is a psychological attitude, a definite form and manner of adaptation to the world without and within, that lays down a definite cultural pattern and creates an atmosphere which remains wholly uninfluenced by any intellectual denials. The change of front is, of course, symptomatically important as an indication of possibilities to come, but on the deeper levels the psyche continues to work for a long time in the old attitude, in accordance with the laws of psychic inertia. Because of this, the unconscious was able to keep paganism alive. The ease with which the spirit of antiquity springs to life again can be observed in the Renaissance, and the readiness of the vastly older primitive mentality to rise up from the past can be seen in our own day, perhaps better than at any other epoch known to history.

[314] The more deeply rooted the attitude, the more violent will be the attempts to shake it off. "Écrasez l'infâme," the cry of the Age of Enlightenment, heralded the religious upheaval started off by the French

Revolution, and this religious upheaval was nothing but a basic readjustment of attitude, though it lacked universality. The problem of a general change of attitude has never slept since that time; it cropped up again in many prominent minds of the nineteenth century. We have seen how Schiller sought to master it, and in Goethe's treatment of Prometheus and Epimetheus we see yet another attempt to effect some sort of union between the more highly differentiated function, which corresponds to the Christian ideal of favouring the good, and the less differentiated function, whose repression corresponds to the Christian ideal of rejecting the evil.[31] In the symbols of Prometheus and Epimetheus, the difficulty that Schiller sought to master philosophically and aesthetically is clothed in the garment of a classical myth. Consequently, something happens which, as I pointed out earlier, is a typical and regular occurrence: when a man meets a difficult task which he cannot master with the means at his disposal, a retrograde movement of libido automatically sets in, i.e., a regression. The libido draws away from the problem of the moment, becomes introverted, and reactivates in the unconscious a more or less primitive analogue of the conscious situation. This law determined Goethe's choice of a symbol: Prometheus was the saviour who brought light and fire to mankind languishing *in* darkness. Goethe's deep scholarship could easily have picked on another saviour, so that the symbol he chose is not sufficient as an explanation. It must lie rather in the classical spirit, which at the turn of the eighteenth century was felt to contain a compensatory value and was given expression in every possible way—in aesthetics, philosophy, morals, even politics (Philhellenism). It was the paganism of antiquity, glorified as "freedom," "naïveté," "beauty," and so on, that met the yearnings of that age. These yearnings, as Schiller shows so clearly, sprang from a feeling of imperfection, of spiritual barbarism, of moral servitude, of drabness. This feeling in its turn arose from a one-sided evaluation of everything Greek, and from the consequent fact that the psychological dissociation between the differentiated and the undifferentiated functions became painfully evident. The Christian division of man into two halves, one valuable and one depraved, was unbearable to the superior sensibilities of that age. Sinfulness stumbled on the idea of an everlasting natural beauty, in the contemplation of which the age reached back to an earlier time when the idea of sinfulness had not yet disrupted man's wholeness, when the heights and depths of human nature could still dwell together in complete naïveté without offending moral or aesthetic susceptibilities.

[315] But the attempt at a regressive Renaissance shared the fate of the "Prometheus Fragment" and "Pandora": it was stillborn. The classical solution would no longer work, because the intervening centuries of Christianity with their profound spiritual upheavals could not be undone. So the penchant for the antique gradually petered out in medievalism. This process sets in with Goethe's *Faust*, where the problem is seized by both horns. The divine wager between good and evil is accepted. Faust, the medieval Prometheus, enters the lists with Mephistopheles, the medieval Epimetheus, and makes a pact with him. And here the problem becomes so sharply focussed that one can see that Faust and Mephisto are the same person. The Epimethean principle, which always thinks backwards and reduces everything to the primal chaos of "interfluent forms" (par. 303), condenses into the devil whose evil power threatens everything living with the "devil's cold fist" and would force back the light into the maternal darkness whence it was born. The devil everywhere displays a true Epimethean thinking, a thinking in terms of "nothing but" which reduces All to Nothing. The naïve passion of Epimetheus for Pandora becomes the diabolical plot of Mephistopheles for the soul of Faust. And the cunning foresight of Prometheus in turning down the divine Pandora is expiated in the tragedy of Gretchen and the yearning for Helen, with its belated fulfillment, and in the endless ascent to the Heavenly Mothers ("The Eternal Feminine / Leads us upward and on").

[316] The Promethean defiance of the accepted gods is personified in the figure of the medieval magician. The magician has preserved in himself a trace of primitive paganism;[32] he possesses a nature that is still unaffected by the Christian dichotomy and is in touch with the still pagan unconscious, where the opposites lie side by side in their original naïve state, beyond the reach of "sinfulness" but liable, if assimilated into conscious life, to beget evil as well as good with the same daemonic

energy (“Part of that power which would / Ever work evil yet engenders good”). He is a destroyer but also a saviour, and such a figure is pre-eminently suited to become the symbolic bearer of an attempt to resolve the conflict. Moreover the medieval magician has laid aside the classical naïveté which was no longer possible, and become thoroughly steeped *in* the Christian atmosphere. The old pagan element must at first drive him into a complete Christian denial and mortification of self, because his longing for redemption is so strong that every avenue has to be explored. But in the end the Christian attempt at a solution fails too, and it then transpires that the possibility of redemption lies precisely in the obstinate persistence of the old pagan element, because the anti-Christian symbol opens the way for an acceptance of evil. Goethe’s intuition thus grasped the problem in all its acuteness. It is certainly significant that the more superficial attempts at a solution—the “Prometheus Fragment,” “Pandora,” and the Rosicrucian compromise, a blend of Dionysian joyousness and Christian self-sacrifice—remained uncompleted.

[317] Faust’s redemption began at his death. The divine, Promethean character he had preserved all his life fell away from him only at death, with his rebirth. Psychologically, this means that the Faustian attitude must be abandoned before the individual can become an integrated whole. The figure that first appeared as Gretchen and then on a higher level as Helen, and was finally exalted as the Mater Gloriosa, is a symbol whose many meanings cannot be discussed here. Suffice to say that it is the same primordial image that lies at the heart of Gnosticism, the image of the divine harlot—Eve, Helen, Mary, Sophia-Achamoth.

3. THE SIGNIFICANCE OF THE UNITING SYMBOL

[318] If, from the vantage point we have now gained, we glance once more at Spitteler’s presentation of the problem, we are immediately struck by the fact that the pact with evil[33] came about by no design of Prometheus but because of the thoughtlessness of Epimetheus, who possesses a merely collective conscience but has no power of discrimination with regard to the things of the inner world. As is invariably the case with a standpoint oriented to the object, it allows itself to be determined

exclusively by collective values and consequently overlooks what is new and unique. Current collective values can certainly be measured by an objective criterion, but only a free and individual assessment—a matter of living feeling—can give the true measure of something newly created. It also needs a man who has a "soul" and not merely relations to objects.

[319] The downfall of Epimetheus begins with the loss of the new-born God-image. His morally unassailable thinking, feeling, and acting in no way prevent the evil and destructive element from creeping in and gaining the upper hand. The invasion of evil signifies that something previously good has turned into something harmful. Spitteler is here expressing the idea that the ruling moral principle, although excellent to begin with, in time loses its essential connection with life, since it no longer embraces life's variety and abundance. What is rationally correct is too narrow a concept to grasp life in its totality and give it permanent expression. The divine birth is an event altogether outside the bounds of rationality. Psychologically, it proclaims the fact that a new symbol, a new expression of life at its most intense, is being created. Every Epimethean man, and everything Epimethean in man, prove incapable of comprehending this event. Yet, from that moment, the highest intensity of life is to be found only in this new direction. Every other direction gradually drops away, dissolved in oblivion.

[320] The new life-giving symbol springs from Prometheus' love for his soul-mistress, a daemonic figure indeed. One can therefore be certain that, interwoven with the new symbol and its living beauty, there will also be the element of evil, for otherwise it would lack the glow of life as well as beauty, since life and beauty are by nature morally neutral. That is why the Epimethean, collective mentality finds nothing estimable in it. It is completely blinded by its one-sided moral standpoint, which is identical with the "little lamb." The raging of Epimetheus when he turns against the "little lamb" is merely "Écrasez l'infâme" in new form, a revolt against established Christianity, which was incapable of understanding the new symbol and so giving life a new direction.

[321] This bare statement of the case might leave us entirely cold were there no poets who could fathom and read the collective unconscious.

They are always the first to divine the darkly moving mysterious currents and to express them, as best they can, in symbols that speak to us. They make known, like true prophets, the stirrings of the collective unconscious or, in the language of the Old Testament, "the will of God," which in the course of time must inevitably come to the surface as a collective phenomenon. The redemptive significance of the deed of Prometheus, the downfall of Epimetheus, his reconciliation with his soul-serving brother, and the vengeance Epimetheus wreaks on the "little lamb"—recalling in its cruelty the scene between Ugolino and Archbishop Ruggieri[34]—prepare a solution of the conflict that entails a sanguinary revolt against traditional collective morality.

[322] In a poet of modest capacity we may assume that the pinnacle of his work does not transcend his personal joys, sorrows, and aspirations. But Spitteler's work entirely transcends his personal destiny. For this reason his solution of the problem is not an isolated one. From here to Zarathustra, the breaker of the tables, is only a step. Stirner had also joined the company in the wake of Schopenhauer, who was the first to conceive the theory of "world negation." Psychologically, "world" means how I see the world, my attitude to the world; thus the world can be conceived as "my will" and "my idea."[35] In itself the world is indifferent. It is my Yes and No that create the differences. Negation, therefore, is itself an attitude to the world, a particularly Schopenhauerian attitude that on the one hand is purely intellectual and rational, and on the other a profound feeling of mystical identity with the world. This attitude is introverted; it suffers therefore from its typological antithesis. But Schopenhauer's work by far transcends his personality. It voices what was obscurely thought and felt by many thousands. Similarly with Nietzsche: his *Zarathustra*, in particular, brings to light the contents of the collective unconscious of our time, and in him we find the same distinguishing features: iconoclastic revolt against the conventional moral atmosphere, and acceptance of the "Ugliest Man," which leads to the shattering unconscious tragedy presented in *Zarathustra*. But what creative minds bring up out of the collective unconscious also actually exists, and sooner or later must make its appearance in collective psychology. Anarchism, regicide, the constant increase and splitting off

of a nihilistic element on the extreme Left, with a programme absolutely hostile to culture—these are phenomena of mass psychology, which were long ago adumbrated by poets and creative thinkers.

[323] We cannot, therefore, afford to be indifferent to the poets, since in their principal works and deepest inspirations they create from the very depths of the collective unconscious, voicing aloud what others only dream. But though they proclaim it aloud, they fashion only a symbol in which they take aesthetic pleasure, without any consciousness of its true meaning. I would be the last to dispute that poets and thinkers have an educative influence on their own and succeeding generations, but it seems to me that their influence consists essentially in the fact that they voice rather more clearly and resoundingly what all men know, and only to the extent that they express this universal unconscious "knowledge" have they an educative or seductive effect. The poet who has the greatest and most immediately suggestive effect is the one who knows how to express the most superficial levels of the unconscious in a suitable form. But the more deeply the vision of the creative mind penetrates, the stranger it becomes to mankind in the mass, and the greater is the resistance to the man who in any way stands out from the mass. The mass does not understand him although unconsciously living what he expresses; not because the poet proclaims it, but because the mass draws its life from the collective unconscious into which he has peered. The more thoughtful of the nation certainly comprehend something of his message, but, because his utterance coincides with processes already going on in the mass, and also because he anticipates their own aspirations, they hate the creator of such thoughts, not out of malice, but merely from the instinct of self-preservation. When his insight into the collective unconscious reaches a depth where its content can no longer be grasped in any conscious form of expression, it is difficult to decide whether it is a morbid product or whether it is incomprehensible because of its extraordinary profundity. An imperfectly understood yet deeply significant content usually has something morbid about it. And morbid products are as a rule significant. But in both cases the approach to it is difficult. The fame of these creators, if it ever arrives at all, is posthumous and often delayed for several centuries. Ostwald's assertion

that a genius today is misunderstood at most for a decade is confined, one must hope, to the realm of technological discoveries, otherwise such an assertion would be ludicrous in the extreme.

[324] There is another point of particular importance to which I feel I ought to draw attention. The solution of the problem in *Faust*, in Wagner’s *Parsifal*, in Schopenhauer, and even in Nietzsche’s *Zarathustra*, is *religious*. It is therefore not surprising that Spitteler too is drawn towards a religious setting. When a problem is grasped as a religious one, it means, psychologically, that it is seen as something very important, of particular value, something that concerns the whole man, and hence also the unconscious (the realm of the gods, the other world, etc.). With Spitteler the religious background is of such luxuriance that the specifically religious problem loses in depth, though gaining in mythological richness and archaism. The lush mythological texture makes the work difficult to approach, as it shrouds the problem from clear comprehension and obscures its solution. The abstruse, grotesque, somewhat tasteless quality that always attaches to this kind of mythological embroidery checks the flow of empathy, alienates one from the meaning of the work, and gives the whole a rather disagreeable flavour of a certain kind of originality that manages to escape being psychically abnormal only by its meticulous attention to detail. Nevertheless, this mythological profusion, however tiresome and unpalatable it may be, has the advantage of allowing the symbol plenty of room to unfold, though in such an unconscious fashion that the conscious wit of the poet is quite at a loss to point up its meaning, but devotes itself exclusively to mythological proliferation and its embellishment. In this respect Spitteler’s poem differs from both *Faust* and *Zarathustra:* in these works there is a greater conscious participation by the authors in the meaning of the symbol, with the result that the mythological profusion of *Faust* and the intellectual profusion of *Zarathustra* are pruned back in the interests of the desired solution. Both *Faust* and *Zarathustra* are, for this reason, far more satisfying *aesthetically* than Spitteler’s Prometheus, though the latter, as a more or less faithful reflection of actual processes of the collective unconscious, has a deeper *truth*.

[325] *Faust* and *Zarathustra* are of very great assistance in the individual mastery of the problem, while Spitteler's *Prometheus and Epimetheus*, thanks to the wealth of mythological material, affords a more general insight into it and the way it appears in collective life. What, first and foremost, is revealed in Spitteler's portrayal of unconscious religious contents is the *symbol of God's renewal*, which was subsequently treated at greater length in his *Olympian Spring*. This symbol appears to be intimately connected with the opposition between the psychological types and functions, and is obviously an attempt to find a solution in the form of a renewal of the general attitude, which in the language of the unconscious is expressed as a renewal of God. This is a well-known primordial image that is practically universal; I need only mention the whole mythological complex of the dying and resurgent god and its primitive precursors all the way down to the re-charging of fetishes and churingas with magical force. It expresses a transformation of attitude by means of which a new potential, a new manifestation of life, a new fruitfulness, is created. This latter analogy explains the well-attested connection between the renewal of the god and seasonal and vegetational phenomena. One is naturally inclined to assume that seasonal, vegetational, lunar, and solar myths underlie these analogies. But that is to forget that a myth, like everything psychic, cannot be solely conditioned by external events. Anything psychic brings its own internal conditions with it, so that one might assert with equal right that the myth is purely psychological and uses meteorological or astronomical events merely as a means of expression. The whimsicality and absurdity of many primitive myths often makes the latter explanation seem far more appropriate than any other.

[326] The psychological point of departure for the god-renewal is an increasing split in the deployment of psychic energy, or libido. One half of the libido is deployed in a Promethean direction, the other half in the Epimethean. Naturally this split is a hindrance not only in society but also in the individual. As a result, the vital optimum withdraws more and more from the opposing extremes and seeks a middle way, which must naturally be irrational and unconscious, just because the opposites are rational and conscious. Since the middle position, as a function of

mediation between the opposites, possesses an irrational character and is still unconscious, it appears projected in the form of a mediating god, a Messiah. In our more primitive, Western forms of religion—primitive because lacking insight—the new bearer of life appears as a God or Saviour who, in his fatherly love and solicitude or from his own inner resolve, puts an end to the division as and when it suits him and for reasons we are not fitted to understand. The childishness of this conception needs no stressing. The East has for thousands of years been familiar with this process and has founded on it a psychological doctrine of salvation which brings the way of deliverance within man's ken and capacity. Thus the religions of India and China, and particularly Buddhism which combines the spheres of both, possess the idea of a redemptive middle way of magical efficacy which is attainable by means of a conscious attitude. The Vedic conception is a conscious attempt to find release from the pairs of opposites in order to reach the path of redemption.

a. The Brahmanic Conception of the Problem of Opposites

[327] The Sanskrit term for pairs of opposites in the psychological sense is *dvandva*. It also means pair (particularly man and woman), strife, quarrel, combat, doubt. The pairs of opposites were ordained by the world-creator. The *Laws of Manu* says:[36]

> Moreover, in order to distinguish actions, he separated merit from demerit, and he caused the creatures to be affected by the pairs of opposites, such as pain and pleasure.

As further pairs of opposites, the commentator Kulluka names desire and anger, love and hate, hunger and thirst, care and folly, honour and disgrace. The *Ramayana* says: "This world must suffer under the pairs of opposites for ever."[37] Not to allow oneself to be influenced by the pairs of opposites, but to be *nirdvandva* (free, untouched by the opposites), to raise oneself above them, is an essentially ethical task, because deliverance from the opposites leads to redemption.

[328] In the following passages I give a series of examples:

When by the disposition [of his heart] he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death. He who has in this manner gradually given up all attachments and is freed from all pairs of opposites reposes in Brahman alone.[38]

The Vedas speak of the three *gunas*; but do you, O Arjuna, be indifferent to the three *gunas*, indifferent to the opposites, ever steadfast in courage.[39]

Then [in deepest meditation, *samadhi*] comes the state of being untroubled by the opposites.[40]

There he shakes off his good deeds and his evil deeds. His dear relatives succeed to the good deeds; those not so dear, to the evil deeds. Then, just as one driving a chariot looks down upon the two chariot wheels, so he looks down upon day and night, so upon good deeds and evil deeds, and upon all the pairs of opposites. Being freed from good and from evil, the knower of Brahman enters into Brahman.[41]

One entering into meditation must be a master over anger, attachment to the world, and the desires of the senses, free from the pairs of opposites, void of self-seeking, empty of expectation.[42]

Clothed with dust, housed under the open sky, I will make my lodging at the root of a tree, surrendering all things loved as well as unloved, tasting neither grief nor pleasure, forfeiting blame and praise alike, neither cherishing hope, nor offering respect, free from the opposites, with neither fortune nor belongings.[43]

He who remains the same in living as in dying, in fortune as in misfortune, whether gaining or losing, loving or hating, will be liberated. He who covets nothing and despises nothing, who is free from the opposites, whose soul knows no passion, is in every way liberated. … He who does neither right nor wrong, renouncing the merit and demerit acquired in former lives, whose soul is tranquil when the bodily elements vanish away, he will be liberated.[44]

A thousand years I have enjoyed the things of sense, while still the craving for them springs up unceasingly. These I will therefore renounce, and direct my mind upon Brahman; indifferent to the opposites and free from self-seeking, I will roam with the wild.[45]

> Through forbearance towards all creatures, through the ascetic life, through self-discipline and freedom from desire, through the vow and the blameless life, through equanimity and endurance of the opposites, man will partake of the bliss of Brahman, which is without qualities.[46]
>
> Free from pride and delusion, with the evils of attachment conquered, faithful always to the highest Atman, with desires extinguished, untouched by the opposites of pain and pleasure, they go, undeluded, towards that imperishable place.[47]

[329] As is clear from these quotations, it is external opposites, such as heat and cold, that must first be denied participation in the psyche, and then extreme fluctuations of emotion, such as love and hate. Fluctuations of emotion are, of course, the constant concomitants of all psychic opposites, and hence of all conflicts of ideas, whether moral or otherwise. We know from experience that the emotions thus aroused increase in proportion as the exciting factor affects the individual as a whole. The Indian purpose is therefore clear: it wants to free the individual altogether from the opposites inherent in human nature, so that he can attain a new life in Brahman, which is the state of redemption and at the same time God. It is an irrational union of opposites, their final overcoming. Although Brahman, the world-ground and world-creator, created the opposites, they must nevertheless be cancelled out in it again, for otherwise it would not amount to a state of redemption. Let me give another series of examples:

> Braham is *sat* and *asat*, being and non-being, *satyam* and *asatyam*, reality and irreality.[48]
>
> There are two forms of Brahman: the formed and the formless, the mortal and the immortal, the stationary and the moving, the actual and the transcendental.[49]
>
> That Person, the maker of all things, the great Self, seated forever in the heart of man, is perceived by the heart, by the thought, by the mind; they who know that become immortal. When there is no darkness [of ignorance] there is neither day nor night, neither being nor not-being.[50]

In the imperishable, infinite, highest Brahman, two things are hidden: knowing and not-knowing. Not-knowing perishes, knowing is immortal; but he who controls both knowing and not-knowing is another.[51]

That Self, smaller than small, greater than great, is hidden in the heart of this creature here. Man becomes free from desire and free from sorrow when by the grace of the Creator he beholds the glory of the Self. Sitting still he walks afar; lying down he goes every where. Who but I can know the God who rejoices and rejoices not?[52]

> Unmoving, the One is swifter than the mind.
> Speeding ahead, it outruns the gods of the senses.
> Past others running, it goes standing.
> …
> It moves. It moves not.
> Far, yet near.
> Within all,
> Outside all.[53]

Just as a falcon or an eagle, after flying to and fro in space, wearies, and folds its wings, and drops down to its eyrie, so this Person (*purusha*) hastens to that state where, asleep, he desires no desires and sees no dream.

This, verily, is that form of his which is beyond desire, free from evil, without fear. As a man in the embrace of a beloved woman knows nothing of a without and within, so this Person, in the embrace of the knowing Self, knows nothing of a without and within. This, verily, is that form of his in which all desire is satisfied, Self his sole desire, which is no desire, without sorrow.

An ocean of seeing, one without a second, he becomes whose world is Brahman. … This is man’s highest achievement, his greatest wealth, his final goal, his utmost joy.[54]

> That which moves, that which flies and yet stands still,
> That which breathes yet draws no breath,
>   that which closes the eyes,
> That, many-formed, sustains the whole earth,

> That, uniting, becomes One only.[55]

[330] These quotations show that Brahman is the union and dissolution of all opposites, and at the same time stands outside them as an irrational factor. It is therefore wholly beyond cognition and comprehension. It is a divine entity, at once the self (though to a lesser degree than the analogous Atman concept) and a definite psychological state characterized by isolation from the flux of affects. Since suffering is an affect, release from affects means deliverance. Deliverance from the flux of affects, from the tension of opposites, is synonymous with the way of redemption that gradually leads to Brahman. Brahman is thus not only a state but also a process, a *durée créatrice*. It is therefore not surprising that it is expressed in the Upanishads by means of the symbols I have termed libido symbols.[56] In the following section I give some examples of these.

b. The Brahmanic Conception of the Uniting Symbol

[331] When it is said that Brahman was first born in the East, it means that each day Brahman is born in the East like yonder sun.[57]

> Yonder man in the sun is Parameshtin, Brahman, Atman.[58]

> Brahman is a light like the sun.[59]

> As to that Brahman, it is yonder burning disk.[60]

> *First was Brahman born in the East*.
> From the horizon the Gracious One appears in splendour;
> He illumines the forms of this world, the deepest, the highest,
> He is the cradle of what is and is not.
> Father of the luminaries, *begetter* of the treasure,
> He entered many-formed into the spaces of the air.
> They glorify him with hymns of praise,
> *Making the youth that is Brahman increase by Brahman*.[61]
> Brahman brought forth the gods, Brahman created the world.[62]

[332] In this last passage, I have italicized certain characteristic points which make it clear that Brahman is not only the producer but the produced, the ever-becoming. The epithet “Gracious One” (*vena*), here

bestowed on the sun, is elsewhere applied to the seer who is endowed with the divine light, for, like the Brahman-sun, the mind of the seer traverses "earth and heaven contemplating Brahman."[63] The intimate connection, indeed identity, between the divine being and the self (Atman) of man is generally known. I give an example from the *Atharva Veda:*

> The disciple of Brahman gives life to both worlds.
> In him all the gods are of one mind.
> He contains and sustains earth and heaven,
> His *tapas* is food even for his teacher.
> To the disciple of Brahman there come, to visit him,
> Fathers and gods, singly and in multitudes,
> And he nourishes all the gods with his *tapas*.[64]

[333] The disciple of Brahman is himself an incarnation of Brahman, whence it follows that the essence of Brahman is identical with a definite psychological state.

> The sun, set in motion by the gods, shines unsurpassed yonder.
> From it came the Brahma-power, the supreme Brahman,
> And all the gods, and what makes them immortal.
> The disciple of Brahman upholds the splendour of Brahman,
> Interwoven in him are the hosts of the gods.[65]

[334] Brahman is also *prana*, the breath of life and the cosmic principle; it is *vayu*, wind, which is described in the *Brihadaranyaka Upanishad* (3, 7) as "the thread by which this world and the other world and all things are tied together, the Self, the inner controller, the immortal."

He who dwells in man, he who dwells in the sun, are the same.[66]

Prayer of the dying:

> The face of the Real
> Is covered with a golden disk.
> Open it, O sun,
> That we may see the nature of the Real.
> …
> Spread thy rays, and gather them in!
> The light which is thy fairest form,

> I see it.
> That Person who dwells yonder, in the sun, is myself.
> May my breath go to the immortal wind
> When my body is consumed to ash.[67]

> And this light which shines above this heaven, higher than all, on top of everything, in the highest world, beyond which there are no other worlds, this same is the light which is in man. And of this we have tangible proof, when we perceive by touch the heat here in the body.[68]
>
> As a grain of rice, or a grain of barley, or a grain of millet, or the kernel of a grain of millet, is this golden Person in the heart, like a flame without smoke, greater than the earth, greater than the sky, greater than space, greater than all these worlds. That is the soul of all creatures, that is myself. Into that I shall enter on departing hence.[69]

[335] Brahman is conceived in the *Atharva Veda* as the vitalistic-principle, the life force, which fashions all the organs and their respective instincts:

> Who planted the seed within him, that he might spin the thread of generation? Who assembled within him the powers of the mind, gave him voice and the play of features?[70]

[336] Even man's strength comes from Brahman. It is clear from these examples, which could be multiplied indefinitely, that the Brahman concept, by virtue of all its attributes and symbols, coincides with that of a dynamic or creative principle which I have termed libido. The word Brahman means prayer, incantation, sacred speech, sacred knowledge (*veda*), holy life, the sacred caste (the Brahmans), the Absolute. Deussen stresses the prayer connotation as being especially characteristic.[71] The word derives from *barh* (cf. L. *farcire*), 'to swell,'[72] whence "prayer" is conceived as "the upward-striving will of man towards the holy, the divine." This derivation indicates a particular psychological state, a specific concentration of libido, which through overflowing innervations produces a general state of tension associated with the feeling of swelling. Hence, in common speech, one frequently uses images like "overflowing with emotion," "unable to restrain oneself," "bursting"

when referring to such a state. ("What filleth the heart, goeth out by the mouth.") The yogi seeks to induce this concentration or accumulation of libido by systematically withdrawing attention (libido) both from external objects and from interior psychic states, in a word, from the opposites. The elimination of sense-perception and the blotting out of conscious contents enforce a lowering of consciousness (as in hypnosis) and an activation of the contents of the unconscious, i.e., the primordial images, which, because of their universality and immense antiquity, possess a cosmic and suprahuman character. This accounts for all those sun, fire, flame, wind, breath similes that from time immemorial have been symbols of the procreative and creative power that moves the world. As I have made a special study of these libido symbols in my book *Symbols of Transformation*, I need not expand on this theme here.

[337] The idea of a creative world-principle is a projected perception of the living essence in man himself. In order to avoid all vitalistic misunderstandings, one would do well to regard this essence in the abstract, as simply *energy*. On the other hand, the hypostatizing of the energy concept after the fashion of modern physicists must be rigorously rejected. The concept of energy implies that of polarity, since a current of energy necessarily presupposes two different states, or poles, without which there can be no current. Every energic phenomenon (and there is no phenomenon that is not energic) consists of pairs of opposites: beginning and end, above and below, hot and cold, earlier and later, cause and effect, etc. The inseparability of the energy concept from that of polarity also applies to the concept of libido. Hence libido symbols, whether mythological or speculative in origin, either present themselves directly as opposites or can be broken down into opposites. I have already referred in my earlier work to this inner splitting of libido, thereby provoking considerable resistance, unjustifiably, it seems to me, because the direct connection between a libido symbol and the concept of polarity is sufficient justification in itself. We find this connection also in the concept or symbol of Brahman. Brahman as a combination of prayer and primordial creative power, the latter resolving itself into the opposition of the sexes, occurs in a remarkable hymn of the *Rig Veda* (10.31.6):

And this prayer of the singer, spreading afar,
Became the bull which existed before the world was.
The gods are nurslings of the same brood,
Dwelling together in Asura’s mansion.
What was the wood, what was the tree,
Out of which heaven and earth were fashioned?
These two stand fast and never grow old,
They have sung praises to many a dawn and morning.
There is no other thing greater than he,
The bull, supporter of earth and heaven.
He makes his skin a filter purifying the rays,
When as Surya his bay horses bear him along.
As the arrow of the sun he illumines the broad earth,
As the wind scatters the mist he storms through the world.
With Mitra and Varuna he comes anointed with ghee,
As Agni in the firesticks he shoots out splendour.
Driven to him, the cow once barren brought forth,
The moveless thing she created moved, pasturing freely.
She bore the son who was older than the parents.[73]

[338] The polarity of the creative world principle is represented in another form in the *Shatapatha Brahmana* (2.2.4):

> In the beginning, Prajapati[74] was this world alone. He meditated: How can I propagate myself? He travailed, he practised *tapas*; then he begat Agni (fire) out of his mouth,[75] and because he begat him out of his mouth, Agni is a devourer of food.
>
> Prajapati meditated: As a devourer of food I have begotten this Agni out of myself, but there is nothing else beside myself that he may devour. For the earth at that time was quite barren, there were no herbs and no trees, and this thought was heavy upon him.
>
> Then Agni turned upon him with gaping maw. His own greatness spoke to him: Sacrifice! Then Prajapati knew: My own greatness has spoken to me. And he sacrificed.
>
> Thereupon that rose up which shines yonder (the sun); thereupon that rose up which purifies all things here (the wind). Thus Prajapati, by offering sacrifice, propagated himself, and at the same time saved himself from death, who as Agni would have devoured him.

[339] Sacrifice always means the renunciation of a valuable part of oneself, and through it the sacrificer escapes being devoured. In other words, there is no transformation into the opposite, but rather equilibration and union, from which arises a new form of libido: sun and wind. Elsewhere the *Shatapatha Brahmana* says that one half of Prajapati is mortal, the other immortal.[76]

[340] In the same way as he divides himself into bull and cow, Prajapati also divides himself into the two principles *manas* (mind) and *vac* (speech):

> This world was Prajapati alone, *vac* was his self, and *vac* his second self. He meditated: This *vac* I will send forth, and she shall go hence and pervade all things. Then he sent forth *vac*, and she went and filled the universe.[77]

This passage is of especial interest in that speech is conceived as a creative, extraverted movement of libido, a diastole in Goethe's sense. There is a further parallel in the following passage:

> In truth Prajapati was this world, and with him was *vac* his second self. He copulated with her; she conceived; she went forth out of him, and made these creatures, and once again entered into Prajapati.[78]

[341] In *Shatapatha Brahmana* 8.1.2, 9 the role attributed to *vac* is a prodigious one: "Truly *vac* is the wise Vishvakarman, for by *vac* was this whole world made." But at 1.4.5, 8–11 the question of primacy between *manas* and *vac* is decided differently:

> Now it happened that Mind and Speech strove for priority one with the other. Mind said: I am better than you, for you speak nothing that I have not first discerned. Then Speech said: I am better than you, for I announce what you have discerned and make it known.
>
> They went to Prajapati for judgment. Prajapati decided in favour of Mind, saying to Speech: Truly Mind is better than you, for you copy what Mind does and run in his tracks; moreover it is the inferior who is wont to imitate his betters.

[342] These passages show that the principles into which the world-creator divides himself are themselves divided. They were at first contained in Prajapati, as is clear from the following:

> Prajapati desired: I wish to be many, I will multiply myself. Then he meditated silently in his Mind, and what was in his Mind became *brihat*

(song). He bethought himself: This embryo of me is hidden in my body, through Speech I will bring it forth. Then he created Speech.[79]

[343] This passage shows the two principles as psychological functions: *manas* an introversion of libido begetting an inner product, *vac* a function of exteriorization or extraversion. This brings us to another passage relating to Brahman:

> When Brahman had entered into that other world, he bethought himself: How can I extend myself through these worlds? And he extended himself twofold through these worlds, by Form and Name.
>
> These two are the two monsters of Brahman; whoever knows these two monsters of Brahman, becomes a mighty monster himself. These are the two mighty manifestations of Brahman.[80]

[344] A little later, Form is defined as *manas* (“*manas* is form, for through *manas* one knows it is this form”) and Name as *vac* (“for through *vac* one grasps the name”). Thus the two “mighty monsters” of Brahman turn out to be mind and speech, two psychic functions by which Brahman can “extend himself” through both worlds, clearly signifying the function of “relationship.” The forms of things are “apprehended” or “taken in” by introverting through *manas*; names are given to things by extraverting through *vac*. Both involve relationship and adaptation to objects as well as their assimilation. The two “monsters” are evidently thought of as personifications; this is indicated by their other name, *yaksha* (‘manifestation’) for *yaksha* means much the same as a daemon or superhuman being. Psychologically, personification always denotes the relative autonomy of the content personified, i.e., its splitting off from the psychic hierarchy. Such contents cannot be voluntarily reproduced; they reproduce themselves spontaneously, or else withdraw themselves from consciousness in the same way.[81] A dissociation of this kind occurs, for instance, when an incompatibility exists between the ego and a particular complex. As we know, it is observed most frequently when the latter is a sexual complex, but other complexes can get split off too, for instance the power-complex, the sum of all those strivings and ideas aiming at the acquisition of personal power. There is, however, another form of dissociation, and that is the splitting off of the conscious ego, together with a selected function, from the other components of the personality. This form of dissociation can be defined as an identification of the ego

with a particular function or group of functions. It is very common in people who are too deeply immersed in one of their psychic functions and have differentiated it into their sole conscious means of adaptation.

[345] A good literary example of such a man is Faust at the beginning of the tragedy. The other components of his personality approach him in the shape of the poodle, and later as Mephistopheles. Although Mephistopheles, as is perfectly clear from many of his associations, also represents the sexual complex, it would in my view be a mistake to explain him as a split-off complex and declare that he is nothing but repressed sexuality. This explanation is too narrow, because Mephistopheles is far more than sexuality—he is also power; in fact, he is practically the whole life of Faust, barring that part of it which is taken up with thinking and research. The result of the pact with the devil makes this very evident. What undreamt-of possibilities of power unfold themselves before the rejuvenated Faust! The correct explanation, therefore, would seem to be that Faust identified with one function and got split off as Mephistopheles from his personality as a whole. Subsequently, Wagner the thinker also gets split off from Faust.

[346] A *conscious* capacity for one-sidedness is a sign of the highest culture, but *involuntary* one-sidedness, i.e., the inability to be anything but one-sided, is a sign of barbarism. Hence the most one-sided differentiations are found among semi-barbarous people—for instance, certain aspects of Christian asceticism that are an affront to good taste, and parallel phenomena among the yogis and Tibetan Buddhists. For the barbarian, this tendency to fall a victim to one-sidedness in one way or another, thus losing sight of his total personality, is a great and constant danger. The Gilgamesh epic, for example, begins with this conflict. The one-sidedness of the barbarian takes the form of daemonic compulsion; it has something of the character of going berserk or running amok. In all cases it presupposes an atrophy of instinct that is not found in the true primitive, for which reason he is in general still free from the one-sidedness of the cultural barbarian.

[347] Identification with one particular function at once produces a tension of opposites. The more compulsive the one-sidedness, and the more

untamed the libido which streams off to one side, the more daemonic it becomes. When a man is carried away by his uncontrolled, undomesticated libido, he speaks of daemonic possession or of magical influences. In this sense *manas* and *vac* are indeed mighty demons, since they work mightily upon men. All things that produced powerful effects were once regarded as gods or demons. Thus, among the Gnostics, the mind was personified as the serpent-like *Nous*, and speech as *Logos. Vac* bears the same relation to Prajapati as Logos to God. The sort of demons that introversion and extraversion may become is a daily experience for us psychotherapists. We see in our patients and can feel in ourselves with what irresistible force the libido streams inwards or outwards, with what unshakable tenacity an introverted or extraverted attitude can take root. The description of *manas* and *vac* as "mighty monsters of Brahman" is in complete accord with the psychological fact that at the instant of its appearance the libido divides into two streams, which as a rule alternate periodically but at times may appear simultaneously in the form of a conflict, as an outward stream opposing an inward stream. The daemonic quality of the two movements lies in their ungovernable nature and overwhelming power. This quality, however, makes itself felt only when the instinct of the primitive is already so stunted as to prevent a natural and purposive counter-movement to one-sidedness, and culture not sufficiently advanced for man to tame his libido to the point where he can follow its introverting or extraverting movement of his own free will and intention.

c. The Uniting Symbol as the Principle of Dynamic Regulation

[348] In the foregoing passages from Indian sources we have followed the development of a redemptive principle from the pairs of opposites and have traced their origin to the same creative principle, thereby gaining an insight into a regular psychological occurrence which was found to be compatible with the concepts of modern psychology. The impression that this occurrence is a regular one is confirmed by the Indian sources themselves, since they identify Brahman with *rta*. What is *rta? Rta* means established order, regulation, destiny, sacred custom, statute, divine law, right, truth. According to the etymological evidence its root meaning is: ordinance, (right) way, direction, course (to be followed). That which is ordained by *rta* fills the whole world, but the particular manifestations of *rta* are in those processes of nature which always remain constant and arouse the idea of regular recurrence: “By the ordinance of *rta* the heaven-born dawn was lighted.” “In obedience to *rta”* the Ancient Ones who order the world “made the sun to mount into the heavens,” who himself is “the burning countenance of *rta.”* Around the heavens circles the year, the twelve-spoked wheel of *rta* that never ages. Agni is called the offspring of *rta*. In the doings of man, *rta* operates as moral law, which ordains truth and the straight way. “Whoso follows *rta,* finds a fair and thornless path to walk in.”

[349] In so far as they represent a magical repetition or re-enactment of cosmic events, *rta* also figures in religious rites. As the rivers flow in obedience to *rta* and the crimson dawn is set ablaze, so “under the harness[82] of *rta”* is the sacrifice kindled; on the path of *rta*, Agni offers sacrifice to the gods. “Free from magic, I invoke the gods; with *rta* I do my work, and shape my thought,” says the sacrificer. Although *rta* does not appear personified in the Vedas, according to Bergaigne[83] a suggestion of concrete existence undoubtedly attaches to it. Since *rta* expresses the direction of events, there are “paths of *rta,”* “charioteers[84] of *rta,”* “ships of *rta,”* and on occasion the gods appear as parallels. For instance, the same is said of *rta* as of Varuna, the sky-god. Mitra also, the ancient sun-god, is brought into relation with *rta*. Of Agni it is said: “Thou shalt become Varuna, if thou strivest after *rta*.”[85] The gods are the guardians of *rta*.[86] Here are some of the most important associations:

> *Rta* is Mitra, for Mitra is Brahman and *rta* is Brahman.[87]

> By giving the cow to the Brahmans, one gains all the worlds, for in her is contained *rta*, Brahman, and *tapas* also.[88]

> Prajapati is named the first-born of *rta*[89]
>
> The gods followed the laws of *rta*.[90]
>
> He who has seen the hidden one (Agni), draws nigh to the streams of *rta*.[91]
>
> O wise one of *rta*, know *rta!* Bore for *rta's* many streams.[92]

[350] The "boring" refers to the worship of Agni, to whom this hymn is dedicated. (Agni is here called "the red bull of *rta*.") In the worship of Agni, the fire obtained by boring is used as a magic symbol of the regeneration of life. Boring for the streams of *rta* obviously has the same significance; the streams of life rise to the surface again, libido is freed from its bonds.[93] The effect produced by the ritual fire-boring, or by the recital of hymns, is naturally regarded by believers as the magical effect of the object; in reality it is an "enchantment" of the subject, an intensification of vital feeling, an increase and release of life force, a restoration of psychic potential:

> Though he [Agni] slinks away, the prayer goes straight to him. They [the prayers] have led forth the flowing streams of *rta*.[94]

[351] The revival of vital feeling, of this sense of streaming energy, is in general compared to a spring gushing from its source, to the melting of the iron-bound ice of winter in springtime, or to the breaking of a long drought by rain.[95] The following passage takes up this theme:

> The lowing milch-cows of *rta* were overflowing, their udders full. The streams, imploring from afar the favour of the gods, have broken through the midst of the rock with their floods.[96]

The imagery clearly suggests a state of energic tension, a damming up of libido and its release. *Rta* appears here as the bestower of blessing in the form of "lowing milch cows" and as the ultimate source of the released energy.

[352] The aforementioned image of rain as a release of libido is borne out in the following passage:

> The mists fly, the clouds thunder. When he who is swollen with the milk of *rta* is led on the straight path of *rta*, Aryaman, Mitra, and Varuna who wanders over the earth, fill the leathern sack (= cloud) in the womb of the lower (world?).[97]

> It is Agni, swollen with the milk of *rta*, who is likened to the lightning that bursts forth from the massed clouds heavy with rain. Here again *rta* appears as the actual source of energy, whence Agni also is born, as expressly mentioned in the *Vedic Hymns*.[98]

> They have greeted with shouts the streams of *rta*, which were hidden at the birthplace of the god, at his seat. There did he drink when he dwelt dispersed in the womb of the waters.[99]

[353] This confirms what we have said about *rta* as the source of libido where the god dwells and whence he is brought forth in the sacred ceremonies. Agni is the positive manifestation of the latent libido; he is accomplisher or fulfiller of *rta*, its "charioteer"; he harnesses the two long-maned red mares of *rta*.[100] He even holds *rta* like a horse, by the bridle.[101] He brings the gods to mankind, their power and blessing; they represent definite psychological states in which the vital feelings and energies flow with greater freedom and joy. Nietzsche has captured this state in his verses:

> You with your fiery lances
> Shatter the ice-bound soul of me,
> Till with high hope it advances
> Rushing and roaring into the sea.[102]

[354] The following invocation echoes this theme:

> May the divine gates, the increasers of *rta*, open themselves … that the gods may come forth. May Night and Dawn … the young mothers of *rta*, sit down together on the sacrificial grass.[103]

The analogy with the sunrise is unmistakable. *Rta* appears as the sun, since it is from night and dawn that the young sun is born.

[355] There is no need, I think, of further examples to show that the concept of *rta* is a libido-symbol like sun, wind, etc. Only, *rta* is less concretistic and contains the abstract element of fixed direction and regularity, the idea of a predetermined, ordered path or process. It is, therefore, a kind of philosophical libido symbol that can be directly compared with the Stoic concept of *heimarmene*. For the Stoics *heimarmene* had the significance of creative, primal heat, and at the same time it was a predetermined, regular process (hence its other meaning: "compulsion of the stars").[104] Libido as psychic energy naturally has these attributes too; the concept of energy necessarily includes the

idea of a regulated process, since a process always flows from a higher potential to a lower. It is the same with the libido concept, which signifies nothing more than the energy of the life process. Its laws are the laws of vital energy. Libido as an energy concept is a quantitative formula for the phenomena of life, which are naturally of varying intensity. Like physical energy, libido passes through every conceivable transformation; we find ample evidence of this in the fantasies of the unconscious and in myths. These fantasies are primarily self-representations of energic transformation processes, which follow their specific laws and keep to a definite "path." This path is the line or curve representing the optimal discharge of energy and the corresponding result in work. Hence it is simply the expression of flowing and self-manifesting energy. The path is *rta*, the right way, the flow of vital energy or libido, the predetermined course along which a constantly self-renewing current is directed. This path is also fate, in so far as a man's fate depends on his psychology. It is the path of our destiny and of the law of our being.

[356] It would be quite wrong to assert that such a direction or tendency is nothing more than naturalism, meaning a complete surrender to one's instincts. This presupposes that the instincts have a constant "downward" tendency, and that naturalism amounts to an unethical sliding down an inclined plane. I have nothing against such an interpretation of naturalism, but I am bound to observe that the man who is left to his own devices, and has therefore every opportunity for sliding downwards, as for instance the primitive, not only has a moral code but one which in the severity of its demands is often considerably more exacting than our civilized morality. It makes no difference if good and evil mean one thing for the primitive and another for us; his naturalism leads to law-giving—that is the chief point. Morality is not a misconception invented by some vaunting Moses on Sinai, but something inherent in the laws of life and fashioned like a house or a ship or any other cultural instrument. The natural flow of libido, this same middle path, means complete obedience to the fundamental laws of human nature, and there can positively be no higher moral principle than harmony with natural laws that guide the libido in the direction of life's optimum. The vital optimum is not to be found in crude egoism, for fundamentally man is so constituted that the pleasure he gives to his neighbour is something essential to him. Nor can the optimum be reached by an unbridled craving for individualistic supremacy, because the collective element in man is so powerful that his longing for fellowship would destroy all pleasure in naked egoism. The optimum can be reached only through obedience to the tidal laws of the libido, by which systole alternates with diastole—laws which bring

pleasure and the necessary limitations of pleasure, and also set us those individual life tasks without whose accomplishment the vital optimum can never be attained.

[357] If the attainment of the middle path consisted in a mere surrender to instinct, as the bewailers of "naturalism" suppose, the profoundest philosophical speculation that the human mind has ever known would have no *raison d'être*. But, as we study the philosophy of the Upanishads, the impression grows on us that the attainment of this path is not exactly the simplest of tasks. Our Western superciliousness in the face of these Indian insights is a mark of our barbarian nature, which has not the remotest inkling of their extraordinary depth and astonishing psychological accuracy. We are still so uneducated that we actually need laws from without, and a task-master or Father above, to show us what is good and the right thing to do. And because we are still such barbarians, any trust in the laws of human nature seems to us a dangerous and unethical naturalism. Why is this? Because under the barbarian's thin veneer of culture the wild beast lurks in readiness, amply justifying his fear. But the beast is not tamed by locking it up in a cage. *There is no morality without freedom*. When the barbarian lets loose the beast within him, that is not freedom but bondage. Barbarism must first be vanquished before freedom can be won. This happens, in principle, when the basic root and driving force of morality are felt by the individual as constituents of his own nature and not as external restrictions. How else is man to attain this realization but through the conflict of opposites?

d. The Uniting Symbol in Chinese Philosophy

[358] The idea of a middle way between the opposites is to be found also in China, in the form of *tao*. The concept of *tao* is usually associated with the name of the philosopher Lao-tzu, born 604 B.C. But this concept is older than the philosophy of Lao-tzu. It is bound up with the ancient folk religion of Taoism, the "way of Heaven," a concept corresponding to the Vedic *rta*. The meanings of *tao* are as follows: way, method, principle, natural force or life force, the regulated processes of nature, the idea of the world, the prime cause of all phenomena, the right, the good, the moral order. Some translators even translate it as God, not without some justification, it seems to me, since *tao*, like *rta*, has a tinge of substantiality.

[359] I will first give a number of passages from the *Tao Te Ching*, Lao-tzu's classic:

> Was Tao the child of something else? We cannot tell.

But as a substanceless image it existed before the Ancestor.[105]

There was something formless yet complete,
That existed before heaven and earth;
Without sound, without substance,
Dependent on nothing, unchanging,
All pervading, unfailing,
One may think of it as the mother of all things under heaven.
Its true name we do not know;
"Way" is the name that we give it.[106]

[360] In order to characterize its essential quality, Lao-tzu likens it to water:

> The highest good is like that of water. The goodness of water is that it benefits the ten thousand creatures; yet itself does not scramble, but is content with the [low] places that all men disdain. It is this that makes water so near to the Way.[107]

The idea of a "potential" could not be better expressed.
He that is without desire sees its essence,
He that clings to desire sees only its outward form.[108]

[361] The affinity with the fundamental Brahmanic ideas is unmistakable, though this does not necessarily imply direct contact. Lao-tzu was an entirely original thinker, and the primordial image underlying *rta-brahman-atman* and *tao* is as universal as man, appearing in every age and among all peoples as a primitive conception of energy, or "soul force," or however else it may be called.

He who knows the Always-so has room in him for everything;
He who has room in him for everything is without prejudice.
To be without prejudice is to be kingly;
To be kingly is to be of heaven;
To be of heaven is to be in Tao.
Tao is forever, and he that possesses it,
Though his body ceases, is not destroyed.[109]

[362] Knowledge of *tao* therefore has the same redeeming and uplifting effect as the knowledge of *brahman*. Man becomes one with *tao*, with the unending *durée créatrice* (if we may compare this concept of Bergson's with its older congener), for *tao* is also the stream of time. It is irrational, inconceivable:

> *Tao* is a thing impalpable, incommensurable.[110]

For though all creatures under heaven are the products of [Tao as] Being,
Being itself is the product of [Tao as] Not-Being.[111]
Tao is hidden and nameless.[112]

It is obviously an irrational union of opposites, a symbol of what is and is not.

The Valley Spirit never dies;
It is named the mysterious Female.
And the door of the mysterious Female
Is the base from which heaven and earth sprang.[113]

[363] *Tao* is the creative process, begetting as the father and bringing forth as the mother. It is the beginning and end of all creatures.

He whose actions are in harmony with *Tao* becomes one with *Tao*.[114]

Therefore the perfected sage liberates himself from the opposites, having seen through their connection with one another and their alternation. Therefore it is said:

When your work is done, then withdraw.
Such is heaven's way.[115]
He [the perfected sage] cannot either be drawn into friendship or repelled,
Cannot be benefited, cannot be harmed,
Cannot be either raised or humbled.[116]

[364] Being one with *tao* resembles the state of infancy:

Can you keep the unquiet physical soul from straying, hold fast to the Unity, and never quit it?
Can you, when concentrating your breath, make it soft like that of a little child?[117]

He who knows the male, yet cleaves to what is female,
Becomes like a ravine, receiving all things under heaven;
And being such a ravine,
He knows all the time a power that he never calls upon in vain.
This is returning to the state of infancy.[118]

The impunity of that which is fraught with this power

> May be likened to that of an infant.[119]

[365] This psychological attitude is, as we know, an essential condition for obtaining the kingdom of heaven, and this in its turn—all rational interpretations notwithstanding—is the central, irrational symbol whence the redeeming effect comes. The Christian symbol merely has a more social character than the related conceptions of the East. These are directly connected with age-old dynamistic ideas of a magical power emanating from people and things or—at a higher level of development—from gods or a divine principle.

[366] According to the central concepts of Taoism, *tao* is divided into a fundamental pair of opposites, *yang* and *yin. Yang* signifies warmth, light, maleness; *yin* is cold, darkness, femaleness. *Yang* is also heaven, *yin* earth. From the *yang* force arises *shen*, the celestial portion of the human soul, and from the *yin* force comes *kwei*, the earthly part. As a microcosm, man is a reconciler of the opposites. Heaven, man, and earth form the three chief elements of the world, the *san-tsai*.

[367] The picture thus presented is an altogether primitive idea which we find in similar forms elsewhere, as for instance in the West African myth where Obatala and Odudua, the first parents (heaven and earth), lie together in a calabash until a son, man, arises between them. Hence man as a microcosm uniting the world opposites is the equivalent of an irrational symbol that unites the psychological opposites. This primordial image of man is in keeping with Schiller's definition of the symbol as "living form."

[368] The division of the psyche into a *shen* (or *hwan*) soul and a *kwei* (or *p'o)* soul is a great psychological truth. This Chinese conception is echoed in the well-known passage from *Faust:*

> Two souls, alas, are housed within my breast,
> And each will wrestle for the mastery there.
> The one has passion's craving crude for love,
> And hugs a world where sweet the senses rage;
> The other longs for pastures fair above,
> Leaving the murk for lofty heritage.[120]

[369] The existence of two mutually antagonistic tendencies, both striving to drag man into extreme attitudes and entangle him in the world, whether on the material or spiritual level, sets him at variance with himself and accordingly demands the existence of a counterweight. This is the "irrational third," *tao*. Hence the sage's anxious endeavour to live in harmony with *tao*, lest he fall into

the conflict of opposites. Since *tao* is irrational, it is not something that can be got by the will, as Lao-tzu repeatedly emphasizes. This lends particular significance to another specifically Chinese concept, *wu-wei*. *Wu-wei* means "not-doing" (which is not to be confused with "doing nothing"). Our rationalistic "doing," which is the greatness as well as the evil of our time, does not lead to *tao*.

[370] The aim of Taoist ethics, then, is to find deliverance from the cosmic tension of opposites by a return to *tao*. In this connection we must also remember the "sage of Omi," Nakae Toju,[121] an outstanding Japanese philosopher of the seventeenth century. Basing himself on the teaching of the Chu-hi school, which had migrated from China, he established two principles, *ri* and *ki*. *Ri* is the world soul, *ki* is the world stuff. *Ri* and *ki* are, however, the same because they are both attributes of God and therefore exist only in him and through him. God is their union. Equally, the soul embraces both *ri* and *ki*. Toju says of God: "As the essence of the world, God embraces the world, but at the same time he is in our midst and even in our bodies." For him God is a universal self, while the individual self is the "heaven" within us, something supra-sensible and divine called *ryochi*. *Ryochi* is "God within us" and dwells in every individual. It is the true self. Toju distinguishes a true from a false self. The false self is an acquired personality compounded of perverted beliefs. We might define this false self as the *persona*, that general idea of ourselves which we have built up from experiencing our effect upon the world around us and its effect upon us. The persona is, in Schopenhauer's words, how one *appears* to oneself and the world, but not what one *is*. What one is, is one's individual self, Toju's "true self" or *ryochi*. *Ryochi* is also called "being alone" or "knowing alone," clearly because it is a condition related to the essence of the self, beyond all personal judgments conditioned by external experience. Toju conceives *ryochi* as the summum bonum, as "bliss" (*brahman* is bliss, *ananda*). It is the light which pervades the world—a further parallel with *brahman*, according to Inouye. It is love for mankind, immortal, all-knowing, good. Evil comes from the will (shades of Schopenhauer!). *Ryochi* is the self-regulating function, the mediator and uniter of the opposites, *ri* and *ki*; it is in fullest accord with the Indian idea of the "wise old man who dwells in the heart." Or as Wang Yang-ming, the Chinese father of Japanese philosophy, says: "In every heart there dwells a *sejin* (sage). Only, we do not believe it firmly enough, and therefore the whole has remained buried."[122]

* * *

[371] From[123] this point of view it is not so difficult to see what the primordial image was that helped to solve the problem in Wagner's *Parsifal*. Here the suffering is caused by the tension of opposites represented by the Grail and the power of Klingsor, who has taken possession of the holy spear. Under the spell of Klingsor is Kundry, symbolizing the instinctive life-force or libido that Amfortas lacks. Parsifal rescues the libido from the state of restless, compulsive instinctuality, in the first place because he does not succumb to Kundry, and in the second because he does not possess the Grail. Amfortas has the Grail and suffers for it, because he lacks libido. Parsifal has nothing of either, he is *nirdvandva*, free from the opposites, and is therefore the redeemer, the bestower of healing and renewed vitality, who unites the bright, heavenly, feminine symbol of the Grail with the dark, earthly, masculine symbol of the spear. The death of Kundry may be taken as the liberation of libido from its naturalistic, undomesticated form (cf. the "bull's shape," par. 350, n. 93), which falls away as a lifeless husk, while the energy bursts forth as a new stream of life in the glowing of the Grail.

[372] By his renunciation of the opposites (unwilling though this was, at least in part), Parsifal caused a blockage of libido that created a new potential and thus made a new manifestation of energy possible. The undeniable sexual symbolism might easily lead to the one-sided interpretation that the union of spear and Grail merely signifies a release of sexuality. The fate of Amfortas shows, however, that sexuality is not the point. On the contrary, it was his relapse into a nature-bound, brutish attitude that was the cause of his suffering and brought about the loss of his power. His seduction by Kundry was a symbolic act, showing that it was not sexuality that dealt him his wound so much as an attitude of nature-bound compulsion, a supine submission to the biological urge. This attitude expresses the supremacy of the animal part of our psyche. The sacrificial wound that is destined for the beast strikes the man who is overcome by the beast—for the sake of man's further development. The fundamental problem, as I have pointed out in *Symbols of Transformation*, is not sexuality *per se*, but the domestication of libido, which concerns sexuality only so far as it is one of the most important and most dangerous forms of libidinal expression.

[373] If, in the case of Amfortas and the union of spear and Grail, only the sexual problem is discerned, we get entangled in an insoluble contradiction, since the thing that harms is also the thing that heals. Such a paradox is true and permissible only when one sees the opposites as united on a higher plane, when one understands that it is not a question of sexuality, either in this form or in

that, but purely a question of the attitude by which every activity, including the sexual, is regulated. Once again I must emphasize that the practical problem in analytical psychology lies deeper than sexuality and its repression. The latter point of view is no doubt very valuable in explaining the infantile and therefore morbid part of the psyche, but as an explanatory principle for the whole of the psyche it is quite inadequate. What lies behind sexuality or the power instinct is the *attitude* to sexuality or to power. In so far as an attitude is not merely an intuitive (i.e., unconscious and spontaneous) phenomenon but also a conscious function, it is, in the main, a *view of life*. Our conception of all problematical things is enormously influenced, sometimes consciously but more often unconsciously, by certain collective ideas that condition our mentality. These collective ideas are intimately bound up with the view of life and the world of the past centuries or epochs. Whether or not we are conscious of this dependence has nothing to do with it, since we are influenced by these ideas through the very air we breathe. Collective ideas always have a religious character, and a philosophical idea becomes collective only when it expresses a primordial image. Their religious character derives from the fact that they express the realities of the collective unconscious and are thus able to release its latent energies. The great problems of life, including of course sex, are always related to the primordial images of the collective unconscious. These images are balancing or compensating factors that correspond to the problems which life confronts us with in reality.

[374] This is no matter for astonishment, since these images are deposits of thousands of years of experience of the struggle for existence and for adaptation. Every great experience in life, every profound conflict, evokes the accumulated treasure of these images and brings about their inner constellation. But they become accessible to consciousness only when the individual possesses so much self-awareness and power of understanding that he also reflects on what he experiences instead of just living it blindly. In the latter event he actually lives the myth and the symbol without knowing it.

4. THE RELATIVITY OF THE SYMBOL

a. The Worship of Woman and the Worship of the Soul

[375] The Christian principle which unites the opposites is the *worship of God*, in Buddhism it is the *worship of the self* (self-development), while in Spitteler and Goethe it is the *worship of the soul* symbolized by the *worship of woman*.

Implicit in this categorization is the modern individualistic principle on the one hand, and on the other a primitive poly-daemonism which assigns to every race, every tribe, every family, every individual its specific religious principle.

[376] The medieval background of *Faust* has a quite special significance because there actually was a medieval element that presided over the birth of modern individualism. It began, it seems to me, with the worship of woman, which strengthened the man’s soul very considerably as a psychological factor, since the worship of woman meant worship of the soul. This is nowhere more beautifully and perfectly expressed than in Dante’s *Divine Comedy*.

[377] Dante is the spiritual knight of his lady; for her sake he embarks on the adventure of the lower and upper worlds. In this heroic endeavour her image is exalted into the heavenly, mystical figure of the Mother of God—a figure that has detached itself from the object and become the personification of a purely psychological factor, or rather, of those unconscious contents whose personification I have termed the *anima*. Canto XXXIII of the *Paradiso* expresses this culminating point of Dante’s psychic development in the prayer of St. Bernard:

> O Virgin Mother, daughter of thy Son,
> Humbler and more exalted than all others,
> Predestined object of the eternal will!
> Thou gavest such nobility to man
> That He who made mankind did not disdain
> To make Himself a creature of His making.

Verses 22–27, 29–33, 37–39 also allude to this development:

> This man, who from the nethermost abyss
> Of all the universe, as far as here,
> Has seen the spiritual existences,
> Now asks thy grace, so thou wilt grant him strength
> That he may with his eyes uplift himself
> Still higher toward the ultimate salvation.
> …
> I… proffer to thee
> All my prayers—and pray they may suffice—
> That thou wilt scatter from him every cloud
> Of his mortality, with thine own prayers,
> So that the bliss supreme may be revealed.
> …
> May thy protection quell his human passions!

Lo, Beatrice and many a blessed soul
Entreat thee, with clasped hands, to grant my wish![124]

[378] The very fact that Dante speaks here through the mouth of St. Bernard is an indication of the transformation and exaltation of his own being. The same transformation also happens to Faust, who ascends from Gretchen to Helen and from Helen to the Mother of God; his nature is altered by repeated figurative deaths (Boy Charioteer, homunculus, Euphorion), until finally he attains the highest goal as Doctor Marianus. In that form Faust utters his prayer to the Virgin Mother:

Pavilioned in the heaven’s blue,
Queen on high of all the world,
For the holy sight I sue,
Of the mystery unfurled.
Sanction what in man may move
Feelings tender and austere,
And with glow of sacred love
Lifts him to thy presence near.
Souls unconquerable rise
If, sublime, thou will it;
Sinks that storm in peaceful wise
If thy pity still it.
Virgin, pure in heavenly sheen,
Mother, throned supernal,
Highest birth, our chosen Queen,
Godhead’s peer eternal.
…
O contrite hearts, seek with your eyes
The visage of salvation;
Blissful in that gaze, arise,
Through glad regeneration.
Now may every pulse of good
Seek to serve before thy face,
Virgin, Queen of Motherhood,
Keep us, Goddess, in thy grace.[125]

[379] We might also mention in this connection the symbolic attributes of the Virgin in the Litany of Loreto:

Mater amabilis	Lovable Mother
Mater admirabilis	Wonderful Mother
Mater boni consilii	Mother of good counsel
Speculum justitiae	Mirror of justice

Sedes sapientiae	Seat of wisdom
Causa nostrae laetitiae	Cause of our gladness
Vas spirituale	Vessel of the spirit
Vas honorabile	Vessel of honour
Vas insigne devotionis	Noble vessel of devotion
Rosa mystica	Mystical rose
Turris Davidica	Tower of David
Turris eburnea	Tower of ivory
Domus aurea	House of gold
Foederis arca	Ark of the covenant
Janua coeli	Gate of heaven
Stella matutina	Morning star[126]

[380] These attributes reveal the functional significance of the Virgin Mother image: they show how the soul-image (anima) affects the conscious attitude. She appears as a vessel of devotion, a source of wisdom and renewal.

[381] We find this characteristic transition from the worship of woman to the worship of the soul in an early Christian document, the *Shepherd* of Hermas, who flourished about A.D. 140. This book, written in Greek, consists of a number of visions and revelations describing the consolidation of the new faith. The book, long regarded as canonical, was nevertheless rejected by the Muratori Canon. It begins as follows:

> The man who reared me sold me to a certain Rhoda in Rome. After many years, I made her acquaintance again and began to love her as a sister. One day I saw her bathing in the Tiber, and gave her my hand and helped her out of the water. When I saw her beauty I thought in my heart: “How happy I would be if I had a wife of such beauty and distinction.” This was my only thought, and no other, no, not one.[127]

[382] This experience was the starting-point for the visionary episode that followed. Hermas had apparently served Rhoda as a slave; then, as often happened, he obtained his freedom, and met her again later, when, probably as much from gratitude as from delight, a feeling of love stirred in his heart, though so far as he was aware it had merely the character of brotherly love. Hermas was a Christian, and moreover, as the text subsequently reveals, he was at that time already the father of a family, circumstances which would readily explain the repression of the erotic element. Yet the peculiar situation, doubtless provocative of many problems, was all the more likely to bring the erotic wish

to consciousness. It is, in fact, expressed quite clearly in the thought that he would have liked Rhoda for a wife, though, as Hermas is at pains to emphasize, it is confined to this simple statement since anything more explicit and more direct instantly fell under a moral ban and was repressed. It is abundantly clear from what follows that this repressed libido wrought a powerful transformation in his unconscious, for it imbued the soul-image with life and brought about a spontaneous manifestation:[128]

> After a certain time, as I journeyed unto Cumae, praising God's creation in its immensity, beauty, and power, I grew heavy with sleep. And a spirit caught me up, and led me away through a pathless region where a man may not go. For it was a place full of crevices and torn by water-courses. I made my passage over the river and came upon even ground, where I threw myself upon my knees, and prayed to God, confessing my sins. While I thus prayed, the heavens opened and I beheld that lady for whom I yearned, who greeted me from heaven and said: "Hail to thee, Hermas!" While my eyes dwelt upon her, I spake, saying: "Mistress, what doest thou there?" And she answered: "I was taken up, in order to charge thee with thy sins before the Lord." I said unto her: "Dost thou now accuse me?" "No," said she, "yet hearken now unto the words I shall speak unto thee. For God, who dwelleth in heaven, and hath created the existing out of the non-existing, and hath magnified it and brought it to increase for the sake of His Holy Church, is wroth with thee, because thou has sinned against me." I answered and spake unto her: "How have I sinned against thee? When and where spake I ever an evil word unto thee? Have I not looked upon thee as a goddess? Have I not ever treated thee like a sister? Wherefore, O lady, dost thou falsely charge me with such evil and unclean things?" She smiled and said unto me: "The desire of sin arose in thy heart. Or is it not indeed a sin in thine eyes for a just man to cherish a sinful desire in his heart? Verily is it a sin," said she, "and a great one. For the just man striveth after what is just."

[383] Solitary wanderings are, as we know, conducive to daydreaming and reverie. Presumably Hermas, on his way to Cumae, was thinking of his mistress; while thus engaged, the repressed erotic fantasy gradually pulled his libido down into the unconscious. Sleep overcame him, as a result of this lowering of the intensity of consciousness, and he fell into a somnambulant or ecstatic state, which itself was nothing but a particularly intense fantasy that completely captivated his conscious mind. It is significant that what then came to him was not an erotic fantasy; instead he is transported as it were to another land, represented in fantasy as the crossing of a river and a journey through a

pathless country. The unconscious appears to him as an upper world in which events take place and men move about exactly as in the real world. His mistress appears before him not in an erotic fantasy but in "divine" form, seeming to him like a goddess in heaven. The repressed erotic impression has activated the latent primordial image of the goddess, i.e., the archetypal soul-image. The erotic impression has evidently become united in the collective unconscious with archaic residues which have preserved from time immemorial the imprint of vivid impressions of the nature of woman—woman as mother and woman as desirable maid. Such impressions have immense power, as they release forces, both in the child and in the adult man, which fully merit the attribute "divine" i.e., something irresistible and absolutely compelling. The recognition of these forces as daemonic powers can hardly be due to moral repression, but rather to a self-regulation of the psychic organism which seeks by this change of front to guard against loss of equilibrium. For if, in face of the overwhelming might of passion, which puts one human being wholly at the mercy of another, the psyche succeeds in building up a counterposition so that, at the height of passion, the boundlessly desired object is unveiled as an idol and man is forced to his knees before the divine image, then the psyche has delivered him from the curse of the object's spell. He is restored to himself again and, flung back on himself, finds himself once more between gods and men, following his own path and subject to his own laws. The awful fear that haunts the primitive, his terror of everything impressive, which he at once senses as magic, as though it were charged with magical power, protects him in a purposive way against that most dreaded of all possibilities, loss of soul, with its inevitable sequel of sickness and death.

[384] Loss of soul amounts to a tearing loose of part of one's nature; it is the disappearance and emancipation of a complex, which thereupon becomes a tyrannical usurper of consciousness, oppressing the whole man. It throws him off course and drives him to actions whose blind one-sidedness inevitably leads to self-destruction. Primitives are notoriously subject to such phenomena as running amok, going berserk, possession, and the like. The recognition of the daemonic character of passion is an effective safeguard, for it at once deprives the object of its strongest spell, relegating its source to the world of demons, i.e., to the unconscious, whence the force of passion actually springs. Exorcistic rites, whose aim is to bring back the soul and release it from enchantment, are similarly effective in causing the libido to flow back into the unconscious.

[385] This mechanism obviously worked in the case of Hermas. The transformation of Rhoda into a divine mistress deprived the actual object of her

provocative and destructive power and brought Hermas under the law of his own soul and its collective determinants. Thanks to his abilities and connections, Hermas no doubt had a considerable share in the spiritual movements of his age. At that very time his brother Pius occupied the episcopal see at Rome. Hermas, therefore, was probably qualified to collaborate in the great task of his time to a greater degree than he, as a former slave, may have consciously realized. No able mind could for long have withstood the contemporary task of spreading Christianity, unless of course the barriers and peculiarities of race assigned him a different function in the great process of spiritual transformation. Just as the external conditions of life force a man to perform a social function, so the collective determinants of the psyche impel him to socialize ideas and convictions. By transforming a possible social *faux pas* into the service of his soul after having been wounded by the dart of passion, Hermas was led to accomplish a social task of a spiritual nature, which for that time was surely of no small importance.

[386] In order to fit him for this task, it was clearly necessary that his soul should destroy the last possibility of an erotic attachment to the object, as this would have meant dishonesty towards himself. By consciously denying any erotic wish, Hermas merely demonstrated that it would be more agreeable for him if the erotic wish did not exist, but it by no means proved that he actually had no erotic intentions and fantasies. Therefore his sovereign lady, the soul, mercilessly revealed to him the existence of his sin, thus releasing him from his secret bondage to the object. As a "vessel of devotion" she took over the passion that was on the point of being fruitlessly lavished upon her. The last vestige of this passion had to be eradicated if the contemporary task was to be accomplished, and this consisted in delivering man from sensual bondage, from the state of primitive *participation mystique*. For the man of that age this bondage had become intolerable. The spiritual function had to be differentiated in order to restore the psychic equilibrium. All philosophical attempts to do this by achieving "equanimity," most of which concentrated on the Stoic doctrine, came to grief because of their rationalism. Reason can give a man equilibrium only if his reason is already an equilibrating organ. But for how many individuals and at what periods of history has it been that? As a rule, a man needs the opposite of his actual condition to force him to find his place in the middle. For the sake of mere reason he can never forgo the sensuous appeal of the immediate situation. Against the power and delight of the temporal he must set the joy of the eternal, and against the passion of the sensual the ecstasy of

the spiritual. The undeniable reality of the one must be matched by the compelling power of the other.

[387] Through insight into the actual existence of his erotic desire, Hermas was able to acknowledge this metaphysical reality. The sensual libido that had previously clung to the concrete object now passed to his soul-image and invested it with the reality which the object had claimed exclusively for itself. Consequently his soul could speak to good effect and successfully enforce her demands.

[388] After his conversation with Rhoda, her image vanishes and the heavens close. In her stead there now appears an "old woman in shining garments," who informs Hermas that his erotic desire is a sinful and foolish defiance of a venerable spirit, but that God is angry with him not so much on that account as because he tolerates the sins of his family. In this adroit fashion the libido is drawn away entirely from the erotic desire and in a flash is directed to the social task. An especial refinement is that the soul has discarded the image of Rhoda and taken on the appearance of an old woman, thus allowing the erotic element to recede into the background. It is later revealed to Hermas that this old woman is the Church; the concrete and personal has resolved itself into an abstraction, and the idea acquires a reality it had never before possessed. The old woman then reads to him from a mysterious book attacking heathens and apostates, but whose exact meaning he is unable to grasp. Subsequently we learn that the book sets forth a mission. Thus his sovereign lady presents him with his task, which as her knight he is pledged to accomplish. Nor is the trial of virtue lacking. For, not long after, Hermas has a vision in which the old woman reappears, promising to return about the fifth hour in order to explain the revelation. Whereupon Hermas betook himself into the country to the appointed place, where he found a couch of ivory, set with a pillow and a cover of fine linen.

> As I beheld these things lying there, I was sore amazed, and a quaking fell upon me and my hair stood on end, and a dreadful fear befell me, because I was alone in that place. But when I came once more to myself, I remembered the glory of God and took new courage; I knelt down and again confessed my sins unto God, as I had done before. Then she drew near with six young men, the which also I had seen before, and stood beside me and listened while I prayed and confessed my sins unto God. And she touched me and said: "Hermas, have done with all thy prayers and the reciting of thy sins. Pray also for righteousness, whereby thou mayest bear some of it with thee to thy house." And she raised me up by the hand and led me to the couch, and said unto the

> young men: “Go and build!” And when the youths were gone and we were alone, she said unto me: “Sit thee here!” I said unto her: “Mistress, let the aged first be seated.” She said: “Do as I said unto thee and be thou seated.” But, when I made as though to seat myself upon her right hand, she motioned me with a gesture of the hand to be seated upon her left.
>
> As I wondered thereat, and was troubled, that I might not sit upon the right side, she said unto me: “Why art thou grieved, Hermas? The seat upon the right is for those who are already well-pleasing to God and have suffered for the Name. But to thee there lacketh much before thou canst sit with them. Yet remain as heretofore in thy simplicity, and thou shalt surely sit with them, and thus shall it be for all who shall have accomplished the work which those wrought, and endured what they suffered.”[129]

[389] In this situation, it would have been very easy for Hermas to give way to an erotic misunderstanding. The rendezvous has about it the feeling of a trysting-place in a “beautiful and sequestered spot,” as he puts it. The rich couch waiting there is a fatal reminder of Eros, so that the terror which overcame Hermas at the sight of it is quite understandable. Clearly he must fight vigorously against these erotic associations lest he fall into a mood far from holy. He does not appear to have recognized the temptation for what it was, unless perhaps it is tacitly admitted in the description of his terror, a touch of honesty that came more easily to the man of that time than to the man of today. For in that age man was more closely in touch with his own nature than we are, and was therefore in a position to perceive his natural reactions directly and to recognize what they were. In the case of Hermas, the confession of his sins may very well have been prompted by unholy sensations. At all events, the ensuing question as to whether he shall sit on the right hand or the left leads to a moral reprimand from his mistress. For although signs coming from the left were regarded as favourable in the Roman auguries, the left side, for both the Greeks and the Romans, was on the whole inauspicious, as the double meaning of the word “sinister” shows. But the question raised here of left and right has nothing to do with popular superstitions and is clearly of Biblical origin, referring to Matthew 25:33: “And he shall set the sheep on his right hand, but the goats on the left.” Because of their guileless and gentle nature, sheep are an allegory of the good, while the unruly and lascivious nature of goats makes them an image of evil. By assigning him a seat on the left, his mistress tactfully reveals to him her understanding of his psychology.

[390] When Hermas has taken his seat on her left, rather sadly, as he records, his mistress shows him a visionary scene which unrolls itself before his eyes. He beholds how the youths, assisted by ten thousand other men, build a mighty tower whose stones fit together without seams. This seamless tower, of indestructible solidity, signifies the Church, so Hermas is given to understand. *His mistress is the Church, and so is the tower*. We have seen already in the Litany of Loreto that the Virgin is named "tower of David" and "tower of ivory." The same or a similar association seems to be made here. The tower undoubtedly has the meaning of something solid and secure, as in Psalm 61:4: "For thou hast been a shelter for me, and a strong tower from the enemy." Any resemblance to the tower of Babel would involve an intense inner contradiction and must be excluded, but there may nevertheless be echoes of it, since Hermas, in company with every other thoughtful mind of that epoch, must have suffered much from the depressing spectacle of the ceaseless schisms and heretical disputes of the early Church. Such an impression may even have been his main reason for writing these confessions, an inference supported by the fact that the mysterious book that was revealed to him inveighed against heathens and apostates. The same confusion of tongues that frustrated the building of the tower of Babel almost completely dominated the Church in the early centuries, demanding desperate efforts on the part of the faithful to overcome the chaos. Since Christendom at that time was far from being one flock under one shepherd, it was only natural that Hermas should long for the "shepherd," the *poimen*, as well as for some solid and stable structure, the "tower," that would unite in one inviolable whole the elements gathered from the four winds, the mountains and seas.

[391] Earth-bound desire, sensuality in all its forms, attachment to the lures of this world, and the incessant dissipation of psychic energy in the world's prodigal variety, are the main obstacle to the development of a coherent and purposive attitude. Hence the elimination of this obstacle must have been one of the most important tasks of the time. It is therefore not surprising that, in the *Shepherd* of Hermas, it is the mastering of this task that is unfolded before our eyes. We have already seen how the original erotic stimulus and the energy it released were canalized into the personification of the unconscious complex, becoming the figure of Ecclesia, the old woman, whose visionary appearance demonstrates the spontaneity of the underlying complex. We learn, moreover, that the old woman now turns into a tower, since the tower is also the Church. This transformation is unexpected, because the connection between the tower and the old woman is not immediately apparent. But the attributes of the Virgin

in the Litany of Loreto will put us on the right track, for there we find, as already mentioned, the tower associated with the Virgin Mother. This attribute has its source in the Song of Songs 4:4: “Thy neck is like the tower of David builded for an armoury,” and 7:4: “Thy neck is a tower of ivory.” Similarly 8:10: “I am a wall, and my breasts like towers.”

[392] The Song of Songs, as we know, was originally a love poem, perhaps a wedding song, which was denied canonical recognition even by Jewish scholars until very late. Mystical interpretation, however, has always loved to conceive the bride as Israel and the bridegroom as Jehovah, impelled by a sound instinct to turn even erotic feelings into a relationship between God and the chosen people. Christianity appropriated the Song of Songs for the same reason, interpreting the bridegroom as Christ and the bride as the Church. To the psychology of the Middle Ages this analogy had an extraordinary appeal, and it inspired the quite unabashed Christ-eroticism of the Christian mystics, some of the best examples of which are supplied by Mechtild of Magdeburg. The Litany of Loreto was conceived in this spirit. It derived certain attributes of the Virgin directly from the Song of Songs, as in the case of the tower symbol. The rose, too, was used as one of her attributes even at the time of the Greek Fathers, together with the lily, which likewise appear in the Song of Songs (2:1): “I am the rose of Sharon, and the lily of the valleys.” Images much used in the medieval hymns are the “enclosed garden” and the “sealed fountain” (Song of Songs 4:12: “A garden inclosed is my sister, my spouse; a spring shut up, a fountain sealed”). The unmistakably erotic nature of these images was explicitly accepted as such by the Fathers. Thus St. Ambrose interprets the “enclosed garden” as virginity.[130] In the same way, he[131] compares Mary with the ark of bulrushes in which Moses was found:

> By the ark of bulrushes is meant the Blessed Virgin. Therefore his mother prepared the ark of bulrushes wherein Moses was placed, because the wisdom of God, which is the Son of God, chose blessed Mary the virgin and formed in her womb a man to whom he might become joined in unity of person.[132]

[393] St. Augustine employs the simile (frequently used by later writers) of the *thalamus*, bridal chamber, for Mary, again in an expressly anatomical sense: “He chose for himself a chaste bridal chamber, where the bridegroom was joined to the bride,”[133] and: “He issued forth from the bridal chamber, that is from the virginal womb.”[134]

[394] The interpretation of *vas* as the womb may therefore be taken as certain when St. Ambrose says in confirmation of St. Augustine: “Not of earth but of heaven did he choose for himself this vessel, through which he should descend to sanctify the temple of shame.”[135] The designation σκεῦος (vessel) is not uncommon with the Greek Fathers. Here again there is probably an allusion to the Song of Songs, for although the designation *vas* does not appear in the Vulgate text, we find instead the image of the goblet and of drinking (7:2): “Thy navel is like a round goblet, which wanteth not liquor; thy belly is like a heap of wheat set about with lilies.” The meaning of the first sentence has a parallel in the *Meisterlieder der Kolmarer Handschrift*, where Mary is compared with the widow’s cruse of oil (I Kings:17: 9ff.): “… Zarephath in the land of Zidon, whither Elijah was sent to a widow who should feed him; my body is fitly compared with hers, for God sent the prophet unto me, to change for us our time of famine.”[136] With regard to the second, St. Ambrose says: “In the womb of the virgin grace increased like a heap of wheat and the flowers of the lily, even as it generated the grain of wheat and the lily.”[137] In Catholic sources[138] very far-fetched passages are drawn into this vessel symbolism, as for instance Song of Songs 1:1 (DV): “Let him kiss me with the kiss of his mouth: for thy *breasts* are better than wine,” and even Exodus 16:33: “Take a *pot*, and put an omer full of manna therein, and lay it up before the Lord, to be kept for your generations.”

[395] These associations are so contrived that they argue against rather than for the Biblical origin of the vessel symbolism. In favour of an extra-Biblical source is the fact that the medieval hymns to Mary brazenly borrowed their imagery from everywhere, so that everything that was in any way precious became associated with her. The fact that the vessel symbol is very old—it stems from the third to fourth century—is no argument against its secular origin, since even the Fathers had a weakness for non-Biblical, pagan imagery; for instance Tertullian,[139] Augustine,[140] and others compared the Virgin with the undefiled earth and the unploughed field, not without a sidelong glance at the Kore of the mysteries.[141] Such comparisons were based on pagan models, as Cumont has shown to be the case with the ascension of Elijah in the early medieval illustrated manuscripts, which keep closely to the Mithraic prototype. In many of its rites the Church followed the pagan model, not least in making the birth of Christ coincide with the birth of the *sol invictus*, the invincible sun. St. Jerome compares the Virgin with the sun as the mother of the light.

[396] These non-Biblical allegories can have their source only in pagan conceptions still current at that time. It is therefore only just, when considering the vessel symbol, to call to mind the well-known and widespread Gnostic symbolism of the vessel. A great many incised gems have been preserved from that time which bear the symbol of a pitcher with remarkable winged bands, at once recalling the uterus with the *ligamenta lata*. This vessel is called the “vase of sins,”[142] in contrast with the hymns to Mary in which she is extolled as the “vessel of virtue.” King[143] contests the former interpretation as arbitrary and agrees with Köhler[144] that the cameo-image (principally Egyptian) refers to the pots on the water-wheels that drew up water from the Nile to irrigate the fields; this would also explain the peculiar bands which clearly served for fastening the pot to the water-wheel. The fertilizing function of the pot was, as King notes, expressed as the “fecundation of Isis by the seed of Osiris.” Often there is on the vessel a winnowing basket, probably with reference to the “mystical winnowing basket of Iakchos,” or *λῖκνον*, the figurative birthplace of the grain of wheat, symbolizing fertility.[145] There used to be a Greek marriage ceremony in which a winnowing basket filled with fruit was placed on the head of the bride, an obvious fertility charm.

[397] This interpretation of the vessel is supported by the ancient Egyptian view that everything originated from the primal water, Nu or Nut, who was also identified with the Nile or the ocean. Nu is written with three pots, three water signs, and the sign for heaven. A hymn to Ptah-Tenen says: “Maker of grain, which cometh forth from him in his name Nu the Aged, who maketh fertile the watery mass of heaven, and maketh to come forth the water on the mountains to give life to men and women.”[146] Wallis Budge drew my attention to the fact that the uterus symbolism exists today in the southern hinterland of Egypt in the form of rain and fertility charms. Occasionally it still happens that the natives in the bush kill a woman and take out her uterus for use in magical rites.[147]

[398] When one considers how strongly the Church Fathers were influenced by Gnostic ideas in spite of their resistance to these heresies,[148] it is not inconceivable that we have in the symbolism of the vessel a pagan relic that proved adaptable to Christianity, and this is all the more likely as the worship of Mary was itself a vestige of paganism which secured for the Christian Church the heritage of the Magna Mater, Isis, and other mother goddesses. The image of the *vas Sapientiae*, vessel of wisdom, likewise recalls its Gnostic prototype, Sophia.

[399] Official Christianity, therefore, absorbed certain Gnostic elements that manifested themselves in the worship of woman and found a place for them in an intensified worship of Mary. I have selected the Litany of Loreto as an example of this process of assimilation from a wealth of equally interesting material. The assimilation of these elements to the Christian symbol nipped in the bud the psychic culture of the man; for his soul, previously reflected in the image of the chosen mistress, lost its individual form of expression through this absorption. Consequently, any possibility of an individual differentiation of the soul was lost when it became repressed in the collective worship. Such losses generally have unfortunate consequences, and in this case they soon made themselves felt. Since the psychic relation to woman was expressed in the collective worship of Mary, the image of woman lost a value to which human beings had a natural right. This value could find its natural expression only through individual choice, and it sank into the unconscious when the individual form of expression was replaced by a collective one. In the unconscious the image of woman received an energy charge that activated the archaic and infantile dominants. And since all unconscious contents, when activated by dissociated libido, are projected upon external objects, the devaluation of the real woman was compensated by daemonic traits. She no longer appeared as an object of love, but as a persecutor or witch. The consequence of increasing Mariolatry was the witch hunt, that indelible blot on the later Middle Ages.

[400] But this was not the only consequence. The splitting off and repression of a valuable progressive tendency resulted in a quite general activation of the unconscious. This activation could find no satisfying expression in collective Christian symbols, for an adequate expression always takes an individual form. Thus the way was paved for heresies and schisms, against which the only defence available to the Christian consciousness was fanaticism. The frenzied horror of the Inquisition was the product of over-compensated doubt, which came surging up from the unconscious and finally gave rise to one of the greatest schisms of the Church—the Reformation.

[401] If I have dwelt rather longer on the symbolism of the vessel than my readers might have expected, I have done so for a definite reason, because I wanted to elucidate the psychological relations between the worship of woman and the legend of the Grail, which was so essentially characteristic of the early Middle Ages. The central religious idea in this legend, of which there are numerous variants, is the holy vessel, which, it must be obvious to everyone, is a thoroughly non-Christian image, whose origin is to be sought in extra-canonical sources.[149] From the material I have cited, it seems to me a genuine relic of

Gnosticism, which either survived the extermination of heresies because of a secret tradition, or owed its revival to an unconscious reaction against the domination of official Christianity. The survival or unconscious revivification of the vessel symbol is indicative of a strengthening of the feminine principle in the masculine psychology of that time. Its symbolization in an enigmatic image must be interpreted as a spiritualization of the eroticism aroused by the worship of woman. But spiritualization always means the retention of a certain amount of libido, which would otherwise be immediately squandered in sexuality. Experience shows that when the libido is retained, one part of it flows into the spiritualized expression, while the remainder sinks into the unconscious and activates images that correspond to it, in this case the vessel symbol. The symbol lives through the restraint imposed upon certain forms of libido, and in turn serves to restrain these forms. The dissolution of the symbol means a streaming off of libido along the direct path, or at any rate an almost irresistible urge for its direct application. But the living symbol exorcises this danger. A symbol loses its magical or, if you prefer, its redeeming power as soon as its liability to dissolve is recognized. To be effective, a symbol must be by its very nature unassailable. It must be the best possible expression of the prevailing world-view, an unsurpassed container of meaning; it must also be sufficiently remote from comprehension to resist all attempts of the critical intellect to break it down; and finally, its aesthetic form must appeal so convincingly to our feelings that no argument can be raised against it on that score. For a certain time the Grail symbol clearly fulfilled these requirements, and to this fact it owed its vitality, which, as the example of Wagner shows, is still not exhausted today, even though our age and our psychology strive unceasingly for its dissolution.[150]

[402] Let us now recapitulate this rather lengthy discussion and see what insights have been gained. We began with the vision of Hermas, in which he saw a tower being built. The old woman, who at first had declared herself to be the Church, now explains that the tower is a symbol of the Church. Her significance is thus transferred to the tower, and it is with this that the whole remaining part of the text is concerned. For Hermas it is only the tower that matters, and no longer the old woman, let alone Rhoda. The detachment of libido from the real object, its concentration on the symbol and canalization into a symbolic function, is complete. The idea of a universal and undivided Church, expressed in the symbol of a seamless and impregnable tower, has become an unshakable reality in the mind of Hermas. The detachment of libido from the object transfers it into the subject, where it activates the images lying dormant in the

unconscious. These images are archaic forms of expression which become symbols, and these appear in their turn as equivalents of the devalued objects. This process is as old as mankind, for symbols may be found among the relics of prehistoric man as well as among the most primitive human types living today. Symbol-formation, therefore, must obviously be an extremely important biological function. As the symbol can come alive only through the devaluation of the object, it is evident that the purpose it serves is to deprive the object of its value. If the object had an absolute value, it would be an absolute determining factor for the subject and would abolish his freedom of action absolutely, since even a relative freedom could not coexist with absolute determination by the object. Absolute relation to the object is equivalent to a complete exteriorization of the conscious processes; it amounts to an identity of subject and object which would render all cognition impossible. In a milder form this state still exists today among primitives. The projections we so often encounter in practical analysis are only residues of this original identity of subject and object.

[403] The elimination of cognition and conscious experience resulting from such a state means a considerable impairment of the capacity for adaptation, and this weights the scales heavily against man, who is already handicapped by his natural defencelessness and the helplessness of his young. But it also produces a dangerous inferiority in the realm of affect, because an identity of feeling with the object means, firstly, that any object whatsoever can affect the subject to any degree, and secondly, any affect on the part of the subject immediately includes and violates the object. An incident in the life of a bushman may illustrate what I mean. A bushman had a little son whom he loved with the tender monkey-love characteristic of primitives. Psychologically, this love is completely autoerotic—that is to say, the subject loves himself in the object. The object serves as a sort of erotic mirror. One day the bushman came home in a rage; he had been fishing, and had caught nothing. As usual the little fellow came running to meet him, but his father seized hold of him and wrung his neck on the spot. Afterwards, of course, he mourned for the dead child with the same unthinking abandon that had brought about his death.

[404] This is a good example of the object's identity with a passing affect. Obviously this kind of mentality is inimical to any protective tribal organization and to the propagation of the species, and must therefore be repressed and transformed. This is the purpose the symbol serves, and to this end it came into being. It draws libido away from the object, devalues it, and bestows the surplus libido on the subject. This surplus exerts its effect upon the unconscious, so that

the subject finds himself placed between an inner and an outer determinant, whence arises the possibility of choice and relative subjective freedom.

[405] Symbols always derive from archaic residues, from racial engrams (imprints), about whose age and origin one can speculate much although nothing definite can be determined. It would be quite wrong to try to derive symbols from personal sources, for instance from repressed sexuality. Such a repression can at most supply the amount of libido required to activate the archaic engram. The engram, however, corresponds to an inherited mode of functioning which owes its existence not to centuries of sexual repression but to the differentiation of instinct in general. The differentiation of instinct was and still is a biological necessity; it is not peculiar to the human species but manifests itself equally in the sexual atrophy of the worker-bee.

[406] I have used the vessel symbolism as an illustration of the way symbols are derived from archaic conceptions. Just as we found the primitive notion of the uterus at the root of this symbol, we may conjecture a similar derivation in the case of the tower. The tower belongs in all probability to the category of phallic symbols in which the history of symbolism abounds. The fact that the tower, presumably symbolizing erection, appears at the very moment when Hermas has to repress his erotic fantasies at the sight of the alluring couch is not surprising. We have seen that other symbolic attributes of the Virgin and the Church are unquestionably erotic in origin, as already attested by their derivation from the Song of Songs, and that they were expressly so interpreted by the Church Fathers. The tower symbol in the Litany of Loreto has the same source and may therefore have a similar underlying meaning. The attribute “ivory” is undoubtedly erotic in origin, since it is an allusion to the tint and texture of the skin (Song of Songs 5:14: “His belly is as bright ivory”). But the tower itself is also found in an unmistakably erotic context in 8:10: “I am a wall, and my breasts like towers,” which obviously refers to the jutting-out breasts with their full and elastic consistency. “His legs are as pillars of marble” (5:15), “thy neck is as a tower of ivory” (7:4), “thy nose is as the tower of Lebanon” (7:4), are equally obvious allusions to something slender and projecting. These attributes originate in tactile sensations which are transferred from the organ to the object. Just as a gloomy mood seems grey, and a joyous one bright and colourful, so also the sense of touch is influenced by subjective sexual sensations (in this case the sensation of erection) whose qualities are transferred to the object. The erotic psychology of the Song of Songs uses the images aroused in the subject for the purpose of enhancing the object’s value. Ecclesiastical psychology employs these same images in order to guide the

libido towards a figurative object, while the psychology of Hermas exalts the unconsciously activated image into an end in itself, using it to embody ideas that were of supreme importance for the minds of that time, namely, the consolidation and organization of the newly won Christian attitude and view of the world.

b. The Relativity of the God-concept in Meister Eckhart

[407] The process of transformation which Hermas experienced represents on a small scale what took place on a large scale in the early medieval psychology: a new revelation of woman and the development of the feminine symbol of the Grail. Hermas saw Rhoda in a new light, and the libido thus set free transformed itself under his hands into the fulfilment of his social task.

[408] It is, I think, characteristic of our psychology that we find on the threshold of the new age two figures who were destined to exert an immense influence on the hearts and minds of the younger generation: Wagner, the prophet of love, whose music runs the whole gamut of feeling from Tristan down to incestuous passion, then up again from Tristan to the sublime spirituality of Parsifal; and Nietzsche, the prophet of power and of the triumphant will for individuality. Wagner, in his last and loftiest utterance, harked back to the Grail legend, as Goethe did to Dante, but Nietzsche seized on the idea of a master caste and a master morality, an idea embodied in many a fair-haired hero and knight of the Middle Ages. Wagner broke the bonds that fettered love, Nietzsche shattered the "tables of values" that cramp individuality. Both strove after similar goals while at the same time creating irremediable discord; for where love is, power cannot prevail, and where power prevails, love cannot reign.

[409] The fact that three of the greatest minds of Germany should fasten on early medieval psychology in their most important works is proof, it seems to me, that that age has left behind a question which still remains to be answered. It may be well, therefore, to examine this question a little more closely. I have the impression that the mysterious something that inspired the knightly orders (the Templars, for instance), and that seems to have found expression in the Grail legend, may possibly have been the germ of a new orientation to life, in other words, a nascent symbol. The non-Christian or Gnostic character of the Grail symbol takes us back to the early Christian heresies, those germinating points in which a whole world of audacious and brilliant ideas lay hidden. In Gnosticism we see man's unconscious psychology in full flower, almost perverse in its luxuriance; it contained the very thing that most strongly resisted the *regula fidei*, that Promethean and creative spirit which will bow only to the individual

soul and to no collective ruling. Although in crude form, we find in Gnosticism what was lacking in the centuries that followed: a belief in the efficacy of individual revelation and individual knowledge. This belief was rooted in the proud feeling of man's affinity with the gods, subject to no human law, and so overmastering that it may even subdue the gods by the sheer power of Gnosis. In Gnosis are to be found the beginnings of the path that led to the intuitions of German mysticism, so important psychologically, which came to flower at the time of which we are speaking.

[410] The question now before us focuses our attention on the greatest thinker of that age, Meister Eckhart. Just as signs of a new orientation are apparent in chivalry, so, in Eckhart, we are confronted with new ideas, ideas having the same *psychic* orientation that impelled Dante to follow the image of Beatrice into the underworld of the unconscious and that inspired the singers who sang the lore of the Grail.

[411] Nothing is known, unfortunately, of Eckhart's personal life that would explain how he was led to his knowledge of the soul. But the meditative air with which he says in his discourse on repentance, "And still today one seldom finds that people come to great things without they first *go* somewhat astray,"[151] permits the inference that he wrote from personal experience. Strangely appealing is Eckhart's sense of an inner affinity with God, when contrasted with the Christian sense of sin. We feel ourselves transported back into the spacious atmosphere of the Upanishads. Eckhart must have experienced a quite extraordinary enhancement of the value of the soul, i.e., of his own inner being, that enabled him to rise to a purely psychological and relativistic conception of God and of his relation to man. This discovery and painstaking exposition of the relativity of God to man and the soul seem to me one of the most important landmarks on the way to a psychological understanding of religious phenomena, serving at the same time to liberate the religious function from the cramping limitations of intellectual criticism, though this criticism, of course, must not be denied its dues.

[412] We now come to the main theme of this chapter—the relativity of the symbol. The "relativity of God," as I understand it, denotes a point of view that does not conceive of God as "absolute," i.e., wholly "cut off" from man and existing outside and beyond all human conditions, but as in a certain sense dependent on him; it also implies a reciprocal and essential relation between man and God, whereby man can be understood as a function of God, and God as a psychological function of man. From the empirical standpoint of analytical

psychology, the God-image is the symbolic expression of a particular psychic state, or function, which is characterized by its absolute ascendency over the will of the subject, and can therefore bring about or enforce actions and achievements that could never be done by conscious effort. This overpowering impetus to action (so far as the God-function manifests itself in acts), or this inspiration that transcends conscious understanding, has its source in an accumulation of energy in the unconscious. The accumulated libido activates images lying dormant in the collective unconscious, among them the God-image, that engram or imprint which from the beginning of time has been the collective expression of the most overwhelmingly powerful influences exerted on the conscious mind by unconscious concentrations of libido.

[413] Hence, for our psychology, which as a science must confine itself to empirical data within the limits set by cognition, God is not even relative, but a function of the unconscious—the manifestation of a dissociated quantum of libido that has activated the God-image. From the metaphysical point of view God is, of course, absolute, existing in himself. This implies his complete detachment from the unconscious, which means, psychologically, a complete unawareness of the fact that God's action springs from one's own inner being. The relativity of God, on the other hand, means that a not inconsiderable portion of the unconscious processes is registered, at least indirectly, as a psychological content. Naturally this insight is possible only when more attention than usual is paid to the psyche, with the consequence that the contents of the unconscious are withdrawn from projection into objects and become endowed with a conscious quality that makes them appear as belonging to the subject and as subjectively conditioned.

[414] This was what happened with the mystics, though it was not the first time that the idea of God's relativity had appeared. It is found in principle and in the very nature of things among primitives. Almost everywhere on the lower human levels the idea of God has a purely dynamic character; God is a divine force, a power related to health, to the soul, to medicine, to riches, to the chief, a power that can be captured by certain procedures and employed for the making of things needful for the life and well-being of man, and also to produce magical or baneful effects. The primitive feels this power as much within him as outside him; it is as much his own life force as it is the "medicine" in his amulet, or the mana emanating from his chief. Here we have the first demonstrable conception of an all-pervading spiritual force. Psychologically, the efficacy of the fetish, or the prestige of the medicine-man, is an unconscious subjective evaluation of those objects. Their power resides in the libido which is present in the subject's

unconscious, and it is perceived in the object because whenever unconscious contents are activated they appear in projection.

[415] The relativity of God in medieval mysticism is, therefore, a regression to a primitive condition. In contrast, the related Eastern conceptions of the individual and supra-individual *atman* are not so much a regression to the primitive as a continuous development out of the primitive in a typically Eastern way that still manages to preserve the efficacy of the primitive principle. The regression to the primitive is not surprising, in view of the fact that every vital form of religion organizes one or the other primitive tendency in its ceremonials or its ethics, thereby securing for itself those secret instinctive forces that conduce to the perfecting of human nature in the religious process. This reversion to the primitive, or, as in India, the uninterrupted connection with it, keeps man in touch with Mother Earth, the prime source of all power. Seen from the heights of a differentiated point of view, whether rational or ethical, these instinctive forces are “impure.” But life itself flows from springs both clear and muddy. Hence all excessive “purity” lacks vitality. A constant striving for clarity and differentiation means a proportionate loss of vital intensity, precisely because the muddy elements are excluded. Every renewal of life needs the muddy as well as the clear. This was evidently perceived by the great relativist Meister Eckhart when he said:

> For this reason God is willing to bear the brunt of sins and often winks at them, mostly sending them to those whom he has destined for great things. Behold! Who was dearer and nearer to our Lord than the apostles? Not one of them but fell into mortal sin; all were mortal sinners. In the Old Testament and in the New he has shown this to be true of those who afterwards were far the dearest to him; and still today one seldom finds that people come to great things without they first go somewhat astray.[152]

[416] Both on account of his psychological perspicacity and his deep religious feeling and thought, Meister Eckhart was the most brilliant exponent of that critical movement within the Church which began towards the end of the thirteenth century. I would like to quote a few of his sayings to illustrate his relativistic conception of God:

> For man is truly God, and God is truly man.[153]

> Whereas he who has not God as such an inner possession, but with every means must fetch him from without, in this thing or in that, where he is then

> sought for in vain, in all manner of works, people, or places; verily such a man has him not, and easily something comes to trouble him. And it is not only evil company that troubles him, but also the good, not only the street, but also the church, not only vile words and deeds, but the good as well. For the hindrance lies within himself, because in him God has not yet become the world. Were God that to him, then all would be well and good with him in every place and with all people, always possessing God.[154]

[417] This passage is of particular psychological interest, as it exemplifies something of the primitive idea of God outlined above. “Fetching God from without” is the equivalent of the primitive view that *tondi*[155] can be got from outside. With Eckhart, it may be merely a figure of speech, but the original meaning nevertheless glimmers through. At any rate it is clear that Eckhart understands God as a psychological value. This is proved by the words “and easily something comes to trouble him.” For, when God is outside, he is necessarily projected into objects, with the result that all objects acquire a surplus value. But whenever this happens, the object exerts an overpowering influence over the subject, holding him in slavish dependence. Eckhart is evidently referring to this subjection to the object, which makes the world appear in the role of God, i.e., as an absolutely determining factor. Hence he says that for such a person “God has not yet become the world,” since for him the world has taken the place of God. The subject has not succeeded in detaching and introverting the surplus value from the object, thus turning it into an inner possession. Were he to possess it in himself, he would have God (this same value) continually as an object, so that God would have become the world. In the same passage Eckhart says:

> He that is right in his feeling is right in any place and in any company, but if he is wrong he finds nothing right wherever or with whom he may be. For a man of right feeling has God with him.[156]

A man who has this value in himself is everywhere at ease; he is not dependent on objects—not for ever needing and hoping to get from the object what he lacks himself.

[418] From all this it should be sufficiently clear that, for Eckhart, God is a psychological or, to be more accurate, a *psycho-dynamic* state.

> … by this kingdom of God we understand the soul, for the soul is of like nature with the Godhead. Hence all that has been said here of the kingdom of God,

> how God is himself the kingdom, may be said with equal truth of the soul. St. John says, “All things were made by him.” This is to be understood of the soul, for the soul is all things. The soul is all things because she is an image of God, and as such she is also the kingdom of God. … So much, says one Master, is God in the soul, that his whole divine nature depends upon her. It is a higher state for God to be in the soul than for the soul to be in God. The soul is not blissful because she is in God, she is blissful because God is in her. Rely upon it, God himself is blissful in the soul.[157]

[419] Looked at historically, the soul, that many-faceted and much-interpreted concept, refers to a psychological content that must possess a certain measure of autonomy within the limits of consciousness. If this were not so, man would never have hit on the idea of attributing an independent existence to the soul, as though it were some objectively perceptible thing. It must be a content in which spontaneity is inherent, and hence also partial unconsciousness, as with every autonomous complex. The primitive, as we know, usually has several souls—several autonomous complexes with a high degree of spontaneity, so that they appear as having a separate existence (as in certain mental disorders). On a higher level the number of souls decreases, until at the highest level of culture the soul resolves itself into the subject’s general awareness of his psychic activities and exists only as a term for the totality of psychic processes. This absorption of the soul into consciousness is just as much a characteristic of Eastern as it is of Western culture. In Buddhism everything is dissolved into consciousness; even the *samskaras*, the unconscious formative forces, must be transformed through religious self-development.

[420] As against this historical evolution of the idea of the soul, analytical psychology opposes the view that the soul does not coincide with the totality of the psychic functions. We define the soul on the one hand as the relation to the unconscious, and on the other as a personification of unconscious contents. From the civilized standpoint it may seem deplorable that personifications of unconscious contents still exist, just as a man with a differentiated consciousness might well lament the existence of contents that are still unconscious. But since analytical psychology is concerned with man as he is and not with man as he would like to be, we have to admit that those same phenomena which impel the primitive to speak of “souls” still go on happening, just as there are still countless people among civilized nations who believe in ghosts. We may believe as much as we please in the doctrine of the “unity of the

ego," according to which there can be no such things as autonomous complexes, but Nature herself does not bother in the least about our abstract theories.

[421] If the "soul" is a personification of unconscious contents, then, according to our previous definition, God too is an unconscious content, a personification in so far as he is thought of as personal, and an image or expression of something in so far as he is thought of as dynamic. God and the soul are essentially the same when regarded as personifications of an unconscious content. Meister Eckhart's view, therefore, is purely psychological. So long as the soul, he says, is only in God, she is not blissful. If by "blissful" one understands a state of intense vitality, it follows from the passage quoted earlier that this state does not exist so long as the dynamic principle "God," the libido, is projected upon objects. For, so long as God, the highest value, is not in the soul, it is somewhere outside. God must be withdrawn from objects and brought into the soul, and this is a "higher state" in which God himself is "blissful." Psychologically, this means that when the libido invested in God, i.e., the surplus value that has been projected, is recognized as a projection,[158] the object loses its overpowering significance, and the surplus value consequently accrues to the individual, giving rise to a feeling of intense vitality, a new potential. God, life at its most intense, then resides in the soul, in the unconscious. But this does not mean that God has become completely unconscious in the sense that all idea of him vanishes from consciousness. It is as though the supreme value were shifted elsewhere, so that it is now found inside and not outside. Objects are no longer autonomous factors, but God has become an autonomous psychic complex. An autonomous complex, however, is always only partially conscious, since it is associated with the ego only in limited degree, and never to such an extent that the ego could wholly comprehend it, in which case it would no longer be autonomous. Henceforth the determining factor is no longer the overvalued object, but the unconscious. The determining influences are now felt as coming from within oneself, and this feeling produces a oneness of being, a relation between conscious and unconscious, in which of course the unconscious predominates.

[422] We must now ask ourselves, whence comes this "blissful" feeling, this ecstasy of love?[159] In this Brahman-like state of *ananda*, with the supreme value lying in the unconscious, there is a drop in the conscious potential, the unconscious becomes the determining factor, and the ego almost entirely disappears. It is a state strongly reminiscent of that of the child on the one hand, and of the primitive on the other, who is likewise influenced in the highest degree by the unconscious. We can safely say that the restoration of the earlier

paradisal state is the cause of this blissfulness. But we have still to find out why this original state is so peculiarly blissful. The feeling of bliss accompanies all those moments when one feels borne along by the current of life, when what was dammed up can flow off without restraint, when there is no need to do this thing or that thing with a conscious effort in order to find a way out or to achieve a result. We have all known situations or moods when “things go of themselves,” when we no longer need to manufacture all sorts of wearisome conditions for our joy or pleasure. The time of childhood is the unforgettable emblem of this joy, which, unperturbed by things without, pours in a warm flood from within. “Childlikeness” is therefore a symbol of that unique inner condition on which “blissfulness” depends. To be like a child means to possess a treasury of accumulated libido which can constantly stream forth. The libido of the child flows into things; in this way he gains the world, then by degrees loses himself in the world (to use the language of religion) through a gradual over-valuation of things. The growing dependence on things entails the necessity of sacrifice, i.e., the withdrawal of libido, the severance of ties. The intuitive teachings of religion seek by this means to gather the energy together again; indeed, religion portrays this process of re-collection in its symbols. Actually, the over-valuation of the object as compared with the low value of the subject produces a retrograde current that would bring the libido quite naturally back to the subject were it not for the obstructing power of consciousness. Everywhere among primitives we find religious practice harmonizing with nature, because the primitive is able to follow his instinct without difficulty, now in one direction and now in another. His religious practices enable him to recreate the magical power he needs, or to recover the soul that was lost to him during the night.

[423] The aim of the great religions is expressed in the injunction “not of this world,” and this implies the inward movement of libido into the unconscious. Its withdrawal and introversion create in the unconscious a concentration of libido which is symbolized as the “treasure,” as in the parables of the “pearl of great price” and the “treasure in the field.” Eckhart interprets the latter as follows:

> Christ says, “The kingdom of heaven is like a treasure hid in a field.” This field is the soul, wherein lies hidden the treasure of the divine kingdom. In the soul, therefore, are God and all creatures blessed.[160]

[424] This interpretation agrees with our psychological argument: the soul is a personification of the unconscious, where lies the treasure, the libido which is immersed in introversion and is allegorized as God’s kingdom. This amounts to a permanent union with God, a living in his kingdom, in that state where a preponderance of libido lies in the unconscious and determines conscious life. The libido concentrated in the unconscious was formerly invested in objects, and this made the world seem all-powerful. God was then “outside,” but now he works from within, as the hidden treasure conceived as God’s kingdom. If, then, Eckhart reaches the conclusion that the soul is itself God’s kingdom, it is conceived as a function of relation to God, and God would be the power working within the soul and perceived by it. Eckhart even calls the soul the *image of God*.

[425] It is evident from the ethnological and historical material that the soul is a content that belongs partly to the subject and partly to the world of spirits, i.e., the unconscious. Hence the soul always has an earthly as well as a rather ghostly quality. It is the same with magical power, the divine force of primitives, whereas on the higher levels of culture God is entirely separate from man and is exalted to the heights of pure ideality. But the soul never loses its intermediate position. It must therefore be regarded as a function of relation between the subject and the inaccessible depths of the unconscious. The determining force (God) operating from these depths is reflected by the soul, that is, it creates symbols and images, and is itself only an image. By means of these images the soul conveys the forces of the unconscious to consciousness; it is both receiver and transmitter, an organ for perceiving unconscious contents. What it perceives are symbols. But symbols are shaped energies, determining ideas whose affective power is just as great as their spiritual value. When, says Eckhart, the soul is in God it is not “blissful,” for when this organ of perception is overwhelmed by the divine *dynamis* it is by no means a happy state. But when God is in the soul, i.e., when the soul becomes a vessel for the unconscious and makes itself an image or symbol of it, this is a truly happy state. The happy state is a *creative* state, as we see from the following noble words:

> If any should ask me, Wherefore do we pray, wherefore do we fast, wherefore do we do all manner of good works, wherefore are we baptized, wherefore did God become man, I would answer, So that God may be born in the soul and the soul again in God. Therefore were the Holy Scriptures written. Therefore did God create the whole world, that God might be born in the soul and the soul

again in God. The innermost nature of all grain is wheat, and of all metal, gold, and of all birth, Man![161]

[426] Here Eckhart states bluntly that God is dependent on the soul, and at the same time, that the soul is the birthplace of God. This latter sentence can readily be understood in the light of our previous reflections. The organ of perception, the soul, apprehends the contents of the unconscious, and, as the creative function, gives birth to its *dynamis* in the form of a symbol.[162] The soul gives birth to images that from the rational standpoint of consciousness are assumed to be worthless. And so they are, in the sense that they cannot immediately be turned to account in the objective world. The first possibility of making use of them is *artistic*, if one is in any way gifted in that direction;[163] a second is *philosophical speculation*;[164] a third is *quasi-religious*, leading to heresy and the founding of sects; and a fourth way of employing the *dynamis* of these images is to squander it in every form of licentiousness. As we noted at the beginning (par. 25), the latter two modes of application were especially apparent in the Encratitic (ascetic) and Antitactic (anarchic) schools of Gnosticism.

[427] The conscious realization of these images is, however, of indirect value from the point of view of adaptation to reality, in that one’s relation to the surrounding world is thereby freed from admixtures of fantasy. Nevertheless, their main value lies in promoting the subject’s happiness and well-being, irrespective of external circumstances. To be adapted is certainly an ideal, but adaptation is not always possible. There are situations in which the only adaptation is patient endurance. This form of passive adaptation is made easier by an elaboration of the fantasy-images. I say “elaboration” because at first the fantasies are merely raw material of doubtful value. They have to be worked on and put in a form best calculated to yield the maximum benefit. This is a matter of technique, which it would not be appropriate to discuss here. I will only say, for clarity’s sake, that there are two methods of treatment: 1. the reductive, and 2. the synthetic. The former traces everything back to primitive instincts, the latter develops the material into a process for differentiating the personality. The two methods are complementary, for reduction to instinct leads back to reality, indeed to an over-valuation of reality and hence to the necessity of sacrifice. The synthetic method elaborates the symbolic fantasies resulting from the introversion of libido through sacrifice. This produces a new attitude to the world, whose very difference offers a new potential. I have termed this transition to a new attitude the transcendent function.[165] In the regenerated attitude the libido that was formerly sunk in the unconscious emerges in the

form of some positive achievement. It is equivalent to a renewal of life, which Eckhart symbolizes by God's birth. Conversely, when the libido is withdrawn from external objects and sinks into the unconscious, the soul is born again in God. This state, as he rightly observes, is not a blissful one,[166] because it is a negative act, a turning away from life and a descent to the *deus absconditus*, who possesses qualities very different from those of the God who shines by day.

[428] Eckhart speaks of God's birth as a continual process. As a matter of fact, the process in question is a psychological one that unconsciously repeats itself almost continually, though we are conscious of it only when it swings towards the extreme. Goethe's idea of a systole and diastole seems to have hit the mark intuitively. It may well be a question of a vital rhythm, of fluctuations of vital forces, which as a rule go on unconsciously. This may also explain why the existing terminology for such a process is in the main either religious or mythological, since these formulas refer primarily to unconscious psychological facts and not, as the scientific interpreters of myths often assert, to the phases of the moon or other meteorological phenomena. And because it is pre-eminently a question of unconscious processes, we have the greatest difficulty, as scientists, in extricating ourselves at least so far from the language of metaphor as to reach the level of metaphor used by other sciences. Reverence for the great mysteries of Nature, which the language of religion seeks to express in symbols hallowed by their antiquity, profound significance, and beauty, will not suffer from the extension of psychology to this domain, to which science has hitherto found no access. We only shift the symbols back a little, shedding a little light on their darker reaches, but without succumbing to the erroneous notion that we have created anything more than merely a new symbol for the same enigma that perplexed all ages before us. Our science is a language of metaphor too, but in practice it works better than the old mythological hypothesis, which used concretisms as a means of expression, and not, as we do, concepts.

By being created, the soul created God, for he did not exist until the soul was made. A little while since and I declared, I am the cause that God is God! God is gotten of the soul, his Godhead he has of himself.[167]

God comes into being and passes away.[168]

Because all creatures declare him, God comes into being. While yet I abode in the ground and the depths of Godhead, in its flood and source, none asked me whither I went or what I did; none was there who could have questioned me.

> But when I flowed forth, all creatures declared God. … And why did they not declare the Godhead? All that is in Godhead is one, and of that there is nothing to declare. Only God does; Godhead does nothing, there is nothing it can do, and never has it looked for anything to do. God and Godhead are as different as doing and non-doing. When I come home again in God, I do nothing more in myself, so this my breaking through is much more excellent than my first going out. For truly it is I who bring all creatures out of their own into my mind and make them one in me. When I come back into the ground and the depths of Godhead, into its flood and source, none asks me whence I came or whither I went. None missed me. God passes away.[169]

[429] We see from these passages that Eckhart distinguishes between God and Godhead. Godhead is All, neither knowing nor possessing itself, whereas God is a function of the soul, just as the soul is a function of Godhead. Godhead is obviously all-pervading creative power or, in psychological terms, self-generating creative instinct, that neither knows nor possesses itself, comparable to Schopenhauer's universal Will. But God appears as issuing forth from Godhead and the soul. Like every creature, the soul "declares" him: he exists in so far as the soul distinguishes itself from the unconscious and perceives its *dynamis*, and he ceases to exist as soon as the soul is immersed in the "flood and source" of unconscious *dynamis*. Thus Eckhart says:

> When I flowed out from God, all things declared, "God is!" Now this cannot make me blessed, for thereby I acknowledge myself a creature. But in my breaking through I stand empty in the will of God, and empty also of God's will, and of all his works, even of God himself—then I am more than all creatures, then I am neither God nor creature: I am what I was, and that I shall remain, now and ever more! Then I receive a thrust which carries me above all angels. By this thrust I become so rich that God cannot suffice me, despite all that he is as God and all his godly works; for in this breakthrough I receive what God and I have in common. I am what I was, I neither increase nor diminish, for I am the unmoved mover that moves all things. Here God can find no more place in man, for man by his emptiness has won back that which he eternally was and ever shall remain.[170]

[430] The "flowing out" means a realization of the unconscious content and the unconscious *dynamis* in the form of an *idea* born of the soul. This is an act of conscious differentiation from the unconscious *dynamis*, a separation of the ego as subject from God (= *dynamis*) as object. By this act God "becomes." But

when the "breakthrough" abolishes this separation by cutting the ego off from the world, and the ego again becomes identical with the unconscious *dynamis*, God disappears as an object and dwindles into a subject which is no longer distinguishable from the ego. In other words the ego, as a late product of differentiation, is reunited with the dynamic All-oneness (the *participation mystique* of primitives). This is the immersion in the "flood and source." The numerous analogies with Eastern ideas are immediately apparent, and they have been elaborated by writers more qualified than myself. In the absence of direct transmission this parallelism proves that Eckhart was thinking from the depths of the collective psyche which is common to East and West. This universal foundation, for which no common historical background can be made answerable, underlies the primitive mentality with its energic conception of God.

[431] The return to primeval nature and mystic regression to the psychic conditions of prehistory are common to all religions in which the impelling *dynamis* has not yet petrified into an abstract idea but is still a living experience, no matter whether this be expressed in ceremonies of identification with the totem among the Australian aborigines[171] or in the ecstasies of the Christian mystics. As a result of this retrograde process the original state of identity with God is re-established and a new potential is produced. However improbable such a state may be, it is a profoundly impressive experience which, by revivifying the individual's relation to God as an object, creates the world anew.

[432] In speaking of the relativity of the God-symbol, we would be failing in our duty if we omitted to mention that solitary poet whose tragic fate it was to find no relation either to his own times or to his own inner vision: Angelus Silesius.[172] What Eckhart laboured to express with a great effort of thought, and often in barely intelligible language, Angelus Silesius sings in touchingly intimate verses, which portray the relativity of God with naïve simplicity. His verses speak for themselves:

I know that without me
God can no moment live;
Were I to die, then He
No longer could survive.

God cannot without me
A single worm create;
Did I not share with Him
Destruction were its fate.

I am as great as God,
And He is small like me;
He cannot be above,
Nor I below Him be.

In me is God a fire
And I in Him its glow;
In common is our life,
Apart we cannot grow.

God loves me more than Self
My love doth give His weight,
Whate’er He gives to me
I must reciprocate.

He’s God and man to me,
To Him I’m both indeed;
His thirst I satisfy,
He helps me in my need.

This God, who feels for us,
Is to us what we will;
And woe to us, if we
Our part do not fulfil.

God is whate’er He is,
I am what I must be;
If you know one, in sooth,
You know both Him and me.

I am not outside God,
Nor leave I Him afar;
I am His grace and light,
And He my guiding star.

I am the vine, which He
Doth plant and cherish most;
The fruit which grows from me
Is God, the Holy Ghost.

I am God’s child, His son,
And He too is my child;
We are the two in one,
Both son and father mild.

To illuminate my God
The sunshine I must be;
My beams must radiate

His calm and boundless sea.[173]

[433] It would be absurd to suppose that such audacious ideas as these and Meister Eckhart's are nothing but figments of conscious speculation. Such thoughts are always profoundly significant historical phenomena, borne along on the unconscious currents of the collective psyche. Below the threshold of consciousness, thousands of other nameless ones are ranged behind them with similar thoughts and feelings, ready to open the gates of a new age. In these bold ideas we hear the voice of the collective psyche, which with imperturbable assurance and the finality of a natural law brings about spiritual transformation and renewal. The unconscious currents reached the surface at the time of the Reformation. The Reformation largely did away with the Church as the dispenser of salvation and established once more the personal relation to God. The culminating point in the objectification of the God-concept had now been passed, and from then on it became more and more subjective. The logical consequence of this subjectifying process is a splitting up into sects, and its most extreme outcome is individualism, representing a new form of detachment from the world, the immediate danger of which is re-submersion in the unconscious *dynamis*. The cult of the "blond beast" stems from this development, besides much else that distinguishes our age from others. But whenever this submersion in instinct occurs, it is compensated by a growing resistance to the chaos of sheer dynamism, by a need for form and order. Diving down into the maelstrom, the soul must create the symbol that captures and expresses this dynamism. It is this process in the collective psyche that is felt or intuited by poets and artists whose main source of creativity is their perception of unconscious contents, and whose intellectual horizon is wide enough to discern the crucial problems of the age, or at least their outward aspects.

5. THE NATURE OF THE UNITING SYMBOL IN SPITTELER

[434] Spitteler's *Prometheus* marks a psychological turning point: it illustrates the splitting apart of pairs of opposites that were once united. Prometheus, the artist, the servant of the soul, disappears from the world of men; while society itself, in obedience to a soulless moral routine, is delivered over to Behemoth, symbolizing the inimical, the destructive effect of an obsolete ideal. At the right moment Pandora, the soul, creates the saving jewel in the unconscious, but it does not benefit mankind because men fail to appreciate it. The change for the better comes about only through the intervention of Prometheus, who through insight and understanding brings first a few, and then many, individuals to their

senses. It can hardly be doubted that this work of Spitteler's has its roots in the intimate life of its creator. But if it consisted only in a poetic elaboration of purely personal experiences, it would lack general validity and permanent value. It achieves both because it is not merely personal but is concerned with Spitteler's own experience of the collective problems of our time. On its first appearance it was bound to meet with the apathetic indifference of the public, for in any age the vast majority of men are called upon to preserve and praise the *status quo*, thus helping to bring about the disastrous consequences which the creative spirit had sought to avert.

[435] One important question still remains to be discussed, and that is the nature of this jewel, or symbol of renewed life, which the poet senses will bring joy and deliverance. We have already documented the "divine" nature of the jewel, and this clearly means that it contains possibilities for a new release of energy, for freeing the libido bound in the unconscious. The symbol always says: in some such form as this a new manifestation of life will become possible, a release from bondage and world-weariness. The libido that is freed from the unconscious by means of the symbol appears as a rejuvenated god, or actually as a new god; in Christianity, for instance, Jehovah is transformed into a loving Father with a higher and more spiritual morality. The motif of the god's renewal is universal and may be assumed to be familiar to most readers. Speaking of the redeeming power of the jewel, Pandora says: "I have heard of a race of men, full of sorrow and deserving of pity, and I have thought of a gift with which, if you graciously approve, I may assuage or solace their many sufferings."[174] The leaves of the tree that shelters the "wonder-child" sing: "For here is the presence, and here is bliss, and here is grace."[175]

[436] The message of the wonder-child is love and joy, a paradisal state just as it was at the birth of Christ; while the greeting by the sun-goddess[176] and the miracle that all men, however far away, became "good" and were blessed at the moment of this birth[177] are attributes to the birth of the Buddha. From the "divine blessing" I will excerpt only this one significant passage: "May every man meet again those images he once beheld as a child in the shimmering dream of the future."[178] This is an affirmation that childhood fantasies strive for fulfilment; the images are not lost, but come again in ripe manhood and should be fulfilled. As Old Kule says in Barlach's *Der tote Tag:*

> When I lie here at night, and the pillows of darkness weigh me down, at times there presses about me a light that resounds, visible to my eyes and audible to

> my ears; and there about my bed stand the lovely forms of a better future. Stiff they are as yet, but of a radiant beauty, still sleeping; but he who shall awaken them would make for the world a fairer face. He would be a hero who could do that. … They stand not in the sun and nowhere are they lit by the sun. But sometime they shall and must come forth from the night. What a master-work that would be, to raise them up to the sun! There they would live.[179]

[437] Epimetheus, too, as we shall see, longs for the image, the jewel; in his discourse on the statue of Herakles (the hero!) he says: "This is the meaning of the statue … that a jewel shall ripen over our heads, a jewel we must win."[180] But when the jewel is rejected by Epimetheus and is brought to the priests, they sing in just the same strain as Epimetheus did when he longed for it: "O come, O God, with thy grace," only to repudiate and revile in the very next instant the heavenly jewel that is offered them. The verses of the hymn sung by the priests can easily be recognized as the Protestant hymn:

> Living Spirit, once again
> Come, Thou true eternal God!
> Nor thy power descend in vain,
> Make us ever Thine abode;
> So shall Spirit, joy and light
> Dwell in us, where all was night.
> …
> Spirit Thou of strength and power,
> Thou new Spirit God hath given,
> Aid us in temptation's hour,
> Make us perfect Thou for heaven.
> Arm us in the battle field,
> Leave us never there to yield.[181]

[438] This hymn bears out our earlier argument. It is wholly in keeping with the rationalistic nature of Epimethean creatures that the same priests who sing this hymn should reject the new spirit of life, the new symbol. Reason must always seek the solution in some rational, consistent, logical way, which is certainly justifiable enough in all normal situations but is entirely inadequate when it comes to the really great and decisive questions. It is incapable of creating the symbol, because the symbol is irrational. When the rational way proves to be a *cul de sac*—as it always does after a time—the solution comes from the side it was least expected. ("Can there any good thing come out of Nazareth?"[182]) Such is the psychological law underlying the Messianic prophecies, for instance. The prophecies themselves are projections of events foreshadowed in

the unconscious. Because the solution is irrational, the coming of the Saviour is associated with an irrational and impossible condition: the pregnancy of a virgin (Isaiah 7:14). This prophecy, like many another, can be taken in two ways, as in *Macbeth* (IV, 1):

> Macbeth shall never vanquished be until
> Great Birnam wood to high Dunsinane hill
> Shall come against him.

[439] The birth of the Saviour, the redeeming symbol, occurs just when one is least expecting it, and in the most improbable of places. Thus Isaiah says (53: 1–3):

> Who hath believed our report? and to whom is the arm of the Lord revealed?
>
> For he shall grow up before him as a tender plant, and as a root out of a dry ground: he hath no form nor comeliness; and when we shall see him, there is no beauty that we should desire him.
>
> He is despised and rejected of men; a man of sorrows, and acquainted with grief; and we hid as it were our faces from him; he was despised, and we esteemed him not.

[440] Not only does the redeeming power come from the place where nothing is expected, it also appears in a form that has nothing to recommend it from the Epimethean point of view. Spitteler can hardly have borrowed consciously from the Bible when describing the rejection of the symbol, or we would note it in his words. It is more likely that he drew on the same depths from which prophets and creative artists call up the redeeming symbol.

[441] The coming of the Saviour signifies a union of opposites:

> The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them.
>
> And the cow and the bear shall feed; their young ones shall lie down together: and the lion shall eat straw like the ox.
>
> And the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice' den.[183]

[442] The nature of the redeeming symbol is that of a child[184] (the “wonder-child” of Spitteler)—childlikeness or lack of prior assumptions is of the very essence

of the symbol and its function. This childlike attitude necessarily brings with it another guiding principle in place of self-will and rational intentions, as overwhelmingly powerful in effect as it is divine. Since it is of an irrational nature, the new guiding principle appears in miraculous form:

> For unto us a child is born, unto us a son is given; and the government shall be on his shoulder; and his name shall be called Wonderful, Counsellor, The mighty God, The everlasting Father, the Prince of Peace.[185]

[443] These honorific titles reproduce the essential qualities of the redeeming symbol. Its “divine” effect comes from the irresistible *dynamis* of the unconscious. The saviour is always a figure endowed with magical power who makes the impossible possible. The symbol is the middle way along which the opposites flow together in a new movement, like a watercourse bringing fertility after a long drought. The tension that precedes solution is likened in Isaiah to pregnancy:

> Like as a woman with child, that draweth near the time of her delivery, is in pain, and crieth out in her pangs, so we have been in thy sight, O Lord.
>
> We have been with child, we have been in pain, we have as it were brought forth wind; we have not wrought any deliverance in the earth; neither have the inhabitants of the world fallen.
>
> Thy dead men shall live, together with my dead body shall they arise.[186]

[444] Through the act of deliverance what was inert and dead comes to life; in psychological terms, the functions that have lain fallow and unfertile, and were unused, repressed, undervalued, despised, etc., suddenly burst forth and begin to live. It is precisely the least valued function that enables life, which was threatened with extinction by the differentiated function, to continue.[187] This motif recurs in the New Testament idea of the *αποκαςάστασιζ πάντων*, restitution of all things (Acts 3:21), which is a more highly developed form of that worldwide version of the hero myth where the hero, on his exit from the belly of the whale, brings with him not only his parents but the whole company of those previously swallowed by the monster—what Frobenius calls the “universal slipping out.”[188] The connection with the hero myth is preserved in Isaiah three verses later:

> In that day the Lord with his sore and great and strong sword shall punish leviathan the piercing serpent, even leviathan that crooked serpent; and he shall

slay the dragon that is in the sea.[189]

[445] With the birth of the symbol, the regression of libido into the unconscious ceases. Regression is converted into progression, the blockage starts to flow again, and the lure of the maternal abyss is broken. When Old Kule in Barlach's *Der tote Tag* says that he who awakened the sleeping images would be a hero, the mother replies: "He must first bury his mother."[190] I have fully documented the motif of the "mother dragon" in my earlier work,[191] so I may spare myself a repetition of it here. The blossoming of new life and fruitfulness where all was arid before is described in Isaiah 35:5ff.:

> Then the eyes of the blind shall be opened, and the ears of the deaf shall be unstopped.
>
> Then shall the lame man leap up as an hart, and the tongue of the dumb sing: for in the wilderness shall waters break out, and streams in the desert.
>
> And the parched ground shall become a pool, and the thirsty land springs of water: in the habitations of dragons, where each lay, shall be grass with reeds and rushes.
>
> And an highway shall be there, and a way, and it shall be called the way of holiness; the unclean shall not pass over it. And this shall be unto you a straight way, so that fools shall not err therein.

The redeeming symbol is a highway, a way upon which life can move forward without torment and compulsion.

[446] Hölderlin says in "Patmos":

> Near is God
> And hard to apprehend.
> But where danger is, there
> Arises salvation also.

That sounds as though the nearness of God were a danger, i.e., as though the concentration of libido in the unconscious were a danger to conscious life. And indeed this is so, for the more the libido is invested—or, to be more accurate, invests itself—in the unconscious, the greater becomes its influence or potency: all the rejected, disused, outlived functional possibilities that have been lost for generations come to life again and begin to exert an ever-increasing influence on the conscious mind, despite its desperate struggles to gain insight into what is happening. The saving factor is the symbol, which embraces both conscious and unconscious and unites them. For while the consciously disposable libido gets gradually used up in the differentiated function and is replenished more and more slowly and with increasing difficulty, the symptoms of inner disunity multiply and there is a growing danger of inundation and destruction by the unconscious contents, but all the time the symbol is developing that is destined to resolve the conflict. The symbol, however, is so intimately bound up with the dangerous and menacing aspect of the unconscious that it is easily mistaken for it, or its appearance may actually call forth evil and destructive tendencies. At all events the appearance of the redeeming symbol is closely connected with destruction and devastation. If the old were not ripe for death, nothing new would appear; and if the old were not injuriously blocking the way for the new, it could not and need not be rooted out.

[447] This natural combination of psychological opposites is found in Isaiah, where we are told that a virgin shall conceive and bear a son, who shall be called Immanuel (7:14). Significantly, Immanuel (the redeeming symbol) means "God with us," i.e., union with the latent *dynamis* of the unconscious. The verses which immediately follow show what this union portends:

> For before the child shall know to refuse the evil and choose the good, the land that thou abhorrest shall be forsaken of both her kings.
>
> And the Lord said to me, Take thee a great book, and write in it with a man's pen: *Hasten to take the spoils, quickly take the prey*.[192]… And I went to the prophetess, and she conceived, and bore a son. And the Lord said to me: Call his name, *Hasten to take the spoils, quickly take the prey*. For before the child know how to cry, My father, My mother, the riches of Damascus and the spoil of Samaria shall be taken away before the king of Assyria.
>
> Forasmuch as this people refuseth the waters of Shiloah that go softly … behold the Lord will bring upon them the waters of the river, strong and many, even the king of Assyria, and all his glory; and he shall come up over all his channels, and go over all his banks, and he shall pass through Judah; he shall overflow and go over, and he shall reach even to the neck; and the stretching out of his wings shall fill the breadth of thy land, O Immanuel.[193]

[448] I have shown in my earlier work[194] that the birth of the god is threatened by the dragon, by the danger of inundation, and infanticide. Psychologically, this means that the latent *dynamis* of the unconscious may burst forth and overwhelm consciousness. For Isaiah the danger is the foreign king, who rules over a powerful and hostile country. The problem for him is not, of course,

psychological, but concrete because of its complete projection. With Spitteler, on the contrary, the problem is a psychological one from the start, and hence detached from the object, but it is none the less expressed in a form that closely resembles Isaiah’s, even though it may not have been consciously borrowed.

[449] The birth of the saviour is equivalent to a great catastrophe, because a new and powerful life springs up just where there had seemed to be no life and no power and no possibility of further development. It comes streaming out of the unconscious, from that unknown part of the psyche which is treated as nothing by all rationalists. From this discredited and rejected region comes the new afflux of energy, the renewal of life. But what is this discredited and rejected source of vitality? It consists of all those psychic contents that were repressed because of their incompatibility with conscious values—everything hateful, immoral, wrong, unsuitable, useless, etc., which means everything that at one time or another appeared so to the individual concerned. The danger now is that when these things reappear in a new and wonderful guise, they may make such an impact on him that he will forget or repudiate all his former values. What he once despised now becomes the supreme principle, and what was once truth now becomes error. This reversal of values is similar to the devastation of a country by floods.

[450] Thus, in Spitteler, Pandora’s heavenly gift brings evil to the country and its inhabitants, just as in the classical myth diseases streamed forth to ravage the land when Pandora opened her box. To understand why this should be so we must examine the nature of the symbol. The first to find the jewel were the peasants, as the shepherds were the first to greet the Saviour. They turned it about in their hands, “until in the end they were utterly dumbfounded by its bizarre, immoral, illicit appearance.”[195] When they brought it to Epimetheus to examine, his conscience (which he kept in a wardrobe) sprang to the floor and hid itself under the bed in great alarm, “with impossible suspicions.”

> Like a crab goggling wickedly and malevolently brandishing its crooked claws, Conscience peered out from under the bed, and the nearer Epimetheus pushed the image, the further Conscience shrank back with gesticulations of disgust. And so it sulked there silently, uttering not a word or syllable, in spite of all the king’s entreaties and petitions and inducements.[196]

[451] Conscience, evidently, found the new symbol acutely distasteful. The king, therefore, bade the peasants bear the jewel to the priests.

> But hardly had Hiphil-Hophal [the high priest] glanced at the face of the image than he shuddered with disgust, and crossing his arms over his forehead as though to ward off a blow, he shouted: “Away with this mockery! For it is opposed to God and carnal is its heart and insolence flashes from its eyes.”[197]

[452] The peasants then brought the jewel to the academy, but the professors found it lacked “feeling and soul, and moreover it wanted in gravity, and above all had no guiding thought.”[198] In the end the goldsmith found the jewel to be spurious and of common stuff. On the marketplace, where the peasants tried to get rid of it, the police descended on the image and cried out:

> Is there no heart in your body and no conscience in your soul? How dare you expose before the eyes of all this stark, shameless, wanton piece of nakedness? … And now, away with you at once! And woe betide you if the sight of it has polluted our innocent children and lily-white wives![199]

[453] The symbol is described by the poet as bizarre, immoral, illicit, outraging our moral feelings and our ideas of the spiritual and divine; it appeals to sensuality, is wanton, and liable to endanger public morals by provoking sexual fantasies. These attributes define something that is blatantly opposed to our moral values and aesthetic judgment because it lacks the higher feeling-values, and the absence of a “guiding thought” suggests the irrationality of its intellectual content. The verdict “opposed to God” might equally well be “anti-Christian,” since this episode is set neither in antiquity nor in the East. By reason of its attributes, the symbol stands for the inferior functions, for psychic contents that are not acknowledged. Although it is nowhere stated, it is obvious that the “image” is of a naked human body—a “living form.” It expresses the complete freedom to be what one is, and also the duty to be what one is. It is a symbol of man as he might be, the perfection of moral and aesthetic beauty, moulded by nature and not by some artificial ideal. To hold such an image before the eyes of present-day man can have no other effect than to release everything in him that lies captive and unlived. If only half of him is civilized and the other half barbarian, all his barbarism will be aroused, for a man’s hatred is always concentrated on the thing that makes him conscious of his bad qualities. Hence the fate of the jewel was sealed the moment it appeared in the world. The dumb shepherd lad who first found it was half cudgelled to death by the enraged peasants, who in the end “hurled” the jewel into the street. Thus the redeeming symbol runs its brief but typical course. The parallel with the Passion is unmistakable, and the jewel’s saviour-nature is further borne out by

the fact that it appears only once every thousand years. The appearance of a saviour, a Saoshyant, or a Buddha is a rare phenomenon.

[454] The end of the jewel is mysterious: it falls into the hands of a wandering Jew. “It was not a Jew of this world, and his clothes seemed to us exceedingly strange.”[200] This peculiar Jew can only be *Ahasuerus*, who did not accept the actual Redeemer, and now, as it were, steals his image. The story of Ahasuerus is a late Christian legend, which cannot be traced back earlier than the thirteenth century.[201] Psychologically, it sprang from a component of the personality or a charge of libido that could find no outlet in the Christian attitude to life and the world and was therefore repressed. The Jews were always a symbol for this, hence the persecution mania against the Jews in the Middle Ages. The idea of ritual murder is a projection, in acute form, of the rejection of the Redeemer, for one always sees the mote in one’s own eye as the beam in one’s brother’s. The ritual murder idea also plays a part in Spitteler’s story—the Jew steals the wonder-child from heaven. It is a mythologized projection of a dim realization that the workings of the Redeemer are constantly being frustrated by the presence of an unredeemed element in the unconscious. This unredeemed, untamed, barbarian element, which can only be held on a chain and cannot be allowed to run free, is projected upon those who have never accepted Christianity. There is an unconscious awareness of this intractable element whose existence we don’t like to admit—hence the projection. In reality it is a part of ourselves that has contrived to escape the Christian process of domestication. The restlessness of the wandering Jew is a concretization of this unredeemed state.

[455] The unredeemed element at once attracts to itself the new light, the energy of the new symbol. This is another way of expressing what we said earlier (pars. 449ff.) about the effect the symbol has on the psyche as a whole. It arouses all the repressed and unacknowledged contents, just as it provoked the “guardians of the marketplace” in Spitteler; and it has the same effect on Hiphil-Hophal, who, because of his unconscious resistance to his own religion, immediately emphasizes the ungodliness and carnality of the new symbol. The affect displayed in the rejection of the jewel equals the amount of repressed libido. With the moral degradation of the pure gift of heaven and its conversion into the lurid fantasies of the priests and police the ritual murder is complete. The appearance of the symbol has, nevertheless, not been entirely valueless. Although not accepted in its pure form, it is devoured by the archaic and undifferentiated forces of the unconscious (symbolized by Behemoth), assiduously supported by conscious morality and ideas of beauty. Thereupon the

enantiodromia begins, the transformation of the hitherto valued into the worthless, and of the former good into the bad.

[456] The kingdom of the good, ruled over by Epimetheus, had long been at enmity with the kingdom of Behemoth.[202] Behemoth and Leviathan are the two famous monsters of Jehovah from the Book of Job, symbolizing his mighty strength. As crude animal symbols they represent similar psychological forces in human nature.[203] Jehovah declaims (Job 40:10ff., DV):

> Behold Behemoth whom I made with thee. He eateth grass like an ox.
> His strength is in his loins, and his force in the navel of his belly.
> He setteth up his tail like a cedar: the sinews of his testicles are wrapped together.[204]
> His bones are like pipes of brass, his gristle like plates of iron.
> He is the beginning of the ways of God …

[457] One should read these words attentively. This sheer *dynamis* is “the beginning of the ways of God,” that is, of Jehovah, who in the New Testament sloughs off this form and ceases to be a nature-god. This means, psychologically, that the animal side of the libido stored up in the unconscious is permanently held in check by the Christian attitude; one half of God is repressed, or written down to man’s debit account, and is ultimately consigned to the domain of the devil. Hence, when the unconscious *dynamis* starts welling up and “the ways of God” begin, God appears in the form of Behemoth.[205] One might even say that God presents himself in the devil’s shape. These moral evaluations are optical illusions, however: the life force is beyond moral judgment. Meister Eckhart says:

> So if I say God is good, it is not true: *I* am good, God is not good. I go further: I am better than God! For only what is good can become better, and only what is better can become the best. God is not good, therefore he cannot become better; and since he cannot become better he cannot become the best. These three: good, better, best, are infinitely remote from God, who is above all.[206]

[458] The immediate effect of the redeeming symbol is the union of opposites: the ideal realm of Epimetheus becomes one with the kingdom of Behemoth. That is to say, moral consciousness enters into a dangerous alliance with the unconscious contents and the libido associated with them. The “divine children,” the highest values of humanity without which man would be an

animal, are now entrusted to the care of Epimetheus. But the union with his unconscious opposite brings with it the danger of devastation and inundation—the values of consciousness are liable to be swamped by the unconscious *dynamis*. Had the jewel, the symbol of natural morality and beauty, been accepted at its face value instead of serving merely to stir up all the filthiness in the background of our “moral” culture, the divine children would not have been imperilled despite the alliance with Behemoth, for Epimetheus would always have been able to discriminate between the valuable and the worthless. But because the symbol appeared unacceptable to his onesided, rationalistic, warped mentality, every standard of value fails. When the union of opposites nevertheless takes place on a higher plane, the danger of inundation and destruction necessarily follows because, characteristically, the antagonistic tendencies get smuggled in under the cover of “correct ideas.” Even the evil and pernicious can be rationalized and made to look aesthetic. Thus the conscious values are exchanged for sheer instinctuality and stupidity—one after another, the divine children are handed over to Behemoth. They are devoured by savage, barbarian tendencies that were formerly unconscious; hence Behemoth and Leviathan set up an *invisible whale* as a symbol of their power, while the corresponding symbol of the Epimethean realm is the *bird*. The whale, a denizen of the deep, is a well-known symbol of the devouring unconscious;[207] the bird, an inhabitant of the bright realm of the air, is a symbol of conscious thought,[208] of the (winged) ideal, and of the Holy Ghost (dove).

[459] The final extinction of the good is prevented by the intervention of Prometheus. He delivers Messias, the last of the divine children, from the power of his enemy. Messias becomes heir to the divine kingdom, while Prometheus and Epimetheus, the personifications of the divided opposites, now united, withdraw to the seclusion of their “native valley.” Both are relieved of sovereignty—Epimetheus because he was forced to renounce it, Prometheus because he never strove for it. In psychological terms, introversion and extraversion cease to dominate as exclusive principles, and consequently the psychic dissociation also ceases. In their stead a new function appears, symbolized by the divine child Messias, who had long lain sleeping. Messias is the mediator, the symbol of a new attitude in which the opposites are united. He is a child, a boy, the *puer aeternus* of the ancient prototype, heralding the rebirth and restitution (apocatastasis) of all that is lost. What Pandora brought to earth in the form of an image, and, being rejected of men, became the cause of their undoing, is fulfilled in him. This combination of symbols is frequently met with in analytical practice: a symbol emerging in dreams is rejected for the very

reasons we have described, and even provokes an antagonistic reaction corresponding to the invasion of Behemoth. As a result of this conflict, the personality is levelled down to the basic characteristics that have been present since birth, and that keep the mature personality in touch with the childhood sources of energy. But as Spitteler shows, the great danger is that instead of the symbol being accepted, the archaic instincts it arouses will be rationalized and put at the disposal of the traditional ways of thinking.

[460] The English mystic William Blake says: “These two classes of men are always upon earth … the Prolific and the Devouring. … Religion is an endeavour to reconcile the two.”[209] With these words of Blake, which summarize so simply the fundamental ideas of Spitteler and the whole of our previous discussion, I would like to close this chapter. If I have unduly expanded it, it was because I wanted to do full justice to the profusion of stimulating ideas that Spitteler offers us in *Prometheus and Epimetheus*, just as Schiller did in his *Letters*. I have, so far as possible, confined myself to essentials; indeed, I have had to pass over a large number of problems which would have to be considered in a comprehensive exposition of the material.

VI

THE TYPE PROBLEM IN PSYCHOPATHOLOGY

[461] We now come to the work of a psychiatrist who made an attempt to single out two types from among the bewildering variety of mental disturbances that are generally grouped under the heading “psychopathic inferiority.” This very extensive group includes all psychopathic borderline states that cannot be reckoned among the psychoses proper; that is, all the neuroses and all degenerative states such as intellectual, moral, affective, and other psychic inferiorities.

[462] This attempt was made by Otto Gross, who in 1902 published a theoretical study entitled *Die zerebrale Sekundärfunktion*. It was the basic hypothesis of this work that led him to the conception of two psychological types.[1] Although the empirical material discussed by him is taken from the domain of psychopathic inferiority, there is no reason why the insights gained should not be carried over into the wider field of normal psychology. The unbalanced psychic state gives the investigator an almost exaggeratedly clear view of certain psychic phenomena which, very often, can only be dimly perceived within the limits of the normal. The abnormal state sometimes acts like a magnifying glass. Gross himself, in his final chapter, also extends his conclusions to a wider domain, as we shall see.

[463] By the “secondary function” Gross understands a cerebral cell-process that comes into action after the “primary function” has taken place. The primary function would correspond to the actual performance of the cell, namely, the production of a positive psychic process, for example an idea. This performance is an energic process, presumably a discharge of chemical tension; in other words, it is a process of chemical decomposition. After this acute discharge, which Gross calls the primary function, the secondary function comes into action. It is a process of recovery, a rebuilding through assimilation. This function will require for

its operation a longer or shorter period depending on the intensity of the preceding discharge of energy. During this time the condition of the cell has altered; it is now in a state of stimulation, and this cannot remain without influence on the subsequent psychic processes. Processes that are especially highly-toned and charged with affect require an especially intense discharge of energy, and hence an especially prolonged period of recovery governed by the secondary function. The effect of the secondary function on the psychic process in general consists, according to Gross, in its specific and demonstrable influence on the subsequent course of association, in the sense that it restricts the choice of associations to the "theme" or "leading idea" represented by the primary function. And indeed, in my own experimental work (which was corroborated by several of my pupils), I was able to demonstrate statistically that *perseveration* followed in the train of ideas with a high feeling-tone.[2] My pupil Eberschweiler, in an investigation of language components,[3] has demonstrated this same phenomenon in assonances and agglutinations. Further, we know from experiences in pathology how frequently perseverations occur in the case of severe cerebral lesions, apoplexies, tumours, atrophic and other degenerative states. Such perseverations may well be ascribed to this retarded process of recovery. Gross' hypothesis thus has much to recommend it.

[464] It is therefore only natural to ask whether there may not be individuals, or even types, in whom the period of recovery, the secondary function, lasts longer than in others, and if so, whether certain characteristic psychologies may not be traceable to this. A short secondary function, clearly, will influence far fewer consecutive associations in a given period of time than a long one. Hence the primary function can operate much more frequently. The psychological picture in such a case would show a constant and rapidly renewed readiness for action and reaction, a kind of *distractibility*, a tendency to superficial associations and a lack of deeper, more concise ones, and a certain incoherence so far as an association is expected to be significant. On the other hand many new themes will crowd up in a given unit of time, though not at all intense or clearly focussed, so that heterogeneous ideas of varying value appear on the same niveau, thus giving the impression

of a “levelling of ideas” (Wernicke). This rapid succession of primary functions necessarily precludes any real experience of the affective value of the ideas *per se*, with the result that the affectivity cannot be anything other than superficial. But, at the same time, this makes rapid adaptations and changes of attitude possible. The actual thought-process, or process of abstraction, naturally suffers when the secondary function is curtailed in this way, since abstraction requires a sustained contemplation of several initial ideas and their after-effects, and therefore a longer secondary function. Without this, there can be no intensification and abstraction of an idea or group of ideas.

[465] The rapid recovery of the primary function produces a higher reactivity, extensive rather than intensive, leading to a prompt grasp of the immediate present in its superficial aspects, though not of its deeper meanings. A person of this type gives the impression of having an uncritical or unprejudiced attitude; we are struck by his readiness to oblige and by his understanding, or again we may find in him an unaccountable lack of consideration, tactlessness, and even brutality. That too facile gliding over the deeper meanings evokes the impression of blindness to everything not lying immediately on the surface. His quick reactivity has the appearance of presence of mind, of audacity to the point of foolhardiness, which from lack of criticism actually turns out to be an inability to realize danger. His rapidity of action looks like decisiveness; more often than not it is just blind impulse. Interference in other people’s affairs is taken as a matter of course, and this comes all the more easily because of his ignorance of the emotional value of an idea or action and its effect on his fellow men. The ever renewed readiness for action has an adverse effect on the assimilation of perceptions and experiences; as a rule, memory is considerably impaired, because, in general, the associations that can be most readily be reproduced are those that have become massively interlinked with others. Those that are relatively isolated become quickly submerged; for this reason it is infinitely more difficult to remember a series of meaningless, disconnected words than a poem. Excitability and an enthusiasm that soon fades are further characteristics of this type, also a certain lack of taste due to the rapid succession of heterogeneous contents and a failure

to appreciate their differing emotional values. His thinking has more the character of a representation and orderly arrangement of contents than that of abstraction and synthesis.

[466] In describing this type with a short secondary function I have followed Gross in all essentials, here and there trans-scribing it in terms of normal psychology. Gross calls this type "inferiority with shallow consciousness." If the excessively crass features are toned down to the normal, we get an overall picture in which the reader will easily recognize Jordan's "less emotional" type, i.e., the extravert. Gross deserves full credit for being the first to set up a simple and consistent hypothesis to account for this type.

[467] Gross calls the opposite type "inferiority with contracted consciousness." In this type the secondary function is particularly intense and prolonged. It therefore influences the consecutive associations to a higher degree than in the other type. We may also suppose an intensified primary function, and hence a more extensive and complete cell-performance than with the extravert. A prolonged and intensified secondary function would be the natural consequence of this. As a result of this prolongation, the after-effect of the initial idea persists for a longer period. From this we get what Gross calls a "contractive effect": the choice of associations follows the path of the initial idea, resulting in a fuller realization or *approfondissement* of the "theme." The idea has a lasting influence, the impression goes deep. One disadvantage of this is that the associations are restricted to a narrow range, so that thinking loses much of its variety and richness. Nevertheless, the contractive effect aids synthesis, since the elements that have to be combined remain constellated long enough to make their abstraction possible. This restriction to one theme enriches the associations that cluster round it and consolidates one particular complex of ideas, but at the same time the complex is shut off from everything extraneous and finds itself in isolation, a phenomenon which Gross (borrowing from Wernicke) calls "sejunction." One result of the sejunction of the complex is a multiplication of groups of ideas (or complexes) that have no connection with one another or only quite a loose one. Outwardly such a condition shows itself as a disharmonious or, as Gross calls it, a "sejunctive"

personality. The isolated complexes exist side by side without any reciprocal influence; they do not interact, mutually balancing and correcting each other. Though firmly knit in themselves, with a logical structure, they are deprived of the correcting influence of complexes with a different orientation. Hence it may easily happen that a particularly strong and therefore particularly isolated and uninfluenceable complex becomes an "over-valued idea,"[4] a dominant that defies all criticism and enjoys complete autonomy, until it finally becomes an all-controlling factor manifesting itself as "spleen." In pathological cases it turns into an obsessive or paranoid idea, absolutely unshakable, that rules the individual's entire life. His whole mentality is subverted, becoming "deranged." This conception of the growth of a paranoid idea may also explain why, during the early stages, it can sometimes be corrected by suitable psychotherapeutic procedures which bring it into connection with other complexes that have a broadening and balancing influence.[5] Paranoiacs are very wary of associating disconnected complexes. They feel things have to remain neatly separated, the bridges between the complexes are broken down as much as possible by an over-precise and rigid formulation of the content of the complex. Gross calls this tendency "fear of association."[6]

[468] The rigid inner cohesion of such a complex hampers all attempts to influence it from outside. The attempt is successful only when it is able to bind the complex to another complex as firmly and logically as it is bound in itself. The multiplication of insufficiently connected complexes naturally results in rigid seclusion from the outside world and a corresponding accumulation of libido within. Hence we regularly find an extraordinary concentration on inner processes, either on physical sensations or on intellectual processes, depending on whether the subject belongs to the sensation or to the thinking type. The personality seems inhibited, absorbed or distracted, "sunk in thought," intellectually lopsided, or hypochondriacal. In every case there is only a meagre participation in external life and a distinct tendency to solitude and fear of other people, often compensated by a special love of animals or plants. To make up for this, the inner processes are particularly active, because from time to time complexes which hitherto had little or no connection

with one another suddenly "collide," thereby stimulating the primary function to intense activity which, in its turn, releases a prolonged secondary function that amalgamates the two complexes. One might think that all complexes would at some time or other collide in this way, thus producing a general uniformity and cohesion of psychic contents. Naturally, this wholesome result could only come about if in the meantime all change in external life were arrested. But since this is not possible, fresh stimuli continually arrive and initiate secondary functions, which intersect and confuse the inner lines. Accordingly this type has a decided tendency to fight shy of external stimuli, to keep out of the way of change, to stop the steady flow of life until all is amalgamated within. Pathological cases show this tendency too; they hold aloof from everything and try to lead the life of a recluse. But only in mild cases will the remedy be found in this way. In all severe ones, the only remedy is to reduce the intensity of the primary function, but this is a chapter in itself, and one which we have already touched on in our discussion of Schiller's *Letters*.

[469] It is clear that this type is distinguished by quite peculiar phenomena in the realm of affect. We have seen how the subject realizes the associations set in motion by the initial idea. He carries out a full and coherent association of the material relevant to the theme, i.e., he associates all material that is not already linked to other complexes. When a stimulus hits on a complex, the result is either a violent explosion of affect, or, if the isolation of the complex is complete, it is entirely negative. But should realization take place, all the affective values are unleashed; there is a strong emotional reaction with a prolonged after-effect. Very often this cannot be seen from outside, but it bores in all the deeper. The emotional reverberations prey on the subject's mind and make him incapable of responding to new stimuli until the emotion has faded away. An accumulation of stimuli becomes unbearable, so he wards them off with violent defence reactions. Whenever there is a marked accumulation of complexes, a chronic attitude of defence usually develops, deepening into mistrust and in pathological cases into persecution mania.

[470] The sudden explosions, alternating with defensiveness and periods of taciturnity, can give the personality such a bizarre appearance that such people become an enigma to everyone in their vicinity. Their absorption in themselves leaves them at a loss when presence of mind or swift action is demanded. Embarrassing situations often arise from which there seems no way out—one reason the more for shunning society. Moreover the occasional outbursts of affect play havoc with their relations to others, and, because of their embarrassment and helplessness, they feel incapable of retrieving the situation. This awkwardness in adapting leads to all sorts of unfortunate experiences which inevitably produce a feeling of inferiority or bitterness, and even of hatred that is readily directed at those who were the actual or supposed authors of their misfortunes. Their affective inner life is very intense, and the manifold emotional reverberations linger on as an extremely fine gradation and perception of feeling-tones. They have a peculiar emotional sensitivity, revealing itself to the outside world as a marked timidity and uneasiness in the face of emotional stimuli, and in all situations that might evoke them. This touchiness is directed primarily against the emotional conditions in their environment. All brusque expressions of opinion, emotional declarations, playing on the feelings, etc., are avoided from the start, prompted by the subject's fear of his own emotion, which in turn might start off a reverberating impression he might not be able to master. This sensitivity may easily develop over the years into melancholy, due to the feeling of being cut off from life. In fact, Gross considers melancholy to be especially characteristic of this type.[7] He also emphasizes that the realization of affective values easily leads to emotional judgments, to "taking things too seriously." The prominence given in this picture to inner processes and the emotional life at once reveals the introvert. Gross's description is much fuller than Jordan's sketch of the "impassioned type," though the latter, in its main features, must be identical with the type described by Gross.

[471] In chapter V of his book Gross observes that, within the limits of the normal, both types of inferiority represent *physiological differences of individuality*. The shallow extensive or the narrow intensive consciousness is therefore a difference of character.[8] According to Gross,

the type with a shallow consciousness is essentially practical, because of his rapid adaptation to circumstances. His inner life does not predominate, having no part to play in the formation of the "great ideational complexes." "They are energetic propagandists for their own personality, and, on a higher level, they also work for the great ideas handed down from the past."[9] Gross asserts that the emotional life of this type is primitive, though at a higher level it becomes organized through "the taking over of ready-made ideals from outside." In this way, Gross says, his activity can become "heroic," but "it is always banal." "Heroic" and "banal" scarcely seem compatible with one another. But Gross shows us at once what he means: in this type the connection between the erotic complex and the other complexes of ideas, whether aesthetic, ethical, philosophical, or religious, which make up the contents of consciousness, is not sufficiently developed. Freud would say that the erotic complex has been repressed. For Gross the marked presence of this connection is the "authentic sign of a superior nature" (p. 61). It requires for its development a prolonged secondary function, because a synthesis of the contents can be achieved only through *approfondissement* and their prolonged retention in consciousness. The taking over of conventional ideals may force sexuality into socially useful paths, but it "never rises above the level of triviality." This somewhat harsh judgment becomes explicable in the light of the extraverted character: the extravert orients himself exclusively by external data, so that his psychic activity consists mainly in his preoccupation with such things. Hence little or nothing is left over for the ordering of his inner life. It has to submit as a matter of course to determinants accepted from without. Under these circumstances, no connection between the more highly and the less developed functions can take place, for this demands a great expense of time and trouble; it is a lengthy and difficult labour of self-education which cannot possibly be achieved without introversion. But the extravert lacks both time and inclination for this; moreover he is hampered by the same unconcealed distrust of his inner world which the introvert feels for the outer world.

[472] One should not imagine, however, that the introvert, thanks to his greater synthetizing capacity and ability to realize affective values, is

thereby equipped to complete the synthesis of his own individuality without further ado—in other words, to establish once and for all a harmonious connection between the higher and lower functions. I prefer this formulation to Gross's, which maintains that it is solely a question of sexuality, for it seems to me that other instincts besides sex are involved. Sexuality is of course a very frequent form of expression for crude and untamed instincts, but so too is the striving for power in all its manifold aspects. Gross coined the term "sejunctive personality" for the introvert in order to emphasize the peculiar difficulty this type has in integrating his complexes. His synthetizing capacity merely serves in the first place to build up complexes that, so far as possible, are isolated from each other. But such complexes positively hinder the development of a higher unity. Thus the sexual complex, or the egoistic striving for power, or the search for pleasure, remains just as isolated and unconnected with other complexes in the introvert as in the extravert. I remember the case of an introverted, highly intellectual neurotic who spent his time alternating between the loftiest flights of transcendental idealism and the most squalid suburban brothels, without any conscious admission of a moral or aesthetic conflict. The two things were utterly distinct as though belonging to different spheres. The result, naturally, was an acute compulsion neurosis.

[473] We must bear this criticism in mind when following Gross's account of the type with intensive consciousness. Intensive consciousness is, as Gross says, "the foundation of the introspective individuality." Because of the strong contractive effect, external stimuli are always regarded from the standpoint of some idea. Instead of the impulse towards practical life there is a "drive for inwardness." "Things are conceived not as individual phenomena but as partial ideas or components of the great ideational complexes." This view accords with what we said earlier in our discussion of the nominalist and realist standpoints and the Platonic, Megarian, and Cynic schools in antiquity. It is easy to see from Gross's argument what the difference is between the two standpoints: the [extraverted] man with the short secondary function has many loosely connected primary functions operating in a given space of time, so that he is struck more particularly by the individual phenomenon. For him

universals are only names lacking reality. But for the [introverted] man with the prolonged secondary function, the inner facts, abstractions, ideas, or universals always occupy the foreground; for him they are the only true realities, to which he *must* relate all individual phenomena. He is therefore by nature a realist (in the Scholastic sense). Since, for the introvert, the way he thinks about things always takes precedence over the perception of externals, he is inclined to be a relativist.[10] Harmony in his surroundings gives him especial pleasure;[11] it reflects his own inner urge to harmonize his isolated complexes. He avoids all "uninhibited behaviour" because it might easily lead to disturbing stimuli (explosions of affect must of course be excepted). His social *savoir faire* is poor because of his absorption in his inner life. The predominance of his own ideas prevents him from taking over the ideas or ideals of others. The intense inner elaboration of the complexes gives them a pronounced individual character. "The emotional life is frequently of no use socially, but is always individual."[12]

[474] We must subject this statement to a thorough criticism, for it contains a problem which, in my experience, always gives rise to the greatest misunderstandings between the types. The introverted intellectual, whom Gross obviously has in mind here, outwardly shows as little feeling as possible, he entertains logically correct views and tries to do the right things in the first place because he has a natural distaste for any display of feeling and in the second because he is fearful lest by incorrect behaviour he should arouse disturbing stimuli, the affects of his fellow men. He is afraid of disagreeable affects in others because he credits others with his own sensitiveness; furthermore, he is always distressed by the quickness and volatility of the extravert. He bottles up his feeling inside him, so that it sometimes swells into a passion of which he is only too painfully aware. His tormenting emotions are well known to him. He compares them with the feelings displayed by others, principally, of course, with those of the extraverted feeling type, and finds that his "feelings" are quite different from those of other men. Hence he gets round to thinking that his feelings (or, more correctly, emotions) are unique or, as Gross says, "individual." It is natural that they should differ from the feelings of the extraverted feeling type, because the latter are a

differentiated instrument of adaptation and therefore lack the “genuine passion” which characterizes the deeper feelings of the introverted thinking type. But passion, as an elemental instinctive force, possesses little that is individual—it is something common to all men. Only what is differentiated can be individual. In the case of intense emotions, type differences are instantly obliterated in the “human-all-too-human.” In my view, the extraverted feeling type has really the chief claim to individualized feeling, because his feelings are differentiated; but he falls into the same delusion in regard to his thinking. He has thoughts that torment him. He compares them with the thoughts expressed by the other people around him, chiefly those of the introverted thinking type. He discovers that his thoughts have little in common with them; he may therefore regard them as individual and himself, perhaps, as an original thinker, or he may repress his thoughts altogether, since no one else thinks the same. In reality they are thoughts which everybody has but are seldom uttered. In my view, therefore, Gross’s statement springs from a subjective delusion, though one that is the general rule.

[475] “The heightened contractive power enables one to get absorbed in things to which no immediate vital interest is attached.”[13] Here Gross hits on an essential feature of the introverted mentality: the introvert delights in elaborating his thoughts for their own sake, regardless of external reality. This is both an advantage and a danger. It is a great advantage to be able to develop a thought into an abstraction, freed from the confines of the senses. The danger is that it will be removed altogether from the sphere of practical applicability and lose its vital value. The introvert is always in danger of getting too far away from life and of viewing things too much under their symbolic aspect. This is also stressed by Gross. The extravert is in no better plight, though for him matters are different. He has the capacity to curtail the secondary function to such an extent that he experiences practically nothing but a succession of positive primary functions: he is nowhere attached to anything, but soars above reality in a kind of intoxication; things are no longer seen as they are but are used merely as stimulants. This capacity is an advantage in that it enables him to manoeuvre himself out of many difficult situations (“he who hesitates

is lost”), but, since it so often leads to inextricable chaos, it finally ends in catastrophe.

[476] From the extraverted type Gross derives what he calls the “civilizing genius,” and from the introverted type the “cultural genius.” The former he equates with “practical achievement,” the latter with “abstract invention.” In the end Gross expresses his conviction that our age stands in especial need of the contracted, intensive consciousness, in contrast to former ages when consciousness was shallower and more extensive. “We delight in the ideal, the profound, the symbolic. Through simplicity to harmony—that is the art of the highest culture.”[14]

[477] Gross wrote these words in 1902. And now? If one were to express an opinion at all, one would have to say that we obviously need both civilization *and* culture,[15] a shortening of the secondary function for the one, and its prolongation for the other. We cannot create one without the other, and we must admit, unfortunately, that modern humanity lacks both. Where there is too much of the one there is too little of the other, if we want to put it more cautiously. The continual harping on progress has by now become rather suspect.

[478] In conclusion I would like to remark that Gross’s views coincide substantially with my own. Even my terms “extraversion” and “introversion” are justified in the light of his conceptions. It only remains for us to make a critical examination of Gross’s basic hypothesis, the concept of the secondary function.

[479] It is always a risky business to frame physiological or “organic” hypotheses with respect to psychological processes. There was a regular mania for this at the time of the great successes in brain research, and the hypothesis that the pseudopodia of the brain-cells withdrew during sleep is by no means the most absurd of those that were taken seriously and deemed worthy of “scientific” discussion. People were quite justified in speaking of a veritable “brain mythology.” I have no desire to treat Gross’s hypothesis as another “brain myth”—its empirical value is too great for that. It is an excellent working hypothesis, and one that has received due recognition in other quarters as well. The concept of the secondary function is as simple as it is ingenious. It enables one to reduce

a very large number of complex psychic phenomena to a satisfying formula—phenomena whose diversity would have resisted simple reduction and classification under any other hypothesis. It is indeed such a happy one that, as always, one is tempted to overestimate its range of application. This, unfortunately, is rather limited. We will entirely disregard the fact that the hypothesis in itself is only a postulate, since no one has ever seen a secondary function of the brain cells, and no one could demonstrate how and why it has in principle the same contractive effect on subsequent associations as the primary function, which is by definition essentially different from the secondary function. There is a further fact which in my opinion carries even greater weight: the psychological attitude in one and the same individual can change its habits in a very short space of time. But if the duration of the secondary function has a physiological or organic character, it must surely be regarded as more or less constant. It could not then be subject to sudden change, for such changes are never observed in a physiological or organic character, pathological changes excepted. But, as I have pointed out more than once, introversion and extraversion are not traits of *character* at all but *mechanisms*, which can, as it were, be switched on or off at will. Only from their habitual predominance do the corresponding characters develop. The predilection one way or the other no doubt depends on the inborn disposition, but this is not always the decisive factor. I have frequently found environmental influences to be just as important. In one case in my experience, it even happened that a man with markedly extravert behaviour, while living in close proximity to an introvert, changed his attitude and became quite introverted when he later came into contact with a pronounced extraverted personality. I have repeatedly observed how quickly personal influences can alter the duration of the secondary function even in a well-defined type, and how the previous condition re-establishes itself as soon as the alien influence is removed.

[480] With such experiences in mind, we should, I think, direct our attention more to the nature of the primary function. Gross himself lays stress on the special prolongation of the secondary function in the wake of strongly feeling-toned ideas,[16] thus showing its dependence on the primary function. There is, in fact, no plausible reason why one should

base a theory of types on the duration of the secondary function; it could be based just as well on the *intensity of the primary function*, since the duration of the secondary function is obviously dependent on the intensity of the cell-performance and on the expenditure of energy. It might be objected that the duration of the secondary function depends on the rapidity of cell recovery, and that there are individuals with especially prompt cerebral assimilation as opposed to others who are less favoured. In that case the brain of the extravert must possess a greater capacity for cell recovery than that of the introvert. But such a very improbable assumption lacks all proof. What is known to us of the actual causes of the prolonged secondary function is limited to the fact that, leaving pathological conditions aside, the special intensity of the primary function results, quite logically, in a prolongation of the secondary function. That being so, the real problem would lie with the primary function and might be resolved into the question: how comes it that in one person the primary function is intense, while in another it is weak? By shifting the problem to the primary function, we have to account for its varying intensity, which does indeed alter very rapidly. It is my belief that this is an energic phenomenon, dependent on a general *attitude*.

[481] The intensity of the primary function seems to me directly dependent on the degree of tension in the propensity to act. If the psychic tension is high, the primary function will be particularly intense and will produce corresponding results. When with increasing fatigue the tension slackens, distractibility and superficiality of association appear, and finally "flight of ideas," a condition characterized by a weak primary and a short secondary function. The general psychic tension (if we discount physiological causes, such as relaxation, etc.) is dependent on extremely complex factors, such as mood, attention, expectancy, etc., that is to say, on value judgments which in their turn are the resultants of all the antecedent psychic processes. By these judgments I mean not only logical judgments but also judgments of feeling. Technically, the general tension could be expressed in the energic sense as *libido*, but in its psychological relation to consciousness we must express it in terms of *value*. An intense primary function is a manifestation of libido, i.e., it is a highly charged energic process. But it is also a psychological value;

hence we term the trains of association resulting from it valuable in contrast to those which are the result of a weak contractive effect, and these are valueless because of their superficiality.

[482] A tense attitude is in general characteristic of the introvert, while a relaxed, easy attitude distinguishes the extravert.[17] Exceptions, however, are frequent, even in one and the same individual. Give an introvert a thoroughly congenial, harmonious milieu, and he relaxes into complete extraversion, so that one begins to wonder whether one may not be dealing with an extravert. But put an extravert in a dark and silent room, where all his repressed complexes can gnaw at him, and he will get into such a state of tension that he will jump at the slightest stimulus. The changing situations of life can have the same effect of momentarily reversing the type, but the basic attitude is not as a rule permanently altered. In spite of occasional extraversion the introvert remains what he was before, and the extravert likewise.

[483] To sum up: the primary function is in my view more important than the secondary. The intensity of the primary function is the decisive factor. It depends on the general psychic tension, i.e., on the amount of accumulated, disposable libido. The factors determining this accumulation are the complex resultants of all the antecedent psychic states—mood, attention, affect, expectancy, etc. Introversion is characterized by general tension, an intense primary function and a correspondingly long secondary function; extraversion by general relaxation, a weak primary function and a correspondingly short secondary function.

VII

THE TYPE PROBLEM IN AESTHETICS

[484] It stands to reason that every province of the human mind directly or indirectly concerned with psychology will have its contribution to make to the problem under discussion. Now that we have listened to the philosopher, the poet, the observer of men and the physician, let us hear what the aesthetician has to say.

[485] Aesthetics by its very nature is applied psychology and has to do not only with the aesthetic qualities of things but also—and perhaps even more—with the psychological question of the aesthetic attitude. A fundamental problem like the contrast between introversion and extraversion could not long escape the attention of the aesthetician, because the way in which art and beauty are sensed by different individuals differs so widely that one could not fail to be struck by it. Aside from the numerous individual peculiarities of attitude, some of them more or less unique, there are two basic antithetical forms which Worringer has described as *abstraction* and *empathy* (*Einfühlung*).[1] His definition of empathy derives principally from Lipps. For Lipps, empathy is "the objectification of myself in an object distinct from myself, no matter whether the thing objectified merits the name 'feeling' or not." "By apperceiving an object, I experience, as though issuing from it or inherent in it as something apperceived, an impulse towards a particular mode of inner behaviour. This has the appearance of being communicated to me by the object."[2] Jodl interprets it as follows:

> The sensuous image produced by the artist not only serves to bring to our minds kindred experiences by the laws of association. Since it is subject to the general law of externalization[3] and appears as something outside ourselves, we simultaneously project into it the inner processes it evokes in us, thereby endowing it with aesthetic animation [*Beseelung*]—a term that may be preferred to *Einfühlung* because, in this introjection of one's

own inner state into the image, it is not feeling alone that is involved, but inner processes of all kinds.[4]

[486] Wundt reckons empathy among the elementary processes of assimilation.[5] It is therefore a kind of perceptive process, characterized by the fact that, through feeling, some essential psychic content is projected into the object, so that the object is assimilated to the subject and coalesces with him to such an extent that he feels himself, as it were, in the object. This happens when the projected content is associated to a higher degree with the subject than with the object. He does not, however, feel himself projected into the object; rather, the "empathized" object appears animated to him, as though it were speaking to him of its own accord. It should be noted that in itself projection is usually an unconscious process not under conscious control. On the other hand it is possible to imitate the projection consciously by means of a conditional sentence—for instance, "if you were my father"—thus bringing about the situation of empathy. As a rule, the projection transfers unconscious contents into the object, for which reason empathy is also termed "transference" (Freud) in analytical psychology. Empathy, therefore, is a form of extraversion.

[487] Worringer defines the aesthetic experience of empathy as follows: "Aesthetic enjoyment is objectified self-enjoyment."[6] Consequently, only a form one can empathize with is beautiful. Lipps says: "Only so far as this empathy extends are forms beautiful. Their beauty is simply my ideal having free play in them."[7] According to this, any form one cannot empathize with would be ugly. But here the theory of empathy reaches its limitations, for, as Worringer points out, there are art-forms to which the empathetic attitude cannot be applied. Specifically, one might mention the oriental and exotic art-forms as examples. In the West, long tradition has established "natural beauty and verisimilitude" as the criterion of beauty in art, since this is the criterion and essential character of Graeco-Roman and occidental art in general (with the exception of certain stylized medieval forms).

[488] Since antiquity, our general attitude to art has always been empathetic, and for this reason we designate as beautiful only those

things we can empathize with. If the art-form is opposed to life, if it is inorganic or abstract, we cannot feel our own life in it. "What I feel myself into is life in general," says Lipps. We can empathize only with organic form—form that is true to nature and has the will to live. And yet another art-principle undoubtedly exists, a style that is opposed to life, that denies the will to live, but nevertheless lays a claim to beauty. When art produces life-denying, inorganic, abstract forms, there can no longer be any question of the will to create arising out of the need for empathy; it is rather a need that is directly opposed to empathy—in other words, a tendency to suppress life. Worringer says: "This counter-pole to the need for empathy appears to us to be the urge to abstraction."[8] As to the psychology of this urge to abstraction, Worringer continues:

> Now, what are the psychic preconditions for the urge to abstraction? Among those peoples where it exists we must look for them in their feeling about the world, in their psychic attitude towards the cosmos. Whereas the precondition for the urge to empathy is a happy pantheistic relationship of confidence between man and the phenomena of the external world, the urge to abstraction is the outcome of a great inner uneasiness inspired in man by these phenomena, and its religious counterpart is the strongly transcendental colouring of all ideas. We might describe this state as an immense spiritual dread of space. When Tibullus says, *primum in mundo fecit deus timorem* [the first thing God made in the world was fear],[9] this same feeling of fear may also be assumed to be the root of artistic creation.[10]

[489] It is indeed true that empathy presupposes a subjective attitude of confidence, or trustfulness towards the object. It is a readiness to meet the object halfway, a subjective assimilation that brings about a good understanding between subject and object, or at least simulates it. A passive object allows itself to be assimilated subjectively, but its real qualities are in no way altered in the process; they are merely veiled, and may even be violated, because of the transference. Empathy can create similarities and seemingly common qualities which have no real existence in themselves. It is understandable, therefore, that the possibility of another kind of aesthetic relation to the object must also

exist, an attitude that does not go to meet the object halfway, but rather withdraws from it and seeks to secure itself against the influence of the object by creating in the subject a psychic activity whose function it is to neutralize the effect of the object.

[490] Empathy presupposes that the object is, as it were, empty, and seeks to imbue it with life. Abstraction, on the other hand, presupposes that the object is alive and active, and seeks to withdraw from its influence. The abstracting attitude is centripetal, i.e., introverting. Worringer's conception of abstraction therefore corresponds to the introverted attitude. It is significant that Worringer describes the influence of the object as fear or dread. The abstracting attitude endows the object with a threatening or injurious quality against which it has to defend itself. This seemingly *a priori* quality is doubtless a projection, but a negative one. We must therefore suppose that abstraction is preceded by an unconscious act of projection which transfers negative contents to the object.

[491] Since empathy, like abstraction, is a conscious act, and since the latter is preceded by an unconscious projection, we may reasonably ask whether an unconscious act may not also precede empathy. As the essence of empathy is the projection of subjective contents, it follows that the preceding unconscious act must be the opposite—a neutralizing of the object that renders it inoperative. In this way the object is emptied, so to speak, robbed of its spontaneous activity, and thus made a suitable receptacle for subjective contents. The empathizing subject wants to feel his own life in the object; hence the independence of the object and the difference between it and the subject must not be too great. As a result of the unconscious act that precedes empathy, the sovereignty of the object is depotentiated, or rather it is overcompensated, because the subject immediately gains ascendency over the object. This can only happen unconsciously, through an unconscious fantasy that either devalues and depotentiates the object or enhances the value and importance of the subject. Only in this way can that difference of potential arise which empathy needs in order to convey subjective contents into the object.

[492] The man with the abstracting attitude finds himself in a frighteningly animated world that seeks to overpower and smother him. He therefore withdraws into himself, in order to think up a saving formula calculated to enhance his subjective value at least to the point where he can hold his own against the influence of the object. The man with the empathetic attitude finds himself, on the contrary, in a world that needs his subjective feeling to give it life and soul. He animates it with himself, full of trust; but the other retreats mistrustfully before the daemonism of objects, and builds up a protective anti-world composed of abstractions.

[493] If we recall what was said in the preceding chapter, it is easy to see that empathy corresponds to the mechanism of extraversion, and abstraction to that of introversion. "The great inner uneasiness inspired in man by the phenomena of the external world" is nothing other than the introvert's fear of all stimuli and change, occasioned by his deeper sensitivity and powers of realization. His abstractions serve the avowed purpose of confining the irregular and changeable within fixed limits. It goes without saying that this essentially magical procedure is found in full flower in the art of primitives, whose geometrical patterns have a magical rather than an aesthetic value. Worringer rightly says of Oriental art:

> Tormented by the confusion and flux of the phenomenal world, these people were dominated by an immense need for repose. The enjoyment they sought in art consisted not so much in immersing themselves in the things of the outside world and finding pleasure there, as in raising the individual object out of its arbitrary and seemingly fortuitous existence, immortalizing it by approximation to abstract forms, and so finding a point of repose amid the ceaseless flux of appearances.[11]
>
> These abstract, regular forms are not merely the highest, they are the only forms in which man may find repose in face of the monstrous confusion of the world.[12]

[494] As Worringer says, it is precisely the Oriental art-forms and religions that display this abstracting attitude to the world. To the Oriental, therefore, the world must appear very different from what it does to the Occidental, who animates it with his empathy. For the Oriental, the

object is imbued with life from the start and has ascendency over him; therefore he withdraws into a world of abstraction. For an illuminating insight into the Oriental attitude, we may turn to the “Fire Sermon” of the Buddha:

> All is on fire. The eye and all the senses are on fire, with the fire of passion, the fire of hate, the fire of delusion; the fire is kindled by birth, old age, and death, by pain and lamentation, by sorrow, suffering, and despair. … The whole world is in flames, the whole world is wrapped in smoke, the whole world is consumed by fire, the whole world trembles.[13]

[495] It is this fearful and sorrowful vision of the world that forces the Buddhist into his abstracting attitude, just as, according to legend, a similar impression started the Buddha on his life’s quest. The dynamic animation of the object as the impelling cause of abstraction is strikingly expressed in the Buddha’s symbolic language. This animation does not come from empathy, but from an unconscious projection that actually exists *a priori*. The term “projection” hardly conveys the real meaning of this phenomenon. Projection is really an act that happens, and not a condition existing *a priori*, which is what we are obviously dealing with here. It seems to me that Lévy-Bruhl’s *participation mystique* is more descriptive of this condition, since it aptly formulates the primordial relation of the primitive to the object. His objects have a dynamic animation, they are charged with soul-stuff or soul-force (and not always possessed of souls, as the animist theory supposes), so that they have a direct psychic effect upon him, producing what is practically a dynamic identification with the object. In certain primitive languages articles of personal use have a gender denoting “alive” (the suffix of animation). With the abstracting attitude it is much the same, for here too the object is alive and autonomous from the beginning and in no need of empathy; on the contrary, it has such a powerful effect that the subject is forced into introversion. Its strong libido investment comes from its *participation mystique* with the subject’s own unconscious. This is clearly expressed in the words of the Buddha: the universal fire is identical with the fire of libido, with the subject’s burning passion, which appears to him as an object because it is not differentiated into a disposable function.

[496] Abstraction thus seems to be a function that is at war with the original state of *participation mystique*. Its purpose is to break the object's hold on the subject. It leads on the one hand to the creation of art-forms, and on the other to knowledge of the object. Empathy too is as much an organ of artistic creation as of cognition. But it functions on a quite different level from abstraction. Just as the latter is based on the magical significance and power of the object, the basis of empathy is the magical significance of the subject, who gains power over the object by means of *mystical identification*. The primitive is in a similar position: he is magically influenced by the power of the fetish, yet at the same time he is the magician and accumulator of magical power who charges the fetish with potency. An example of this is the *churinga* rite of the Australian aborigines.[14]

[497] The unconscious depotentiation that precedes the act of empathy gives the object a permanently lower value, as in the case of abstraction. Since the unconscious contents of the empathetic type are identical with the object and make it appear inanimate,[15] empathy is needed in order to cognize the nature of the object. One might speak in this case of a continual unconscious abstraction which "depsychizes" the object. All abstraction has this effect: it kills the independent activity of the object in so far as this is magically related to the psyche of the subject. The abstracting type does it quite consciously, as a defence against the magical influence of the object. The inertness of objects also explains the trustful relationship of the empathetic type to the world; there is nothing that could exert a hostile influence or oppress him, since he alone gives the object life and soul, though to his conscious mind the converse would seem to be true. For the abstracting type, on the other hand, the world is filled with potent and dangerous objects that inspire him with fear and a consciousness of his own impotence; he withdraws from any too intimate contact with the world, in order to weave those thoughts and formulas with which he hopes to gain the upper hand. His psychology, therefore, is that of the under-dog, whereas the empathetic type faces the world with confidence—its inert objects hold no terrors for him. Naturally this sketch is schematic and makes no pretence to be a complete picture of the

introverted or extraverted attitude; it merely emphasizes certain nuances which, nevertheless, are not without significance.

[498] Just as the empathetic type is really taking an unconscious delight in himself through the object, so, without knowing it, the abstracting type is really reflecting himself when he reflects on the impressions which objects make upon him. For what the one projects into the object is himself, his own unconscious contents, and what the other thinks about his impression of the object is really his thoughts about his own feelings, which appear to him projected upon the object. It is evident, therefore, that both empathy and abstraction are needed for any real appreciation of the object as well as for artistic creation. Both are always present in every individual, though in most cases they are unequally differentiated.

[499] In Worringer's view the common root of these two basic forms of aesthetic experience is "self-alienation"—the need to get outside oneself. Through abstraction and "in the contemplation of something immutable and necessary, we seek deliverance from the hazards of being human, from the seeming arbitrariness of ordinary organic existence."[16] Faced with the bewildering profusion of animate objects, we create an abstraction, an abstract universal image which conjures the welter of impressions into a fixed form. This image has the magical significance of a defence against the chaotic flux of experience. The abstracting type becomes so lost and submerged in this image that finally its abstract truth is set above the reality of life; and because life might disturb the enjoyment of abstract beauty, it gets completely suppressed. He turns himself into an abstraction, he identifies with the eternal validity of the image and petrifies in it, because for him it has become a redeeming formula. He divests himself of his real self and puts his whole life into his abstraction, in which he is, so to speak, crystallized.

[500] The empathetic type suffers a similar fate. Since his activity, his life is empathized into the object, he himself gets into the object because the empathized content is an essential part of himself. He becomes the object. He identifies himself with it and in this way gets outside himself. By turning himself into an object he desubjectivizes himself. Worringer says:

> In empathizing this will to activity into another object, we *are* in the other object. We are delivered from our individual being as long as our inner urge for experience absorbs us into an external object, a form outside ourselves. We feel our individuality flowing into fixed bounds that contrast with the boundless diversity of individual consciousness. In this self-objectivation lies a self-alienation. This affirmation of our individual need for activity represents, at the same time, a restriction of its unlimited possibilities, a negation of its irreconcilable diversities. For all our inner urge to activity, we have to rest within the limits of this objectivation.[17]

[501] Just as for the abstracting type the abstract image is a bulwark against the destructive effects of the unconsciously animated object,[18] so for the empathetic type the transference to the object is a defence against the disintegration caused by inner subjective factors, which for him consist in limitless fantasies and corresponding impulses to action. The extraverted neurotic clings as tenaciously to the object of his transference as, according to Adler, the introverted neurotic clings to his "guiding fiction." The introvert abstracts his "guiding fiction" from his good and bad experiences of objects, and relies on his formula to protect him from the limitless possibilities life offers.

[502] Abstraction and empathy, introversion and extraversion, are mechanisms of adaptation and defence. In so far as they make for adaptation, they protect a man from external dangers. In so far as they are directed functions,[19] they liberate him from fortuitous impulses; indeed they are an actual defence against them since they make self-alienation possible. As our daily psychological experience shows, there are very many people who are completely identified with their directed (or "valuable") function, among them the very types we are discussing. Identification with the directed function has an undeniable advantage in that a man can best adapt to collective demands and expectations; moreover, it also enables him to keep out of the way of his inferior, undifferentiated, undirected functions by self-alienation. In addition, "selflessness" is always considered a particular virtue from the standpoint of social morality. On the other hand, we also have to bear in mind the

great disadvantage which identification with the directed function entails, namely, the degeneration of the individual. No doubt man can be mechanized to a very considerable extent, but not to the point of giving himself up completely, or only at the cost of the gravest injury. For the more he identifies with one function, the more he invests it with libido, and the more he withdraws libido from the other functions. They can tolerate being deprived of libido for even quite long periods, but in the end they will react. Being drained of libido, they gradually sink below the threshold of consciousness, lose their associative connection with it, and finally lapse into the unconscious. This is a regressive development, a reversion to the infantile and finally to the archaic level. Since man has spent only a few thousand years in a cultivated state, as opposed to several hundred thousand years in a state of savagery, the archaic modes of functioning are still extraordinarily vigorous and easily reactivated. Hence, when certain functions disintegrate by being deprived of libido, their archaic foundations in the unconscious become operative again.

[503] This state brings about a dissociation of the personality, since the archaic modes of functioning have no direct connection with consciousness and no negotiable bridges exist between it and the unconscious. Consequently, the further the process of self-alienation goes, the further the unconscious functions sink down to the archaic level. The influence of the unconscious increases proportionately. It begins to provoke symptomatic disturbances of the directed function, thus producing that vicious circle characteristic of so many neuroses: the patient tries to compensate the disturbing influences by special feats on the part of the directed function, and the competition between them is often carried to the point of nervous collapse.

[504] The possibility of self-alienation by identification with the directed function does not depend solely on a rigid restriction to the one function, but also on the fact that the directed function is itself a principle that makes self-alienation necessary. Thus every directed function demands the strict exclusion of everything not suited to its nature: thinking excludes all disturbing feelings, just as feeling excludes all disturbing thoughts. Without the repression of everything alien to itself, the directed function could never operate at all. On the other hand, since the self-

regulation of the living organism requires by its very nature the harmonizing of the whole human being, consideration of the less favoured functions forces itself upon us as a vital necessity and an unavoidable task in the education of the human race.

VIII

THE TYPE PROBLEM IN MODERN PHILOSOPHY

1. WILLIAM JAMES' TYPES

[505] The existence of two types has also been discovered in modern pragmatic philosophy, particularly in the philosophy of William James.[1] He says:

> The history of philosophy is, to a great extent, that of a certain clash of human temperaments. … Of whatever temperament a professional philosopher is, he tries, when philosophizing, to sink the fact of his temperament. … Yet his temperament really gives him a stronger bias than any of his more strictly objective premises. It loads the evidence for him one way or the other, making for a more sentimental or a more hard-hearted view of the universe, just as this fact or that principle would. He trusts his temperament. Wanting a universe that suits it, he believes in any representation of the universe that does suit it. He feels men of opposite temper to be out of key with the world's character, and in his heart considers them incompetent and "not in it," in the philosophic business, even though they may far excel him in dialectical ability.
>
> Yet in the forum he can make no claim, on the bare ground of his temperament, to superior discernment or authority. There arises thus a certain insincerity in our philosophic discussions; the potentest of all our premises is never mentioned.[2]

[506] Whereupon James proceeds to the characterization of the two temperaments. Just as in the domain of manners and customs we distinguish conventional and easy-going persons, in politics authoritarians and anarchists, in literature purists and realists, in art classicists and romantics, so in philosophy, according to James, we find two types, the "rationalist" and the "empiricist." The rationalist is "your devotee of abstract and eternal principles." The empiricist is the "lover of facts in all their crude variety" (p. 9). Although no man can dispense either with facts or with principles, they nevertheless give rise to entirely different points of view according to whether the accent falls on one side or on the other.

[507] James makes "rationalism" synonymous with "intellectualism," and "empiricism" with "sensationalism." Although in my opinion this equation is

not tenable, we will follow James' line of thought for the time being, reserving our criticism until later. In his view, intellectualism is associated with an idealistic and optimistic tendency, whereas empiricism inclines to materialism and a very qualified and uncertain optimism. Intellectualism is always *monistic*. It begins with the whole, with the universal, and unites things; empiricism begins with the part and makes the whole into an *assemblage*. It could therefore be described as *pluralistic*. The rationalist is a man of feeling, but the empiricist is a hard-headed creature. The former is naturally disposed to a belief in free will, the latter to fatalism. The rationalist is inclined to be dogmatic, the empiricist sceptical (pp. 10ff.). James calls the rationalist *tender-minded*, the empiricist *tough-minded*. It is obvious that he is trying to put his finger on the characteristic mental qualities of the two types. Later, we shall examine this characterization rather more closely. It is interesting to hear what James has to say about the prejudices each type cherishes about the other (pp. 12f.):

> They have a low opinion of each other. Their antagonism, whenever as individuals their temperaments have been intense, has formed in all ages a part of the philosophic atmosphere of the time. It forms a part of the atmosphere today. The tough think of the tender as sentimentalists and soft-heads. The tender feel the tough to be unrefined, callous, or brutal. … Each type believes the other to be inferior to itself.

James tabulates the qualities of the two types as follows:

Tender-minded	*Tough-minded*
Rationalistic (going by "principles")	Empiricist (going by "facts")
Intellectualistic	Sensationalistic
Idealistic	Materialistic
Optimistic	Pessimistic
Religious	Irreligious
Free-willist	Fatalistic
Monistic	Pluralistic
Dogmatical	Sceptical

[508] This list touches on a number of problems we have met with in the chapter on realism and nominalism. The tender-minded have certain features in common with the realists, and the tough-minded with the nominalists. As I have pointed out, realism corresponds to introversion, and nominalism to extraversion. The controversy about universals undoubtedly forms part of that "clash of temperaments" in philosophy to which James alludes. These associations tempt one to think of the tender-minded as introverted and the

tough-minded as extraverted, but it remains to be seen whether this equation is valid or not.

[509] With my somewhat limited knowledge of James' writings, I have not been able to discover any more detailed definitions or descriptions of the two types, although he frequently refers to these two kinds of thinking, and incidentally describes them as "thin" and "thick." Flournoy[3] interprets "thin" as "mince, ténu, maigre, chétif," and "thick" as "épais, solide, massif, cossu." On one occasion, as we have seen, James calls the tender-minded "soft-heads." Both "soft" and "tender" suggest something delicate, mild, gentle, hence weak, subdued, and rather powerless, in contrast to "thick" and "tough," which are resistant qualities, solid and hard to change, suggesting the nature of matter. Flournoy accordingly elucidates the two kinds of thinking as follows:

> It is the contrast between the abstract way of thinking—that is, the purely logical and dialectical way so dear to philosophers, but which failed to inspire James with any confidence and appeared to him fragile, hollow, and thin because too remote from particular objects—and the concrete way of thinking, which nourishes itself on the facts of experience and never leaves the solid earthy region of tortoise-shells or other positive data.[4]

[510] We should not, however, conclude from this comment that James has a bias in favour of concrete thinking. He appreciates both standpoints: "Facts are good, of course … give us lots of facts. Principles are good … give us plenty of principles." A fact never exists only as it is in itself, but also as we see it. When, therefore, James describes concrete thinking as "thick" and "tough," he is saying that for him this kind of thinking has something about it that is substantial and resistant, while abstract thinking appears to him weak, thin, and colourless, perhaps even (if we go along with Flournoy) sickly and decrepit. Naturally such a view is possible only for a person who has made an *a priori* connection between substantiality and concrete thinking—and that, as we have said, is just where the question of temperament comes in. When the empiricist attributes a resistant substantiality to his concrete thinking, from the abstract point of view he is deceiving himself, because substantiality or hardness is a property of external facts and not of empirical thinking. Indeed, the latter proves to be singularly feeble and ineffective; far from holding its own in the face of external facts, it is always running after them and depending on them, and, in consequence, hardly rises above the level of a purely classifying or descriptive activity. *Qua* thinking, therefore, is very weak and unself-reliant, because it has no stability in itself but only in objects, which gain ascendency over it as

determining values. It is a thinking characterized by a succession of sense-bound representations, which are set in motion less by the inner activity of thought than by the changing stream of sense-impressions. A series of concrete representations conditioned by sensuous perceptions is not exactly what the abstract thinker would call thinking, but at best only passive apperception.

[511] The temperament that favours concrete thinking and endows it with substantiality is thus distinguished by a preponderance of sensuously conditioned representations as contrasted with active apperception, which springs from a subjective act of the will and seeks to organize such representations in accordance with the intentions of a given *idea*. In a word, what counts for this temperament is the *object:* the object is empathized, it leads a quasi-independent existence in the ideational world of the subject, and comprehension follows as a kind of after-thought. It is therefore an extraverting temperament, for the thinking of the extravert is concretistic. Its stability lies outside in the empathized object, which is why James calls it "tough." For anyone who espouses concrete thinking, i.e., the representation of facts, abstract thinking must appear feeble and ineffective, because he measures it by the stability of concrete, sense-bound objects. For the man who is on the side of abstraction, it is not the sensuously determined representation but the abstract idea that is the decisive factor.

[512] Currently, an idea is held to be nothing more than the abstraction of a sum of experiences. One likes to think of the human mind as, originally, a *tabula rasa* that gradually gets covered with perceptions and experiences of life and the world. From this standpoint, which is the standpoint of empirical science in general, an idea cannot be anything else but an epiphenomenal, *a posteriori* abstraction from experiences, and consequently even feebler and more colourless than they are. We know, however, that the mind cannot be a *tabula rasa*, for epistemological criticism shows us that certain categories of thinking are given *a priori*; they are antecedent to all experience and appear with the first act of thought, of which they are its preformed determinants. What Kant demonstrated in respect of logical thinking is true of the whole range of the psyche. The psyche is no more a *tabula rasa* to begin with than is the mind proper (the thinking area). Naturally the concrete contents are lacking, but the potential contents are given *a priori* by the inherited and preformed functional disposition. This is simply the product of the brain's functioning throughout the whole ancestral line, a deposit of phylogenetic experiences and attempts at adaptation. Hence the new-born brain is an immensely old instrument fitted out for quite specific purposes, which does not only apperceive passively but

actively arranges the experiences of its own accord and enforces certain conclusions and judgments. These patterns of experience are by no means accidental or arbitrary; they follow strictly preformed conditions which are not transmitted by experience as contents of apprehension but are the preconditions of all apprehension. They are ideas *ante rem*, determinants of form, a kind of pre-existent ground-plan that gives the stuff of experience a specific configuration, so that we may think of them, as Plato did, as *images*, as schemata, or as inherited functional possibilities which, nevertheless, exclude other possibilities or at any rate limit them to a very great extent. This explains why even fantasy, the freest activity of the mind, can never roam into the infinite (although it seems that way to the poet) but remains anchored to these preformed patterns, these primordial images. The fairytales of the most widely separated races show, by the similarity of their motifs, the same tie. Even the images that underlie certain scientific theories—ether, energy, its transformations and constancy, the atomic theory, affinity, and so on—are proof of this restriction.

[513] Just as concrete thinking is dominated and guided by sensuously conditioned representations, abstract thinking is dominated by “irrepresentable” primordial images lacking specific content. They remain relatively inactive so long as the object is empathized and thus made a determinant of thought. But if the object is not empathized, and loses its dominance over the thinking process, the energy denied to it accumulates in the subject. It is now the subject who is unconsciously empathized; the primordial images are awakened from their slumber and emerge as operative factors in the thinking process, but in irrepresentable form, rather like invisible stage managers behind the scenes. They are irrepresentable because they lack content, being nothing but activated functional possibilities, and accordingly they seek something to fill them out. They draw the stuff of experience into their empty forms, representing themselves *in* facts rather than representing facts. They clothe themselves with facts, as it were. Hence they are not, in themselves, a known *point d’appui,* as is the empirical fact in concrete thinking, but become experienceable only through the unconscious shaping of the stuff of experience. The empiricist, too, can organize this material and give it shape, but he models it as far as possible on a concrete idea he has built up on the basis of past experience.

[514] The abstract thinker, on the other hand, uses an unconscious model, and only afterwards, from the finished product, does he experience the idea to which he has given shape. The empiricist is always inclined to assume that the abstract thinker shapes the stuff of experience in a quite arbitrary fashion from some

colourless, flimsy, inadequate premise, judging the latter's mental processes by his own. But the actual premise, the idea or primordial image, is just as unknown to the abstract thinker as is the theory which the empiricist will in due course evolve from experience after so and so many experiments. As I have shown in the first chapter,[5] the one type (in this case the empiricist) sees only the individual object and interests himself in its behaviour, while the other, the abstract thinker, sees mainly the similarities between objects, and disregards their singularity because he finds security in reducing the multiplicity of the world to something uniform and coherent. The empiricist finds similarities frankly tiresome and disturbing, something that actually hinders him from recognizing the object's singularity. The more the individual object is empathized, the more easily he discerns its singularity, and the more he loses sight of its similarities with other objects. If only he knew how to empathize other objects as well, he would be far more capable of sensing and recognizing their similarities than the abstract thinker, who sees them only from outside.

[515] It is because he empathizes first one object and then another—always a time-consuming procedure—that the concrete thinker is very slow to recognize the similarities between them, and for this reason his thinking appears sluggish and viscid. But his empathy is fluid. The abstract thinker seizes on similarities quickly, puts general characteristics in the place of individual objects, and shapes the stuff of experience by his own mental activity, though this is just as powerfully influenced by the shadowy primordial image as the concrete thinker is by the object. The greater the influence the object has on thinking, the more it stamps its characteristics on the conceptual image. But the less the object works on the mind, the more the primordial idea will set its seal on experience.

[516] The excessive importance attached to objects gives rise in science to a certain kind of theory favoured by specialists, which for instance cropped up in psychiatry in the form of the "brain mythology" mentioned in Chapter VI (par. 479). In all such theories an attempt is made to elucidate a very wide range of experience in terms of principles which, though applicable over a small area, are wholly inappropriate for other fields. Conversely, abstract thinking, by taking cognizance of individual facts only because of their similarities with others, formulates a general hypothesis which, while presenting the leading idea in more or less pure form, has as little to do with the nature of concrete facts as a myth. When carried to extremes, therefore, both types of thinking create a mythology, the one expressed concretely in terms of cells, atoms, vibrations, etc., the other abstractly in terms of "eternal" ideas. At least extreme empiricism has the advantage of presenting the facts as purely as possible, just as extreme

idealism reflects the primordial images as in a mirror. The theoretical results of the one are limited by its empirical material, just as the practical results of the other are confined to a presentation of the psychological idea. Because the contemporary scientific attitude is exclusively concretistic and empirical, it has no appreciation of the value of ideas, for facts rank higher than knowledge of the primordial forms in which the human mind conceives them. This swing towards concretism is a comparatively recent development, a relict of the Enlightenment. The results are indeed astonishing, but they have led to an accumulation of empirical material whose very immensity is productive of more confusion than clarity. The inevitable outcome is scientific separatism and specialist mythology, which spells death to universality. The predominance of empiricism not only means the suppression of active thinking; it also imperils the building of theories in any branch of science. The dearth of general viewpoints, however, caters to the construction of mythical theories, just as much as does the absence of empirical criteria.

[517] I am therefore of the opinion that James' "tough-minded" and "tender-minded," as descriptive terms, are onesided and at bottom conceal a certain prejudice. Nevertheless, it should at least be clear from this discussion that his characterization deals with the same types which I have termed introverted and extraverted.

2. THE CHARACTERISTIC PAIRS OF OPPOSITES IN JAMES' TYPES

a. *Rationalism* versus *Empiricism*

[518] I have already discussed this pair of opposites in the preceding section, conceiving it as the opposition between ideologism and empiricism. I avoided the term "rationalism" because concrete empirical thinking is just as "rational" as active ideological thinking. Both forms are governed by reason. Moreover, there is not only a logical rationalism but a rationalism of feeling, for rationalism as such is a general psychological attitude to the rationality of feeling as well as thought. Conceiving rationalism in this way, I find myself at odds with the historical and philosophical view which uses "rationalistic" in the sense of "ideological" and sees in rationalism the supremacy of the idea. Certainly modern philosophers have stripped reason of its purely ideal character and are fond of describing it as a faculty, a drive, an intention, even a feeling or, indeed, a method. At any rate, psychologically considered, it is a certain attitude governed, as Lipps says, by the "sense of objectivity." Baldwin regards it as the

"constitutive, regulative principle of mind."[6] Herbart conceives reason as "the capacity for reflection."[7] Schopenhauer says it has only one function, the forming of concepts, and from this one function "all the above-mentioned manifestations of reason which distinguish the life of man from that of the brutes may easily be explained. The application or non-application of this function is all that is meant by what men have everywhere and always called rational or irrational."[8] The "above-mentioned manifestations" refer to certain expressions of reason listed by Schopenhauer; they include "the control of the emotions and passions, the capacity for drawing conclusions and formulating general principles … the united action of several individuals … civilization, the state, also science, the storing up of experience," etc.[9] If, as Schopenhauer asserts, it is the function of reason to form concepts, it must possess the character of a particular psychic attitude whose function it is to form concepts through the activity of thought. It is entirely in this sense of an attitude that Jerusalem[10] conceives reason, as a disposition of the will which enables us to make use of reason in our decisions and to control our passions.

[519] Reason, therefore, is the capacity to be reasonable, a definite attitude that enables us to think, feel, and act in accordance with objective values. From the empirical standpoint these objective values are the product of experience, but from the ideological standpoint they are the result of a positive act of rational evaluation, which in the Kantian sense would be the "capacity to judge and act in accordance with fundamental principles." For Kant, reason is the source of the idea, which he defines as a "rational concept whose object is not to be found in experience," and which contains the "archetype [*Urbild*] of all practical employment of reason … a regulative principle for the sake of thorough consistency in our empirical use of the rational faculty."[11] This is a genuinely introverted view, and it may be contrasted with the empirical view of Wundt, who declares that reason belongs to a group of complex intellectual functions which, with their "antecedent phases that give them an indispensable sensuous substrate," are lumped together "in one general expression."

> It is self-evident that this concept "intellectual" is a survival from the old faculty psychology, and suffers, if possible, even more than such old concepts as memory, reason, fantasy, etc., from *confusion with logical points of view which have nothing to do with psychology*, so that the more various the psychic contents it embraces, the more indefinite and arbitrary it becomes. … If, from the standpoint of scientific psychology, there is no such thing as memory, reason, or fantasy, but only *elementary psychic processes and their connections*

with one another, which from lack of discrimination one lumps together under those names, still less can there be "intelligence" or "intellectual functions" in the sense of a homogeneous concept corresponding to some strictly delimited datum. Nevertheless there remain cases where it is useful to avail oneself of these concepts borrowed from the inventory of faculty psychology, even though using them in a sense modified by the psychological approach. Such cases arise when we encounter complex phenomena of very heterogeneous composition, phenomena that demand consideration on account of the regularity of their combination and above all on practical grounds; or when the individual consciousness presents certain definite trends in its disposition and structure; or when the regularity of the combination necessitates an analysis of such complex psychic dispositions. *But in all these cases it is naturally incumbent on psychological research not to remain rigidly dependent on the general concepts thus formed, but to reduce them whenever possible to their simple factors*.[12]

[520] Here speaks the extravert: I have italicized the passages that are specially characteristic. Whereas for the introvert "general concepts" like memory, reason, intelligence, etc. are "faculties," i.e., simple basic functions that comprise the multitude of psychic processes governed by them, for the extraverted empiricist they are nothing but secondary, derivative concepts, elaborations of elementary processes which for him are far more important. No doubt from this standpoint such concepts are not to be circumvented, but in principle one should "reduce them whenever possible to their simple factors." It is self-evident that for the empiricist anything except reductive thinking is simply out of the question, since for him general concepts are mere derivatives from experience. He recognizes no "rational concepts," no *a priori* ideas, because his passive, apperceptive thinking is oriented by sense impressions. As a result of this attitude, the object is always emphasized; *it* is the agent prompting him to insights and complicated ratiocinations, and these require the existence of general concepts which merely serve to comprise certain groups of phenomena under a collective name. Thus the general concept naturally becomes a secondary factor, having no real existence apart from language.

[521] Science, therefore, can concede to reason, fantasy, etc. no right to independent existence as long as it maintains that the only things that really exist are elementary facts perceived by the senses. But when, as with the introvert, thinking is oriented by active apperception, reason, fantasy, and the rest acquire the value of basic functions, of faculties or activities operating from within, because for him the accent of value lies on the concept and not on the elementary processes covered and comprised by the concept. This type of

thinking is synthetic from the start. It organizes the stuff of experience along the lines of the concept and uses it as a "filling" for ideas. Here the concept is the agent by virtue of its own inner potency, which seizes and shapes the experienced material. The extravert supposes that the source of this power is merely arbitrary choice, or else a premature generalizing of experiences which in themselves are limited. The introvert who is unconscious of the psychology of his own thought-processes, and who may even have adopted the vogue for empiricism as his guiding principle, is defenceless in the face of this reproach. But the reproach is nothing but a projection of the extravert's psychology. For the active thinking type draws the energy for his thought-processes neither from arbitrary choice nor from experience, but from the idea, from the innate functional form which his introverted attitude has activated. He is not conscious of this source, since by reason of its *a priori* lack of content he can recognize the idea only after he has given shape to it, that is, from the form his thinking imposes on the data of experience. For the extravert, however, the object and the elementary process are important and indispensable because he unconsciously projects the idea into the object, and can reach the idea only through the accumulation and comparison of the empirical material. The two types are opposed in a remarkable way: the one shapes the material out of his own unconscious idea and thus comes to experience; the other lets himself be guided by the material which contains his unconscious projection and thus comes to the idea. There is something intrinsically irritating about this conflict of attitude, and, at bottom, it is the cause of the most heated and futile scientific discussions.

[522] I trust that the foregoing sufficiently illustrates my view that rationalism, i.e., the elevation of reason into a principle, is as much a characteristic of empiricism as of ideologism. Instead of ideologism, we might have used the term "idealism," but the antithesis of this would be "materialism," and we could hardly say that the opposite of the materialist is the ideologist. The history of philosophy shows that the materialist can just as often be ideological in his thinking, that is, when he does not think empirically, but starts with the general idea of matter.

b. *Intellectualism* versus *Sensationalism*

[523] Sensationalism connotes extreme empiricism. It postulates sense-experience as the sole and exclusive source of knowledge. The sensationalistic attitude is wholly oriented by objects of sense. James evidently means an intellectual rather than an aesthetic sensationalism, and for this reason "intellectualism" is

not exactly an appropriate term for its opposite number. Psychologically speaking, intellectualism is an attitude that gives the main determining value to the intellect, to cognition on the conceptual level. But with such an attitude I can also be a sensationalist, for instance when my thinking is occupied with concrete concepts all derived from sense-experience. For the same reason, the empiricist may be intellectualistic. Intellectualism and rationalism are employed promiscuously in philosophy, so in this case too one would have to use ideologism as the antithesis of sensationalism, in so far as the latter is, in essence, only an extreme empiricism.

c. *Idealism* versus *Materialism*

[524] One may have already begun to wonder whether by “sensationalism” James merely meant an extreme empiricism, i.e., an intellectual sensationalism as surmised above, or whether by “sensationalistic” he really meant “sensuous”—the quality pertaining to sensation as a function quite apart from the intellect. By “pertaining to sensation” I mean true sensuousness, not in the vulgar sense of *voluptas*, but a psychological attitude in which the orienting and determining factor is not so much the empathized object as the mere fact of sensory excitation. This attitude might also be described as reflexive, since the whole mentality depends on and culminates in sense-impressions. The object is neither cognized abstractly nor empathized, but exerts an effect by its very nature and existence, the subject being oriented exclusively by sense-impressions excited by the object. This attitude would correspond to a primitive mentality. Its antithesis and corollary is the intuitive attitude, which is distinguished by an immediate sensing or apprehension that depends neither on thinking nor on feeling but is an inseparable combination of both. Just as the object of sense *appears* before the perceiving subject, so the psychic content appears before the intuitive, as a quasi-hallucination.

[525] That James should describe the tough-minded as both “sensationalistic” and “materialistic” (and “irreligious” to boot) makes it even more doubtful whether he had in mind the same type antithesis that I have. Materialism, as commonly understood, is an attitude oriented by “material” values—in other words, a kind of moral sensationalism. Hence James’ characterization would present a very unfavourable picture if we were to impute to these terms their common meaning. This is certainly not what James intended, and his own words about the types should suffice to remove any such misunderstanding. We are probably not wrong in assuming that what he had in mind was chiefly the philosophical meaning of those terms. In this sense materialism is certainly an attitude

oriented by material values, but these values are factual rather than sensuous, referring to objective and concrete reality. Its antithesis is idealism, in the philosophical sense of a supreme valuation of the idea. It cannot be a moral idealism that is meant here, for then we would have to assume, contrary to James' intention, that by materialism he meant moral sensationalism. But if by materialism he meant an attitude oriented by factual values, we are once again in a position to find in this attitude the quality of extraversion, so that our doubts are dispelled. We have already seen that philosophical idealism corresponds to introverted ideologism. But moral idealism would not be especially characteristic of the introvert, for the materialist can be a moral idealist too.

d. *Optimism* versus *Pessimism*

[526] I doubt very much whether this well-known antithesis of human temperaments can be applied to James' types. Is the empirical thinking of Darwin also pessimistic, for instance? Certainly Darwin is a pessimist for one who has an idealistic view of the world and sees the other type through the lens of his unconsciously projected feelings. But this does not mean that the empiricist himself takes a pessimistic view of the world. Or again, to follow the Jamesian typology, can it be said that the thinker Schopenhauer, whose view of the world is purely idealistic (like the pure idealism of the Upanishads), is by any chance an optimist? Kant himself, an extremely pure introverted type, is as remote from either optimism or pessimism as any of the great empiricists.

[527] It seems to me, therefore, that this antithesis has nothing to do with James' types. There are optimistic introverts as well as optimistic extraverts, and both can be pessimists. But it is quite possible that James slipped into this error as a result of an unconscious projection. From the idealist standpoint, a materialistic or empirical or positivist view of the world seems utterly cheerless and is bound to be felt as pessimistic. But the same view of the world seems optimistic to the man who has put his faith in the god "Matter." For the idealist the materialistic view severs the vital nerve, because his main source of strength—active apperception and realization of the primordial images—is sapped. Such a view of the world must appear completely pessimistic to him, as it robs him of all hope of ever again seeing the eternal idea embodied in reality. A world composed only of facts means exile and everlasting homelessness. So when James equates the materialistic with the pessimistic point of view, we may infer that he personally is on the side of idealism—an inference that might easily be corroborated by numerous other traits from the life of this philosopher. This

might also explain why the tough-minded are saddled with the three somewhat dubious epithets “sensationalistic,” “materialistic,” “irreligious.” The inference is further corroborated by that passage in *Pragmatism* where James likens the mutual aversion of the two types to a meeting between Bostonian tourists and the inhabitants of Cripple Creek.[13] It is a comparison hardly flattering to the other type, and it allows one to infer an emotional dislike which even a strong sense of justice could not entirely suppress. This little foible seems to me an amusing proof of the mutually irritating differences between the two types. It may seem rather petty to make such a point of these incompatibilities of feeling, but numerous experiences have convinced me that it is just such feelings as these, lurking in the background, that bias even the nicest reasoning and obstruct understanding. It is easy to imagine that the inhabitants of Cripple Creek might also view the Bostonian tourists with a jaundiced eye.

e. *Religiousness* versus *Irreligiousness*

[528] The validity of this antithesis naturally depends on the definition of religiousness. If James conceives it entirely from the idealist standpoint, as an attitude in which religious ideas (as opposed to feelings) play the dominant role, then he is certainly right to characterize the tough-minded as irreligious. But James’ thought is so wide and so human that he can hardly have failed to see that a religious attitude can equally well be determined by feeling. He himself says: “But our esteem for facts has not neutralized in us all religiousness. It is itself almost religious. Our scientific temper is devout.”[14]

[529] Instead of reverence for “eternal” ideas, the empiricist has an almost religious belief in facts. It makes no difference, psychologically, whether a man is oriented by the idea of God or by the idea of matter, or whether facts are exalted into the determinants of his attitude. Only when this orientation becomes absolute does it deserve the name “religious.” From such an exalted standpoint, facts are just as worthy of being absolutes as the idea, the primordial image, which is the imprint left on man’s psyche by his collision for millions of years with the hard facts of reality. At any rate, absolute surrender to facts can never be described as irreligious from the psychological point of view. The tough-minded indeed have their empiricistic religion, just as the tender-minded have an idealistic one. It is also a phenomenon of our present cultural epoch that science is dominated by the object and religion by the subject, i.e., by the subjective idea—for the idea had to take refuge somewhere after having been ousted from its place in science by the object. If religion is understood as a phenomenon of our culture in this sense, then James is right in describing the

empiricist as irreligious, but only in this sense. For since philosophers are not a separate class of men, their types will also extend beyond the philosopher to all civilized humanity. On these general grounds it is surely not permissible to class half of civilized humanity as irreligious. We also know from the psychology of primitives that the religious function is an essential component of the psyche and is found always and everywhere, however undifferentiated it may be.

[530] In the absence of some such limitation of James' concept of "religion," we must once again assume that he was thrown off the rails by his emotions, as can happen all too easily.

f. *Indeterminism* versus *Determinism*

[531] This antithesis is very interesting psychologically. It stands to reason that the empiricist thinks causally, the necessary connection between cause and effect being taken as axiomatic. The empiricist is oriented by the empathized object; he is, as it were, "actuated" by the external fact and impressed with a sense of the necessity of effect following cause. It is psychologically quite natural that the impression of the inevitability of the causal connection should force itself on such an attitude. The identification of the inner psychic processes with external facts is implied from the start, because in the act of empathy a considerable sum of the subject's activity, of his own life, is unconsciously invested in the object. The empathetic type is thereby assimilated to the object, although it feels as if the object were assimilated to him. But whenever the value of the object is emphasized, it at once assumes an importance which in its turn influences the subject, forcing him to a "dissimilation" from himself.[15] Human psychology is chameleon-like, as the practising psychologist knows from daily experience. So whenever the object predominates, an assimilation to the object takes place. Identification with the love-object plays no small role in analytical psychology, and the psychology of primitives swarms with examples of dissimilation in favour of the totem animal or ancestral spirit. The stigmatization of saints in medieval and even in recent times is a similar phenomenon. In the *imitatio Christi* dissimilation is exalted into a principle.

[532] In view of this undoubted capacity of the human psyche for dissimilation, the carrying over of objective causal connections into the subject can readily be understood. The psyche then labours under the impression of the exclusive validity of the causal principle, and the whole armoury of the theory of knowledge is needed to combat the overmastering power of this impression. This is further aggravated by the fact that the very nature of the empirical

attitude prevents one from believing in inner freedom, since any proof, indeed any possibility of proof, is lacking. What use is that vague, indefinable feeling of freedom in face of the overwhelming mass of objective proofs to the contrary? The determinism of the empiricist, therefore, is a foregone conclusion, provided that he carries his thinking that far and does not prefer, as often happens, to live in two compartments—one for science, and the other for the religion he has taken over from his parents or from his surroundings.

[533] As we have seen, idealism consists essentially in an unconscious activation of the idea. This activation may be due to an aversion for empathy acquired later in life, or it may be present at birth as an *a priori* attitude fashioned and favoured by nature (in my practical experience I have seen many such cases). In this latter case the idea is active from the beginning, though, because of its lack of content and its irrepresentability, it does not appear in consciousness. Yet, as an invisible inner dominant, it gains ascendency over all external facts and communicates a sense of its own autonomy and freedom to the subject, who, in consequence of his inner assimilation to the idea, feels independent and free in relation to the object. When the idea is the principal orienting factor, it assimilates the subject just as completely as the subject tries to assimilate the idea by shaping the stuff of experience. Thus, as in the case of his attitude to the object, the subject is dissimilated from himself, but this time in the reverse sense and in favour of the idea.

[534] The inherited primordial image outlives all time and change, preceding and superseding all individual experience. It must thus be charged with immense power. When it is activated, it communicates a distinct feeling of power to the subject by assimilating him to itself through his unconscious inner empathy. This would account for his feeling of independence, of freedom, and of living forever (cf. Kant’s threefold postulate: God, freedom, and immortality). When the subject feels within him the sway of the idea over the reality of facts, the idea of freedom naturally forces itself upon him. If his idealism is unalloyed, he is bound to believe in free will.

[535] The antithesis here discussed is highly characteristic of our types. The extravert is distinguished by his craving for the object, by his empathy and identification with the object, his voluntary dependence on the object. He is influenced by the object in the same degree as he strives to assimilate it. The introvert is distinguished by his self-assertion vis-à-vis the object. He struggles against any dependence on the object, he repels all its influences, and even fears it. So much the more is he dependent on the idea, which shields him from

external reality and gives him the feeling of inner freedom—though he pays for this with a very noticeable power psychology.

g. *Monism* versus *Pluralism*

[536] It follows from what we have already said that the idea-oriented attitude must tend towards monism. The idea always possesses an hierarchical character, no matter whether it is derived from a process of abstraction or exists *a priori* as an unconscious form. In the first case it is the apex of an edifice, so to speak, the terminal point that sums up everything that lies below it; in the second case it is the unconscious law-giver, regulating the possibilities and logical necessities of thought. In both cases the idea has a sovereign quality. Although a plurality of ideas may be present, one of them always succeeds in gaining the upper hand for a time and constellates the other psychic elements in a monarchic pattern. It is equally clear that the object-oriented attitude always tends towards a plurality of principles, because the multiplicity of objective qualities necessitates a plurality of concepts without which the nature of the object cannot be properly interpreted. The monistic tendency is a characteristic of introversion, the pluralistic of extraversion.

h. *Dogmatism* versus *Scepticism*

[537] It is easy to see in this case too that dogmatism is the attitude *par excellence* that clings to the idea, although an unconscious realization of the idea is not necessarily dogmatic. It is none the less true that the forceful way in which an unconscious idea realizes itself gives outsiders the impression that the idea-oriented thinker starts out with a dogma that squeezes experience into a rigid ideological mould. It is equally clear that the object-oriented thinker will be sceptical about all ideas from the start, since his primary concern is to let every object and every experience speak for itself, undisturbed by general concepts. In this sense scepticism is a necessary condition of all empiricism. Here we have another pair of opposites that confirms the essential similarity between James' types and my own.

3. GENERAL CRITICISM OF JAMES' TYPOLOGY

[538] In criticizing James' typology, I must first stress that it is almost exclusively concerned with the thinking qualities of the types. In a philosophical work one could hardly expect anything else. But the bias resulting from this philosophical setting easily leads to confusion. It would not be difficult to show that such and

such a quality is equally characteristic of the opposite type, or even several of them. There are, for instance, empiricists who are dogmatic, religious, idealistic, intellectualistic, rationalistic, etc., just as there are ideologists who are materialistic, pessimistic, deterministic, irreligious, and so on. It is true, of course, that these terms cover extremely complex facts and that all sorts of subtle nuances have to be taken into account, but this still does not get rid of the possibility of confusion.

[539] Taken individually, the Jamesian terms are too *broad* and give an approximate picture of the type antithesis only when taken as a whole. Though they do not reduce it to a simple formula, they form a valuable supplement to the picture of the types we have gained from other sources. James deserves credit for being the first to draw attention to the extraordinary importance of temperament in colouring philosophical thought. The whole purpose of his pragmatic approach is to reconcile the philosophical antagonisms resulting from temperamental differences.

[540] Pragmatism is a widely ramifying philosophical movement, deriving from English philosophy,[16] which restricts the value of “truth” to its practical efficacy and usefulness, regardless of whether or not it may be contested from some other standpoint. It is characteristic of James to begin his exposition of pragmatism with this type antithesis, as if to demonstrate and justify the need for a pragmatic approach. Thus the drama already acted out in the Middle Ages is repeated. The antithesis at that time took the form of nominalism versus realism, and it was Abelard who attempted to reconcile the two in his “sermonism” or conceptualism. But since the psychological standpoint was completely lacking, his attempted solution was marred by its logical and intellectualistic bias. James dug deeper and grasped the conflict at its psychological root, coming up with a pragmatic solution. One should not, however, cherish any illusions about its value: pragmatism is but a makeshift, and it can claim validity only so long as no sources are discovered, other than intellectual capacities coloured by temperament, which might reveal new elements in the formation of philosophical concepts. Bergson, it is true, has drawn attention to the role of intuition and to the possibility of an “intuitive method,” but it remains a mere pointer. Any proof of the method is lacking and will not be easy to furnish, notwithstanding Bergson’s claim that his “élan vital” and “durée créatrice” are products of intuition. Aside from these intuitive concepts, which derive their psychological justification from the fact that they were current even in antiquity, particularly in Neoplatonism, Bergson’s method is not intuitive but intellectual. Nietzsche made far greater use of the intuitive

source and in so doing freed himself from the bonds of the intellect in shaping his philosophical ideas—so much so that his intuition carried him outside the bounds of a purely philosophical system and led to the creation of a work of art which is largely inaccessible to philosophical criticism. I am speaking, of course, of *Zarathustra* and not of the collection of philosophical aphorisms, which are accessible to philosophical criticism because of their predominantly intellectual method. If one may speak of an intuitive method at all, *Zarathustra* is in my view the best example of it, and at the same time a vivid illustration of how the problem can be grasped in a non-intellectual and yet philosophical way. As forerunners of Nietzsche's intuitive approach I would mention Schopenhauer and Hegel, the former because his intuitive feelings had such a decisive influence on his thinking, the latter because of the intuitive ideas that underlie his whole system. In both cases, however, intuition was subordinated to intellect, but with Nietzsche it ranked above it.

[541] The conflict between the two "truths" requires a pragmatic attitude if any sort of justice is to be done to the other standpoint. Yet, though it cannot be dispensed with, pragmatism presupposes too great a resignation and almost unavoidably leads to a drying up of creativeness. The solution of the conflict of opposites can come neither from the intellectual compromise of conceptualism nor from a pragmatic assessment of the practical value of logically irreconcilable views, but only from a positive act of creation which assimilates the opposites as necessary elements of co-ordination, in the same way as a co-ordinated muscular movement depends on the innervation of opposing muscle groups. Pragmatism can be no more than a transitional attitude preparing the way for the creative act by removing prejudices. James and Bergson are signposts along the road which German philosophy—not of the academic sort—has already trodden. But it was really Nietzsche who, with a violence peculiarly his own, struck out on the path to the future. His creative act goes beyond the unsatisfying pragmatic solution just as fundamentally as pragmatism itself, in acknowledging the living value of a truth, transcended the barren one-sidedness and unconscious conceptualism of post-Abelardian philosophy—and still there are heights to be climbed.

IX

THE TYPE PROBLEM IN BIOGRAPHY

[542] As one might expect, biography too has its contribution to make to the problem of psychological types. For this we are indebted mainly to Wilhelm Ostwald, who, by comparing the biographies of a number of outstanding scientists, was able to establish a typical psychological pair of opposites which he termed the classic and romantic types.[1]

> Whereas the former is characterized by the all-round perfection of each of his works, and at the same time by a rather retiring disposition and a personality that has but little influence on his immediate surroundings, the romantic stands out by reason of just the opposite qualities. His peculiarity lies not so much in the perfection of each individual work as in the variety and striking originality of numerous works following one another in rapid succession, and in the direct and powerful influence he has upon his contemporaries.
>
> It should also be emphasized that the speed of mental reaction is a decisive criterion for determining to which type a scientist belongs. Discoverers with rapid reactivity are romantics, those with slower reactions are classics.[2]

[543] The classic type is slow to produce, usually bringing forth the ripest fruit of his mind relatively late in life (p. 89). A never-failing characteristic of the classic type, according to Ostwald, is "the absolute need to stand unblemished in the public eye" (p. 94). As a compensation for his "lack of personal influence, the classic type is assured an all the more potent effect through his writings" (p. 100).

[544] There seem, however, to be limitations to this effect, as the following episode from the biography of Helmholtz testifies. *A propos* Helmholtz's mathematical researches concerning the effects of induction shocks, his colleague Du Bois-Reymond wrote to the scientist: "You must—please don't take this amiss—devote yourself much more carefully to the

problem of abstracting yourself from your own scientific standpoint, and put yourself in the position of those who know nothing of what it is all about, or what it is you want to discuss." To which Helmholtz replied: "This time I really did take pains with my paper, and I thought that at last I might be satisfied with it." Ostwald comments: "He does not consider the reader's point of view at all, because, true to his classic type, he is writing for himself, so that the presentation seems irreproachable to him, while to others it is not." What Du Bois-Reymond says in the same letter to Helmholtz is entirely characteristic: "I read your treatise and the summary several times without understanding what you have actually done, or the way you did it. … Finally I discovered your method myself, and now I am gradually beginning to understand your paper."[3]

[545] This is a thoroughly typical event in the life of the classic type who seldom or never succeeds in "setting like minds on fire with his own" (p. 100). It shows that the influence ascribed to him through his writings is as a rule posthumous, i.e., it appears after he has been disinterred from his works, as happened in the case of Robert Mayer. Moreover, his writings often seem unconvincing, uninspiring, lacking any direct personal appeal, because the way a man writes is, after all, just as much an expression of himself as the way he talks or lectures. Hence any influence the classic type exerts depends much less on the outwardly stimulating qualities of his writings than on the fact that these are all that finally remain of him, and that only from them can his achievement be reconstructed. It is also evident from Ostwald's description that the classic type seldom communicates what he is doing and the way he does it, but only the final result, regardless of the fact that his public has no notion how he arrived at it. Evidently the way and the method of working are of little importance to him just because they are most intimately linked with his personality, which is something he always keeps in the background.

[546] Ostwald compares his two types with the four classical temperaments,[4] with special reference to the speed of reaction, which in his view is fundamental. Slow reactions are correlated with phlegmatic and melancholic temperaments, quick reactions with the sanguine and the choleric. He regards the sanguine and the phlegmatic as the average

types, whereas the choleric and the melancholic seem to him morbid exaggerations of the basic character.

[547] If one glances through the biographies of Humphry Davy and Liebig on the one hand, and Robert Mayer and Faraday on the other, it is easy to see that the former are distinctly romantic, sanguine, and choleric, while the latter are just as clearly classic, phlegmatic, and melancholic. This observation of Ostwald's seems to me entirely convincing, since the doctrine of the four temperaments was in all probability based on the same empirical principles as Ostwald's classic and romantic types. The four temperaments are obviously differentiations in terms of affectivity, that is, they are correlated with manifest affective reactions. But this is a superficial classification from the psychological point of view; it judges only by appearances. According to it, the man who is outwardly calm and inconspicuous in his behaviour has a phlegmatic temperament. He looks phlegmatic and is therefore classed as phlegmatic. In reality he may be anything but phlegmatic; he may have a profoundly sensitive, even passionate nature, his intense, introverted emotionality expressing itself through the greatest outward calm. Jordan, in his typology, takes this fact into account. He judges not merely from the surface impression, but from a deeper observation of human nature. Ostwald's criteria of distinction are based on appearances, like the old division into temperaments. His romantic type is characterized by a quick outward reaction; the classic type may react just as quickly, but within.

[548] As one reads Ostwald's biographies, one can see at a glance that the romantic type corresponds to the extravert, and the classic type to the introvert. Humphry Davy and Liebig are perfect examples of the one, and Mayer and Faraday of the other. The outward reaction characterizes the extravert, just as the inward reaction is the mark of the introvert. The extravert has no especial difficulty in expressing himself; he makes his presence felt almost involuntarily, because his whole nature goes outwards to the object. He gives himself easily to the world in a form that is pleasing and acceptable, and it is always understandable even when it is unpleasing. Because of his quick reactivity and discharge of emotion, valuable and worthless psychic contents will be projected together into the object; he will react with winsome manners as well as with dour

thoughts and affects. For the same reason these contents will have undergone little elaboration and are therefore easily understood; the quick succession of immediate reactions produces a series of images that show the public the path he has followed and the means by which he has attained his result.

[549] The introvert, on the other hand, who reacts almost entirely within, cannot as a rule discharge his reactions except in explosions of affect. He suppresses them, though they may be just as quick as those of the extravert. They do not appear on the surface, hence the introvert may easily give the impression of slowness. Since immediate reactions are always strongly personal, the extravert cannot help asserting his personality. But the introvert hides his personality by suppressing all his immediate reactions. Empathy is not his aim, nor the transference of contents to the object, but rather abstraction from the object. Instead of immediately discharging his reactions he prefers to elaborate them inwardly for a long time before finally coming out with the finished product. His constant endeavour is to strip the product of everything personal and to present it divested of all personal relationships. The matured fruit of prolonged inner labour, it emerges into the world in a highly abstract and depersonalized form. It is therefore difficult to understand, because the public lacks all knowledge of the preliminary stages and the way he attained his result. A personal relation to his public is also lacking, because the introvert in suppressing himself shrouds his personality from the public eye. But often enough it is just the personal relationship which brings about an understanding where mere intellectual apprehension fails. This must constantly be borne in mind when passing judgment on the introvert’s development. As a rule one is badly informed about the introvert because his real self is not visible. His incapacity for immediate outward reaction keeps his personality hidden. His life therefore affords ample scope for fantastic interpretations and projections should his achievements ever make him an object of general interest.

[550] So when Ostwald says that “early mental maturity” is characteristic of the romantic type, we must add that, though this is quite true, the classic type is just as capable of early maturity, but hides his products within himself, not intentionally of course, but from an incapacity for

immediate expression. As a result of deficient differentiation of feeling, a certain awkwardness lingers on in the introvert, a real infantilism in his personal relations with other people. His outward personality is so uncertain and indefinite, and he himself is so sensitive in this respect, that he dares to appear before the public only with what in his own eyes is a perfect product. He prefers to let his work speak for him, instead of taking up the cudgels on its behalf. The natural result of such an attitude is a considerably delayed appearance on the world's stage, so that it is easy to accuse him of late maturity. But this superficial judgment overlooks the fact that the infantilism of the apparently early matured and outwardly differentiated extravert is all internal, in his relation to his inner world. It only reveals itself later in life, in some moral immaturity or, as is often the case, in an astonishing infantilism of thought. As Ostwald observes, conditions for development and growth are more favourable for the romantic than for the classic type. His convincing appearance before the public and his outward reactions allow his personal importance to be immediately recognized. In this way many valuable relations are quickly built up which enrich his work and give it *breadth* (p. 374), whereas the other remains hidden and his lack of personal relations limits any extension of his field of work, though his activity gains in *depth* and his work has a lasting value.

[551] Both types are capable of *enthusiasm*. What fills the extravert's heart flows out of his mouth, but the enthusiasm of the introvert is the very thing that seals his lips. He kindles no flame in others, and so he lacks colleagues of equal calibre. Even if he had any desire to impart his knowledge, his laconic manner of expression and the mystified incomprehension it produces are enough to deter him from further efforts at communication, and it frequently happens that no one believes he has anything out of the ordinary to say. His manner of expression, his "personality," appear commonplace on a superficial view, whereas the romantic looks intrinsically "interesting" and understands the art of pandering to this impression by fair means or foul. His very glibness provides a suitable background for brilliant ideas and helps the public over the gaps in his thinking. The emphasis Ostwald lays on the successful academic careers of the romantics is therefore very much to

the point. The romantic empathizes his students and knows the right word at the right moment. But the classic type is sunk in his own thoughts and problems and completely overlooks the difficulties his students have in understanding him. Ostwald says of Helmholtz:[5]

> In spite of his prodigious learning, wide experience, and richly creative mind, he was never a good teacher. He never reacted on the instant, but only after a long time. Confronted by a student's question in the laboratory, he would promise to think it over, and only after several days would he bring the answer. This turned out to be so remote from the predicament of the student that only in the rarest cases could the latter see any connection between the difficulty he had experienced and the nicely rounded theory of a general problem subsequently expounded to him. Not only was the immediate help lacking on which every beginner largely relies, but also any guidance adapted to the student's own personality, that would have helped him to outgrow the natural dependence of the beginner and win to complete mastery of his subject. All these deficiencies are directly due to the teacher's inability to react instantaneously to the student's needs, so that, when the desired reaction does come, its effect is entirely lost.

[552] Ostwald's explanation in terms of the introvert's slowness to react does not seem to me sufficient. This is no sort of proof that Helmholtz possessed a slow reactivity. He merely reacted inwardly rather than outwardly. He had not empathized his student and so did not understand what he needed. His attitude was entirely directed to his own thoughts; consequently, he reacted not to the personal need of the student but to the thoughts which the student's question had aroused in himself, and he reacted so rapidly and thoroughly that he immediately perceived a further connection which, at that moment, he was incapable of evaluating and handing back in fully developed, abstract form. This was not because his thinking was too slow, but because it was impossible for him to grasp, all in a moment, the full extent of the problem he had divined. Not observing that the student had no inkling of any such problem, he naturally thought that this was what had to be dealt with, and not some extremely simple and trivial piece of advice which could have been given on the spot if only he had been able to see what the student needed in order to get on

with his work. But, being an introvert, he had not empathized the other's psychology; his empathy had gone inwards to his own theoretical problems, and simply went on spinning the threads taken over from the student's problem while entirely ignoring his needs. From the academic standpoint, naturally, this peculiar attitude is highly unsuitable quite apart from the unfavourable impression it makes. The introverted teacher is to all appearances slow, somewhat eccentric, even thick-headed; because of this he is underestimated not only by the wider public but also by his own colleagues, until one day his thoughts are taken up and elaborated by other investigators.

[553] The mathematician Gauss had such a distaste for teaching that he used to inform each of his students that his course of lectures would probably not take place at all, hoping in this way to disembarrass himself of the necessity of giving them. Teaching was repugnant to him because it meant having to "pronounce scientific results in his lectures without first having checked and polished every word of the text. To be obliged to communicate his findings to others without such verification must have felt to him as though he were exhibiting himself before strangers in his nightshirt" (p. 380). Here Ostwald puts his finger on a very essential point we have already mentioned—the introvert's dislike of anything other than entirely impersonal communications.

[554] Ostwald points out that the romantic is usually compelled to terminate his career comparatively early because of increasing exhaustion. This fact, also, Ostwald attributes to the greater speed of reaction. Since in my opinion the speed of mental reaction is still far from having been explained scientifically, and there is as yet no proof that outward reactions are quicker than inward ones, it seems to me that the earlier exhaustion of the extraverted discoverer must be essentially connected not so much with the speed of reaction as with the outward reactions peculiar to his type. He begins to publish very early, quickly makes a name for himself, and soon develops an intensive activity, both academically and as a writer; he cultivates personal relationships among a wide circle of friends and acquaintances and, in addition to all this, takes an unusual interest in the development of his pupils. The introverted pioneer begins to publish later; his works succeed one another

at longer intervals, and are usually sparing in expression; repetitions of a theme are avoided unless something entirely new can be introduced into them. The pithy and laconic style of his scientific communications, frequently omitting all indications about the way he arrived at his results, prevents any general understanding or acceptance of his work, and so he remains unknown. His distaste for teaching does not bring him pupils; his lack of renown precludes relations with a large circle of acquaintances; as a rule he lives a retired life, not merely from necessity but also from choice. Thus he avoids the danger of expending himself too lavishly. His inward reactions draw him constantly back to the narrow path of his researches; these in themselves are very exacting, proving as time goes on to be so exhausting as to permit of no incidental expenditures on behalf of others. The situation is complicated by the fact that the public success of the romantic has an invigorating effect, but this is often denied to the classic type, who is therefore forced to seek his sole satisfaction in perfecting his research work. In the light of these considerations, the relatively premature exhaustion of the romantic genius, if demonstrable at all, seems to me to depend more on the outward reaction than on a quicker reactivity.

[555] Ostwald does not pretend that his type division is absolute in the sense that every investigator can be shown at once to belong to one type or the other. He is, however, of the opinion that the “really great men” can definitely be classed in one or the other category with respect to speed of reaction, while “average people” much more frequently occupy the middle range (pp. 372f.). In conclusion I would like to observe that Ostwald’s biographies contain material that has in part a very valuable bearing on the psychology of types, and strikingly exhibit the coincidence of the romantic with the extravert and the classic with the introvert.

X

GENERAL DESCRIPTION OF THE TYPES

1. INTRODUCTION

[556] In the following pages I shall attempt a general description of the psychology of the types, starting with the two basic types I have termed introverted and extraverted. This will be followed by a description of those more special types whose peculiarities are due to the fact that the individual adapts and orients himself chiefly by means of his most differentiated function. The former I would call *attitude-types,* distinguished by the direction of their interest, or of the movement of libido; the latter I would call *function-types*.

[557] The attitude-types, as I have repeatedly emphasized in the preceding chapters, are distinguished by their attitude to the object. The introvert's attitude is an abstracting one; at bottom, he is always intent on withdrawing libido from the object, as though he had to prevent the object from gaining power over him. The extravert, on the contrary, has a positive relation to the object. He affirms its importance to such an extent that his subjective attitude is constantly related to and oriented by the object. The object can never have enough value for him, and its importance must always be increased. The two types are so different and present such a striking contrast that their existence becomes quite obvious even to the layman once it has been pointed out. Everyone knows those reserved, inscrutable, rather shy people who form the strongest possible contrast to the open, sociable, jovial, or at least friendly and approachable characters who are on good terms with everybody, or quarrel with everybody, but always relate to them in some way and in turn are affected by them.

[558] One is naturally inclined, at first, to regard such differences as mere idiosyncrasies of character peculiar to individuals. But anyone with a thorough knowledge of human nature will soon discover that the contrast

is by no means a matter of isolated individual instances but of typical attitudes which are far more common than one with limited psychological experience would assume. Indeed, as the preceding chapters may have shown, it is a fundamental contrast, sometimes quite clear, sometimes obscured, but always apparent when one is dealing with individuals whose personality is in any way pronounced. Such people are found not merely among the educated, but in all ranks of society, so that our types can be discovered among labourers and peasants no less than among the most highly differentiated members of a community. Sex makes no difference either; one finds the same contrast among women of all classes. Such a widespread distribution could hardly have come about if it were merely a question of a conscious and deliberate choice of attitude. In that case, one would surely find one particular attitude in one particular class of people linked together by a common education and background and localized accordingly. But that is not so at all; on the contrary, the types seem to be distributed quite at random. In the same family one child is introverted, the other extraverted. Since the facts show that the attitude-type is a general phenomenon having an apparently random distribution, it cannot be a matter of conscious judgment or conscious intention, but must be due to some unconscious, instinctive cause. As a general psychological phenomenon, therefore, the type antithesis must have some kind of biological foundation.

[559] The relation between subject and object, biologically considered, is always one of adaptation, since every relation between subject and object presupposes the modification of one by the other through reciprocal influence. Adaptation consists in these constant modifications. The typical attitudes to the object, therefore, are processes of adaptation. There are in nature two fundamentally different modes of adaptation which ensure the continued existence of the living organism. The one consists in a high rate of fertility, with low powers of defence and short duration of life for the single individual; the other consists in equipping the individual with numerous means of self-preservation plus a low fertility rate. This biological difference, it seems to me, is not merely analogous to, but the actual foundation of, our two psychological modes of adaptation. I must content myself with this broad hint. It is sufficient

to note that the peculiar nature of the extravert constantly urges him to expend and propagate himself in every way, while the tendency of the introvert is to defend himself against all demands from outside, to conserve his energy by withdrawing it from objects, thereby consolidating his own position. Blake's intuition did not err when he described the two classes of men as "prolific" and "devouring."[1] Just as, biologically, the two modes of adaptation work equally well and are successful in their own way, so too with the typical attitudes. The one achieves its end by a multiplicity of relationships, the other by monopoly.

[560] The fact that children often exhibit a typical attitude quite unmistakably even in their earliest years forces us to assume that it cannot be the struggle for existence in the ordinary sense that determines a particular attitude. It might be objected, cogently enough, that even the infant at the breast has to perform an unconscious act of psychological adaptation, in that the mother's influence leads to specific reactions in the child. This argument, while supported by incontestable evidence, becomes rather flimsy in face of the equally incontestable fact that two children of the same mother may exhibit contrary attitudes at an early age, though no change in the mother's attitude can be demonstrated. Although nothing would induce me to underrate the incalculable importance of parental influence, this familiar experience compels me to conclude that the decisive factor must be looked for in the disposition of the child. Ultimately, it must be the individual disposition which decides whether the child will belong to this or that type despite the constancy of external conditions. Naturally I am thinking only of normal cases. Under abnormal conditions, i.e., when the mother's own attitude is extreme, a similar attitude can be forced on the children too, thus violating their individual disposition, which might have opted for another type if no abnormal external influences had intervened. As a rule, whenever such a falsification of type takes place as a result of parental influence, the individual becomes neurotic later, and can be cured only by developing the attitude consonant with his nature.

[561] As to the individual disposition, I have nothing to say except that there are obviously individuals who have a greater capacity, or to whom it is more congenial, to adapt in one way and not in another. It may well

be that physiological causes of which we have no knowledge play a part in this. I do not think it improbable, in view of one’s experience that a reversal of type often proves exceedingly harmful to the physiological well-being of the organism, usually causing acute exhaustion.

2. THE EXTRAVERTED TYPE

[562] In our description of this and the following types it is necessary, for the sake of clarity, to distinguish between the psychology of consciousness and the psychology of the unconscious. We shall first describe the phenomena of consciousness.

a. The General Attitude of Consciousness

[563] Although it is true that everyone orients himself in accordance with the data supplied by the outside world, we see every day that the data in themselves are only relatively decisive. The fact that it is cold outside prompts one man to put on his overcoat, while another, who wants to get hardened, finds this superfluous. One man admires the latest tenor because everybody else does, another refuses to do so, not because he dislikes him, but because in his view the subject of universal admiration is far from having been proved admirable. One man resigns himself to circumstances because experience has shown him that nothing else is possible, another is convinced that though things have gone the same way a thousand times before, the thousand and first time will be different. The one allows himself to be oriented by the given facts, the other holds in reserve a view which interposes itself between him and the objective data. Now, when orientation by the object predominates in such a way that decisions and actions are determined not by subjective views but by objective conditions, we speak of an extraverted attitude. When this is habitual, we speak of an extraverted type. If a man thinks, feels, acts, and actually lives in a way that is *directly* correlated with the objective conditions and their demands, he is extraverted. His life makes it perfectly clear that it is the object and not this subjective view that plays the determining role in his consciousness. Naturally he has subjective views too, but their determining value is less than that of the objective

conditions. Consequently, he never expects to find any absolute factors in his own inner life, since the only ones he knows are outside himself. Like Epimetheus, his inner life is subordinated to external necessity, though not without a struggle; but it is always the objective determinant that wins in the end. His whole consciousness looks outward, because the essential and decisive determination always comes from outside. But it comes from outside only because that is where he expects it to come from. All the peculiarities of his psychology, except those that depend on the primacy of one particular psychological function or on idiosyncrasies of character, follow from this basic attitude. His interest and attention are directed to objective happenings, particularly those in his immediate environment. Not only people but things seize and rivet his attention. Accordingly, they also determine his actions, which are fully explicable on those grounds. The actions of the extravert are recognizably related to external conditions. In so far as they are not merely reactive to environmental stimuli, they have a character that is always adapted to the actual circumstances, and they find sufficient play within the limits of the objective situation. No serious effort is made to transcend these bounds. It is the same with his interest: objective happenings have an almost inexhaustible fascination for him, so that ordinarily he never looks for anything else.

[564] The moral laws governing his actions coincide with the demands of society, that is, with the prevailing moral standpoint. If this were to change, the extravert’s subjective moral guidelines would change accordingly, without this altering his general psychological habits in any way. This strict determination by objective factors does not mean, as one might suppose, a complete let alone ideal adaptation to the general conditions of life. In the eyes of the extravert, of course, an *adjustment* of this kind to the objective situation must seem like complete adaptation, since for him no other criterion exists. But from a higher point of view it by no means follows that the objective situation is in all circumstances a normal one. It can quite well be temporarily or locally abnormal. An individual who adjusts himself to it is admittedly conforming to the style of his environment, but together with his whole surroundings he is in an abnormal situation with respect to the universally valid laws of life. He

may indeed thrive in such surroundings, but only up to the point where he and his milieu meet with disaster for transgressing these laws. He will share the general collapse to exactly the same extent as he was adjusted to the previous situation. Adjustment is not adaptation; adaptation requires far more than merely going along smoothly with the conditions of the moment. (Once again I would remind the reader of Spitteler’s Epimetheus.) It requires observance of laws more universal than the immediate conditions of time and place. The very adjustment of the normal extraverted type is his limitation. He owes his normality on the one hand to his ability to fit into existing conditions with comparative ease. His requirements are limited to the objectively possible, for instance to the career that holds out good prospects at this particular moment; he does what is needed of him, or what is expected of him, and refrains from all innovations that are not entirely self-evident or that in any way exceed the expectations of those around him. On the other hand, his normality must also depend essentially on whether he takes account of his subjective needs and requirements, and this is just his weak point, for the tendency of his type is so outer-directed that even the most obvious of all subjective facts, the condition of his own body, receives scant attention. The body is not sufficiently objective or “outside,” so that the satisfaction of elementary needs which are indispensable to physical well-being is no longer given its due. The body accordingly suffers, to say nothing of the psyche. The extravert is usually unaware of this latter fact, but it is all the more apparent to his household. He feels his loss of equilibrium only when it announces itself in abnormal body sensations. These he cannot ignore. It is quite natural that he should regard them as concrete and “objective,” since with his type of mentality they cannot be anything else—for him. In others he at once sees “imagination” at work. A too extraverted attitude can also become so oblivious of the subject that the latter is sacrificed completely to so-called objective demands—to the demands, for instance, of a continually expanding business, because orders are piling up and profitable opportunities have to be exploited.

[565] This is the extravert’s danger: he gets sucked into objects and completely loses himself in them. The resultant functional disorders, nervous or physical, have a compensatory value, as they force him into

an involuntary self-restraint. Should the symptoms be functional, their peculiar character may express his psychological situation in symbolic form; for instance, a singer whose fame has risen to dangerous heights that tempt him to expend too much energy suddenly finds he cannot sing high notes because of some nervous inhibition. Or a man of modest beginnings who rapidly reaches a social position of great influence with wide prospects is suddenly afflicted with all the symptoms of a mountain sickness.[2] Again, a man about to marry a woman of doubtful character whom he adores and vastly overestimates is seized with a nervous spasm of the oesophagus and has to restrict himself to two cups of milk a day, each of which takes him three hours to consume. All visits to the adored are effectively stopped, and he has no choice but to devote himself to the nourishment of his body. Or a man who can no longer carry the weight of the huge business he has built up is afflicted with nervous attacks of thirst and speedily falls a victim to hysterical alcoholism.

[566] Hysteria is, in my view, by far the most frequent neurosis of the extraverted type. The hallmark of classic hysteria is an exaggerated rapport with persons in the immediate environment and an adjustment to surrounding conditions that amounts to imitation. A constant tendency to make himself interesting and to produce an impression is a basic feature of the hysteric. The corollary of this is his proverbial suggestibility, his proneness to another person’s influence. Another unmistakable sign of the extraverted hysteric is his effusiveness, which occasionally carries him into the realm of fantasy, so that he is accused of the “hysterical lie.” The hysterical character begins as an exaggeration of the normal attitude; it is then complicated by compensatory reactions from the unconscious, which counteract the exaggerated extraversion by means of physical symptoms that force the libido to introvert. The reaction of the unconscious produces another class of symptoms having a more introverted character, one of the most typical being a morbid intensification of fantasy activity.

[567] After this general outline of the extraverted attitude we shall now turn to a description of the modifications which the basic psychological functions undergo as a result of this attitude.

b. The Attitude of the Unconscious

[568] It may perhaps seem odd that I should speak of an “attitude of the unconscious.” As I have repeatedly indicated, I regard the attitude of the unconscious as compensatory to consciousness. According to this view, the unconscious has as good a claim to an “attitude” as the latter.

[569] In the preceding section I emphasized the tendency to one-sidedness in the extraverted attitude, due to the ascendency of the object over the course of psychic events. The extraverted type is constantly tempted to expend himself for the apparent benefit of the object, to assimilate subject to object. I have discussed in some detail the harmful consequences of an exaggeration of the extraverted attitude, namely, the suppression of the subjective factor. It is only to be expected, therefore, that the psychic compensation of the conscious extraverted attitude will lay special weight on the subjective factor, and that we shall find a markedly egocentric tendency in the unconscious. Practical experience proves this to be the case. I do not wish to cite case material at this point, so must refer my readers to the ensuing sections, where I try to present the characteristic attitude of the unconscious in each function-type. In this section we are concerned simply with the compensation of the extraverted attitude in general, so I shall confine myself to describing the attitude of the unconscious in equally general terms.

[570] The attitude of the unconscious as an effective complement to the conscious extraverted attitude has a definitely introverting character. It concentrates the libido on the subjective factor, that is, on all those needs and demands that are stifled or repressed by the conscious attitude. As may be gathered from what was said in the previous section, a purely objective orientation does violence to a multitude of subjective impulses, intentions, needs, and desires and deprives them of the libido that is their natural right. Man is not a machine that can be remodelled for quite other purposes as occasion demands, in the hope that it will go on functioning as regularly as before but in a quite different way. He carries his whole history with him; in his very structure is written the history of mankind. This historical element in man represents a vital need to which a wise psychic economy must respond. Somehow the past must come alive and

participate in the present. Total assimilation to the object will always arouse the protest of the suppressed minority of those elements that belong to the past and have existed from the very beginning.

[571] From these general considerations it is easy to see why the unconscious demands of the extravert have an essentially primitive, infantile, egocentric character. When Freud says that the unconscious "can do nothing but wish" this is very largely true of the unconscious of the extravert. His adjustment to the objective situation and his assimilation to the object prevent low-powered subjective impulses from reaching consciousness. These impulses (thoughts, wishes, affects, needs, feelings, etc.) take on a regressive character according to the degree of repression; the less they are acknowledged, the more infantile and archaic they become. The conscious attitude robs them of all energy that is readily disposable, only leaving them the energy of which it cannot deprive them. This residue, which still possesses a potency not to be underestimated, can be described only as primordial instinct. Instinct can never be eradicated in an individual by arbitrary measures; it requires the slow, organic transformation of many generations to effect a radical change, for instinct is the energic expression of the organism's make-up.

[572] Thus with every repressed impulse a considerable amount of energy ultimately remains, of an instinctive character, and preserves its potency despite the deprivation that made it unconscious. The more complete the conscious attitude of extraversion is, the more infantile and archaic the unconscious attitude will be. The egoism which characterizes the extravert's unconscious attitude goes far beyond mere childish selfishness; it verges on the ruthless and the brutal. Here we find in full flower the incest-wish described by Freud. It goes without saying that these things are entirely unconscious and remain hidden from the layman so long as the extraversion of the conscious attitude is not extreme. But whenever it is exaggerated, the unconscious comes to light in symptomatic form; its egoism, infantilism, and archaism lose their original compensatory character and appear in more or less open opposition to the conscious attitude. This begins as an absurd exaggeration of conscious standpoint, aiming at a further repression of the unconscious, but usually it ends in a *reductio ad absurdum* of the

conscious attitude and hence in catastrophe. The catastrophe may take an objective form, since the objective aims gradually become falsified by the subjective. I remember the case of a printer who, starting as a mere employee, worked his way up after years of hard struggle till at last he became the owner of a flourishing business. The more it expanded, the more it tightened its hold on him, until finally it swallowed up all his other interests. This proved his ruin. As an unconscious compensation of his exclusive interest in the business, certain memories of his childhood came to life. As a child he had taken great delight in painting and drawing. But instead of renewing this capacity for its own sake as a compensating hobby, he channelled it into his business and began wondering how he might embellish his products in an "artistic" way. Unfortunately his fantasies materialized: he actually turned out stuff that suited his own primitive and infantile taste, with the result that after a very few years his business went to pieces. He acted in accordance with one of our "cultural ideals," which says that any enterprising person has to concentrate everything on the one aim in view. But he went too far, and merely fell a victim to the power of his infantile demands.

[573] The catastrophe can, however, also be subjective and take the form of a nervous breakdown. This invariably happens when the influence of the unconscious finally paralyzes all conscious action. The demands of the unconscious then force themselves imperiously on consciousness and bring about a disastrous split which shows itself in one of two ways: either the subject no longer knows what he really wants and nothing interests him, or he wants too much at once and has too many interests, but in impossible things. The suppression of infantile and primitive demands for cultural reasons easily leads to a neurosis or to the abuse of narcotics such as alcohol, morphine, cocaine, etc. In more extreme cases the split ends in suicide.

[574] It is an outstanding peculiarity of unconscious impulses that, when deprived of energy by lack of conscious recognition, they take on a destructive character, and this happens as soon as they cease to be compensatory. Their compensatory function ceases as soon as they reach a depth corresponding to a cultural level absolutely incompatible with our own. From this moment the unconscious impulses form a block in

every way opposed to the conscious attitude, and its very existence leads to open conflict.

[575] Generally speaking, the compensating attitude of the unconscious finds expression in the maintenance of the psychic equilibrium. A normal extraverted attitude does not, of course, mean that the individual invariably behaves in accordance with the extraverted schema. Even in the same individual many psychological processes may be observed that involve the mechanism of introversion. We call a mode of behaviour extraverted only when the mechanism of extraversion predominates. In these cases the most differentiated function is always employed in an extraverted way, whereas the inferior functions are introverted; in other words, the superior function is the most conscious one and completely under conscious control, whereas the less differentiated functions are in part unconscious and far less under the control of consciousness. The superior function is always an expression of the conscious personality, of its aims, will, and general performance, whereas the less differentiated functions fall into the category of things that simply "happen" to one. These things need not be mere slips of the tongue or pen and other such oversights, they can equally well be half or three-quarters intended, for the less differentiated functions also possess a slight degree of consciousness. A classic example of this is the extraverted feeling type, who enjoys an excellent feeling rapport with the people around him, yet occasionally "happens" to express opinions of unsurpassable tactlessness. These opinions spring from his inferior and half-conscious thinking, which, being only partly under his control and insufficiently related to the object, can be quite ruthless in its effects.

[576] The less differentiated functions of the extravert always show a highly subjective colouring with pronounced egocentricity and personal bias, thus revealing their close connection with the unconscious. The unconscious is continually coming to light through them. It should not be imagined that the unconscious lies permanently buried under so many overlying strata that it can only be uncovered, so to speak, by a laborious process of excavation. On the contrary, there is a constant influx of unconscious contents into the conscious psychological process, to such a degree that at times it is hard for the observer to decide which character

traits belong to the conscious and which to the unconscious personality. This difficulty is met with mainly in people who are given to express themselves more profusely than others. Naturally it also depends very largely on the attitude of the observer whether he seizes hold of the conscious or the unconscious character of the personality. Generally speaking, a judging observer will tend to seize on the conscious character, while a perceptive observer will be more influenced by the unconscious character, since judgment is chiefly concerned with the conscious motivation of the psychic process, while perception registers the process itself. But in so far as we apply judgment and perception in equal measure, it may easily happen that a personality appears to us as both introverted and extraverted, so that we cannot decide at first to which attitude the superior function belongs. In such cases only a thorough analysis of the qualities of each function can help us to form a valid judgment. We must observe which function is completely under conscious control, and which functions have a haphazard and spontaneous character. The former is always more highly differentiated than the latter, which also possess infantile and primitive traits. Occasionally the superior function gives the impression of normality, while the others have something abnormal or pathological about them.

c. The Peculiarities of the Basic Psychological Functions in the Extraverted Attitude

Thinking

[577] As a consequence of the general attitude of extraversion, thinking is oriented by the object and objective data. This gives rise to a noticeable peculiarity. Thinking in general is fed on the one hand from subjective and in the last resort unconscious sources, and on the other hand from objective data transmitted by sense-perception. Extraverted thinking is conditioned in a larger measure by the latter than by the former. Judgment always presupposes a criterion; for the extraverted judgment, the criterion supplied by external conditions is the valid and determining one, no matter whether it be represented directly by an objective, perceptible fact or by an objective idea; for an objective idea is equally determined by external data or borrowed from outside even when it is

subjectively sanctioned. Extraverted thinking, therefore, need not necessarily be purely concretistic thinking; it can just as well be purely ideal thinking, if for instance it can be shown that the ideas it operates with are largely borrowed from outside, i.e., have been transmitted by tradition and education. So in judging whether a particular thinking is extraverted or not we must first ask: by what criterion does it judge—does it come from outside, or is its origin subjective? A further criterion is the direction the thinking takes in drawing conclusions—whether it is principally directed outwards or not. It is no proof of its extraverted nature that it is preoccupied with concrete objects, since my thinking may be preoccupied with a concrete object either because I am abstracting my thought from it or because I am concretizing my thought through it. Even when my thinking is preoccupied with concrete things and could be described as extraverted to that extent, the direction it will take still remains an essential characteristic and an open question—namely, whether or not in its further course it leads back again to objective data, external facts, or generally accepted ideas. So far as the practical thinking of the business man, the technician, or the scientific investigator is concerned, its outer-directedness is obvious enough. But in the case of the philosopher it remains open to doubt when his thinking is directed to ideas. We then have to inquire whether these ideas are simply abstractions from objective experience, in which case they would represent higher collective concepts comprising a sum of objective facts, or whether (if they are clearly not abstractions from immediate experience) they may not be derived from tradition or borrowed from the intellectual atmosphere of the time. In the latter case, they fall into the category of objective data, and accordingly this thinking should be called extraverted.

[578] Although I do not propose to discuss the nature of introverted thinking at this point, reserving it for a later section (pars. 628–31), it is essential that I should say a few words about it before proceeding further. For if one reflects on what I have just said about extraverted thinking, one might easily conclude that this covers everything that is ordinarily understood as thinking. A thinking that is directed neither to objective facts nor to general ideas, one might argue, scarcely deserves the name

“thinking” at all. I am fully aware that our age and its most eminent representatives know and acknowledge only the extraverted type of thinking. This is largely because all the thinking that appears visibly on the surface in the form of science or philosophy or even art either derives directly from objects or else flows into general ideas. For both these reasons it appears essentially understandable, even though it may not always be self-evident, and it is therefore regarded as valid. In this sense it might be said that the extraverted intellect oriented by objective data is actually the only one that is recognized. But—and now I come to the question of the introverted intellect—there also exists an entirely different kind of thinking, to which the term “thinking” can hardly be denied: it is a kind that is oriented neither by immediate experience of objects nor by traditional ideas. I reach this other kind of thinking in the following manner: when my thoughts are preoccupied with a concrete object or a general idea, in such a way that the course of my thinking eventually leads me back to my starting-point, this intellectual process is not the only psychic process that is going on in me. I will disregard all those sensations and feelings which become noticeable as a more or less disturbing accompaniment to my train of thought, and will merely point out that this very thinking process which starts from the object and returns to the object also stands in a constant relation to the subject. This relation is a *sine qua non*, without which no thinking process whatsoever could take place. Even though my thinking process is directed, as far as possible, to objective data, it is still *my* subjective process, and it can neither avoid nor dispense with this admixture of subjectivity. Struggle as I may to give an objective orientation to my train of thought, I cannot shut out the parallel subjective process and its running accompaniment without extinguishing the very spark of life from my thought. This parallel process has a natural and hardly avoidable tendency to subjectify the objective data and assimilate them to the subject.

[579] Now when the main accent lies on the subjective process, that other kind of thinking arises which is opposed to extraverted thinking, namely, that purely subjective orientation which I call introverted. This thinking is neither determined by objective data nor directed to them; it is a thinking that starts from the subject and is directed to subjective ideas or

subjective facts. I do not wish to enter more fully into this kind of thinking here; I have merely established its existence as the necessary complement of extraverted thinking and brought it into clearer focus.

[580] Extraverted thinking, then, comes into existence only when the objective orientation predominates. This fact does nothing to alter the logic of thinking; it merely constitutes that difference between thinkers which James considered a matter of temperament. Orientation to the object, as already explained, makes no essential change in the thinking function; only its appearance is altered. It has the appearance of being captivated by the object, as though without the external orientation it simply could not exist. It almost seems as though it were a mere sequela of external facts, or as though it could reach its highest point only when flowing into some general idea. It seems to be constantly affected by the objective data and to draw conclusions only with their consent. Hence it gives one the impression of a certain lack of freedom, of occasional short-sightedness, in spite of all its adroitness within the area circumscribed by the object. What I am describing is simply the impression this sort of thinking makes on the observer, who must himself have a different standpoint, otherwise it would be impossible for him to observe the phenomenon of extraverted thinking at all. But because of his different standpoint he sees only its outward aspect, not its essence, whereas the thinker himself can apprehend its essence but not its outward aspect. Judging by appearances can never do justice to the essence of the thing, hence the verdict is in most cases depreciatory.

[581] In its essence this thinking is no less fruitful and creative than introverted thinking, it merely serves other ends. This difference becomes quite palpable when extraverted thinking appropriates material that is the special province of introverted thinking; when, for instance, a subjective conviction is explained analytically in terms of objective data or as being derived from objective ideas. For our scientific consciousness, however, the difference becomes even more obvious when introverted thinking attempts to bring objective data into connections not warranted by the object—in other words, to subordinate them to a subjective idea. Each type of thinking senses the other as an encroachment on its own province, and hence a sort of shadow effect is produced, each revealing to the other

its least favourable aspect. Introverted thinking then appears as something quite arbitrary, while extraverted thinking seems dull and banal. Thus the two orientations are incessantly at war.

[582] One might think it easy enough to put an end to this conflict by making a clear distinction between objective and subjective data. Unfortunately, this is impossible, though not a few have attempted it. And even if it were possible it would be a disastrous proceeding, since in themselves both orientations are one-sided and of limited validity, so that each needs the influence of the other. When objective data predominate over thinking to any great extent, thinking is sterilized, becoming a mere appendage of the object and no longer capable of abstracting itself into an independent concept. It is then reduced to a kind of “after-thought,” by which I do not mean “reflection” but a purely imitative thinking which affirms nothing beyond what was visibly and immediately present in the objective data in the first place. This thinking naturally leads directly back to the object, but never beyond it, not even to a linking of experience with an objective idea. Conversely, when it has an idea for an object, it is quite unable to experience its practical, individual value, but remains stuck in a more or less tautological position. The materialistic mentality is an instructive example of this.

[583] When extraverted thinking is subordinated to objective data as a result of over-determination by the object, it engrosses itself entirely in the individual experience and accumulates a mass of undigested empirical material. The oppressive weight of individual experiences having little or no connection with one another produces a dissociation of thought which usually requires psychological compensation. This must consist in some simple, general idea that gives coherence to the disordered whole, or at least affords the possibility of such. Ideas like “matter” or “energy” serve this purpose. But when the thinking depends primarily not on objective data but on some second-hand idea, the very poverty of this thinking is compensated by an all the more impressive accumulation of facts congregating round a narrow and sterile point of view, with the result that many valuable and meaningful aspects are completely lost sight of. Many of the allegedly scientific outpourings of our own day owe their existence to this wrong orientation.

The Extraverted Thinking Type

[584] It is a fact of experience that the basic psychological functions seldom or never all have the same strength or degree of development in the same individual. As a rule, one or the other function predominates, in both strength and development. When thinking holds prior place among the psychological functions, i.e., when the life of an individual is mainly governed by reflective thinking so that every important action proceeds, or is intended to proceed, from intellectually considered motives, we may fairly call this a thinking type. Such a type may be either introverted or extraverted. We will first discuss the extraverted thinking type.

[585] This type will, by definition, be a man whose constant endeavour—in so far, of course, as he is a pure type—is to make all his activities dependent on intellectual conclusions, which in the last resort are always oriented by objective data, whether these be external facts or generally accepted ideas. This type of man elevates objective reality, or an objectively oriented intellectual formula, into the ruling principle not only for himself but for his whole environment. By this formula good and evil are measured, and beauty and ugliness determined. Everything that agrees with this formula is right, everything that contradicts it is wrong, and anything that passes by it indifferently is merely incidental. Because this formula seems to embody the entire meaning of life, it is made into a universal law which must be put into effect everywhere all the time, both individually and collectively. Just as the extraverted thinking type subordinates himself to his formula, so, for their own good, everybody round him must obey it too, for whoever refuses to obey it is wrong—he is resisting the universal law, and is therefore unreasonable, immoral, and without a conscience. His moral code forbids him to tolerate exceptions; his ideal must under all circumstances be realized, for in his eyes it is the purest conceivable formulation of objective reality, and therefore must also be a universally valid truth, quite indispensable for the salvation of mankind. This is not from any great love for his neighbour, but from the higher standpoint of justice and truth. Anything in his own nature that appears to invalidate this formula is a mere imperfection, an accidental failure, something to be eliminated on the next occasion, or, in the event of further failure, clearly pathological. If tolerance for the sick, the

suffering, or the abnormal should chance to be an ingredient of the formula, special provisions will be made for humane societies, hospitals, prisons, missions, etc., or at least extensive plans will be drawn up. Generally the motive of justice and truth is not sufficient to ensure the actual execution of such projects; for this, real Christian charity is needed, and this has more to do with feeling than with any intellectual formula. "Oughts" and "musts" bulk large in this programme. If the formula is broad enough, this type may play a very useful role in social life as a reformer or public prosecutor or purifier of conscience, or as the propagator of important innovations. But the more rigid the formula, the more he develops into a martinet, a quibbler, and a prig, who would like to force himself and others into one mould. Here we have the two extremes between which the majority of these types move.

[586] In accordance with the nature of the extraverted attitude, the influence and activities of these personalities are the more favourable and beneficial the further from the centre their radius extends. Their best aspect is to be found at the periphery of their sphere of influence. The deeper we penetrate into their own power province, the more we feel the unfavourable effects of their tyranny. A quite different life pulses at the periphery, where the truth of the formula can be felt as a valuable adjunct to the rest. But the closer we come to centre of power where the formula operates, the more life withers away from everything that does not conform to its dictates. Usually it is the nearest relatives who have to taste the unpleasant consequences of the extraverted formula, since they are the first to receive its relentless benefits. But in the end it is the subject himself who suffers most—and this brings us to the reverse side of the psychology of this type.

[587] The fact that an intellectual formula never has been and never will be devised which could embrace and express the manifold possibilities of life must lead to the inhibition or exclusion of other activities and ways of living that are just as important. In the first place, all those activities that are dependent on feeling will become repressed in such a type—for instance, aesthetic activities, taste, artistic sense, cultivation of friends, etc. Irrational phenomena such as religious experiences, passions, and suchlike are often repressed to the point of complete unconsciousness.

Doubtless there are exceptional people who are able to sacrifice their entire life to a particular formula, but for most of us such exclusiveness is impossible in the long run. Sooner or later, depending on outer circumstances or inner disposition, the potentialities repressed by the intellectual attitude will make themselves indirectly felt by disturbing the conscious conduct of life. When the disturbance reaches a definite pitch, we speak of a neurosis. In most cases it does not go so far, because the individual instinctively allows himself extenuating modifications of his formula in a suitably rationalistic guise, thus creating a safety valve.

[588] The relative or total unconsciousness of the tendencies and functions excluded by the conscious attitude keeps them in an undeveloped state. In comparison with the conscious function they are inferior. To the extent that they are unconscious, they become merged with the rest of the unconscious contents and acquire a bizarre character. To the extent that they are conscious, they play only a secondary role, though one of considerable importance for the over-all psychological picture. The first function to be affected by the conscious inhibition is feeling, since it is the most opposed to the rigid intellectual formula and is therefore repressed the most intensely. No function can be entirely eliminated—it can only be greatly distorted. In so far as feeling is compliant and lets itself be subordinated, it has to support the conscious attitude and adapt to its aims. But this is possible only up to a point; part of it remains refractory and has to be repressed. If the repression is successful, the subliminal feeling then functions in a way that is opposed to the conscious aims, even producing effects whose cause is a complete enigma to the individual. For example, the conscious altruism of this type, which is often quite extraordinary, may be thwarted by a secret self-seeking which gives a selfish twist to actions that in themselves are disinterested. Purely ethical intentions may lead him into critical situations which sometimes have more than a semblance of being the outcome of motives far from ethical. There are guardians of public morals who suddenly find themselves in compromising situations, or rescue workers who are themselves in dire need of rescue. Their desire to save others leads them to employ means which are calculated to bring about the very thing they wished to avoid. There are extraverted idealists

so consumed by their desire for the salvation of mankind that they will not shrink from any lie or trickery in pursuit of their ideal. In science there are not a few painful examples of highly respected investigators who are so convinced of the truth and general validity of their formula that they have not scrupled to falsify evidence in its favour. Their sanction is: the end justifies the means. Only an inferior feeling function, operating unconsciously and in secret, could seduce otherwise reputable men into such aberrations.

[589] The inferiority of feeling in this type also manifests itself in other ways. In keeping with the objective formula, the conscious attitude becomes more or less impersonal, often to such a degree that personal interests suffer. If the attitude is extreme, all personal considerations are lost sight of, even those affecting the subject's own person. His health is neglected, his social position deteriorates, the most vital interests of his family—health, finances, morals—are violated for the sake of the ideal. Personal sympathy with others must in any case suffer unless they too happen to espouse the same ideal. Often the closest members of his family, his own children, know such a father only as a cruel tyrant, while the outside world resounds with the fame of his humanity. Because of the highly impersonal character of the conscious attitude, the unconscious feelings are extremely personal and oversensitive, giving rise to secret prejudices—a readiness, for instance, to misconstrue any opposition to his formula as personal ill-will, or a constant tendency to make negative assumptions about other people in order to invalidate their arguments in advance—in defence, naturally, of his own touchiness. His unconscious sensitivity makes him sharp in tone, acrimonious, aggressive. Insinuations multiply. His feelings have a sultry and resentful character—always a mark of the inferior function. Magnanimous as he may be in sacrificing himself to his intellectual goal, his feelings are petty, mistrustful, crotchety, and conservative. Anything new that is not already contained in his formula is seen through a veil of unconscious hatred and condemned accordingly. As late as the middle of the last century a certain doctor, famed for his humanitarianism, threatened to dismiss an assistant for daring to use a thermometer, because the formula decreed that temperature must be taken by the pulse.

[590] The more the feelings are repressed, the more deleterious is their secret influence on thinking that is otherwise beyond reproach. The intellectual formula, which because of its intrinsic value might justifiably claim general recognition, undergoes a characteristic alteration as a result of this unconscious personal sensitiveness: it becomes rigidly dogmatic. The self-assertion of the personality is transferred to the formula. Truth is no longer allowed to speak for itself; it is identified with the subject and treated like a sensitive darling whom an evil-minded critic has wronged. The critic is demolished, if possible with personal invective, and no argument is too gross to be used against him. The truth must be trotted out, until finally it begins to dawn on the public that it is not so much a question of truth as of its personal begetter.

[591] The dogmatism of the intellectual formula sometimes undergoes further characteristic alterations, due not so much to the unconscious admixture of repressed personal feelings as to a contamination with other unconscious factors which have become fused with them. Although reason itself tells us that every intellectual formula can never be anything more than a partial truth and can never claim general validity, in practice the formula gains such an ascendency that all other possible standpoints are thrust into the background. It usurps the place of all more general, less definite, more modest and therefore more truthful views of life. It even supplants that general view of life we call religion. Thus the formula becomes a religion, although in essentials it has not the slightest connection with anything religious. At the same time, it assumes the essentially religious quality of absoluteness. It becomes an intellectual superstition. But now all the psychological tendencies it has repressed build up a counter-position in the unconscious and give rise to paroxysms of doubt. The more it tries to fend off the doubt, the more fanatical the conscious attitude becomes, for fanaticism is nothing but over-compensated doubt. This development ultimately leads to an exaggerated defence of the conscious position and to the formation of a counter-position in the unconscious absolutely opposed to it; for instance, conscious rationalism is opposed by an extreme irrationality, and a scientific attitude by one that is archaic and superstitious. This explains those bigoted and ridiculous views well-known in the history of science

which have proved stumbling-blocks to many an eminent investigator. Frequently the unconscious counter-position is embodied in a woman. In my experience this type is found chiefly among men, since, in general, thinking tends more often to be a dominant function in men than in women. When thinking dominates in a woman it is usually associated with a predominantly *intuitive* cast of mind.

[592] The thinking of the extraverted type is *positive*, i.e., productive. It leads to the discovery of new facts or to general conceptions based on disparate empirical material. It is usually synthetic too. Even when it analyses it constructs, because it is always advancing beyond the analysis to a new combination, to a further conception which reunites the analysed material in a different way or adds something to it. One could call this kind of judgment *predicative*. A characteristic feature, at any rate, is that it is never absolutely depreciative or destructive, since it always substitutes a fresh value for the one destroyed. This is because the thinking of this type is the main channel into which his vital energy flows. The steady flow of life manifests itself in his thinking, so that his thought has a progressive, creative quality. It is not stagnant or regressive. But it can become so if it fails to retain prior place in his consciousness. In that case it loses the quality of a positive, vital activity. It follows in the wake of other functions and becomes Epimethean, plagued by afterthoughts, contenting itself with constant broodings on things past and gone, chewing them over in an effort to analyse and digest them. Since the creative element is now lodged in another function, thinking no longer progresses: it stagnates. Judgment takes on a distinct quality of *inherence:* it confines itself entirely to the range of the given material, nowhere overstepping it. It is satisfied with more or less abstract statements which do not impart any value to the material that is not already inherent in it. Such judgments are always oriented to the object, and they affirm nothing more about an experience than its objective and intrinsic meaning. We may easily observe this type of thinking in people who cannot refrain from tacking on to an impression or experience some rational and doubtless very valid remark which in no way ventures beyond the charmed circle of the objective datum. At bottom such a remark merely says: “I have understood it because

afterwards I can think it." And there the matter ends. At best such a judgment amounts to no more than putting the experience in an objective setting, where it quite obviously belonged in the first place.

[593] But whenever a function other than thinking predominates in consciousness to any marked degree, thinking, so far as it is conscious at all and not directly dependent on the dominant function, assumes a negative character. If it is subordinated to the dominant function it may actually wear a positive aspect, but closer scrutiny will show that it simply mimics the dominant function, supporting it with arguments that clearly contradict the laws of logic proper to thinking. This kind of thinking is of no interest for our present discussion. Our concern is rather with the nature of a thinking which cannot subordinate itself to another function but remains true to its own principle. To observe and investigate this thinking is not easy, because it is more or less constantly repressed by the conscious attitude. Hence, in the majority of cases, it must first be retrieved from the background of consciousness, unless it should come to the surface accidentally in some unguarded moment. As a rule it has to be enticed with some such question as "Now what do you *really* think?" or "What is your private view of the matter?" Or perhaps one may have to use a little cunning, framing the question something like this: "What do you imagine, then, that *I* really think about it?" One should adopt this device when the real thinking is unconscious and therefore projected. The thinking that is enticed to the surface in this way has characteristic qualities, and it was these I had in mind when I described it as negative. Its habitual mode is best expressed by the two words "nothing but." Goethe personified this thinking in the figure of Mephistopheles. Above all it shows a distinct tendency to trace the object of its judgment back to some banality or other, thus stripping it of any significance in its own right. The trick is to make it appear dependent on something quite commonplace. Whenever a conflict arises between two men over something apparently objective and impersonal, negative thinking mutters "Cherchez la femme." Whenever somebody defends or advocates a cause, negative thinking never asks about its importance but simply: "What does *he* get out of it?" The dictum ascribed to Moleschott, "Der Mensch ist, was er isst" (man is what he eats, or, rendered more freely,

what you eat you are), likewise comes under this heading, as do many other aphorisms I need not quote here.

[594] The destructive quality of this thinking, as well as its limited usefulness on occasion, does not need stressing. But there is still another form of negative thinking, which at first glance might not be recognized as such, and that is *theosophical* thinking, which today is rapidly spreading in all parts of the world, presumably in reaction to the materialism of the recent past. Theosophical thinking has an air that is not in the least reductive, since it exalts everything to a transcendental and world-embracing idea. A dream, for instance, is no longer just a dream, but an experience "on another plane." The hitherto inexplicable fact of telepathy is very simply explained as "vibrations" passing from one person to another. An ordinary nervous complaint is explained by the fact that something has collided with the "astral body." Certain ethnological peculiarities of the dwellers on the Atlantic seaboard are easily accounted for by the submergence of Atlantis, and so on. We have only to open a theosophical book to be overwhelmed by the realization that everything is already explained, and that "spiritual science" has left no enigmas unsolved. But, at bottom, this kind of thinking is just as negative as materialistic thinking. When the latter regards psychology as chemical changes in the ganglia or as the extrusion and retraction of cell-pseudopodia or as an internal secretion, this is just as much a superstition as theosophy. The only difference is that materialism reduces everything to physiology, whereas theosophy reduces everything to Indian metaphysics. When a dream is traced back to an overloaded stomach, this is no explanation of the dream, and when we explain telepathy as vibrations we have said just as little. For what are "vibrations"? Not only are both methods of explanation futile, they are actually destructive, because by diverting interest away from the main issue, in one case to the stomach and in the other to imaginary vibrations, they hamper any serious investigation of the problem by a bogus explanation. Either kind of thinking is sterile and sterilizing. Its negative quality is due to the fact that it is so indescribably cheap, impoverished, and lacking in creative energy. It is a thinking taken in tow by other functions.

Feeling

[595] Feeling in the extraverted attitude is likewise oriented by objective data, the object being the indispensable determinant of the quality of feeling. The extravert's feeling is always in harmony with objective values. For anyone who has known feeling only as something subjective, the nature of extraverted feeling will be difficult to grasp, because it has detached itself as much as possible from the subjective factor and subordinated itself entirely to the influence of the object. Even when it appears not to be qualified by a concrete object, it is none the less still under the spell of traditional or generally accepted values of some kind. I may feel moved, for instance, to say that something is "beautiful" or "good," not because I find it "beautiful" or "good" from my own subjective feeling about it, but because it is fitting and politic to call it so, since a contrary judgment would upset the general feeling situation. A feeling judgment of this kind is not by any means a pretence or a lie, it is simply an act of adjustment. A painting, for instance, is called "beautiful" because a painting hung in a drawing room and bearing a well-known signature is generally assumed to be beautiful, or because to call it "hideous" would presumably offend the family of its fortunate possessor, or because the visitor wants to create a pleasant feeling atmosphere, for which purpose everything must be felt as agreeable. These feelings are governed by an objective criterion. As such they are genuine, and represent the feeling function as a whole.

[596] In precisely the same way as extraverted thinking strives to rid itself of subjective influences, extraverted feeling has to undergo a process of differentiation before it is finally denuded of every subjective trimming. The valuations resulting from the act of feeling either correspond directly with objective values or accord with traditional and generally accepted standards. This kind of feeling is very largely responsible for the fact that so many people flock to the theatre or to concerts, or go to church, and do so moreover with their feelings correctly adjusted. Fashions, too, owe their whole existence to it, and, what is far more valuable, the positive support of social, philanthropic, and other such cultural institutions. In these matters extraverted feeling proves itself a creative factor. Without it, a harmonious social life would be impossible. To that extent extraverted feeling is just as beneficial and sweetly reasonable in its

effects as extraverted thinking. But these salutary effects are lost as soon as the object gains ascendency. The force of extraverted feeling then pulls the personality into the object, the object assimilates him, whereupon the personal quality of the feeling, which constitutes its chief charm, disappears. It becomes cold, “unfeeling,” untrustworthy. It has ulterior motives, or at least makes an impartial observer suspect them. It no longer makes that agreeable and refreshing impression which invariably accompanies genuine feeling; instead, one suspects a pose, or that the person is acting, even though he may be quite unconscious of any egocentric motives. Over-extraverted feeling may satisfy aesthetic expectations, but it does not speak to the heart; it appeals merely to the senses or—worse still—only to reason. It can provide the aesthetic padding for a situation, but there it stops, and beyond that its effect is nil. It has become sterile. If this process goes any further, a curiously contradictory dissociation of feeling results: everything becomes an object of feeling valuations, and innumerable relationships are entered into which are all at variance with each other. As this situation would become quite impossible if the subject received anything like due emphasis, even the last vestiges of a real personal standpoint are suppressed. The subject becomes so enmeshed in the network of individual feeling processes that to the observer it seems as though there were merely a feeling process and no longer a subject of feeling. Feeling in this state has lost all human warmth; it gives the impression of being put on, fickle, unreliable, and in the worst cases hysterical.

The Extraverted Feeling Type

[597] As feeling is undeniably a more obvious characteristic of feminine psychology than thinking, the most pronounced feeling types are to be found among women. When extraverted feeling predominates we speak of an extraverted feeling type. Examples of this type that I can call to mind are, almost without exception, women. The woman of this type follows her feeling as a guide throughout life. As a result of upbringing her feeling has developed into an adjusted function subject to conscious control. Except in extreme cases, her feeling has a personal quality, even though she may have repressed the subjective factor to a large extent. Her personality appears adjusted in relation to external conditions. Her

feelings harmonize with objective situations and general values. This is seen nowhere more clearly than in her love choice: the “suitable” man is loved, and no one else; he is suitable not because he appeals to her hidden subjective nature—about which she usually knows nothing—but because he comes up to all reasonable expectations in the matter of age, position, income, size and respectability of his family, etc. One could easily reject such a picture as ironical or cynical, but I am fully convinced that the love feeling of this type of woman is in perfect accord with her choice. It is genuine and not just shrewd. There are countless “reasonable” marriages of this kind and they are by no means the worst. These women are good companions and excellent mothers so long as the husbands and children are blessed with the conventional psychic constitution.

[598] But one can feel “correctly” only when feeling is not disturbed by anything else. Nothing disturbs feeling so much as thinking. It is therefore understandable that in this type thinking will be kept in abeyance as much as possible. This does not mean that the woman does not think at all; on the contrary, she may think a great deal and very cleverly, but her thinking is never *sui generis*—it is an Epimethean appendage to her feeling. What she cannot feel, she cannot consciously think. “But I can’t think what I don’t feel,” such a type said to me once in indignant tones. So far as her feeling allows, she can think very well, but every conclusion, however logical, that might lead to a disturbance of feeling is rejected at the outset. It is simply not thought. Thus everything that fits in with objective values is good, and is loved, and everything else seems to her to exist in a world apart.

[599] But a change comes over the picture when the importance of the object reaches a still higher level. As already explained, the subject then becomes so assimilated to the object that the subject of feeling is completely engulfed. Feeling loses its personal quality, and becomes feeling for its own sake; the personality seems wholly dissolved in the feeling of the moment. But since actual life is a constant succession of situations that evoke different and even contradictory feelings, the personality gets split up into as many different feeling states. At one moment one is this, at another something quite different—to all

appearances, for in reality such a multiple personality is impossible. The basis of the ego always remains the same and consequently finds itself at odds with the changing feeling states. To the observer, therefore, the display of feeling no longer appears as a personal expression of the subject but as an alteration of the ego—a mood, in other words. Depending on the degree of dissociation between the ego and the momentary state of feeling, signs of self-disunity will become clearly apparent, because the originally compensatory attitude of the unconscious has turned into open opposition. This shows itself first of all in extravagant displays of feeling, gushing talk, loud expostulations, etc., which ring hollow: "The lady doth protest too much." It is at once apparent that some kind of resistance is being over-compensated, and one begins to wonder whether these demonstrations might not turn out quite different. And a little later they do. Only a very slight alteration in the situation is needed to call forth at once just the opposite pronouncement on the selfsame object. As a result of these experiences the observer is unable to take either pronouncement seriously. He begins to reserve judgment. But since, for this type, it is of the highest importance to establish an intense feeling of rapport with the environment, redoubled efforts are now required to overcome this reserve. Thus, in the manner of a vicious circle, the situation goes from bad to worse. The stronger the feeling relation to the object, the more the unconscious opposition comes to the surface.

[600] We have already seen that the extraverted feeling type suppresses thinking most of all because this is the function most liable to disturb feeling. For the same reason, thinking totally shuts out feeling if ever it wants to reach any kind of pure results, for nothing is more liable to prejudice and falsify thinking than feeling values. But, as I have said, though the thinking of the extraverted feeling type is repressed as an independent function, the repression is not complete; it is repressed only so far as its inexorable logic drives it to conclusions that are incompatible with feeling. It is suffered to exist as a servant of feeling, or rather as its slave. Its backbone is broken; it may not operate on its own account, in accordance with its own laws. But since logic nevertheless exists and enforces its inexorable conclusions, this must take place somewhere, and

it takes place outside consciousness, namely in the unconscious. Accordingly the unconscious of this type contains first and foremost a peculiar kind of thinking, a thinking that is infantile, archaic, negative. So long as the conscious feeling preserves its personal quality, or, to put it another way, so long as the personality is not swallowed up in successive states of feeling, this unconscious thinking remains compensatory. But as soon as the personality is dissociated and dissolves into a succession of contradictory feeling states, the identity of the ego is lost and the subject lapses into the unconscious. When this happens, it gets associated with the unconscious thinking processes and occasionally helps them to the surface. The stronger the conscious feeling is and the more ego-less it becomes, the stronger grows the unconscious opposition. The unconscious thoughts gravitate round just the most valued objects and mercilessly strip them of their value. The "nothing but" type of thinking comes into its own here, since it effectively depotentiates all feelings that are bound to the object. The unconscious thinking reaches the surface in the form of obsessive ideas which are invariably of a negative and depreciatory character. Women of this type have moments when the most hideous thoughts fasten on the very objects most valued by their feelings. This negative thinking utilizes every infantile prejudice or comparison for the deliberate purpose of casting aspersions on the feeling value, and musters every primitive instinct in the attempt to come out with "nothing but" interpretations. It need hardly be remarked that this procedure also mobilizes the collective unconscious and activates its store of primordial images, thus bringing with it the possibility of a regeneration of attitude on a different basis. Hysteria, with the characteristic infantile sexuality of its unconscious world of ideas, is the principal form of neurosis in this type.

Summary of the Extraverted Rational Types

[601] I call the two preceding types rational or judging types because they are characterized by the supremacy of the reasoning and judging functions. It is a general distinguishing mark of both types that their life is, to a great extent, subordinated to rational judgment. But we have to consider whether by "rational" we are speaking from the standpoint of the individual's subjective psychology or from that of the observer, who

perceives and judges from without. This observer could easily arrive at a contrary judgment, especially if he intuitively apprehended merely the outward behaviour of the person observed and judged accordingly. On the whole, the life of this type is never dependent on rational judgment alone; it is influenced in almost equal degree by unconscious irrationality. If observation is restricted to outward behaviour, without any concern for the internal economy of the individual's consciousness, one may get an even stronger impression of the irrational and fortuitous nature of certain unconscious manifestations than of the reasonableness of his conscious intentions and motivations. I therefore base my judgment on what the individual feels to be his conscious psychology. But I am willing to grant that one could equally well conceive and present such a psychology from precisely the opposite angle. I am also convinced that, had I myself chanced to possess a different psychology, I would have described the rational types in the reverse way, from the standpoint of the unconscious—as irrational, therefore. This aggravates the difficulty of a lucid presentation of psychological matters and immeasurably increases the possibility of misunderstandings. The arguments provoked by these misunderstandings are, as a rule, quite hopeless because each side is speaking at cross purposes. This experience is one reason the more for basing my presentation on the conscious psychology of the individual, since there at least we have a definite objective footing, which completely drops away the moment we try to base our psychological rationale on the unconscious. For in that case the observed object would have no voice in the matter at all, because there is nothing about which he is more uninformed than his own unconscious. The judgment is then left entirely to the subjective observer—a sure guarantee that it will be based on his own individual psychology, which would be forcibly imposed on the observed. To my mind, this is the case with the psychologies of both Freud and Adler. The individual is completely at the mercy of the judging observer, which can never be the case when the conscious psychology of the observed is accepted as a basis. He after all is the only competent judge, since he alone knows his conscious motives.

[602] The rationality that characterizes the conscious conduct of life in both these types involves a deliberate exclusion of everything irrational and

accidental. Rational judgment, in such a psychology, is a force that coerces the untidiness and fortuitousness of life into a definite pattern, or at least tries to do so. A definite choice is made from among all the possibilities it offers, only the rational ones being accepted; but on the other hand the independence and influence of the psychic functions which aid the perception of life's happenings are consequently restricted. Naturally this restriction of sensation and intuition is not absolute. These functions exist as before, but their products are subject to the choice made by rational judgment. It is not the intensity of a sensation as such that decides action, for instance, but judgment. Thus, in a sense, the functions of perception share the same fate as feeling in the case of the first type, or thinking in that of the second. They are relatively repressed, and therefore in an inferior state of differentiation. This gives a peculiar stamp to the unconscious of both our types: what they consciously and intentionally do accords with reason (*their* reason, of course), but what happens to them accords with the nature of infantile, primitive sensations and intuitions. At all events, what happens to these types is irrational (from their standpoint). But since there are vast numbers of people whose lives consist more of what happens to them than of actions governed by rational intentions, such a person, after observing them closely, might easily describe both our types as irrational. And one has to admit that only too often a man's unconscious makes a far stronger impression on an observer than his consciousness does, and that his actions are of considerably more importance than his rational intentions.

[603] The rationality of both types is object-oriented and dependent on objective data. It accords with what is collectively considered to be rational. For them, nothing is rational save what is generally considered as such. Reason, however, is in large part subjective and individual. In our types this part is repressed, and increasingly so as the object gains in importance. Both the subject and his subjective reason, therefore, are in constant danger of repression, and when they succumb to it they fall under the tyranny of the unconscious, which in this case possesses very unpleasant qualities. Of its peculiar thinking we have already spoken. But, besides that, there are primitive sensations that express themselves compulsively, for instance in the form of compulsive pleasure-seeking in

every conceivable form; there are also primitive intuitions that can become a positive torture to the person concerned and to everybody in his vicinity. Everything that is unpleasant and painful, everything that is disgusting, hateful, and evil, is sniffed out or suspected, and in most cases it is a half-truth calculated to provoke misunderstandings of the most poisonous kind. The antagonistic unconscious elements are so strong that they frequently disrupt the conscious rule of reason; the individual becomes the victim of chance happenings, which exercise a compulsive influence over him either because they pander to his sensations or because he intuits their unconscious significance.

Sensation

[604] Sensation, in the extraverted attitude, is pre-eminently conditioned by the object. As sense perception, sensation is naturally dependent on objects. But, just as naturally, it is also dependent on the subject, for which reason there is subjective sensation of a kind entirely different from objective sensation. In the extraverted attitude the subjective component of sensation, so far as its conscious application is concerned, is either inhibited or repressed. Similarly, as an irrational function, sensation is largely repressed when thinking or feeling holds prior place; that is to say, it is a conscious function only to the extent that the rational attitude of consciousness permits accidental perceptions to become conscious contents—in a word, registers them. The sensory function is, of course, absolute in the stricter sense; everything is seen or heard, for instance, to the physiological limit, but not everything attains the threshold value a perception must have in order to be apperceived. It is different when sensation itself is paramount instead of merely seconding another function. In this case no element of objective sensation is excluded and nothing is repressed (except the subjective component already mentioned).

[605] As sensation is chiefly conditioned by the object, those objects that excite the strongest sensations will be decisive for the individual’s psychology. The result is a strong sensuous tie to the object. Sensation is therefore a vital function equipped with the strongest vital instinct. Objects are valued in so far as they excite sensations, and, so far as lies

within the power of sensation, they are fully accepted into consciousness whether they are compatible with rational judgments or not. The sole criterion of their value is the intensity of the sensation produced by their objective qualities. Accordingly, all objective processes which excite any sensations at all make their appearance in consciousness. However, it is only concrete, sensuously perceived objects or processes that excite sensations for the extravert; those, exclusively, which everyone everywhere would sense as concrete. Hence the orientation of such an individual accords with purely sensuous reality. The judging, rational functions are subordinated to the concrete facts of sensation, and thus have all the qualities of the less differentiated functions, exhibiting negative, infantile, and archaic traits. The function most repressed is naturally the opposite of sensation—intuition, the function of unconscious perception.

The Extraverted Sensation Type

[606] No other human type can equal the extraverted sensation type in realism. His sense for objective facts is extraordinarily developed. His life is an accumulation of actual experiences of concrete objects, and the more pronounced his type, the less use does he make of his experience. In certain cases the events in his life hardly deserve the name “experience” at all. What he experiences serves at most as a guide to fresh sensations; anything new that comes within his range of interest is acquired by way of sensation and has to serve its ends. Since one is inclined to regard a highly developed reality-sense as a sign of rationality, such people will be esteemed as very rational. But in actual fact this is not the case, since they are just as much at the mercy of their sensations in the face of irrational, chance happenings as they are in the face of rational ones. This type—the majority appear to be men—naturally does not think he is at the “mercy” of sensation. He would ridicule this view as quite beside the point, because sensation for him is a concrete expression of life—it is simply real life lived to the full. His whole aim is concrete enjoyment, and his morality is oriented accordingly. Indeed, true enjoyment has its own special morality, its own moderation and lawfulness, its own unselfishness and willingness to make sacrifices. It by no means follows that he is just sensual or gross,

for he may differentiate his sensation to the finest pitch of aesthetic purity without ever deviating from his principle of concrete sensation however abstract his sensations may be. Wulfen’s *Der Genussmensch: ein Cicerone im rücksichtslosen Lebensgenuss*[3] is the unvarnished confession of a type of this sort, and the book seems to me worth reading on that account alone.

[607] On the lower levels, this type is the lover of tangible reality, with little inclination for reflection and no desire to dominate. To feel the object, to have sensations and if possible enjoy them—that is his constant aim. He is by no means unlovable; on the contrary, his lively capacity for enjoyment makes him very good company; he is usually a jolly fellow, and sometimes a refined aesthete. In the former case the great problems of life hang on a good or indifferent dinner; in the latter, it’s all a question of good taste. Once an object has given him a sensation, nothing more remains to be said or done about it. It cannot be anything except concrete and real; conjectures that go beyond the concrete are admitted only on condition that they enhance sensation. The intensification does not necessarily have to be pleasurable, for this type need not be a common voluptuary; he is merely desirous of the strongest sensations, and these, by his very nature, he can receive only from outside. What comes from inside seems to him morbid and suspect. He always reduces his thoughts and feelings to objective causes, to influences emanating from objects, quite unperturbed by the most glaring violations of logic. Once he can get back to tangible reality in any form he can breathe again. In this respect he is surprisingly credulous. He will unhesitatingly connect a psychogenic symptom with a drop in the barometer, while on the other hand the existence of a psychic conflict seems to him morbid imagination. His love is unquestionably rooted in the physical attractions of its object. If normal, he is conspicuously well adjusted to reality. That is his ideal, and it even makes him considerate of others. As he has no ideals connected with ideas, he has no reason to act in any way contrary to the reality of things as they are. This manifests itself in all the externals of his life. He dresses well, as befits the occasion; he keeps a good table with plenty of drink for his friends, making them feel very grand, or at least giving them to understand that his refined taste entitles

him to make a few demands of them. He may even convince them that certain sacrifices are decidedly worth while for the sake of style.

[608] The more sensation predominates, however, so that the subject disappears behind the sensation, the less agreeable does this type become. He develops into a crude pleasure-seeker, or else degenerates into an unscrupulous, effete aesthete. Although the object has become quite indispensable to him, yet, as something existing in its own right, it is none the less devalued. It is ruthlessly exploited and squeezed dry, since now its sole use is to stimulate sensation. The bondage to the object is carried to the extreme limit. In consequence, the unconscious is forced out of its compensatory role into open opposition. Above all, the repressed intuitions begin to assert themselves in the form of projections. The wildest suspicions arise; if the object is a sexual one, jealous fantasies and anxiety states gain the upper hand. More acute cases develop every sort of phobia, and, in particular, compulsion symptoms. The pathological contents have a markedly unreal character, with a frequent moral or religious streak. A pettifogging captiousness follows, or a grotesquely punctilious morality combined with primitive, "magical" superstitions that fall back on abstruse rites. All these things have their source in the repressed inferior functions which have been driven into harsh opposition to the conscious attitude, and they appear in a guise that is all the more striking because they rest on the most absurd assumptions, in complete contrast to the conscious sense of reality. The whole structure of thought and feeling seems, in this second personality, to be twisted into a pathological parody: reason turns into hair-splitting pedantry, morality into dreary moralizing and blatant Pharisaism, religion into ridiculous superstition, and intuition, the noblest gift of man, into meddlesome officiousness, poking into every corner; instead of gazing into the far distance, it descends to the lowest level of human meanness.

[609] The specifically compulsive character of the neurotic symptoms is the unconscious counterpart of the easy-going attitude of the pure sensation type, who, from the standpoint of rational judgment, accepts indiscriminately everything that happens. Although this does not by any means imply an absolute lawlessness and lack of restraint, it nevertheless deprives him of the essential restraining power of judgment. But rational

judgment is a conscious coercion which the rational type appears to impose on himself of his own free will. This coercion overtakes the sensation type from the unconscious, in the form of compulsion. Moreover, the very existence of a judgment means that the rational type's relation to the object will never become an absolute tie, as it is in the case of the sensation type. When his attitude attains an abnormal degree of one-sidedness, therefore, he is in danger of being overpowered by the unconscious in the same measure as he is consciously in the grip of the object. If he should become neurotic, it is much harder to treat him by rational means because the functions which the analyst must turn to are in a relatively undifferentiated state, and little or no reliance can be placed on them. Special techniques for bringing emotional pressure to bear are often needed in order to make him at all conscious.

Intuition

[610] In the extraverted attitude, intuition as the function of unconscious perception is wholly directed to external objects. Because intuition is in the main an unconscious process, its nature is very difficult to grasp. The intuitive function is represented in consciousness by an attitude of expectancy, by vision and penetration; but only from the subsequent result can it be established how much of what was "seen" was actually in the object, and how much was "read into" it. Just as sensation, when it is the dominant function, is not a mere reactive process of no further significance for the object, but an activity that seizes and shapes its object, so intuition is not mere perception, or vision, but an active, creative process that puts into the object just as much as it takes out. Since it does this unconsciously, it also has an unconscious effect on the object.

[611] The primary function of intuition, however, is simply to transmit images, or perceptions of relations between things, which could not be transmitted by the other functions or only in a very roundabout way. These images have the value of specific insights which have a decisive influence on action whenever intuition is given priority. In this case, psychic adaptation will be grounded almost entirely on intuitions. Thinking, feeling, and sensation are then largely repressed, sensation

being the one most affected, because, as the conscious sense function, it offers the greatest obstacle to intuition. Sensation is a hindrance to clear, unbiassed, naïve perception; its intrusive sensory stimuli direct attention to the physical surface, to the very things round and beyond which intuition tries to peer. But since extraverted intuition is directed predominantly to objects, it actually comes very close to sensation; indeed, the expectant attitude to external objects is just as likely to make use of sensation. Hence, if intuition is to function properly, sensation must to a large extent be suppressed. By sensation I mean in this instance the simple and immediate sense-impression understood as a clearly defined physiological and psychic datum. This must be expressly established beforehand because, if I ask an intuitive how he orients himself, he will speak of things that are almost indistinguishable from sense-impressions. Very often he will even use the word "sensation." He does have sensations, of course, but he is not guided by them as such; he uses them merely as starting-points for his perceptions. He selects them by unconscious predilection. It is not the strongest sensation, in the physiological sense, that is accorded the chief value, but any sensation whatsoever whose value is enhanced by the intuitive's unconscious attitude. In this way it may eventually come to acquire the chief value, and to his conscious mind it appears to be pure sensation. But actually it is not so.

[612] Just as extraverted sensation strives to reach the highest pitch of actuality, because this alone can give the appearance of a full life, so intuition tries to apprehend the widest range of *possibilities*, since only through envisioning possibilities is intuition fully satisfied. It seeks to discover what possibilities the objective situation holds in store; hence, as a subordinate function (i.e., when not in the position of priority), it is the auxiliary that automatically comes into play when no other function can find a way out of a hopelessly blocked situation. When it is the dominant function, every ordinary situation in life seems like a locked room which intuition has to open. It is constantly seeking fresh outlets and new possibilities in external life. In a very short time every existing situation becomes a prison for the intuitive, a chain that has to be broken. For a time objects appear to have an exaggerated value, if they should serve to

bring about a solution, a deliverance, or lead to the discovery of a new possibility. Yet no sooner have they served their purpose as stepping-stones or bridges than they lose their value altogether and are discarded as burdensome appendages. Facts are acknowledged only if they open new possibilities of advancing beyond them and delivering the individual from their power. Nascent possibilities are compelling motives from which intuition cannot escape and to which all else must be sacrificed.

The Extraverted Intuitive Type

[613] Whenever intuition predominates, a peculiar and unmistakable psychology results. Because extraverted intuition is oriented by the object, there is a marked dependence on external situations, but it is altogether different from the dependence of the sensation type. The intuitive is never to be found in the world of accepted reality-values, but he has a keen nose for anything new and in the making. Because he is always seeking out new possibilities, stable conditions suffocate him. He seizes on new objects or situations with great intensity, sometimes with extraordinary enthusiasm, only to abandon them cold-bloodedly, without any compunction and apparently without remembering them, as soon as their range is known and no further developments can be divined. So long as a new possibility is in the offing, the intuitive is bound to it with the shackles of fate. It is as though his whole life vanished in the new situation. One gets the impression, which he himself shares, that he has always just reached a final turning-point, and that from now on he can think and feel nothing else. No matter how reasonable and suitable it may be, and although every conceivable argument speaks for its stability, a day will come when nothing will deter him from regarding as a prison the very situation that seemed to promise him freedom and deliverance, and from acting accordingly. Neither reason nor feeling can restrain him or frighten him away from a new possibility, even though it goes against all his previous convictions. Thinking and feeling, the indispensable components of conviction, are his inferior functions, carrying no weight and hence incapable of effectively withstanding the power of intuition. And yet these functions are the only ones that could compensate its supremacy by supplying the *judgment* which the intuitive type totally lacks. The intuitive's morality is governed neither by thinking nor by

feeling; he has his own characteristic morality, which consists in a loyalty to his vision and in voluntary submission to its authority. Consideration for the welfare of others is weak. Their psychic well-being counts as little with him as does his own. He has equally little regard for their convictions and way of life, and on this account he is often put down as an immoral and unscrupulous adventurer. Since his intuition is concerned with externals and with ferreting out their possibilities, he readily turns to professions in which he can exploit these capacities to the full. Many business tycoons, entrepreneurs, speculators, stockbrokers, politicians, etc., belong to this type. It would seem to be more common among women, however, than among men. In women the intuitive capacity shows itself not so much in the professional as in the social sphere. Such women understand the art of exploiting every social occasion, they make the right social connections, they seek out men with prospects only to abandon everything again for the sake of a new possibility.

[614] It goes without saying that such a type is uncommonly important both economically and culturally. If his intentions are good, i.e., if his attitude is not too egocentric, he can render exceptional service as the initiator or promoter of new enterprises. He is the natural champion of all minorities with a future. Because he is able, when oriented more to people than things, to make an intuitive diagnosis of their abilities and potentialities, he can also “make” men. His capacity to inspire courage or to kindle enthusiasm for anything new is unrivalled, although he may already have dropped it by the morrow. The stronger his intuition, the more his ego becomes fused with all the possibilities he envisions. He brings his vision to life, he presents it convincingly and with dramatic fire, he embodies it, so to speak. But this is not play-acting, it is a kind of fate.

[615] Naturally this attitude holds great dangers, for all too easily the intuitive may fritter away his life on things and people, spreading about him an abundance of life which others live and not he himself. If only he could stay put, he would reap the fruits of his labours; but always he must be running after a new possibility, quitting his newly planted fields while others gather in the harvest. In the end he goes away empty. But when the intuitive lets things come to such a pass, he also has his own unconscious

against him. The unconscious of the intuitive bears some resemblance to that of the sensation type. Thinking and feeling, being largely repressed, come up with infantile, archaic thoughts and feelings similar to those of the countertype. They take the form of intense projections which are just as absurd as his, though they seem to lack the "magical" character of the latter and are chiefly concerned with quasi-realities such as sexual suspicions, financial hazards, forebodings of illness, etc. The difference seems to be due to the repression of real sensations. These make themselves felt when, for instance, the intuitive suddenly finds himself entangled with a highly unsuitable woman—or, in the case of a woman, with an unsuitable man—because these persons have stirred up the archaic sensations. This leads to an unconscious, compulsive tie which bodes nobody any good. Cases of this kind are themselves symptomatic of compulsion, to which the intuitive is as prone as the sensation type. He claims a similar freedom and exemption from restraint, submitting his decisions to no rational judgment and relying entirely on his nose for the possibilities that chance throws in his way. He exempts himself from the restrictions of reason only to fall victim to neurotic compulsions in the form of over-subtle ratiocinations, hairsplitting dialectics, and a compulsive tie to the sensation aroused by the object. His conscious attitude towards both sensation and object is one of ruthless superiority. Not that he means to be ruthless or superior—he simply does not see the object that everyone else sees and rides roughshod over it, just as the sensation type has no eyes for its soul. But sooner or later the object takes revenge in the form of compulsive hypochondriacal ideas, phobias, and every imaginable kind of absurd bodily sensation.

Summary of the Extraverted Irrational Types

[616] I call the two preceding types irrational for the reasons previously discussed, namely that whatever they do or do not do is based not on rational judgment but on the sheer intensity of perception. Their perception is directed simply and solely to events as they happen, no selection being made by judgment. In this respect they have a decided advantage over the two judging types. Objective events both conform to law and are accidental. In so far as they conform to law, they are accessible to reason; in so far as they are accidental, they are not.

Conversely, we might also say that an event conforms to law when it presents an aspect accessible to reason, and that when it presents an aspect for which we can find no law we call it accidental. The postulate of universal lawfulness is a postulate of reason alone, but in no sense is it a postulate of our perceptive functions. Since these are in no way based on the principle of reason and its postulates, they are by their very nature irrational. That is why I call the perception types "irrational" by nature. But merely because they subordinate judgment to perception, it would be quite wrong to regard them as "unreasonable." It would be truer to say that they are in the highest degree *empirical*. They base themselves exclusively on experience—so exclusively that, as a rule, their judgment cannot keep pace with their experience. But the judging functions are none the less present, although they eke out a largely unconscious existence. Since the unconscious, in spite of its separation from the conscious subject, is always appearing on the scene, we notice in the actual life of the irrational types striking judgments and acts of choice, but they take the form of apparent sophistries, cold-hearted criticisms, and a seemingly calculating choice of persons and situations. These traits have a rather infantile and even primitive character; both types can on occasion be astonishingly naïve, as well as ruthless, brusque, and violent. To the rational types the real character of these people might well appear rationalistic and calculating in the worst sense. But this judgment would be valid only for their unconscious, and therefore quite incorrect for their conscious psychology, which is entirely oriented by perception, and because of its irrational nature is quite unintelligible to any rational judgment. To the rational mind it might even seem that such a hodge-podge of accidentals hardly deserves the name "psychology" at all. The irrational type ripostes with an equally contemptuous opinion of his opposite number: he sees him as something only half alive, whose sole aim is to fasten the fetters of reason on everything living and strangle it with judgments. These are crass extremes, but they nevertheless occur.

[617] From the standpoint of the rational type, the other might easily be represented as an inferior kind of rationalist—when, that is to say, he is judged by what happens to him. For what happens to him is not accidental—here he is the master—instead, the accidents that befall him

take the form of rational judgments and rational intentions, and these are the things he stumbles over. To the rational mind this is something almost unthinkable, but its unthinkableness merely equals the astonishment of the irrational type when he comes up against someone who puts rational ideas above actual and living happenings. Such a thing seems to him scarcely credible. As a rule it is quite hopeless to discuss these things with him as questions of principle, for all rational communication is just as alien and repellent to him as it would be unthinkable for the rationalist to enter into a contract without mutual consultation and obligation.

[618] This brings me to the problem of the psychic relationship between the two types. Following the terminology of the French school of hypnotists, psychic relationship is known in modern psychiatry as "rapport." Rapport consists essentially in a feeling of agreement in spite of acknowledged differences. Indeed, the recognition of existing differences, if it be mutual, is itself a rapport, a feeling of agreement. If in a given case we make this feeling conscious to a higher degree than usual, we discover that it is not just a feeling whose nature cannot be analysed further, but at the same time an insight or a content of cognition which presents the point of agreement in conceptual form. This rational presentation is valid only for the rational types, but not for the irrational, whose rapport is based not on judgment but on the parallelism of living events. His feeling of agreement comes from the common perception of a sensation or intuition. The rational type would say that rapport with the irrational depends purely on chance. If, by some accident, the objective situations are exactly in tune, something like a human relationship takes place, but nobody can tell how valid it is or how long it will last. To the rational type it is often a painful thought that the relationship will last just as long as external circumstances and chance provide a common interest. This does not seem to him particularly human, whereas it is precisely in this that the irrational type sees a human situation of particular beauty. The result is that each regards the other as a man destitute of relationships, who cannot be relied upon, and with whom one can never get on decent terms. This unhappy outcome, however, is reached only when one makes a conscious effort to assess the nature of one's relationships with others. But since this kind of psychological conscientiousness is not very

common, it frequently happens that despite an absolute difference of standpoint a rapport nevertheless comes about, and in the following way: one party, by unspoken projection, assumes that the other is, in all essentials, of the same opinion as himself, while the other divines or senses an objective community of interest, of which, however, the former has no conscious inkling and whose existence he would at once dispute, just as it would never occur to the other that his relationship should be based on a common point of view. A rapport of this kind is by far the most frequent; it rests on mutual projection, which later becomes the source of many misunderstandings.

[619] Psychic relationship, in the extraverted attitude, is always governed by objective factors and external determinants. What a man is within himself is never of any decisive significance. For our present-day culture the extraverted attitude to the problem of human relationships is the principle that counts; naturally the introverted principle occurs too, but it is still the exception and has to appeal to the tolerance of the age.

3. THE INTROVERTED TYPE

a. The General Attitude of Consciousness

[620] As I have already explained in the previous section, the introvert is distinguished from the extravert by the fact that he does not, like the latter, orient himself by the object and by objective data, but by subjective factors. I also mentioned[4] that the introvert interposes a subjective view between the perception of the object and his own action, which prevents the action from assuming a character that fits the objective situation. Naturally this is a special instance, mentioned by way of example and intended to serve only as a simple illustration. We must now attempt a formulation on a broader basis.

[621] Although the introverted consciousness is naturally aware of external conditions, it selects the subjective determinants as the decisive ones. It is therefore oriented by the factor in perception and cognition which responds to the sense stimulus in accordance with the individual's subjective disposition. For example, two people see the same object, but

they never see it in such a way that the images they receive are absolutely identical. Quite apart from the variable acuteness of the sense organs and the personal equation, there often exists a radical difference, both in kind and in degree, in the psychic assimilation of the perceptual image. Whereas the extravert continually appeals to what comes to him from the object, the introvert relies principally on what the sense impression constellates in the subject. The difference in the case of a single apperception may, of course, be very delicate, but in the total psychic economy it makes itself felt in the highest degree, particularly in the effect it has on the ego. If I may anticipate, I consider the viewpoint which inclines, with Weininger, to describe the introverted attitude as philautic, autoerotic, egocentric, subjectivistic, egotistic, etc., to be misleading in principle and thoroughly depreciatory. It reflects the normal bias of the extraverted attitude in regard to the nature of the introvert. We must not forget—although the extravert is only too prone to do so—that perception and cognition are not purely objective, but are also subjectively conditioned. The world exists not merely in itself, but also as it appears to me. Indeed, at bottom, we have absolutely no criterion that could help us to form a judgment of a world which was unassimilable by the subject. If we were to ignore the subjective factor, it would be a complete denial of the great doubt as to the possibility of absolute cognition. And this would mean a relapse into the stale and hollow positivism that marred the turn of the century—an attitude of intellectual arrogance accompanied by crudeness of feeling, a violation of life as stupid as it is presumptuous. By overvaluing our capacity for objective cognition we repress the importance of the subjective factor, which simply means a denial of the subject. But what is the subject? The subject is man himself—we are the subject. Only a sick mind could forget that cognition must have a subject, and that there is no knowledge whatever and therefore no world at all unless “I know” has been said, though with this statement one has already expressed the subjective limitation of all knowledge.

[622] This applies to all the psychic functions: they have a subject which is just as indispensable as the object. It is characteristic of our present extraverted sense of values that the word “subjective” usually sounds like

a reproof; at all events the epithet “merely subjective” is brandished like a weapon over the head of anyone who is not boundlessly convinced of the absolute superiority of the object. We must therefore be quite clear as to what “subjective” means in this inquiry. By the subjective factor I understand that psychological action or reaction which merges with the effect produced by the object and so gives rise to a new psychic datum. In so far as the subjective factor has, from the earliest times and among all peoples, remained in large measure constant, elementary perceptions and cognitions being almost universally the same, it is a reality that is just as firmly established as the external object. If this were not so, any sort of permanent and essentially unchanging reality would be simply inconceivable, and any understanding of the past would be impossible. In this sense, therefore, the subjective factor is as ineluctable a datum as the extent of the sea and the radius of the earth. By the same token, the subjective factor has all the value of a co-determinant of the world we live in, a factor that can on no account be left out of our calculations. It is another universal law, and whoever bases himself on it has a foundation as secure, as permanent, and as valid as the man who relies on the object. But just as the object and objective data do not remain permanently the same, being perishable and subject to chance, so too the subjective factor is subject to variation and individual hazards. For this reason its value is also merely relative. That is to say, the excessive development of the introverted standpoint does not lead to a better and sounder use of the subjective factor, but rather to an artificial subjectivizing of consciousness which can hardly escape the reproach “merely subjective.” This is then counterbalanced by a de-subjectivization which takes the form of an exaggerated extraverted attitude, an attitude aptly described by Weininger as “misautic.” But since the introverted attitude is based on the ever-present, extremely real, and absolutely indispensable fact of psychic adaptation, expressions like “philautic,” “egocentric,” and so on are out of place and objectionable because they arouse the prejudice that it is always a question of the beloved ego. Nothing could be more mistaken than such an assumption. Yet one is continually meeting it in the judgments of the extravert on the introvert. Not, of course, that I wish to ascribe this error to individual extraverts; it is rather to be put down to the generally accepted extraverted view which is by no means restricted to the extraverted type, for it has just as many representatives among introverts, very much to their own detriment. The reproach of being untrue to their own nature can justly be levelled at the latter, whereas this at least cannot be held against the former.

[623] The introverted attitude is normally oriented by the psychic structure, which is in principle hereditary and is inborn in the subject. This must not be assumed, however, to be simply identical with the subject's ego, as is implied by the above designations of Weininger; it is rather the psychic structure of the subject prior to any ego-development. The really fundamental subject, the self, is far more comprehensive than the ego, since the former includes the unconscious whereas the latter is essentially the focal point of consciousness. Were the ego identical with the self, it would be inconceivable how we could sometimes see ourselves in dreams in quite different forms and with entirely different meanings. But it is a characteristic peculiarity of the introvert, which is as much in keeping with his own inclination as with the general bias, to confuse his ego with the self, and to exalt it as the subject of the psychic process, thus bringing about the aforementioned subjectivization of consciousness which alienates him from the object.

[624] The psychic structure is the same as what Semon calls "mneme"[5] and what I call the "collective unconscious." The individual self is a portion or segment or representative of something present in all living creatures, an exponent of the specific mode of psychological behaviour, which varies from species to species and is inborn in each of its members. The inborn mode of *acting* has long been known as *instinct*, and for the inborn mode of psychic apprehension I have proposed the term *archetype*.[6] I may assume that what is understood by instinct is familiar to everyone. It is another matter with the archetype. What I understand by it is identical with the "primordial image," a term borrowed from Jacob Burckhardt,[7] and I describe it as such in the Definitions that conclude this book. I must here refer the reader to the definition "Image."[8]

[625] The archetype is a symbolic formula which always begins to function when there are no conscious ideas present, or when conscious ideas are

inhibited for internal or external reasons. The contents of the collective unconscious are represented in consciousness in the form of pronounced preferences and definite ways of looking at things. These subjective tendencies and views are generally regarded by the individual as being determined by the object—incorrectly, since they have their source in the unconscious structure of the psyche and are merely released by the effect of the object. They are stronger than the object's influence, their psychic value is higher, so that they superimpose themselves on all impressions. Thus, just as it seems incomprehensible to the introvert that the object should always be the decisive factor, it remains an enigma to the extravert how a subjective standpoint can be superior to the objective situation. He inevitably comes to the conclusion that the introvert is either a conceited egoist or crack-brained bigot. Today he would be suspected of harbouring an unconscious power-complex. The introvert certainly lays himself open to these suspicions, for his positive, highly generalizing manner of expression, which appears to rule out every other opinion from the start, lends countenance to all the extravert's prejudices. Moreover the inflexibility of his subjective judgment, setting itself above all objective data, is sufficient in itself to create the impression of marked egocentricity. Faced with this prejudice the introvert is usually at a loss for the right argument, for he is quite unaware of the unconscious but generally quite valid assumptions on which his subjective judgment and his subjective perceptions are based. In the fashion of the times he looks outside for an answer, instead of seeking it behind his own consciousness. Should he become neurotic, it is the sign of an almost complete identity of the ego with the self; the importance of the self is reduced to nil, while the ego is inflated beyond measure. The whole world-creating force of the subjective factor becomes concentrated in the ego, producing a boundless power-complex and a fatuous egocentricity. Every psychology which reduces the essence of man to the unconscious power drive springs from this kind of disposition. Many of Nietzsche's lapses in taste, for example, are due to this subjectivization of consciousness.

b. The Attitude of the Unconscious

[626] The predominance of the subjective factor in consciousness naturally involves a devaluation of the object. The object is not given the importance that belongs to it by right. Just as it plays too great a role in the extraverted attitude, it has too little meaning for the introvert. To the extent that his consciousness is subjectivized and excessive importance attached to the ego, the object is put in a position which in the end becomes untenable. The object is a factor whose power cannot be denied, whereas the ego is a very limited and fragile thing. It would be a very different matter if the self opposed the object. Self and world are commensurable factors; hence a normal introverted attitude is as justifiable and valid as a normal extraverted attitude. But if the ego has usurped the claims of the subject, this naturally produces, by way of compensation, an unconscious reinforcement of the influence of the object. In spite of positively convulsive efforts to ensure the superiority of the ego, the object comes to exert an overwhelming influence, which is all the more invincible because it seizes on the individual unawares and forcibly obtrudes itself on his consciousness. As a result of the ego's unadapted relation to the object—for a desire to dominate it is not adaptation—a compensatory relation arises in the unconscious which makes itself felt as an absolute and irrepressible tie to the object. The more the ego struggles to preserve its independence, freedom from obligation, and superiority, the more it becomes enslaved to the objective data. The individual's freedom of mind is fettered by the ignominy of his financial dependence, his freedom of action trembles in the face of public opinion, his moral superiority collapses in a morass of inferior relationships, and his desire to dominate ends in a pitiful craving to be loved. It is now the unconscious that takes care of the relation to the object, and it does so in a way that is calculated to bring the illusion of power and the fantasy of superiority to utter ruin. The object assumes terrifying proportions in spite of the conscious attempt to degrade it. In consequence, the ego's efforts to detach itself from the object and get it under control become all the more violent. In the end it surrounds itself with a regular system of defences (aptly described by Adler) for the purpose of preserving at least the illusion of superiority. The introvert's alienation from the object is now complete; he wears himself out with defence measures on the one hand, while on the other he makes fruitless

attempts to impose his will on the object and assert himself. These efforts are constantly being frustrated by the overwhelming impressions received from the object. It continually imposes itself on him against his will, it arouses in him the most disagreeable and intractable affects and persecutes him at every step. A tremendous inner struggle is needed all the time in order to “keep going.” The typical form his neurosis takes is psychasthenia, a malady characterized on the one hand by extreme sensitivity and on the other by great proneness to exhaustion and chronic fatigue.

[627] An analysis of the personal unconscious reveals a mass of power fantasies coupled with fear of objects which he himself has forcibly activated, and of which he is often enough the victim. His fear of objects develops into a peculiar kind of cowardliness; he shrinks from making himself or his opinions felt, fearing that this will only increase the object’s power. He is terrified of strong affects in others, and is hardly ever free from the dread of falling under hostile influences. Objects possess puissant and terrifying qualities for him—qualities he cannot consciously discern in them, but which he imagines he sees through his unconscious perception. As his relation to the object is very largely repressed, it takes place via the unconscious, where it becomes charged with the latter’s qualities. These qualities are mostly infantile and archaic, so that the relation to the object becomes primitive too, and the object seems endowed with magical powers. Anything strange and new arouses fear and mistrust, as though concealing unknown perils; heirlooms and suchlike are attached to his soul as by invisible threads; any change is upsetting, if not positively dangerous, as it seems to denote a magical animation of the object. His ideal is a lonely island where nothing moves except what he permits to move. Vischer’s novel, *Auch Einer*, affords deep insight into this side of the introvert’s psychology, and also into the underlying symbolism of the collective unconscious. But this latter question I must leave to one side, since it is not specific to a description of types but is a general phenomenon.

c. The Peculiarities of the Basic Psychological Functions in the Introverted Attitude

Thinking

[628] In the section on extraverted thinking I gave a brief description of introverted thinking (pars. 578–79) and must refer to it again here. Introverted thinking is primarily oriented by the subjective factor. At the very least the subjective factor expresses itself as a feeling of guidance which ultimately determines judgment. Sometimes it appears as a more or less complete image which serves as a criterion. But whether introverted thinking is concerned with concrete or with abstract objects, always at the decisive points it is oriented by subjective data. It does not lead from concrete experience back again to the object, but always to the subjective content. External facts are not the aim and origin of this thinking, though the introvert would often like to make his thinking appear so. It begins with the subject and leads back to the subject, far though it may range into the realm of actual reality. With regard to the establishment of new facts it is only indirectly of value, since new views rather than knowledge of new facts are its main concern. It formulates questions and creates theories, it opens up new prospects and insights, but with regard to facts its attitude is one of reserve. They are all very well as illustrative examples, but they must not be allowed to predominate. Facts are collected as evidence for a theory, never for their own sake. If ever this happens, it is merely a concession to the extraverted style. Facts are of secondary importance for this kind of thinking; what seems to it of paramount importance is the development and presentation of the subjective idea, of the initial symbolic image hovering darkly before the mind’s eye. Its aim is never an intellectual reconstruction of the concrete fact, but a shaping of that dark image into a luminous idea. It wants to reach reality, to see how the external fact will fit into and fill the framework of the idea, and the creative power of this thinking shows itself when it actually creates an idea which, though not inherent in the concrete fact, is yet the most suitable abstract expression of it. Its task is completed when the idea it has fashioned seems to emerge so inevitably from the external facts that they actually prove its validity.

[629] But no more than extraverted thinking can wrest a sound empirical concept from concrete facts or create new ones can introverted thinking

translate the initial image into an idea adequately adapted to the facts. For, as in the former case the purely empirical accumulation of facts paralyzes thought and smothers their meaning, so in the latter case introverted thinking shows a dangerous tendency to force the facts into the shape of its image, or to ignore them altogether in order to give fantasy free play. In that event it will be impossible for the finished product—the idea—to repudiate its derivation from the dim archaic image. It will have a mythological streak which one is apt to interpret as "originality" or, in more pronounced cases, as mere whimsicality, since its archaic character is not immediately apparent to specialists unfamiliar with mythological motifs. The subjective power of conviction exerted by an idea of this kind is usually very great, and it is all the greater the less it comes into contact with external facts. Although it may seem to the originator of the idea that his meagre store of facts is the actual source of its truth and validity, in reality this is not so, for the idea derives its convincing power from the unconscious archetype, which, as such, is eternally valid and true. But this truth is so universal and so symbolic that it must first be assimilated to the recognized and recognizable knowledge of the time before it can become a practical truth of any value for life. What would causality be, for instance, if it could nowhere be recognized in practical causes and practical effects?

[630] This kind of thinking easily gets lost in the immense truth of the subjective factor. It creates theories for their own sake, apparently with an eye to real or at least possible facts, but always with a distinct tendency to slip over from the world of ideas into mere imagery. Accordingly, visions of numerous possibilities appear on the scene, but none of them ever becomes a reality, until finally images are produced which no longer express anything externally real, being mere symbols of the ineffable and unknowable. It is now merely a mystical thinking and quite as unfruitful as thinking that remains bound to objective data. Whereas the latter sinks to the level of a mere representation of facts, the former evaporates into a representation of the irrepresentable, far beyond anything that could be expressed in an image. The representation of facts has an incontestable truth because the subjective factor is excluded and the facts speak for themselves. Similarly, the representation of the

irrepresentable has an immediate, subjective power of conviction because it demonstrates its own existence. The one says “Est, ergo est”; the other says “Cogito, ergo cogito.” Introverted thinking carried to extremes arrives at the evidence of its own subjective existence, and extraverted thinking at the evidence of its complete identity with the objective fact. Just as the latter abnegates itself by evaporating into the object, the former empties itself of each and every content and has to be satisfied with merely existing. In both cases the further development of life is crowded out of the thinking function into the domain of the other psychic functions, which till then had existed in a state of relative unconsciousness. The extraordinary impoverishment of introverted thinking is compensated by a wealth of unconscious facts. The more consciousness is impelled by the thinking function to confine itself within the smallest and emptiest circle—which seems, however, to contain all the riches of the gods—the more the unconscious fantasies will be enriched by a multitude of archaic contents, a veritable “pandaemonium” of irrational and magical figures, whose physiognomy will accord with the nature of the function that will supersede the thinking function as the vehicle of life. If it should be the intuitive function, then the “other side” will be viewed through the eyes of a Kubin or a Meyrink.[9] If it is the feeling function, then quite unheard-of and fantastic feeling relationships will be formed, coupled with contradictory and unintelligible value judgments. If it is the sensation function, the senses will nose up something new, and never experienced before, in and outside the body. Closer examination of these permutations will easily demonstrate a recrudescence of primitive psychology with all its characteristic features. Naturally, such experiences are not merely primitive, they are also symbolic; in fact, the more primordial and aboriginal they are, the more they represent a future truth. For everything old in the unconscious hints at something coming.

[631] Under ordinary circumstances, not even the attempt to get to the “other side” will be successful—and still less the redeeming journey through the unconscious. The passage across is usually blocked by conscious resistance to any subjection of the ego to the realities of the unconscious and their determining power. It is a state of dissociation, in

other words a neurosis characterized by inner debility and increasing cerebral exhaustion—the symptoms of psychasthenia.

The Introverted Thinking Type

[632] Just as we might take Darwin as an example of the normal extraverted thinking type, the normal introverted thinking type could be represented by Kant. The one speaks with facts, the other relies on the subjective factor. Darwin ranges over the wide field of objective reality. Kant restricts himself to a critique of knowledge. Cuvier and Nietzsche would form an even sharper contrast.

[633] The introverted thinking type is characterized by the primacy of the kind of thinking I have just described. Like his extraverted counterpart, he is strongly influenced by ideas, though his ideas have their origin not in objective data but in his subjective foundation. He will follow his ideas like the extravert, but in the reverse direction: inwards and not outwards. Intensity is his aim, not extensity. In these fundamental respects he differs quite unmistakably from his extraverted counterpart. What distinguishes the other, namely his intense relation to objects, is almost completely lacking in him as in every introverted type. If the object is a person, this person has a distinct feeling that he matters only in a negative way; in milder cases he is merely conscious of being *de trop*, but with a more extreme type he feels himself warded off as something definitely disturbing. This negative relation to the object, ranging from indifference to aversion, characterizes every introvert and makes a description of the type exceedingly difficult. Everything about him tends to disappear and get concealed. His judgment appears cold, inflexible, arbitrary, and ruthless, because it relates far less to the object than to the subject. One can feel nothing in it that might possibly confer a higher value on the object; it always bypasses the object and leaves one with a feeling of the subject's superiority. He may be polite, amiable, and kind, but one is constantly aware of a certain uneasiness betraying an ulterior motive—the disarming of an opponent, who must at all costs be pacified and placated lest he prove himself a nuisance. In no sense, of course, is he an opponent, but if he is at all sensitive he will feel himself repulsed, and even belittled.

[634] Invariably the object has to submit to a certain amount of neglect, and in pathological cases it is even surrounded with quite unnecessary precautionary measures. Thus this type tends to vanish behind a cloud of misunderstanding, which gets all the thicker the more he attempts to assume, by way of compensation and with the help of his inferior functions, an air of urbanity which contrasts glaringly with his real nature. Although he will shrink from no danger in building up his world of ideas, and never shrinks from thinking a thought because it might prove to be dangerous, subversive, heretical, or wounding to other people's feelings, he is none the less beset by the greatest anxiety if ever he has to make it an objective reality. That goes against the grain. And when he does put his ideas into the world, he never introduces them like a mother solicitous for her children, but simply dumps them there and gets extremely annoyed if they fail to thrive on their own account. His amazing unpracticalness and horror of publicity in any form have a hand in this. If in his eyes his product appears correct and true, then it must be so in practice, and others have got to bow to its truth. Hardly ever will he go out of his way to win anyone's appreciation of it, especially anyone of influence. And if ever he brings himself to do so, he generally sets about it so clumsily that it has just the opposite of the effect intended. He usually has bad experiences with rivals in his own field because he never understands how to curry their favour; as a rule he only succeeds in showing them how entirely superfluous they are to him. In the pursuit of his ideas he is generally stubborn, headstrong, and quite unamenable to influence. His suggestibility to personal influences is in strange contrast to this. He has only to be convinced of a person's seeming innocuousness to lay himself open to the most undesirable elements. They seize hold of him from the unconscious. He lets himself be brutalized and exploited in the most ignominious way if only he can be left in peace to pursue his ideas. He simply does not see when he is being plundered behind his back and wronged in practice, for to him the relation to people and things is secondary and the objective evaluation of his product is something he remains unconscious of. Because he thinks out his problems to the limit, he complicates them and constantly gets entangled in his own scruples and misgivings. However clear to him the inner structure of his thoughts may be, he is not in the least clear where or how they link up with the

world of reality. Only with the greatest difficulty will he bring himself to admit that what is clear to him may not be equally clear to everyone. His style is cluttered with all sorts of adjuncts, accessories, qualifications, retractions, saving clauses, doubts, etc., which all come from his scrupulosity. His work goes slowly and with difficulty.

[635] In his personal relations he is taciturn or else throws himself on people who cannot understand him, and for him this is one more proof of the abysmal stupidity of man. If for once he is understood, he easily succumbs to credulous overestimation of his prowess. Ambitious women have only to know how to take advantage of his cluelessness in practical matters to make an easy prey of him; or he may develop into a misanthropic bachelor with a childlike heart. Often he is gauche in his behaviour, painfully anxious to escape notice, or else remarkably unconcerned and childishly naïve. In his own special field of work he provokes the most violent opposition, which he has no notion how to deal with, unless he happens to be seduced by his primitive affects into acrimonious and fruitless polemics. Casual acquaintances think him inconsiderate and domineering. But the better one knows him, the more favourable one’s judgment becomes, and his closest friends value his intimacy very highly. To outsiders he seems prickly, unapproachable, and arrogant, and sometimes soured as a result of his anti-social prejudices. As a personal teacher he has little influence, since the mentality of his students is strange to him. Besides, teaching has, at bottom, no interest for him unless it happens to provide him with a theoretical problem. He is a poor teacher, because all the time he is teaching his thought is occupied with the material itself and not with its presentation.

[636] With the intensification of his type, his convictions become all the more rigid and unbending. Outside influences are shut off; as a person, too, he becomes more unsympathetic to his wider circle of acquaintances, and therefore more dependent on his intimates. His tone becomes personal and surly, and though his ideas may gain in profundity they can no longer be adequately expressed in the material at hand. To compensate for this, he falls back on emotionality and touchiness. The outside influences he has brusquely fended off attack him from within, from the unconscious, and in his efforts to defend himself he attacks things that to

outsiders seem utterly unimportant. Because of the subjectivization of consciousness resulting from his lack of relationship to the object, what secretly concerns his own person now seems to him of extreme importance. He begins to confuse his subjective truth with his own personality. Although he will not try to press his convictions on anyone personally, he will burst out with vicious, personal retorts against every criticism, however just. Thus his isolation gradually increases. His originally fertilizing ideas become destructive, poisoned by the sediment of bitterness. His struggle against the influences emanating from the unconscious increases with his external isolation, until finally they begin to cripple him. He thinks his withdrawal into ever-increasing solitude will protect him from the unconscious influences, but as a rule it only plunges him deeper into the conflict that is destroying him from within.

[637] The thinking of the introverted type is positive and synthetic in developing ideas which approximate more and more to the eternal validity of the primordial images. But as their connection with objective experience becomes more and more tenuous, they take on a mythological colouring and no longer hold true for the contemporary situation. Hence his thinking is of value for his contemporaries only so long as it is manifestly and intelligibly related to the known facts of the time. Once it has become mythological, it ceases to be relevant and runs on in itself. The counterbalancing functions of feeling, intuition, and sensation are comparatively unconscious and inferior, and therefore have a primitive extraverted character that accounts for all the troublesome influences from outside to which the introverted thinker is prone. The various protective devices and psychological minefields which such people surround themselves with are known to everyone, and I can spare myself a description of them. They all serve as a defence against “magical” influences—and among them is a vague fear of the feminine sex.

Feeling

[638] Introverted feeling is determined principally by the subjective factor. It differs quite as essentially from extraverted feeling as introverted from extraverted thinking. It is extremely difficult to give an intellectual account of the introverted feeling process, or even an approximate

description of it, although the peculiar nature of this kind of feeling is very noticeable once one has become aware of it. Since it is conditioned subjectively and is only secondarily concerned with the object, it seldom appears on the surface and is generally misunderstood. It is a feeling which seems to devalue the object, and it therefore manifests itself for the most part negatively. The existence of positive feeling can be inferred only indirectly. Its aim is not to adjust itself to the object, but to subordinate it in an unconscious effort to realize the underlying images. It is continually seeking an image which has no existence in reality, but which it has seen in a kind of vision. It glides unheedingly over all objects that do not fit in with its aim. It strives after inner intensity, for which the objects serve at most as a stimulus. The depth of this feeling can only be guessed—it can never be clearly grasped. It makes people silent and difficult of access; it shrinks back like a violet from the brute nature of the object in order to fill the depths of the subject. It comes out with negative judgments or assumes an air of profound indifference as a means of defence.

[639] The primordial images are, of course, just as much ideas as feelings. Fundamental ideas, ideas like God, freedom, and immortality, are just as much feeling-values as they are significant ideas. Everything, therefore, that we have said about introverted thinking is equally true of introverted feeling, only here everything is felt while there it was thought. But the very fact that thoughts can generally be expressed more intelligibly than feelings demands a more than ordinary descriptive or artistic ability before the real wealth of this feeling can be even approximately presented or communicated to the world. If subjective thinking can be understood only with difficulty because of its unrelatedness, this is true in even higher degree of subjective feeling. In order to communicate with others, it has to find an external form not only acceptable to itself, but capable also of arousing a parallel feeling in them. Thanks to the relatively great inner (as well as outer) uniformity of human beings, it is actually possible to do this, though the form acceptable to feeling is extraordinarily difficult to find so long as it is still mainly oriented to the fathomless store of primordial images. If, however, feeling is falsified by an egocentric attitude, it at once becomes unsympathetic, because it is

then concerned mainly with the ego. It inevitably creates the impression of sentimental self-love, of trying to make itself interesting, and even of morbid self-admiration. Just as the subjectivized consciousness of the introverted thinker, striving after abstraction to the nth degree, only succeeds in intensifying a thought-process that is in itself empty, the intensification of egocentric feeling only leads to inane transports of feeling for their own sake. This is the mystical, ecstatic stage which opens the way for the extraverted functions that feeling has repressed. Just as introverted thinking is counterbalanced by a primitive feeling, to which objects attach themselves with magical force, introverted feeling is counterbalanced by a primitive thinking, whose concretism and slavery to facts surpass all bounds. Feeling progressively emancipates itself from the object and creates for itself a freedom of action and conscience that is purely subjective, and may even renounce all traditional values. But so much the more does unconscious thinking fall a victim to the power of objective reality.

The Introverted Feeling Type

[640] It is principally among women that I have found the predominance of introverted feeling. "Still waters run deep" is very true of such women. They are mostly silent, inaccessible, hard to understand; often they hide behind a childish or banal mask, and their temperament is inclined to melancholy. They neither shine nor reveal themselves. As they are mainly guided by their subjective feelings, their true motives generally remain hidden. Their outward demeanour is harmonious, inconspicuous, giving an impression of pleasing repose, or of sympathetic response, with no desire to affect others, to impress, influence, or change them in any way. If this outward aspect is more pronounced, it arouses a suspicion of indifference and coldness, which may actually turn into a disregard for the comfort and well-being of others. One is distinctly aware then of the movement of feeling away from the object. With the normal type, however, this happens only when the influence of the object is too strong. The feeling of harmony, therefore, lasts only so long as the object goes its own moderate way and makes no attempt to cross the other's path. There is little effort to respond to the real emotions of the other person; they are more often damped down and rebuffed, or cooled off by a negative value

judgment. Although there is a constant readiness for peaceful and harmonious co-existence, strangers are shown no touch of amiability, no gleam of responsive warmth, but are met with apparent indifference or a repelling coldness. Often they are made to feel entirely superfluous. Faced with anything that might carry her away or arouse enthusiasm, this type observes a benevolent though critical neutrality, coupled with a faint trace of superiority that soon takes the wind out of the sails of a sensitive person. Any stormy emotion, however, will be struck down with murderous coldness, unless it happens to catch the woman on her unconscious side—that is, unless it hits her feelings by arousing a primordial image. In that case she simply feels paralysed for the moment, and this in due course invariably produces an even more obstinate resistance which will hit the other person in his most vulnerable spot. As far as possible, the feeling relationship is kept to the safe middle path, all intemperate passions being resolutely tabooed. Expressions of feeling therefore remain niggardly, and the other person has a permanent sense of being undervalued once he becomes conscious of it. But this need not always be so, because very often he remains unconscious of the lack of feeling shown to him, in which case the unconscious demands of feeling will produce symptoms designed to compel attention.

[641] Since this type appears rather cold and reserved, it might seem on a superficial view that such women have no feelings at all. But this would be quite wrong; the truth is, their feelings are intensive rather than extensive. They develop in depth. While an extensive feeling of sympathy can express itself in appropriate words and deeds, and thus quickly gets back to normal again, an intensive sympathy, being shut off from every means of expression, acquires a passionate depth that comprises a whole world of misery and simply gets benumbed. It may perhaps break out in some extravagant form and lead to an astounding act of an almost heroic character, quite unrelated either to the subject herself or to the object that provoked the outburst. To the outside world, or to the blind eyes of the extravert, this intensive sympathy looks like coldness, because usually it does nothing visible, and an extraverted consciousness is unable to believe in invisible forces. Such a misunderstanding is a common occurrence in the life of this type, and is used as a weighty

argument against the possibility of any deeper feeling relation with the object. But the real object of this feeling is only dimly divined by the normal type herself. It may express itself in a secret religiosity anxiously guarded from profane eyes, or in intimate poetic forms that are kept equally well hidden, not without the secret ambition of displaying some kind of superiority over the other person by this means. Women often express a good deal of their feelings through their children, letting their passion flow secretly into them.

[642] Although this tendency to overpower or coerce the other person with her secret feelings rarely plays a disturbing role in the normal type, and never leads to a serious attempt of this kind, some trace of it nevertheless seeps through into the personal effect they have on him, in the form of a domineering influence often difficult to define. It is sensed as a sort of stifling or oppressive feeling which holds everybody around her under a spell. It gives a woman of this type a mysterious power that may prove terribly fascinating to the extraverted man, for it touches his unconscious. This power comes from the deeply felt, unconscious images, but consciously she is apt to relate it to the ego, whereupon her influence becomes debased into a personal tyranny. Whenever the unconscious subject is identified with the ego, the mysterious power of intensive feeling turns into a banal and overweening desire to dominate, into vanity and despotic bossiness. This produces a type of woman notorious for her unscrupulous ambition and mischievous cruelty. It is a change, however, that leads to neurosis.

[643] So long as the ego feels subordinate to the unconscious subject, and feeling is aware of something higher and mightier than the ego, the type is normal. Although the unconscious thinking is archaic, its reductive tendencies help to compensate the occasional fits of trying to exalt the ego into the subject. If this should nevertheless happen as a result of complete suppression of the counterbalancing subliminal processes, the unconscious thinking goes over into open opposition and gets projected. The egocentrized subject now comes to feel the power and importance of the devalued object. She begins consciously to feel “what other people think.” Naturally, other people are thinking all sorts of mean things, scheming evil, contriving plots, secret intrigues, etc. In order to forestall

them, she herself is obliged to start counter-intrigues, to suspect others and sound them out, and weave counterplots. Beset by rumours, she must make frantic efforts to get her own back and be top dog. Endless clandestine rivalries spring up, and in these embittered struggles she will shrink from no baseness or meanness, and will even prostitute her virtues in order to play the trump card. Such a state of affairs must end in exhaustion. The form of neurosis is neurasthenic rather than hysterical, often with severe physical complications, such as anaemia and its sequelae.

Summary of the Introverted Rational Types

[644] Both the foregoing types may be termed rational, since they are grounded on the functions of rational judgment. Rational judgment is based not merely on objective but also on subjective data. The predominance of one or the other factor, however, as a result of a psychic disposition often existing from early youth, will give the judgment a corresponding bias. A judgment that is truly rational will appeal to the objective and the subjective factor equally and do justice to both. But that would be an ideal case and would presuppose an equal development of both extraversion and introversion. In practice, however, either movement excludes the other, and, so long as this dilemma remains, they cannot exist side by side but at best successively. Under ordinary conditions, therefore, an ideal rationality is impossible. The rationality of a rational type always has a typical bias. Thus, the judgment of the introverted rational types is undoubtedly rational, only it is oriented more by the subjective factor. This does not necessarily imply any logical bias, since the bias lies in the premise. The premise consists in the predominance of the subjective factor prior to all conclusions and judgments. The superior value of the subjective as compared with the objective factor appears self-evident from the beginning. It is not a question of *assigning* this value, but, as we have said, of a natural disposition existing before all rational valuation. Hence, to the introvert, rational judgment has many nuances which differentiate it from that of the extravert. To mention only the most general instance, the chain of reasoning that leads to the subjective factor seems to the introvert somewhat more rational than the one that leads to the object. This

difference, though slight and practically unnoticeable in individual cases, builds up in the end to unbridgeable discrepancies which are the more irritating the less one is aware of the minimal shift of standpoint occasioned by the psychological premise. A capital error regularly creeps in here, for instead of recognizing the difference in the premise one tries to demonstrate a fallacy in the conclusion. This recognition is a difficult matter for every rational type, since it undermines the apparently absolute validity of his own principle and delivers him over to its antithesis, which for him amounts to a catastrophe.

[645] The introvert is far more subject to misunderstanding than the extravert, not so much because the extravert is a more merciless or critical adversary than he himself might be, but because the style of the times which he himself imitates works against him. He finds himself in the minority, not in numerical relation to the extravert, but in relation to the general Western view of the world as judged by his feeling. In so far as he is a convinced participator in the general style, he undermines his own foundations; for the general style, acknowledging as it does only the visible and tangible values, is opposed to his specific principle. Because of its invisibility, he is obliged to depreciate the subjective factor, and must force himself to join in the extraverted overvaluation of the object. He himself sets the subjective factor at too low a value, and his feelings of inferiority are his chastisement for this sin. Little wonder, therefore, that it is precisely in the present epoch, and particularly in those movements which are somewhat ahead of the time, that the subjective factor reveals itself in exaggerated, tasteless forms of expression bordering on caricature. I refer to the art of the present day.

[646] The undervaluation of his own principle makes the introvert egotistical and forces on him the psychology of the underdog. The more egotistical he becomes, the more it seems to him that the others, who are apparently able, without qualms, to conform to the general style, are the oppressors against whom he must defend himself. He generally does not see that his chief error lies in not depending on the subjective factor with the same trust and devotion with which the extravert relies on the object. His undervaluation of his own principle makes his leanings towards egotism unavoidable, and because of this he fully deserves the censure of

the extravert. If he remained true to his own principle, the charge of egotism would be altogether false, for his attitude would be justified by its effects in general, and the misunderstanding would be dissipated.

Sensation

[647] Sensation, which by its very nature is dependent on the object and on objective stimuli, undergoes considerable modification in the introverted attitude. It, too, has a subjective factor, for besides the sensed object there is a sensing subject who adds his subjective disposition to the objective stimulus. In the introverted attitude sensation is based predominantly on the subjective component of perception. What I mean by this is best illustrated by works of art which reproduce external objects. If, for instance, several painters were to paint the same landscape, each trying to reproduce it faithfully, each painting will be different from the others, not merely because of differences in ability, but chiefly because of different ways of seeing; indeed, in some of the paintings there will be a distinct psychic difference in mood and the treatment of colour and form. These qualities betray the influence of the subjective factor. The subjective factor in sensation is essentially the same as in the other functions we have discussed. It is an unconscious disposition which alters the sense-perception at its source, thus depriving it of the character of a purely objective influence. In this case, sensation is related primarily to the subject and only secondarily to the object. How extraordinarily strong the subjective factor can be is shown most clearly in art. Its predominance sometimes amounts to a complete suppression of the object's influence, and yet the sensation remains sensation even though it has become a perception of the subjective factor and the object has sunk to the level of a mere stimulus. Introverted sensation is oriented accordingly. True sense-perception certainly exists, but it always looks as though the object did not penetrate into the subject in its own right, but as though the subject were seeing it quite differently, or saw quite other things than other people see. Actually, he perceives the same things as everybody else, only he does not stop at the purely objective influence, but concerns himself with the subjective perception excited by the objective stimulus.

[648] Subjective perception is markedly different from the objective. What is perceived is either not found at all in the object, or is, at most, merely suggested by it. That is, although the perception can be similar to that of other men, it is not immediately derived from the objective behaviour of things. It does not impress one as a mere product of consciousness—it is too genuine for that. But it makes a definite psychic impression because elements of a higher psychic order are discernible in it. This order, however, does not coincide with the contents of consciousness. It has to do with presuppositions or dispositions of the collective unconscious, with mythological images, with primordial possibilities of ideas. Subjective perception is characterized by the meaning that clings to it. It means more than the mere image of the object, though naturally only to one for whom the subjective factor means anything at all. To another, the reproduced subjective impression seems to suffer from the defect of not being sufficiently like the object and therefore to have failed in its purpose.

[649] Introverted sensation apprehends the background of the physical world rather than its surface. The decisive thing is not the reality of the object, but the reality of the subjective factor, of the primordial images which, in their totality, constitute a psychic mirror-world. It is a mirror with the peculiar faculty of reflecting the existing contents of consciousness not in their known and customary form but, as it were, *sub specie aeternitatis*, somewhat as a million-year-old consciousness might see them. Such a consciousness would see the becoming and passing away of things simultaneously with their momentary existence in the present, and not only that, it would also see what was before their becoming and will be after their passing hence. Naturally this is only a figure of speech, but one that I needed in order to illustrate in some way the peculiar nature of introverted sensation. We could say that introverted sensation transmits an image which does not so much reproduce the object as spread over it the patina of age-old subjective experience and the shimmer of events still unborn. The bare sense impression develops in depth, reaching into the past and future, while extraverted sensation seizes on the momentary existence of things open to the light of day.

The Introverted Sensation Type

[650] The predominance of introverted sensation produces a definite type, which is characterized by certain peculiarities. It is an irrational type, because it is oriented amid the flux of events not by rational judgment but simply by what happens. Whereas the extraverted sensation type is guided by the intensity of objective influences, the introverted type is guided by the intensity of the subjective sensation excited by the objective stimulus. Obviously therefore, no proportional relation exists between object and sensation, but one that is apparently quite unpredictable and arbitrary. What will make an impression and what will not can never be seen in advance, and from outside. Did there exist an aptitude for expression in any way proportional to the intensity of his sensations, the irrationality of this type would be extraordinarily striking. This is the case, for instance, when an individual is a creative artist. But since this is the exception, the introvert's characteristic difficulty in expressing himself also conceals his irrationality. On the contrary, he may be conspicuous for his calmness and passivity, or for his rational self-control. This peculiarity, which often leads a superficial judgment astray, is really due to his unrelatedness to objects. Normally the object is not consciously devalued in the least, but its stimulus is removed from it and immediately replaced by a subjective reaction no longer related to the reality of the object. This naturally has the same effect as devaluation. Such a type can easily make one question why one should exist at all, or why objects in general should have any justification for their existence since everything essential still goes on happening without them. This doubt may be justified in extreme cases, but not in the normal, since the objective stimulus is absolutely necessary to sensation and merely produces something different from what the external situation might lead one to expect.

[651] Seen from the outside, it looks as though the effect of the object did not penetrate into the subject at all. This impression is correct inasmuch as a subjective content does, in fact, intervene from the unconscious and intercept the effect of the object. The intervention may be so abrupt that the individual appears to be shielding himself directly from all objective influences. In more serious cases, such a protective defence actually does exist. Even with only a slight increase in the power of the unconscious,

the subjective component of sensation becomes so alive that it almost completely obscures the influence of the object. If the object is a person, he feels completely devalued, while the subject has an illusory conception of reality, which in pathological cases goes so far that he is no longer able to distinguish between the real object and the subjective perception. Although so vital a distinction reaches the vanishing point only in near-psychotic states, yet long before that the subjective perception can influence thought, feeling, and action to an excessive degree despite the fact that the object is clearly seen in all its reality. When its influence does succeed in penetrating into the subject—because of its special intensity or because of its complete analogy with the unconscious image—even the normal type will be compelled to *act* in accordance with the unconscious model. Such action has an illusory character unrelated to objective reality and is extremely disconcerting. It instantly reveals the reality-alienating subjectivity of this type. But when the influence of the object does not break through completely, it is met with well-intentioned neutrality, disclosing little sympathy yet constantly striving to soothe and adjust. The too low is raised a little, the too high is lowered, enthusiasm is damped down, extravagance restrained, and anything out of the ordinary reduced to the right formula—all this in order to keep the influence of the object within the necessary bounds. In this way the type becomes a menace to his environment because his total innocuousness is not altogether above suspicion. In that case he easily becomes a victim of the aggressiveness and domineeringness of others. Such men allow themselves to be abused and then take their revenge on the most unsuitable occasions with redoubled obtuseness and stubbornness.

[652] If no capacity for artistic expression is present, all impressions sink into the depths and hold consciousness under a spell, so that it becomes impossible to master their fascination by giving them conscious expression. In general, this type can organize his impressions only in archaic ways, because thinking and feeling are relatively unconscious and, if conscious at all, have at their disposal only the most necessary, banal, everyday means of expression. As conscious functions, they are wholly incapable of adequately reproducing his subjective perceptions.

This type, therefore, is uncommonly inaccessible to objective understanding, and he usually fares no better in understanding himself.

[653] Above all, his development alienates him from the reality of the object, leaving him at the mercy of his subjective perceptions, which orient his consciousness to an archaic reality, although his lack of comparative judgment keeps him wholly unconscious of this fact. Actually he lives in a mythological world, where men, animals, locomotives, houses, rivers, and mountains appear either as benevolent deities or as malevolent demons. That they appear thus to him never enters his head, though that is just the effect they have on his judgments and actions. He judges and acts as though he had such powers to deal with; but this begins to strike him only when he discovers that his sensations are totally different from reality. If he has any aptitude for objective reason, he will sense this difference as morbid; but if he remains faithful to his irrationality, and is ready to grant his sensations reality value, the objective world will appear a mere make-believe and a comedy. Only in extreme cases, however, is this dilemma reached. As a rule he resigns himself to his isolation and the banality of the world, which he has unconsciously made archaic.

[654] His unconscious is distinguished chiefly by the repression of intuition, which consequently acquires an extraverted and archaic character. Whereas true extraverted intuition is possessed of a singular resourcefulness, a “good nose” for objectively real possibilities, this archaicized intuition has an amazing flair for all the ambiguous, shadowy, sordid, dangerous possibilities lurking in the background. The real and conscious intentions of the object mean nothing to it; instead, it sniffs out every conceivable archaic motive underlying such an intention. It therefore has a dangerous and destructive quality that contrasts glaringly with the well-meaning innocuousness of the conscious attitude. So long as the individual does not hold too aloof from the object, his unconscious intuition has a salutary compensating effect on the rather fantastic and overcredulous attitude of consciousness. But as soon as the unconscious becomes antagonistic, the archaic intuitions come to the surface and exert their pernicious influence, forcing themselves on the individual and producing compulsive ideas of the most perverse kind.

The result is usually a compulsion neurosis, in which the hysterical features are masked by symptoms of exhaustion.

Intuition

[655] Introverted intuition is directed to the inner object, a term that might justly be applied to the contents of the unconscious. The relation of inner objects to consciousness is entirely analogous to that of outer objects, though their reality is not physical but psychic. They appear to intuitive perception as subjective images of things which, though not to be met with in the outside world, constitute the contents of the unconscious, and of the collective unconscious in particular. These contents *per se* are naturally not accessible to experience, a quality they have in common with external objects. For just as external objects correspond only relatively to our perception of them, so the phenomenal forms of the inner objects are also relative—products of their (to us) inaccessible essence and of the peculiar nature of the intuitive function.

[656] Like sensation, intuition has its subjective factor, which is suppressed as much as possible in the extraverted attitude but is the decisive factor in the intuition of the introvert. Although his intuition may be stimulated by external objects, it does not concern itself with external possibilities but with what the external object has released within him. Whereas introverted sensation is mainly restricted to the perception, via the unconscious, of the phenomena of innervation and is arrested there, introverted intuition suppresses this side of the subjective factor and perceives the image that caused the innervation. Supposing, for instance, a man is overtaken by an attack of psychogenic vertigo. Sensation is arrested by the peculiar nature of this disturbance of innervation, perceiving all its qualities, its intensity, its course, how it arose and how it passed, but not advancing beyond that to its content, to the thing that caused the disturbance. Intuition, on the other hand, receives from sensation only the impetus to its own immediate activity; it peers behind the scenes, quickly perceiving the inner image that gave rise to this particular form of expression—the attack of vertigo. It sees the image of a tottering man pierced through the heart by an arrow. This image fascinates the intuitive activity; it is arrested by it, and seeks to explore

every detail of it. It holds fast to the vision, observing with the liveliest interest how the picture changes, unfolds, and finally fades.

[657] In this way introverted intuition perceives all the background processes of consciousness with almost the same distinctness as extraverted sensation registers external objects. For intuition, therefore, unconscious images acquire the dignity of things. But, because intuition excludes the co-operation of sensation, it obtains little or no knowledge of the disturbances of innervation or of the physical effects produced by the unconscious images. The images appear as though detached from the subject, as though existing in themselves without any relation to him. Consequently, in the above-mentioned example, the introverted intuitive, if attacked by vertigo, would never imagine that the image he perceived might in some way refer to himself. To a judging type this naturally seems almost inconceivable, but it is none the less a fact which I have often come across in my dealings with intuitives.

[658] The remarkable indifference of the extraverted intuitive to external objects is shared by the introverted intuitive in relation to inner objects. Just as the extraverted intuitive is continually scenting out new possibilities, which he pursues with equal unconcern for his own welfare and for that of others, pressing on quite heedless of human considerations and tearing down what has just been built in his everlasting search for change, so the introverted intuitive moves from image to image, chasing after every possibility in the teeming womb of the unconscious, without establishing any connection between them and himself. Just as the world of appearances can never become a moral problem for the man who merely senses it, the world of inner images is never a moral problem for the intuitive. For both of them it is an aesthetic problem, a matter of perception, a “sensation.” Because of this, the introverted intuitive has little consciousness of his own bodily existence or of its effect on others. The extravert would say: “Reality does not exist for him, he gives himself up to fruitless fantasies.” The perception of the images of the unconscious, produced in such inexhaustible abundance by the creative energy of life, is of course fruitless from the standpoint of immediate utility. But since these images represent possible views of the world which may give life a new potential, this function, which to the outside

world is the strangest of all, is as indispensable to the total psychic economy as is the corresponding human type to the psychic life of a people. Had this type not existed, there would have been no prophets in Israel.

[659] Introverted intuition apprehends the images arising from the *a priori* inherited foundations of the unconscious. These archetypes, whose innermost nature is inaccessible to experience, are the precipitate of the psychic functioning of the whole ancestral line; the accumulated experiences of organic life in general, a million times repeated, and condensed into types. In these archetypes, therefore, all experiences are represented which have happened on this planet since primeval times. The more frequent and the more intense they were, the more clearly focussed they become in the archetype. The archetype would thus be, to borrow from Kant, the noumenon of the image which intuition perceives and, in perceiving, creates.

[660] Since the unconscious is not just something that lies there like a psychic *caput mortuum*, but coexists with us and is constantly undergoing transformations which are inwardly connected with the general run of events, introverted intuition, through its perception of these inner processes, can supply certain data which may be of the utmost importance for understanding what is going on in the world. It can even foresee new possibilities in more or less clear outline, as well as events which later actually do happen. Its prophetic foresight is explained by its relation to the archetypes, which represent the laws governing the course of all experienceable things.

The Introverted Intuitive Type

[661] The peculiar nature of introverted intuition, if it gains the ascendency, produces a peculiar type of man: the mystical dreamer and seer on the one hand, the artist and the crank on the other. The artist might be regarded as the normal representative of this type, which tends to confine itself to the perceptive character of intuition. As a rule, the intuitive stops at perception; perception is his main problem, and—in the case of a creative artist—the shaping of his perception. But the crank is content with a visionary idea by which he himself is shaped and determined.

Naturally the intensification of intuition often results in an extraordinary aloofness of the individual from tangible reality; he may even become a complete enigma to his immediate circle. If he is an artist, he reveals strange, far-off things in his art, shimmering in all colours, at once portentous and banal, beautiful and grotesque, sublime and whimsical. If not an artist, he is frequently a misunderstood genius, a great man "gone wrong," a sort of wise simpleton, a figure for "psychological" novels.

[662] Although the intuitive type has little inclination to make a moral problem of perception, since a strengthening of the judging functions is required for this, only a slight differentiation of judgment is sufficient to shift intuitive perception from the purely aesthetic into the moral sphere. A variety of this type is thus produced which differs essentially from the aesthetic, although it is none the less characteristic of the introverted intuitive. The moral problem arises when the intuitive tries to relate himself to his vision, when he is no longer satisfied with mere perception and its aesthetic configuration and evaluation, when he confronts the questions: What does this mean for me or the world? What emerges from this vision in the way of a duty or a task, for me or the world? The pure intuitive who represses his judgment, or whose judgment is held in thrall by his perceptive faculties, never faces this question squarely, since his only problem is the "know-how" of perception. He finds the moral problem unintelligible or even absurd, and as far as possible forbids his thoughts to dwell on the disconcerting vision. It is different with the morally oriented intuitive. He reflects on the meaning of his vision, and is less concerned with developing its aesthetic possibilities than with the moral effects which emerge from its intrinsic significance. His judgment allows him to discern, though often only darkly, that he, as a man and a whole human being, is somehow involved in his vision, that it is not just an object to be perceived, but wants to participate in the life of the subject. Through this realization he feels bound to transform his vision into his own life. But since he tends to rely most predominantly on his vision, his moral efforts become one-sided; he makes himself and his life symbolic—adapted, it is true, to the inner and eternal meaning of events, but unadapted to present-day reality. He thus deprives himself of any influence upon it because he remains uncomprehended. His language is

not the one currently spoken—it has become too subjective. His arguments lack the convincing power of reason. He can only profess or proclaim. His is “the voice of one crying in the wilderness.”

[663] What the introverted intuitive represses most of all is the sensation of the object, and this colours his whole unconscious. It gives rise to a compensatory extraverted sensation function of an archaic character. The unconscious personality can best be described as an extraverted sensation type of a rather low and primitive order. Instinctuality and intemperance are the hallmarks of this sensation, combined with an extraordinary dependence on sense-impressions. This compensates the rarefied air of the intuitive’s conscious attitude, giving it a certain weight, so that complete “sublimation” is prevented. But if, through a forced exaggeration of the conscious attitude, there should be a complete subordination to inner perceptions, the unconscious goes over to the opposition, giving rise to compulsive sensations whose excessive dependence on the object directly contradicts the conscious attitude. The form of neurosis is a compulsion neurosis with hypochondriacal symptoms, hypersensitivity of the sense organs, and compulsive ties to particular persons or objects.

Summary of the Introverted Irrational Types

[664] The two types just described are almost inaccessible to judgment from outside. Being introverted, and having in consequence little capacity or desire for expression, they offer but a frail handle in this respect. As their main activity is directed inwards, nothing is outwardly visible but reserve, secretiveness, lack of sympathy, uncertainty, and an apparently groundless embarrassment. When anything does come to the surface, it is generally an indirect manifestation of the inferior and relatively unconscious functions. Such manifestations naturally arouse all the current prejudices against this type. Accordingly they are mostly underestimated, or at least misunderstood. To the extent that they do not understand themselves—because they very largely lack judgment—they are also powerless to understand why they are so constantly underestimated by the public. They cannot see that their efforts to be forthcoming are, as a matter of fact, of an inferior character. Their vision

is enthralled by the richness of subjective events. What is going on inside them is so captivating, and of such inexhaustible charm, that they simply do not notice that the little they do manage to communicate contains hardly anything of what they themselves have experienced. The fragmentary and episodic character of their communications makes too great a demand on the understanding and good will of those around them; also, their communications are without the personal warmth that alone carries the power of conviction. On the contrary, these types have very often a harsh, repelling manner, though of this they are quite unaware and did not intend it. We shall form a fairer judgment of such people, and show them greater forbearance, when we begin to realize how hard it is to translate into intelligible language what is perceived within. Yet this forbearance must not go so far as to exempt them altogether from the need to communicate. This would only do them the greatest harm. Fate itself prepares for them, perhaps even more than for other men, overwhelming external difficulties which have a very sobering effect on those intoxicated by the inner vision. Often it is only an intense personal need that can wring from them a human confession.

[665] From an extraverted and rationalistic standpoint, these types are indeed the most useless of men. But, viewed from a higher standpoint, they are living evidence that this rich and varied world with its overflowing and intoxicating life is not purely external, but also exists within. These types are admittedly one-sided specimens of nature, but they are an object-lesson for the man who refuses to be blinded by the intellectual fashion of the day. In their own way, they are educators and promoters of culture. Their life teaches more than their words. From their lives, and not least from their greatest fault—their inability to communicate—we may understand one of the greatest errors of our civilization, that is, the superstitious belief in verbal statements, the boundless overestimation of instruction by means of words and methods. A child certainly allows himself to be impressed by the grand talk of his parents, but do they really imagine he is educated by it? Actually it is the parents’ lives that educate the child—what they add by word and gesture at best serves only to confuse him. The same holds good for the teacher. But we have such a belief in method that, if only the method be good, the

practice of it seems to sanctify the teacher. An inferior man is never a good teacher. But he can conceal his pernicious inferiority, which secretly poisons the pupil, behind an excellent method or an equally brilliant gift of gab. Naturally the pupil of riper years desires nothing better than the knowledge of useful methods, because he is already defeated by the general attitude, which believes in the all-conquering method. He has learned that the emptiest head, correctly parroting a method, is the best pupil. His whole environment is an optical demonstration that all success and all happiness are outside, and that only the right method is needed to attain the haven of one's desires. Or does, perchance, the life of his religious instructor demonstrate the happiness which radiates from the treasure of the inner vision? The irrational introverted types are certainly no teachers of a more perfect humanity; they lack reason and the ethics of reason. But their lives teach the other possibility, the interior life which is so painfully wanting in our civilization.

d. The Principal and Auxiliary Functions

[666] In the foregoing descriptions I have no desire to give my readers the impression that these types occur at all frequently in such pure form in actual life. They are, as it were, only Galtonesque family portraits, which single out the common and therefore typical features, stressing them disproportionately, while the individual features are just as disproportionately effaced. Closer investigation shows with great regularity that, besides the most differentiated function, another, less differentiated function of secondary importance is invariably present in consciousness and exerts a co-determining influence.

[667] To recapitulate for the sake of clarity: the products of all functions can be conscious, but we speak of the "consciousness" of a function only when its use is under the control of the will and, at the same time, its governing principle is the decisive one for the orientation of consciousness. This is true when, for instance, thinking is not a mere afterthought, or rumination, and when its conclusions possess an absolute validity, so that the logical result holds good both as a motive and as a guarantee of practical action without the backing of any further evidence. This absolute sovereignty always belongs, empirically, to one function

alone, and *can* belong only to one function, because the equally independent intervention of another function would necessarily produce a different orientation which, partially at least, would contradict the first. But since it is a vital condition for the conscious process of adaptation always to have clear and unambiguous aims, the presence of a second function of equal power is naturally ruled out. This other function, therefore, can have only a secondary importance, as has been found to be the case in practice. Its secondary importance is due to the fact that it is not, like the primary function, valid in its own right as an absolutely reliable and decisive factor, but comes into play more as an auxiliary or complementary function. Naturally only those functions can appear as auxiliary whose nature is not opposed to the dominant function. For instance, feeling can never act as the second function alongside thinking, because it is by its very nature too strongly opposed to thinking. Thinking, if it is to be real thinking and true to its own principle, must rigorously exclude feeling. This, of course, does not do away with the fact that there are individuals whose thinking and feeling are on the same level, both being of equal motive power for consciousness. But in these cases there is also no question of a differentiated type, but merely of relatively undeveloped thinking and feeling. The uniformly conscious or uniformly unconscious state of the functions is, therefore, the mark of a primitive mentality.

[668] Experience shows that the secondary function is always one whose nature is different from, though not antagonistic to, the primary function. Thus, thinking as the primary function can readily pair with intuition as the auxiliary, or indeed equally well with sensation, but, as already observed, never with feeling. Neither intuition nor sensation is antagonistic to thinking; they need not be absolutely excluded, for they are not of a nature equal and opposite to thinking, as feeling is—which, as a judging function, successfully competes with thinking—but are functions of perception, affording welcome assistance to thought. But as soon as they reached the same level of differentiation as thinking, they would bring about a change of attitude which would contradict the whole trend of thinking. They would change the judging attitude into a perceiving one; whereupon the principle of rationality indispensable to

thought would be suppressed in favour of the irrationality of perception. Hence the auxiliary function is possible and useful only in so far as it *serves* the dominant function, without making any claim to the autonomy of its own principle.

[669] For all the types met with in practice, the rule holds good that besides the conscious, primary function there is a relatively unconscious, auxiliary function which is in every respect different from the nature of the primary function. The resulting combinations present the familiar picture of, for instance, practical thinking allied with sensation, speculative thinking forging ahead with intuition, artistic intuition selecting and presenting its images with the help of feeling-values, philosophical intuition systematizing its vision into comprehensible thought by means of a powerful intellect, and so on.

[670] The unconscious functions likewise group themselves in patterns correlated with the conscious ones. Thus, the correlative of conscious, practical thinking may be an unconscious, intuitive-feeling attitude, with feeling under a stronger inhibition than intuition. These peculiarities are of interest only for one who is concerned with the practical treatment of such cases, but it is important that he should know about them. I have frequently observed how an analyst, confronted with a terrific thinking type, for instance, will do his utmost to develop the feeling function directly out of the unconscious. Such an attempt is foredoomed to failure, because it involves too great a violation of the conscious standpoint. Should the violation nevertheless be successful, a really compulsive dependence of the patient on the analyst ensues, a transference that can only be brutally terminated, because, having been left without a standpoint, the patient has made his standpoint the analyst. But the approach to the unconscious and to the most repressed function is disclosed, as it were, of its own accord, and with adequate protection of the conscious standpoint, when the way of development proceeds via the auxiliary function—in the case of a rational type via one of the irrational functions. This gives the patient a broader view of what is happening, and of what is possible, so that his consciousness is sufficiently protected against the inroads of the unconscious. Conversely, in order to cushion

the impact of the unconscious, an irrational type needs a stronger development of the rational auxiliary function present in consciousness.

[671] The unconscious functions exist in an archaic, animal state. Hence their symbolic appearance in dreams and fantasies is usually represented as the battle or encounter between two animals or monsters.

XI

DEFINITIONS

[672] It may perhaps seem superfluous that I should add to my text a chapter dealing solely with definitions. But ample experience has taught me that, in psychological works particularly, one cannot proceed too cautiously in regard to the concepts and terms one uses: for nowhere do such wide divergences of meaning occur as in the domain of psychology, creating only too frequently the most obstinate misunderstandings. This drawback is due not only to the fact that the science of psychology is still in its infancy; there is the further difficulty that the empirical material, the object of scientific investigation, cannot be displayed in concrete form, as it were, before the eyes of the reader. The psychological investigator is always finding himself obliged to make extensive use of an indirect method of description in order to present the reality he has observed. Only in so far as elementary facts are communicated which are amenable to quantitative measurement can there be any question of a direct presentation. But how much of the actual psychology of man can be experienced and observed as quantitatively measurable facts? Such facts do exist, and I believe I have shown in my association studies[1] that extremely complicated psychological facts are accessible to quantitative measurement. But anyone who has probed more deeply into the nature of psychology, demanding something more of it as a science than that it should confine itself within the narrow limits of the scientific method, will also have realized that an experimental method will never succeed in doing justice to the nature of the human psyche, nor will it ever project anything like a true picture of the more complex psychic phenomena.

[673] But once we leave the domain of measurable facts we are dependent on *concepts*, which have now to take over the role of measure and number. The precision which measure and number lend to the observed fact can be replaced only by the *precision of the concept*. Unfortunately, as every investigator and worker in this field knows only too well,

current psychological concepts are so imprecise and so ambiguous that mutual understanding is practically impossible. One has only to take the concept “feeling,” for instance, and try to visualize everything this concept comprises, to get some sort of notion of the variability and ambiguity of psychological concepts in general. And yet the concept of feeling does express something characteristic that, though not susceptible of quantitative measurement, nevertheless palpably exists. One simply cannot resign oneself, as Wundt does in his physiological psychology, to a mere denial of such essential and fundamental phenomena, and seek to replace them by elementary facts or to resolve them into such. In this way an essential part of psychology is thrown overboard.

[674] In order to escape the ill consequences of this overvaluation of the scientific method, one is obliged to have recourse to well-defined concepts. But in order to arrive at such concepts, the collaboration of many workers would be needed, a sort of *consensus gentium*. Since this is not within the bounds of possibility at present, the individual investigator must at least try to give his concepts some fixity and precision, and this can best be done by discussing the meaning of the concepts he employs so that everyone is in a position to see what in fact he means by them.

[675] To meet this need I now propose to discuss my principal psychological concepts in alphabetical order, and I would like the reader to refer to these explanations in case of doubt. It goes without saying that these definitions and explanations are merely intended to establish the sense in which I myself use the concepts; far be it from me to affirm that this use is in all circumstances the only possible one or the absolutely right one.

[676] 1. ABSTRACTION, as the word itself indicates, is the drawing out or singling out of a content (a meaning, a general characteristic, etc.) from a context made up of other elements whose combination into a whole is something unique or individual and therefore cannot be compared with anything else. Singularity, uniqueness, and incomparability are obstacles to cognition; hence the other elements associated with a content that is felt to be the essential one are bound to appear irrelevant.

[677] Abstraction, therefore, is a form of mental activity that frees this content from its association with the irrelevant elements by distinguishing it from them or, in other words, *differentiating* it (v. *Differentiation*). In its wider sense, everything is *abstract* that is separated from its association with elements that are felt to have no relevance to its meaning.

[678] Abstraction is an activity pertaining to the psychological *functions* (q.v.) in general. There is an abstract *thinking*, just as there is abstract *feeling, sensation*, and *intuition* (qq. v.). Abstract thinking singles out the rational, logical qualities of a given content from its intellectually irrelevant components. Abstract feeling does the same with a content characterized by its feeling-values; similarly with sensation and intuition. Hence, not only are there abstract thoughts but also abstract feelings, the latter being defined by Sully as intellectual, aesthetic, and moral.[2] To these Nahlowsky adds all religious feelings.[3] Abstract feelings would, in my view, correspond to the "higher" or "ideal" feelings of Nahlowsky. I put abstract feelings on the same level as abstract thoughts. Abstract sensation would be aesthetic as opposed to sensuous *sensation* (q.v.), and abstract intuition would be symbolic as opposed to fantastic *intuition* (v. *Fantasy* and *Intuition)*.

[679] In this work I also associate abstraction with the awareness of the psycho-energic process it involves. When I take an abstract attitude to an object, I do not allow the object to affect me in its totality; I focus my attention on one part of it by excluding all the irrelevant parts. My aim is to disembarrass myself of the object as a singular and unique whole and to abstract only a portion of this whole. No doubt I am aware of the whole, but I do not immerse myself in this awareness; my interest does not flow into the whole, but draws back from it, pulling the abstracted portion into myself, into my conceptual world, which is already prepared or constellated for the purpose of abstracting a part of the object. (It is only because of a subjective constellation of concepts that I am able to abstract from the object.) "Interest" I conceive as the energy or *libido* (q.v.) which I bestow on the object as a value, or which the object draws from me, maybe even against my will or unknown to myself. I visualize the process of abstraction as a withdrawal of libido from the object, as a

backflow of value from the object into a subjective, abstract content. For me, therefore, abstraction amounts to an energic *devaluation of the object*. In other words, abstraction is an introverting movement of libido (v. *Introversion*).

[680] I call an *attitude* (q.v.) *abstractive* when it is both introverting and at the same time *assimilates* (q.v.) a portion of the object, felt to be essential, to abstract contents already constellated in the subject. The more abstract a content is, the more it is *irrepresentable*. I subscribe to Kant's view that a concept gets more abstract "the more the differences of things are left out of it,"[4] in the sense that abstraction at its highest level detaches itself absolutely from the object, thereby attaining the extreme limit of irrepresentability. It is this pure "abstract" which I term an *idea* (q.v.). Conversely, an abstract that still possesses some degree of representability or plasticity is a *concrete* concept (v. *Concretism*).

[681] 2. AFFECT. By the term affect I mean a state of feeling characterized by marked physical innervation on the one hand and a peculiar disturbance of the ideational process on the other.[5] I use *emotion* as synonymous with affect. I distinguish—in contrast to Bleuler (v. *Affectivity)—feeling* (q.v.) from affect, in spite of the fact that the dividing line is fluid, since every feeling, after attaining a certain strength, releases physical innervations, thus becoming an affect. For practical reasons, however, it is advisable to distinguish affect from feeling, since feeling can be a voluntarily disposable function, whereas affect is usually not. Similarly, affect is clearly distinguished from feeling by quite perceptible physical innervations, while feeling for the most part lacks them, or else their intensity is so slight that they can be demonstrated only by the most delicate instruments, as in the case of psychogalvanic phenomena.[6] Affect becomes cumulative through the sensation of the physical innervations released by it. This observation gave rise to the James-Lange theory of affect, which derives affect causally from physical innervations. As against this extreme view, I regard affect on the one hand as a psychic feeling-state and on the other as a physiological innervation-state, each of which has a cumulative, reciprocal effect on the other. That is to say, a component of sensation

allies itself with the intensified feeling, so that the affect is approximated more to *sensation* (q.v.) and essentially differentiated from the feeling-state. Pronounced affects, i.e., affects accompanied by violent physical innervations, I do not assign to the province of feeling but to that of the sensation function.

[682] 3. AFFECTIVITY is a term coined by Bleuler. It designates and comprises "not only the affects proper, but also the slight feelings or feeling-tones of pain and pleasure."[7] Bleuler distinguishes affectivity from the sense-perceptions and physical sensations as well as from "feelings" that may be regarded as inner perception processes (e.g., the "feeling" of certainty, of probability, etc.) or vague thoughts or discernments.[8]

4. ANIMA / ANIMUS, V. SOUL; SOUL-IMAGE.

[683] 5. APPERCEPTION is a psychic process by which a new content is articulated with similar, already existing contents in such a way that it becomes understood, apprehended, or "clear."[9] We distinguish *active* from *passive* apperception. The first is a process by which the subject, of his own accord and from his own motives, consciously apprehends a new content with attention and assimilates it to other contents already constellated; the second is a process by which a new content forces itself upon consciousness either from without (through the senses) or from within (from the unconscious) and, as it were, compels attention and enforces apprehension. In the first case the activity lies with the *ego* (q.v.); in the second, with the self-enforcing new content.

[684] 6. ARCHAISM is a term by which I designate the "oldness" of psychic contents or *functions* (q.v.). By this I do not mean qualities that are "archaistic" in the sense of being pseudo-antique or copied, as in later Roman sculpture or nineteenth-century Gothic, but qualities that have the character of *relics*. We may describe as archaic all psychological traits that exhibit the qualities of the primitive mentality. It is clear that archaism attaches primarily to the *fantasies* (q.v.) of the unconscious, i.e., to the products of unconscious fantasy activity which reach

consciousness. An *image* (q.v.) has an archaic quality when it possesses unmistakable mythological parallels.[10] Archaic, too, are the associations-by-analogy of unconscious fantasy, and so is their symbolism (v. *Symbol*). The relation of *identity* (q.v.) with an object, or *participation mystique* (q.v.), is likewise archaic. *Concretism* (q.v.) of thought and feeling is archaic; also compulsion and inability to control oneself (ecstatic or trance states, possession, etc.). Fusion of the psychological functions (v. *Differentiation*), of thinking with feeling, feeling with sensation, feeling with intuition, and so on, is archaic, as is also the fusion of part of a function with its counterpart, e.g., positive with negative feeling, or what Bleuler calls ambitendency and ambivalence, and such phenomena as *colour hearing*.

6a. ARCHETYPE,[11] v. IMAGE, primordial: also IDEA.

[685] 7. ASSIMILATION is the approximation of a new content of consciousness to already constellated subjective material,[12] the similarity of the new content to this material being especially accentuated in the process, often to the detriment of its independent qualities.[13] Fundamentally, assimilation is a process of *apperception* (q.v.), but is distinguished from apperception by this element of approximation to the subjective material. It is in this sense that Wundt says:[14]

> This way of building up ideas [i.e., by assimilation] is most conspicuous when the assimilating elements arise through reproduction, and the assimilated ones through an immediate sense impression. For then the elements of memory-images are projected, as it were, into the external object, so that, particularly when the object and the reproduced elements differ substantially from one another, the finished sense impression appears as an illusion, deceiving us as to the real nature of things.

[686] I use the term assimilation in a somewhat broader sense, as the approximation of object to subject in general, and with it I contrast *dissimilation*, as the approximation of subject to object, and a consequent alienation of the subject from himself in favour of the object, whether it be an external object or a “psychological” object, for instance an idea.

[687] 8. ATTITUDE. This concept is a relatively recent addition to psychology. It originated with Müller and Schumann.[15] Whereas Külpe[16] defines attitude as a predisposition of the sensory or motor centres to react to a particular stimulus or constant impulse, Ebbinghaus[17] conceives it in a wider sense as an effect of training which introduces the factor of habit into individual acts that deviate from the habitual. Our use of the concept derives from Ebbinghaus's. For us, attitude is a readiness of the psyche to act or react in a certain way. The concept is of particular importance for the psychology of complex psychic processes because it expresses the peculiar fact that certain stimuli have too strong an effect on some occasions, and little or no effect on others. To have an attitude means to be ready for something definite, even though this something is unconscious; for having an attitude is synonymous with an *a priori* orientation to a definite thing, no matter whether this be represented in consciousness or not. The state of readiness, which I conceive attitude to be, consists in the presence of a certain subjective constellation, a definite combination of psychic factors or contents, which will either determine action in this or that definite direction, or react to an external stimulus in a definite way. Active *apperception* (q.v.) is impossible without an attitude. An attitude always has a point of reference; this can be either conscious or unconscious, for in the act of apperceiving a new content an already constellated combination of contents will inevitably accentuate those qualities or elements that appear to belong to the subjective content. Hence a selection or judgment takes place which excludes anything irrelevant. As to what is or is not relevant, this is decided by the already constellated combination of contents. Whether the point of reference is conscious or unconscious does not affect the selectivity of the attitude, since the selection is implicit in the attitude and takes place automatically. It is useful, however, to distinguish between the two, because the presence of two attitudes is extremely frequent, one conscious and the other unconscious. This means that consciousness has a constellation of contents different from that of the unconscious, a duality particularly evident in neurosis.

[688] The concept of attitude has some affinity with Wundt's concept of *apperception*, with the difference that apperception includes the process

of relating the already constellated contents to the new content to be apperceived, whereas attitude relates exclusively to the subjectively constellated content. Apperception is, as it were, the bridge which connects the already existing, constellated contents with the new one, whereas attitude would be the support or abutment of the bridge on the one bank, and the new content the abutment on the other bank. Attitude signifies *expectation*, and expectation always operates selectively and with a sense of direction. The presence of a strongly feeling-toned content in the conscious field of vision forms (maybe with other contents) a particular constellation that is equivalent to a definite attitude, because such a content promotes the perception and apperception of everything similar to itself and blacks out the dissimilar. It creates an attitude that corresponds to it. This automatic phenomenon is an essential cause of the one-sidedness of conscious *orientation* (q.v.). It would lead to a complete loss of equilibrium if there were no self-regulating, compensatory (v. *Compensation*) function in the psyche to correct the conscious attitude. In this sense, therefore, the duality of attitude is a normal phenomenon, and it plays a disturbing role only when the one-sidedness is excessive.

[689] Attitude in the sense of ordinary *attention* can be a relatively unimportant subsidiary phenomenon, but it can also be a general principle governing the whole psyche. Depending on environmental influences and on the individual’s education, general experience of life, and personal convictions, a subjective constellation of contents may be habitually present, continually moulding a certain attitude that may affect the minutest details of his life. Every man who is particularly aware of the seamy side of existence, for instance, will naturally have an attitude that is constantly on the look-out for something unpleasant. This conscious imbalance is compensated by an unconscious expectation of pleasure. Again, an oppressed person has a conscious attitude that always anticipates oppression; he selects this factor from the general run of experience and scents it out everywhere. His unconscious attitude, therefore, aims at power and superiority.

[690] The whole psychology of an individual even in its most fundamental features is oriented in accordance with his habitual attitude. Although the

general psychological laws operate in every individual, they cannot be said to be characteristic of a particular individual, since the way they operate varies in accordance with his habitual attitude. The habitual attitude is always a resultant of all the factors that exert a decisive influence on the psyche, such as innate disposition, environmental influences, experience of life, insights and convictions gained through *differentiation* (q.v.), *collective* (q.v.) views, etc. Were it not for the absolutely fundamental importance of attitude, the existence of an individual psychology would be out of the question. But the habitual attitude brings about such great displacements of energy, and so modifies the relations between the individual *functions* (q.v.), that effects are produced which often cast doubt on the validity of general psychological laws. In spite of the fact, for instance, that some measure of sexual activity is held to be indispensable on physiological and psychological grounds, there are individuals who, without loss to themselves, i.e., without pathological effects or any demonstrable restriction of their powers, can, to a very great extent, dispense with it, while in other cases quite insignificant disturbances in this area can have far-reaching consequences. How enormous the individual differences are can be seen most clearly, perhaps, in the question of likes and dislikes. Here practically all rules go by the board. What is there, in the last resort, that has not at some time given man pleasure, and what is there that has not caused him pain? Every instinct, every function can be subordinated to another. The ego instinct or power instinct can make sexuality its servant, or sexuality can exploit the ego. Thinking may overrun everything else, or feeling swallow up thinking and sensation, all depending on the attitude.

[691] At bottom, attitude is an individual phenomenon that eludes scientific investigation. In actual experience, however, certain typical attitudes can be distinguished in so far as certain psychic functions can be distinguished. When a function habitually predominates, a typical attitude is produced. According to the nature of the differentiated function, there will be constellations of contents that create a corresponding attitude. There is thus a typical thinking, feeling, sensation, and intuitive attitude. Besides these purely psychological

attitudes, whose number might very well be increased, there are also social attitudes, namely, those on which a collective idea has set its stamp. They are characterized by the various “-isms.” These collective attitudes are very important, in some cases even outweighing the importance of the individual attitude.

[692] 9. COLLECTIVE. I term *collective* all psychic contents that belong not to one individual but to many, i.e., to a society, a people, or to mankind in general. Such contents are what Lévy-Bruhl[18] calls the *représentations collectives* of primitives, as well as general concepts of justice, the state, religion, science, etc., current among civilized man. It is not only concepts and ways of looking at things, however, that must be termed collective, but also *feelings*. Among primitives, the *représentations collectives* are at the same time collective feelings, as Lévy-Bruhl has shown. Because of this collective feeling-value he calls the *représentations collectives* “mystical,” since they are not merely intellectual but emotional.[19] Among civilized peoples, too, certain collective ideas—God, justice, fatherland, etc.—are bound up with collective feelings. This collective quality adheres not only to particular psychic elements or contents but to whole *functions* (q.v.). Thus the thinking function as a whole can have a collective quality, when it possesses general validity and accords with the laws of logic. Similarly, the feeling function as a whole can be collective, when it is identical with the general feeling and accords with general expectations, the general moral consciousness, etc. In the same way, sensation and intuition are collective when they are at the same time characteristic of a large group of men. The antithesis of collective is *individual* (q.v.).

[693] 10. COMPENSATION means *balancing, adjusting, supplementing*. The concept was introduced into the psychology of the neuroses by Adler.[20] He understands by it the functional balancing of the feeling of inferiority by a compensatory psychological system, comparable to the compensatory development of organs in organ inferiority.[21] He says:

> With the breaking away from the maternal organism the struggle with the outer world begins for these inferior organs and organ systems, a struggle

> which must necessarily break out and declare itself with greater violence than in a normally developed apparatus. … Nevertheless, the foetal character supplies at the same time the heightened possibility of compensation and overcompensation, increases the capacity for adaptation to usual and unusual resistance, and ensures the development of new and higher forms, of new and higher achievements.[22]

The neurotic's feeling of inferiority, which according to Adler corresponds aetiologically to an organ inferiority, gives rise to an "auxiliary device,"[23] that is, a compensation, which consists in the setting up of a "guiding fiction" to balance the inferiority. The "guiding fiction" is a psychological system that endeavours to turn an inferiority into a superiority. The significant thing about this conception is the undeniable and empirically demonstrable existence of a compensating function in the sphere of psychological processes. It corresponds to a similar function in the physiological sphere, namely, the self-regulation of the living organism.

[694] Whereas Adler restricts his concept of compensation to the balancing of inferiority feelings, I conceive it as functional adjustment in general, an inherent self-regulation of the psychic apparatus.[24] In this sense, I regard the activity of the *unconscious* (q.v.) as a balancing of the one-sidedness of the general *attitude* (q.v.) produced by the function of *consciousness* (q.v.). Psychologists often compare consciousness to the eye: we speak of a visual field and a focal point of consciousness. The nature of consciousness is aptly characterized by this simile: only a limited number of contents can be held in the conscious field at the same time, and of these only a few can attain the highest grade of consciousness. The activity of consciousness is *selective*. Selection demands *direction*. But direction requires the *exclusion of everything irrelevant*. This is bound to make the conscious *orientation* (q.v.) one-sided. The contents that are excluded and inhibited by the chosen direction sink into the unconscious, where they form a counterweight to the conscious orientation. The strengthening of this counterposition keeps pace with the increase of conscious one-sidedness until finally a noticeable tension is produced. This tension inhibits the activity of consciousness to a certain extent, and though at first the inhibition can be

broken down by increased conscious effort, in the end the tension becomes so acute that the repressed unconscious contents break through in the form of dreams and spontaneous *images* (q.v.). The more one-sided the conscious attitude, the more antagonistic are the contents arising from the unconscious, so that we may speak of a real opposition between the two. In this case the compensation appears in the form of a counter-function, but this case is extreme. As a rule, the unconscious compensation does not run counter to consciousness, but is rather a balancing or supplementing of the conscious orientation. In dreams, for instance, the unconscious supplies all those contents that are constellated by the conscious situation but are inhibited by conscious selection, although a knowledge of them would be indispensable for complete adaptation.

[695] Normally, compensation is an unconscious process, i.e., an unconscious regulation of conscious activity. In neurosis the unconscious appears in such stark contrast to the conscious state that compensation is disturbed. The aim of analytical therapy, therefore, is a realization of unconscious contents in order that compensation may be re-established.

[696] 11. CONCRETISM. By this I mean a peculiarity of thinking and feeling which is the antithesis of *abstraction* (q.v.). The actual meaning of *concrete* is “grown together.” A concretely thought concept is one that has grown together or coalesced with other concepts. Such a concept is not abstract, not segregated, not thought “in itself,” but is always alloyed and related to something else. It is not a differentiated concept, but is still embedded in the material transmitted by sense-perception. Concretistic *thinking* (q.v.) operates exclusively with concrete concepts and percepts, and is constantly related to *sensation* (q.v.). Similarly, concretistic *feeling* (q.v.) is never segregated from its sensuous context.

[697] Primitive thinking and feeling are entirely concretistic; they are always related to sensation. The thought of the primitive has no detached independence but clings to material phenomena. It rises at most to the level of *analogy*. Primitive feeling is equally bound to material phenomena. Both of them depend on sensation and are only slightly differentiated from it. Concretism, therefore, is an *archaism* (q.v.). The

magical influence of the fetish is not experienced as a subjective state of feeling, but sensed as a magical effect. That is concretistic feeling. The primitive does not experience the idea of divinity as a subjective content; for him the sacred tree is the abode of the god, or even the god himself. That is concretistic thinking. In civilized man, concretistic thinking consists in the inability to conceive of anything except immediately obvious facts transmitted by the senses, or in the inability to discriminate between subjective feeling and the sensed object.

[698] Concretism is a concept which falls under the more general concept of *participation mystique* (q.v.). Just as the latter represents a fusion of the individual with external objects, concretism represents a fusion of thinking and feeling with sensation, so that the object of one is at the same time the object of the other. This fusion prevents any differentiation of thinking and feeling and keeps them both within the sphere of sensation; they remain its servants and can never be developed into pure functions. The result is a predominance of the sensation factor in psychological *orientation* (q.v.). (Concerning the importance of this factor, v. *Sensation*.)

[699] The disadvantage of concretism is the subjection of the functions to sensation. Because sensation is the perception of physiological stimuli, concretism either rivets the function to the sensory sphere or constantly leads back to it. This results in a bondage of the psychological functions to the senses, favouring the influence of sensuous facts at the expense of the psychic independence of the individual. So far as the recognition of facts is concerned this orientation is naturally of value, but not as regards the *interpretation* of facts and their relation to the individual. Concretism sets too high a value on the importance of facts and suppresses the freedom of the individual for the sake of objective data. But since the individual is conditioned not merely by physiological stimuli but by factors which may even be opposed to external realities, concretism results in a *projection* (q.v.) of these inner factors into the objective data and produces an almost superstitious veneration of mere facts, as is precisely the case with the primitive. A good example of concretistic feeling is seen in the excessive importance which Nietzsche attached to diet, and in the materialism of Moleschott (“Man is what he eats”). An

example of the superstitious overvaluation of facts would be the hypostatizing of the concept of energy in Ostwald's monism.

[700] 12. CONSCIOUSNESS. By consciousness I understand the relation of psychic contents to the *ego* (q.v.), in so far as this relation is perceived as such by the ego.[25] Relations to the ego that are not perceived as such are *unconscious* (q.v.). Consciousness is the function or activity[26] which maintains the relation of psychic contents to the ego. Consciousness is not identical with the *psyche* (v. *Soul*), because the psyche represents the totality of all psychic contents, and these are not necessarily all directly connected with the ego, i.e., related to it in such a way that they take on the quality of consciousness. A great many psychic complexes exist which are not all necessarily connected with the ego.[27]

[701] 13. CONSTRUCTIVE. This concept is used by me in an equivalent sense to *synthetic*, almost in fact as an illustration of it. Constructive means "building up." I use *constructive* and *synthetic* to designate a method that is the antithesis of the *reductive* (q.v.).[28] The constructive method is concerned with the elaboration of the products of the unconscious (dreams, fantasies, etc.; v. *Fantasy*). It takes the unconscious product as a symbolic expression (v. *Symbol*) which anticipates a coming phase of psychological development.[29] Maeder actually speaks of a *prospective function* of the *unconscious* (q.v.), which half playfully anticipates future developments.[30] Adler, too, recognizes an anticipatory function of the unconscious.[31] It is certain that the product of the unconscious cannot be regarded as a finished thing, as a sort of end-product, for that would be to deny it any purposive significance. Freud himself allows the dream a teleological role at least as the "guardian of sleep,"[32] though for him its prospective function is essentially restricted to "wishing." The purposive character of unconscious tendencies cannot be contested *a priori* if we are to accept their analogy with other psychological or physiological functions. We conceive the product of the unconscious, therefore, as an expression oriented to a goal or purpose, but characterizing its objective in symbolic language.[33]

[702] In accordance with this conception, the constructive method of interpretation is not so much concerned with the primary sources of the unconscious product, with its raw materials, so to speak, as with bringing its symbolism to a general and comprehensible expression. The "free associations" of the subject are considered with respect to their aim and not with respect to their derivation. They are viewed from the angle of future action or inaction; at the same time, their relation to the conscious situation is carefully taken into account, for, according to the *compensation* (q.v.) theory, the activity of the unconscious has an essentially complementary significance for the conscious situation. Since it is a question of an anticipatory *orientation* (q.v.), the actual relation to the object does not loom so large as in the reductive procedure, which is concerned with actual relations to the object in the past. It is more a question of the subjective *attitude* (q.v.), the object being little more than a signpost pointing to the tendencies of the subject. The aim of the constructive method, therefore, is to elicit from the unconscious product a meaning that relates to the subject's future attitude. Since, as a rule, the unconscious can create only symbolic expressions, the constructive method seeks to elucidate the symbolically expressed meaning in such a way as to indicate how the conscious orientation may be corrected, and how the subject may act in harmony with the unconscious.

[703] Thus, just as no psychological method of interpretation relies exclusively on the associative material supplied by the analysand, the constructive method also makes use of comparative material. And just as reductive interpretation employs parallels drawn from biology, physiology, folklore, literature, and other sources, the constructive treatment of an intellectual problem will make use of philosophical parallels, while the treatment of an intuitive problem will depend more on parallels from mythology and the history of religion.

[704] The constructive method is necessarily *individualistic*, since a future collective attitude can develop only through the individual. The reductive method, on the contrary, is *collective* (q.v.), since it leads back from the individual to basic collective attitudes or facts. The constructive method can also be directly applied by the subject to his own material, in which case it is an *intuitive* method, employed to elucidate the general meaning

of an unconscious product. This elucidation is the result of an *associative* (as distinct from actively *apperceptive*, q.v.) addition of further material, which so enriches the, symbolic product (e.g., a dream) that it eventually attains a degree of clarity sufficient for conscious comprehension. It becomes interwoven with more general associations and is thereby assimilated.

[705] 14. DIFFERENTIATION means the development of differences, the separation of parts from a whole. In this work I employ the concept of differentiation chiefly with respect to the psychological *functions* (q.v.). So long as a function is still so fused with one or more other functions—thinking with feeling, feeling with sensation, etc.—that it is unable to operate on its own, it is in an *archaic* (q.v.) condition, i.e., not differentiated, not separated from the whole as a special part and existing by itself. Undifferentiated thinking is incapable of thinking apart from other functions; it is continually mixed up with sensations, feelings, intuitions, just as undifferentiated feeling is mixed up with sensations and fantasies, as for instance in the sexualization (Freud) of feeling and thinking in neurosis. As a rule, the undifferentiated function is also characterized by ambivalence and ambitendency,[34] i.e., every position entails its own negation, and this leads to characteristic inhibitions in the use of the undifferentiated function. Another feature is the fusing together of its separate components; thus, undifferentiated sensation is vitiated by the coalescence of different sensory spheres (colour-hearing), and undifferentiated feeling by confounding hate with love. To the extent that a function is largely or wholly unconscious, it is also undifferentiated; it is not only fused together in its parts but also merged with other functions. Differentiation consists in the separation of the function from other functions, and in the separation of its individual parts from each other. Without differentiation direction is impossible, since the direction of a function towards a goal depends on the elimination of anything irrelevant. Fusion with the irrelevant precludes direction; only a differentiated function is *capable* of being directed.

15. DISSIMILATION, V. ASSIMILATION.

[706] 16. EGO. By ego I understand a complex of ideas which constitutes the centre of my field of consciousness and appears to possess a high degree of continuity and identity. Hence I also speak of an *ego-complex*.[35] The ego-complex is as much a content as a condition of *consciousness* (q.v.), for a psychic element is conscious to me only in so far as it is related to my ego-complex. But inasmuch as the ego is only the centre of my field of consciousness, it is not identical with the totality of my psyche, being merely one complex among other complexes. I therefore distinguish between the ego and the *self* (q.v.), since the ego is only the subject of my consciousness, while the self is the subject of my total psyche, which also includes the unconscious. In this sense the self would be an ideal entity which embraces the ego. In unconscious *fantasies* (q.v.) the self often appears as supraordinate or ideal personality, having somewhat the relationship of Faust to Goethe or Zarathustra to Nietzsche. For the sake of idealization the archaic features of the self are represented as being separate from the "higher" self, as for instance Mephistopheles in Goethe, Epimetheus in Spitteler, and in Christian psychology the devil or Antichrist. In Nietzsche, Zarathustra discovered his shadow in the "Ugliest Man."

16a. EMOTION, V. AFFECT.

[707] 17. EMPATHY[36] is an *introjection* (q.v.) of the object. For a fuller description of the concept of empathy, see Chapter VII; also *projection*.

[708] 18. ENANTIODROMIA means a "running counter to." In the philosophy of Heraclitus[37] it is used to designate the play of opposites in the course of events—the view that everything that exists turns into its opposite. "From the living comes death and from the dead life, from the young old age and from the old youth; from waking, sleep, and from sleep, waking; the stream of generation and decay never stands still."[38] "Construction and destruction, destruction and construction—this is the principle which governs all the cycles of natural life, from the smallest to the greatest. Just as the cosmos itself arose from the primal fire, so must it return once more into the same—a dual process running its measured course through vast periods of time, a drama eternally re-enacted."[39] Such is the

enantiodromia of Heraclitus in the words of qualified interpreters. He himself says:

> It is the opposite which is good for us.
>
> Men do not know how what is at variance agrees with itself. It is an attunement of opposite tensions, like that of the bow and the lyre.
>
> The bow (βιός) is called life (βιός), but its work is death.
>
> Mortals are immortals and immortals are mortals, the one living the others' death and dying the others' life.
>
> For souls it is death to become water, for water death to become earth. But from earth comes water, and from water, soul.
>
> All things are an exchange for fire, and fire for all things, like goods for gold and gold for goods.
>
> The way up and the way down are the same.[40]

[709] I use the term enantiodromia for the emergence of the unconscious opposite in the course of time. This characteristic phenomenon practically always occurs when an extreme, onesided tendency dominates conscious life; in time an equally powerful counterposition is built up, which first inhibits the conscious performance and subsequently breaks through the conscious control. Good examples of enantiodromia are: the conversion of St. Paul and of Raymund Lully,[41] the self-identification of the sick Nietzsche with Christ, and his deification and subsequent hatred of Wagner, the transformation of Swedenborg from an erudite scholar into a seer, and so on.

[710] 19. EXTRAVERSION is an outward-turning of *libido* (q.v.). I use this concept to denote a manifest relation of subject to object, a positive movement of subjective interest towards the object. Everyone in the extraverted state thinks, feels, and acts in relation to the object, and moreover in a direct and clearly observable fashion, so that no doubt can remain about his positive dependence on the object. In a sense, therefore, extraversion is a transfer of interest from subject to object. If it is an extraversion of thinking, the subject thinks himself into the object; if an extraversion of feeling, he feels himself into it. In extraversion there is a strong, if not exclusive, determination by the object. Extraversion is

active when it is intentional, and *passive* when the object compels it, i.e., when the object attracts the subject's interest of its own accord, even against his will. When extraversion is habitual, we speak of the extraverted *type* (q.v.).

[711] 20. FANTASY.[42] By fantasy I understand two different things: 1. a *fantasm*, and 2. *imaginative activity*. In the present work the context always shows which of these meanings is intended. By fantasy in the sense of *fantasm* I mean a complex of ideas that is distinguished from other such complexes by the fact that it has no objective referent. Although it may originally be based on memory-images of actual experiences, its content refers to no external reality; it is merely the output of creative psychic activity, a manifestation or product of a combination of energized psychic elements. In so far as psychic energy can be voluntarily directed, a fantasy can be consciously and intentionally produced, either as a whole or at least in part. In the former case it is nothing but a combination of *conscious* elements, an artificial experiment of purely theoretical interest. In actual everyday psychological experience, fantasy is either set in motion by an intuitive attitude of expectation, or it is an irruption of *unconscious* contents into consciousness.

[712] We can distinguish between *active* and *passive* fantasy. *Active* fantasies are the product of *intuition* (q.v.), i.e., they are evoked by an *attitude* (q.v.) directed to the perception of unconscious contents, as a result of which the *libido* (q.v.) immediately invests all the elements emerging from the unconscious and, by association with parallel material, brings them into clear focus in visual form. *Passive* fantasies appear in visual form at the outset, neither preceded nor accompanied by intuitive expectation, the attitude of the subject being wholly passive. Such fantasies belong to the category of psychic *automatisms* (Janet). Naturally, they can appear only as a result of a relative dissociation of the psyche, since they presuppose a withdrawal of energy from conscious control and a corresponding activation of unconscious material. Thus the vision of St. Paul[43] presupposes that unconsciously he was already a Christian, though this fact had escaped his conscious insight.

[713] It is probable that passive fantasies always have their origin in an unconscious process that is antithetical to consciousness, but invested with approximately the same amount of energy as the conscious attitude, and therefore capable of breaking through the latter's resistance. Active fantasies, on the other hand, owe their existence not so much to this unconscious process as to a conscious propensity to assimilate hints or fragments of lightly-toned unconscious complexes and, by associating them with parallel elements, to elaborate them in clearly visual form. It is not necessarily a question of a dissociated psychic state, but rather of a positive participation of consciousness.

[714] Whereas passive fantasy not infrequently bears a morbid stamp or at least shows some trace of abnormality, active fantasy is one of the highest forms of psychic activity. For here the conscious and the unconscious personality of the subject flow together into a common product in which both are united. Such a fantasy can be the highest expression of the unity of a man's *individuality* (q.v.), and it may even create that individuality by giving perfect expression to its unity. As a general rule, passive fantasy is never the expression of a unified individuality since, as already observed, it presupposes a considerable degree of dissociation based in turn on a marked conscious/unconscious opposition. Hence the fantasy that irrupts into consciousness from such a state can never be the perfect expression of a unified individuality, but will represent mainly the standpoint of the unconscious personality. The life of St. Paul affords a good example of this: his conversion to Christianity signified an acceptance of the hitherto unconscious standpoint and a repression of the hitherto anti-Christian one, which then made itself felt in his hysterical attacks. Passive fantasy, therefore, is always in need of conscious *criticism*, lest it merely reinforce the standpoint of the unconscious opposite. Whereas active fantasy, as the product of a conscious attitude *not* opposed to the unconscious, and of unconscious processes not opposed but merely compensatory to consciousness, does not require criticism so much as *understanding*.

[715] In fantasies as in dreams (which are nothing but passive fantasies), a *manifest* and a *latent* meaning must be distinguished. The manifest meaning is found in the actual "look" of the fantasy image, in the direct

statement made by the underlying complex of ideas. Frequently, however, the manifest meaning hardly deserves its name, although it is always far more developed in fantasies than in dreams, probably because the dream-fantasy usually requires very little energy to overcome the feeble resistance of the sleeping consciousness, with the result that tendencies which are only slightly antagonistic and slightly compensatory can also reach the threshold of perception. Waking fantasy, on the other hand, must muster considerable energy to overcome the inhibition imposed by the conscious attitude. For this to take place, the unconscious opposite must be a very important one in order to break through into consciousness. If it consisted merely of vague, elusive hints it would never be able to direct attention (conscious libido) to itself so effectively as to interrupt the continuity of the conscious contents. The unconscious opposite, therefore, has to depend on a very strong inner cohesion, and this expresses itself in an emphatic manifest meaning.

[716] The manifest meaning always has the character of a visual and concrete process which, because of its objective unreality, can never satisfy the conscious demand for understanding. Hence another meaning of the fantasy, in other words its interpretation or latent meaning, has to be sought. Although the existence of a latent meaning is by no means certain, and although the very possibility of it may be contested, the demand for understanding is a sufficient motive for a thorough-going investigation. This investigation of the latent meaning may be purely causal, inquiring into the psychological origins of the fantasy. It leads on the one hand to the remoter causes of the fantasy in the distant past, and on the other to ferreting out the instinctual forces which, from the energic standpoint, must be responsible for the fantasy activity. As we know, Freud has made intensive use of this method. It is a method of interpretation which I call *reductive* (q.v.). The justification of a reductive view is immediately apparent, and it is equally obvious that this method of interpreting psychological facts suffices for people of a certain temperament, so that no demand for a deeper understanding is made. If somebody shouts for help, this is sufficiently and satisfactorily explained when it is shown that the man is in immediate danger of his life. If a man dreams of a sumptuous feast, and it is shown that he went to bed hungry,

this is a sufficient explanation of his dream. Or if a man who represses his sexuality has sexual fantasies like a medieval hermit, this is satisfactorily explained by a reduction to sexual repression.

[717] But if we were to explain Peter's vision[44] by reducing it to the fact that, being "very hungry," he had received an invitation from the unconscious to eat animals that were "unclean," or that the eating of unclean beasts merely signified the fulfilment of a forbidden wish, such an explanation would send us away empty. It would be equally unsatisfactory to reduce Paul's vision to his repressed envy of the role Christ played among his fellow countrymen, which prompted him to identify himself with Christ. Both explanations may contain some glimmering of truth, but they are in no way related to the real psychology of the two apostles, conditioned as this was by the times they lived in. The explanation is too facile. One cannot discuss historical events as though they were problems of physiology or a purely personal *chronique scandaleuse*. That would be altogether too limited a point of view. We are therefore compelled to broaden very considerably our conception of the latent meaning of fantasy, first of all in its causal aspect. The psychology of an individual can never be exhaustively explained from himself alone: a clear recognition is needed of the way it is also conditioned by historical and environmental circumstances. His individual psychology is not merely a physiological, biological, or moral problem, it is also a contemporary problem. Again, no psychological fact can ever be exhaustively explained in terms of causality alone; as a living phenomenon, it is always indissolubly bound up with the continuity of the vital process, so that it is not only something evolved but also continually evolving and creative.

[718] Anything psychic is Janus-faced—it looks both backwards and forwards. Because it is evolving, it is also preparing the future. Were this not so, intentions, aims, plans, calculations, predictions and premonitions would be psychological impossibilities. If, when a man expresses an opinion, we simply relate it to an opinion previously expressed by someone else, this explanation is quite futile, for we wish to know not merely what prompted him to do so, but what he means by it, what his aims and intentions are, and what he hopes to achieve. And when we

know that, we are usually satisfied. In everyday life we instinctively, without thinking, introduce a final standpoint into an explanation; indeed, very often we take the final standpoint as the decisive one and completely disregard the strictly causal factor, instinctively recognizing the creative element in everything psychic. If we do this in everyday life, then a scientific psychology must take this fact into account, and not rely exclusively on the strictly causal standpoint originally taken over from natural science, for it has also to consider the purposive nature of the psyche.

[719] If, then, everyday experience establishes beyond doubt the final orientation of conscious contents, we have absolutely no grounds for assuming, in the absence of experience to the contrary, that this is not the case with the contents of the unconscious. My experience gives me no reason at all to dispute this; on the contrary, cases where the introduction of the final standpoint alone provides a satisfactory explanation are in the majority. If we now look at Paul's vision again, but this time from the angle of his future mission, and come to the conclusion that Paul, though consciously a persecutor of Christians, had unconsciously adopted the Christian standpoint, and that he was finally brought to avow it by an irruption of the unconscious, because his unconscious personality was constantly striving toward this goal—this seems to me a more adequate explanation of the real significance of the event than a reduction to personal motives, even though these doubtless played their part in some form or other, since the "all-too-human" is never lacking. Similarly, the clear indication given in Acts 10:28 of a purposive interpretation of Peter's vision is far more satisfying than a merely physiological and personal conjecture.

[720] To sum up, we might say that a fantasy needs to be understood both causally and purposively. Causally interpreted, it seems like a *symptom* of a physiological or personal state, the outcome of antecedent events. Purposively interpreted, it seems like a *symbol*, seeking to characterize a definite goal with the help of the material at hand, or trace out a line of future psychological development. Because active fantasy is the chief mark of the artistic mentality, the artist is not just a *reproducer* of appearances but a creator and educator, for his works have the value of

symbols that adumbrate lines of future development. Whether the symbols will have a limited or a general social validity depends on the viability of the creative individual. The more abnormal, i.e., the less viable he is, the more limited will be the social validity of the symbols he produces, though their value may be absolute for the individual himself.

[721] One can dispute the existence of the latent meaning of fantasy only if one is of the opinion that natural processes in general are devoid of meaning. Science, however, has extracted the meaning of natural processes in the form of natural laws. These, admittedly, are human hypotheses advanced in explanation of such processes. But, in so far as we have ascertained that the proposed law actually coincides with the objective process, we are also justified in speaking of the meaning of natural occurrences. We are equally justified in speaking of the meaning of fantasies when it can be shown that they conform to law. But the meaning we discover is satisfying, or to put it another way, the demonstrated law deserves its name, only when it adequately reflects the nature of fantasy. Natural processes both conform to law and demonstrate that law. It is a law that one dreams when one sleeps, but that is not a law which demonstrates anything about the nature of the dream; it is a mere condition of the dream. The demonstration of a physiological source of fantasy is likewise a mere condition of its existence, not a law of its nature. The law of fantasy as a psychological phenomenon can only be a psychological law.

[722] This brings us to the second connotation of fantasy, namely *imaginative activity*. Imagination is the reproductive or creative activity of the mind in general. It is not a special faculty, since it can come into play in all the basic forms of psychic activity, whether *thinking, feeling, sensation*, or *intuition* (qq.v.). Fantasy as imaginative activity is, in my view, simply the direct expression of psychic life,[45] of psychic energy which cannot appear in consciousness except in the form of images or contents, just as physical energy cannot manifest itself except as a definite physical state stimulating the sense organs in physical ways. For as every physical state, from the energic standpoint, is a dynamic system, so from the same standpoint a psychic content is a dynamic system manifesting itself in consciousness. We could therefore say that fantasy

in the sense of a fantasm is a definite sum of libido that cannot appear in consciousness in any other way than in the form of an image. A fantasm is an *idée-force*. Fantasy as imaginative activity is identical with the flow of psychic energy.

[723] 21. FEELING.[46] I count feeling among the four basic psychological *functions* (q.v.). I am unable to support the psychological school that considers feeling a secondary phenomenon dependent on "representations" or sensations, but in company with Höffding, Wundt, Lehmann, Külpe, Baldwin, and others, I regard it as an independent function *sui generis*."[47]

[724] Feeling is primarily a process that takes place between the *ego* (q.v.) and a given content, a process, moreover, that imparts to the content a definite *value* in the sense of acceptance or rejection ("like" or "dislike"). The process can also appear isolated, as it were, in the form of a "mood," regardless of the momentary contents of consciousness or momentary sensations. The mood may be causally related to earlier conscious contents, though not necessarily so, since, as psychopathology amply proves, it may equally well arise from unconscious contents. But even a mood, whether it be a general or only a partial feeling, implies a valuation; not of one definite, individual conscious content, but of the whole conscious situation at the moment, and, once again, with special reference to the question of acceptance or rejection.

[725] Feeling, therefore, is an entirely *subjective* process, which may be in every respect independent of external stimuli, though it allies itself with every sensation.[48] Even an "indifferent" sensation possesses a feeling-tone, namely that of indifference, which again expresses some sort of valuation. Hence feeling is a kind of *judgment*, differing from intellectual judgment in that its aim is not to establish conceptual relations but to set up a subjective criterion of acceptance or rejection. Valuation by feeling extends to *every* content of consciousness, of whatever kind it may be. When the intensity of feeling increases, it turns into an *affect* (q.v.), i.e., a feeling-state accompanied by marked physical innervations. Feeling is distinguished from affect by the fact that it produces no perceptible

physical innervations, i.e., neither more nor less than an ordinary thinking process.

[726] Ordinary, "simple" feeling is *concrete* (q.v.), that is, it is mixed up with other functional elements, more particularly with sensations. In this case we can call it *affective* or, as I have done in this book, *feeling-sensation*, by which I mean an almost inseparable amalgam of feeling and sensation elements. This characteristic amalgamation is found wherever feeling is still an undifferentiated function, and is most evident in the psyche of a neurotic with differentiated thinking. Although feeling is, in itself, an independent function, it can easily become dependent on another function—thinking, for instance; it is then a mere concomitant of thinking, and is not repressed only in so far as it accommodates itself to the thinking processes.

[727] It is important to distinguish *abstract* feeling from ordinary concrete feeling. Just as the abstract concept (v. *Thinking*) abolishes the differences between things it apprehends, abstract feeling rises above the differences of the individual contents it evaluates, and produces a "mood" or feeling-state which embraces the different individual valuations and thereby abolishes them. In the same way that thinking organizes the contents of consciousness under concepts, feeling arranges them according to their value. The more concrete it is, the more subjective and personal is the value conferred upon them; but the more abstract it is, the more universal and objective the value will be. Just as a completely abstract concept no longer coincides with the singularity and discreteness of things, but only with their universality and non-differentiation, so completely abstract feeling no longer coincides with a particular content and its feeling-value, but with the undifferentiated totality of all contents. Feeling, like thinking, is a *rational* (q.v.) function, since values in general are assigned according to the laws of reason, just as concepts in general are formed according to these laws.

[728] Naturally the above definitions do not give the essence of feeling—they only describe it from outside. The intellect proves incapable of formulating the real nature of feeling in conceptual terms, since thinking belongs to a category incommensurable with feeling; in fact, no basic

psychological function can ever be completely expressed by another. That being so, it is impossible for an intellectual definition to reproduce the specific character of feeling at all adequately. The mere classification of feelings adds nothing to an understanding of their nature, because even the most exact classification will be able to indicate only the content of feeling which the intellect can apprehend, without grasping its specific nature. Only as many classes of feelings can be discriminated as there are classes of contents that can be intellectually apprehended, but feeling *per se* can never be exhaustively classified because, beyond every possible class of contents accessible to the intellect, there still exist feelings which resist intellectual classification. The very notion of classification is intellectual and therefore incompatible with the nature of feeling. We must therefore be content to indicate the limits of the concept.

[729] The nature of valuation by feeling may be compared with intellectual *apperception* (q.v.) as an *apperception of value*. We can distinguish *active* and *passive* apperception by feeling. Passive feeling allows itself to be attracted or excited by a particular content, which then forces the feelings of the subject to participate. Active feeling is a transfer of value from the subject; it is an intentional valuation of the content in accordance with feeling and not in accordance with the intellect. Hence active feeling is a *directed* function, an act of the *will* (q.v.), as for instance loving as opposed to being in love. The latter would be *undirected*, passive feeling, as these expressions themselves show: the one is an activity, the other a passive state. Undirected feeling is *feeling-intuition*. Strictly speaking, therefore, only active, directed feeling should be termed *rational*, whereas passive feeling is *irrational* (q.v.) in so far as it confers values without the participation or even against the intentions of the subject. When the subject's attitude as a whole is oriented by the feeling function, we speak of a *feeling type* (v. *Type*).

[730] 21a. FEELING, A (or FEELINGS). A feeling is the specific content or material of the feeling function, discriminated by *empathy* (q.v.).

[731] 22. FUNCTION (v. also INFERIOR FUNCTION). By a psychological function I mean a particular form of psychic activity that remains the

same in principle under varying conditions. From the energic standpoint a function is a manifestation of *libido* (q.v.), which likewise remains constant in principle, in much the same way as a physical force can be considered a specific form or manifestation of physical energy. I distinguish four basic functions in all, two rational and two irrational (qq.v.): *thinking* and *feeling*, *sensation* and *intuition* (qq.v.). I can give no *a priori* reason for selecting these four as basic functions, and can only point out that this conception has shaped itself out of many years' experience. I distinguish these functions from one another because they cannot be related or reduced to one another. The principle of thinking, for instance, is absolutely different from the principle of feeling, and so forth. I make a cardinal distinction between these functions and *fantasies* (q.v.), because fantasy is a characteristic form of activity that can manifest itself in all four functions. Volition or *will* (q.v.) seems to me an entirely secondary phenomenon, and so does *attention*.

[732] 23. IDEA. In this work the concept "idea" is sometimes used to designate a certain psychological element which is closely connected with what I term *image* (q.v.). The image may be either *personal* or *impersonal* in origin. In the latter case it is *collective* (q.v.) and is also distinguished by mythological qualities. I then term it a *primordial image*. When, on the other hand, it has no mythological character, i.e., is lacking in visual qualities and merely collective, I speak of an *idea*. Accordingly, I use the term idea to express the *meaning* of a primordial image, a meaning that has been abstracted from the *concretism* (q.v.) of the image. In so far as an idea is an *abstraction* (q.v.), it has the appearance of something derived, or developed, from elementary factors, a product of thought. This is the sense in which it is conceived by Wundt[49] and many others.

[733] In so far, however, as an idea is the formulated meaning of a primordial image by which it was represented *symbolically* (v. *Symbol*), its essence is not just something derived or developed, but, psychologically speaking, exists *a priori*, as a given possibility for thought-combinations in general. Hence, in accordance with its essence (but not with its formulation), the idea is a psychological determinant

having an *a priori* existence. In this sense Plato sees the idea as a prototype of things, while Kant defines it as the “archetype [*Urbild*] of all practical employment of reason,” a transcendental concept which as such exceeds the bounds of the experienceable,[50] “a rational concept whose object is not to be found in experience.”[51] He says:

> Although we must say of the transcendental concepts of reason that *they are only ideas*, this is not by any means to be taken as signifying that they are superfluous and void. For even if they cannot determine any object, they may yet, in a fundamental and unobserved fashion, be of service to the understanding as a canon for its extended and consistent employment. The understanding does not thereby obtain more knowledge of any object than it would have by means of its own concepts, but for the acquiring of such knowledge it receives better and more extensive guidance. Further—what we need here no more than mention—concepts of reason may perhaps make a possible transition from the concepts of nature to the practical concepts, and in that way may give support to the moral ideas themselves.[52]

[734] Schopenhauer says:

> By Idea, then, I understand every definite and well-established stage in the objectivation of the Will, so far as the Will is a thing-in-itself and therefore without multiplicity, which stages are related to individual things as their eternal forms or prototypes.[53]

For Schopenhauer the idea is a visual thing, for he conceives it entirely in the way I conceive the primordial image. Nevertheless, it remains uncognizable by the individual, revealing itself only to the “pure subject of cognition,” which “is beyond all willing and all individuality.”[54]

[735] Hegel hypostatizes the idea completely and attributes to it alone real being. It is the “concept, the reality of the concept, and the union of both.”[55] It is “eternal generation.”[56] Lasswitz regards the idea as the “law showing the direction in which our experience should develop.” It is the “most certain and supreme reality.”[57] For Cohen, it is the “concept’s awareness of itself,” the “foundation” of being.[58]

[736] I do not want to pile up evidence for the primary nature of the idea. These quotations should suffice to show that it can be conceived as a fundamental, *a priori* factor. It derives this quality from its precursor—the primordial, symbolic image. Its secondary nature as something abstract and derived is a result of the rational elaboration to which the primordial image is subjected to fit it for rational use. The primordial image is an autochthonous psychological factor constantly repeating itself at all times and places, and the same might be said of the idea, although, on account of its rational nature, it is much more subject to modification by rational elaboration and formulations corresponding to local conditions and the spirit of the time. Since it is derived from the primordial image, a few philosophers ascribe a transcendent quality to it; this does not really belong to the idea as I conceive it, but rather to the primordial image, about which a timeless quality clings, being an integral component of the human mind everywhere from time immemorial. Its autonomous character is also derived from the primordial image, which is never "made" but is continually present, appearing in perception so spontaneously that it seems to strive for its own realization, being sensed by the mind as an active determinant. Such a view, however, is not general, and is presumably a question of *attitude* (q.v., also Ch. VII).

[737] The idea is a psychological factor that not only determines thinking but, as a practical idea, also conditions feeling. As a general rule, I use the term *idea* only when speaking of the determination of thought in a thinking type, or of feeling in a feeling type. On the other hand, it would be terminologically correct to speak of an *a priori* determination by the primordial image in the case of an undifferentiated function. The dual nature of the idea as something both primary and derived is responsible for the fact that I sometimes use it promiscuously with primordial image. For the introverted attitude the idea is the prime mover; for the extraverted, a product.

[738] 24. IDENTIFICATION. By this I mean a psychological process in which the personality is partially or totally *dissimilated* (v. *Assimilation*). Identification is an alienation of the subject from himself for the sake of the object, in which he is, so to speak, disguised. For example,

identification with the father means, in practice, adopting all the father's ways of behaving, as though the son were the same as the father and not a separate individuality. Identification differs from *imitation* in that it is an *unconscious* imitation, whereas imitation is a conscious copying. Imitation is an indispensable aid in developing the youthful personality. It is beneficial so long as it does not serve as a mere convenience and hinder the development of ways and means suited to the individual. Similarly, identification can be beneficial so long as the individual cannot go his own way. But when a better possibility presents itself, identification shows its morbid character by becoming just as great a hindrance as it was an unconscious help and support before. It now has a dissociative effect, splitting the individual into two mutually estranged personalities.

[739] Identification does not always apply to persons but also to things (e.g., a movement of some kind, a business, etc.) and to psychological functions. The latter kind is, in fact, particularly important.[59] Identification then leads to the formation of a secondary character, the individual identifying with his best developed function to such an extent that he alienates himself very largely or even entirely from his original character, with the result that his true *individuality* (q.v.) falls into the unconscious. This is nearly always the rule with people who have one highly differentiated function. It is, in fact, a necessary transitional stage on the way to *individuation* (q.v.).

[740] Identification with parents or the closest members of the family is a normal phenomenon in so far as it coincides with the *a priori family identity*. In this case it is better not to speak of *identification* but of *identity* (q.v.), a term that expresses the actual situation. Identification with members of the family differs from identity in that it is not an *a priori* but a secondary phenomenon arising in the following way. As the individual emerges from the original family identity, the process of adaptation and development brings him up against obstacles that cannot easily be mastered. A damming up of *libido* (q.v.) ensues, which seeks a regressive outlet. The regression reactivates the earlier states, among them the state of family identity. Identification with members of the family corresponds to this regressive revival of an identity that had

almost been overcome. All identifications with persons come about in this way. Identification always has a purpose, namely, to obtain an advantage, to push aside an obstacle, or to solve a task in the way another individual would.

[741] 25. IDENTITY. I use the term *identity* to denote a psychological conformity. It is always an unconscious phenomenon since a conscious conformity would necessarily involve a consciousness of two dissimilar things, and, consequently, a separation of subject and object, in which case the identity would already have been abolished. Psychological identity presupposes that it is unconscious. It is a characteristic of the primitive mentality and the real foundation of *participation mystique* (q.v.), which is nothing but a relic of the original non-differentiation of subject and object, and hence of the primordial unconscious state. It is also a characteristic of the mental state of early infancy, and, finally, of the unconscious of the civilized adult, which, in so far as it has not become a content of consciousness, remains in a permanent state of identity with objects. Identity with the parents provides the basis for subsequent *identification* (q.v.) with them; on it also depends the possibility of *projection* (q.v.) and *introjection* (q.v.).

[742] Identity is primarily an unconscious conformity with objects. It is not an *equation*, but an *a priori likeness* which was never the object of consciousness. Identity is responsible for the naïve assumption that the psychology of one man is like that of another, that the same motives occur everywhere, that what is agreeable to me must obviously be pleasurable for others, that what I find immoral must also be immoral for them, and so on. It is also responsible for the almost universal desire to correct in others what most needs correcting in oneself. Identity, too, forms the basis of suggestion and psychic infection. Identity is particularly evident in pathological cases, for instance in paranoic ideas of reference, where one's own subjective contents are taken for granted in others. But identity also makes possible a consciously *collective* (q.v.), social *attitude* (q.v.), which found its highest expression in the Christian ideal of brotherly love.

[743] 26. IMAGE. When I speak of “image” in this book, I do not mean the psychic reflection of an external object, but a concept derived from poetic usage, namely, a figure of fancy or *fantasy-image*, which is related only indirectly to the perception of an external object. This image depends much more on unconscious fantasy activity, and as the product of such activity it appears more or less abruptly in consciousness, somewhat in the manner of a vision or hallucination, but without possessing the morbid traits that are found in a clinical picture. The image has the psychological character of a fantasy idea and never the quasi-real character of an hallucination, i.e., it never takes the place of reality, and can always be distinguished from sensuous reality by the fact that it is an “inner” image. As a rule, it is not a projection in space, although in exceptional cases it can appear in exteriorized form. This mode of manifestation must be termed *archaic* (q.v.) when it is not primarily pathological, though that would not by any means do away with its archaic character. On the primitive level, however, the inner image can easily be projected in space as a vision or an auditory hallucination without being a pathological phenomenon.

[744] Although, as a rule, no reality-value attaches to the image, this can at times actually increase its importance for psychic life, since it then has a greater *psychological* value, representing an inner reality which often far outweighs the importance of external reality. In this case the *orientation* (q.v.) of the individual is concerned less with adaptation to reality than with adaptation to inner demands.

[745] The inner image is a complex structure made up of the most varied material from the most varied sources. It is no conglomerate, however, but a homogeneous product with a meaning of its own. The image is a *condensed expression of the psychic situation as a whole*, and not merely, nor even predominately, of unconscious contents pure and simple. It undoubtedly does express unconscious contents, but not the whole of them, only those that are momentarily constellated. This constellation is the result of the spontaneous activity of the unconscious on the one hand and of the momentary conscious situation on the other, which always stimulates the activity of relevant subliminal material and at the same time inhibits the irrelevant. Accordingly the image is an expression of the

unconscious as well as the conscious situation of the moment. The interpretation of its meaning, therefore, can start neither from the conscious alone nor from the unconscious alone, but only from their reciprocal relationship.

[746] I call the image *primordial* when it possesses an *archaic* (q.v.) character.[60] I speak of its archaic character when the image is in striking accord with familiar mythological motifs. It then expresses material primarily derived from the *collective unconscious* (q.v.), and indicates at the same time that the factors influencing the conscious situation of the moment are *collective* (q.v.) rather than personal. A *personal* image has neither an archaic character nor a collective significance, but expresses contents of the *personal unconscious* (q.v.) and a personally conditioned conscious situation.

[747] The primordial image, elsewhere also termed *archetype,*[61] is always collective, i.e., it is at least common to entire peoples or epochs. In all probability the most important mythological motifs are common to all times and races; I have, in fact, been able to demonstrate a whole series of motifs from Greek mythology in the dreams and fantasies of pure-bred Negroes suffering from mental disorders.[62]

[748] From[63] the scientific, causal standpoint the primordial image can be conceived as a mnemic deposit, an imprint or *engram* (Semon), which has arisen through the condensation of countless processes of a similar kind. In this respect it is a precipitate and, therefore, a typical basic form, of certain ever-recurring psychic experiences. As a mythological motif, it is a continually effective and recurrent expression that reawakens certain psychic experiences or else formulates them in an appropriate way. From this standpoint it is a psychic expression of the physiological and anatomical disposition. If one holds the view that a particular anatomical structure is a product of environmental conditions, working on living matter, then the primordial image, in its constant and universal distribution, would be the product of equally constant and universal influences from without, which must, therefore, act like a natural law. One could in this way relate myths to nature, as for instance solar myths to the daily rising and setting of the sun, or to the equally obvious change

of the seasons, and this has in fact been done by many mythologists, and still is. But that leaves the question unanswered why the sun and its apparent motions do not appear direct and undisguised as a content of the myths. The fact that the sun or the moon or the meteorological processes appear, at the very least, in allegorized form points to an independent collaboration of the psyche, which in that case cannot be merely a product or stereotype of environmental conditions. For whence would it draw the capacity to adopt a standpoint outside sense perception? How, for that matter, could it be at all capable of any performance more or other than the mere corroboration of the evidence of the senses? In view of such questions Semon's naturalistic and causalistic engram theory no longer suffices. We are forced to assume that the given structure of the brain does not owe its peculiar nature merely to the influence of surrounding conditions, but also and just as much to the peculiar and autonomous quality of living matter, i.e., to a law inherent in life itself. The given constitution of the organism, therefore, is on the one hand a product of external conditions, while on the other it is determined by the intrinsic nature of living matter. Accordingly, the primordial image is related just as much to certain palpable, self-perpetuating, and continually operative natural processes as it is to certain inner determinants of psychic life and of life in general. The organism confronts light with a new structure, the eye, and the psyche confronts the natural process with a symbolic image, which apprehends it in the same way as the eye catches the light. And just as the eye bears witness to the peculiar and spontaneous creative activity of living matter, the primordial image expresses the unique and unconditioned creative power of the psyche.

[749] The primordial image is thus a condensation of the living process. It gives a co-ordinating and coherent meaning both to sensuous and to inner perceptions, which at first appear without order or connection, and in this way frees psychic energy from its bondage to sheer uncomprehended perception. At the same time, it links the energies released by the perception of stimuli to a definite meaning, which then guides action along paths corresponding to this meaning. It releases unavailable,

dammed-up energy by leading the mind back to nature and canalizing sheer instinct into mental forms.

[750] The primordial image is the precursor of the *idea* (q.v.), and its matrix. By detaching it from the *concretism* (q.v.) peculiar and necessary to the primordial image, reason develops it into a concept—i.e., an idea which differs from all other concepts in that it is not a datum of experience but is actually the underlying principle of all experience. The idea derives this quality from the primordial image, which, as an expression of the specific structure of the brain, gives every experience a definite form.

[751] The degree of psychological efficacy of the primordial image is determined by the *attitude* (q.v.) of the individual. If the attitude is introverted, the natural consequence of the withdrawal of *libido* (q.v.) from the external object is the heightened significance of the internal object, i.e., thought. This leads to a particularly intense development of thought along the lines unconsciously laid down by the primordial image. In this way the primordial image comes to the surface indirectly. The further development of thought leads to the idea, which is nothing other than the primordial image intellectually formulated. Only the development of the counter-function can take the idea further—that is to say, once the idea has been grasped intellectually, it strives to become effective in life. It therefore calls upon *feeling* (q.v.), which in this case is much less differentiated and more concretistic than thinking. Feeling is impure and, because undifferentiated, still fused with the *unconscious*. Hence the individual is unable to unite the contaminated feeling with the idea. At this juncture the primordial image appears in the inner field of vision as a *symbol* (q.v.), and, by virtue of its concrete nature, embraces the undifferentiated, concretized feeling, but also, by virtue of its intrinsic significance, embraces the idea, of which it is indeed the matrix, and so unites the two. In this way the primordial image acts as a mediator, once again proving its redeeming power, a power it has always possessed in the various religions. What Schopenhauer says of the idea, therefore, I would apply rather to the primordial image, since, as I have already explained, the idea is not something absolutely *a priori*, but must also be regarded as secondary and derived (v. *Idea)*.

[752] In the following passage from Schopenhauer, I would ask the reader to replace the word “idea” by “primordial image,” and he will then be able to understand my meaning.

> It [the idea] is never cognized by the individual as such, but only by him who has raised himself beyond all willing and all individuality to the pure subject of cognition. Thus it is attainable only by the genius, or by the man who, inspired by works of genius, has succeeded in elevating his powers of pure cognition into a temper akin to genius. It is, therefore, not absolutely but only conditionally communicable, since the idea conceived and reproduced in a work of art, for instance, appeals to each man only according to the measure of his own intellectual worth.
>
> The idea is the unity that falls into multiplicity on account of the temporal and spatial form of our intuitive apprehension.
>
> The concept is like an inert receptacle, in which the things one puts into it lie side by side, but from which no more can be taken out than was put in. The idea, on the other hand, develops, in him who has comprehended it, notions which are new in relation to the concept of the same name: it is like a living, self-developing organism endowed with generative power, constantly bringing forth something that was not put into it.[64]

[753] Schopenhauer clearly discerned that the “idea,” or the primordial image as I define it, cannot be produced in the same way that a concept or an “idea” in the ordinary sense can (Kant defines an “idea” as a concept “formed from notions”).[65] There clings to it an element beyond rational formulation, rather like Schopenhauer’s “temper akin to genius,” which simply means a state of feeling. One can get to the primordial image from the idea only because the path that led to the idea passes over the summit into the counterfunction, feeling.

[754] The primordial image has one great advantage over the clarity of the idea, and that is its vitality. It is a self-activating organism, “endowed with generative power.” The primordial image is an inherited organization of psychic energy, an ingrained system, which not only gives expression to the energic process but facilitates its operation. It shows how the energic process has run its unvarying course from time

immemorial, while simultaneously allowing a perpetual repetition of it by means of an apprehension or psychic grasp of situations so that life can continue into the future. It is thus the necessary counterpart of *instinct* (q.v.), which is a purposive mode of action presupposing an equally purposive and meaningful grasp of the momentary situation. This apprehension is guaranteed by the pre-existent primordial image. It represents the practical formula without which the apprehension of a new situation would be impossible.

26a. IMAGO V. SUBJECTIVE LEVEL.

[755] 27. INDIVIDUAL. The psychological individual is characterized by a peculiar and in some respects unique psychology. The peculiar nature of the individual psyche appears less in its elements than in its complex formations. The psychological individual, or his *individuality* (q.v.), has an *a priori* unconscious existence, but exists consciously only so far as a consciousness of his peculiar nature is present, i.e., so far as there exists a conscious distinction from other individuals. The psychic individuality is given *a priori* as a correlate of the physical individuality, although, as observed, it is at first unconscious. A conscious process of *differentiation* (q.v.), or *individuation* (q.v.), is needed to bring the individuality to consciousness, i.e., to raise it out of the state of *identity* (q.v.) with the object. The identity of the individuality with the object is synonymous with its unconsciousness. If the individuality is unconscious, there is no psychological individual but merely a collective psychology of consciousness. The unconscious individuality is then projected on the object, and the object, in consequence, possesses too great a value and acts as too powerful a determinant.

[756] 28. INDIVIDUALITY. By individuality I mean the peculiarity and singularity of the individual in every psychological respect. Everything that is not *collective* (q.v.) is individual, everything in fact that pertains only to one individual and not to a larger group of individuals. Individuality can hardly be said to pertain to the psychic elements themselves, but only to their peculiar and unique grouping and combination (v. *Individual*).

[757] 29. INDIVIDUATION. The concept of individuation plays a large role in our psychology. In general, it is the process by which individual beings are formed and differentiated; in particular, it is the development of the psychological *individual* (q.v.) as a being distinct from the general, collective psychology. Individuation, therefore, is a process of *differentiation* (q.v.), having for its goal the development of the individual personality.

[758] Individuation is a natural necessity inasmuch as its prevention by a levelling down to collective standards is injurious to the vital activity of the individual. Since *individuality* (q.v.) is a prior psychological and physiological datum, it also expresses itself in psychological ways. Any serious check to individuality, therefore, is an artificial stunting. It is obvious that a social group consisting of stunted individuals cannot be a healthy and viable institution; only a society that can preserve its internal cohesion and collective values, while at the same time granting the individual the greatest possible freedom, has any prospect of enduring vitality. As the individual is not just a single, separate being, but by his very existence presupposes a collective relationship, it follows that the process of individuation must lead to more intense and broader collective relationships and not to isolation.

[759] Individuation is closely connected with the *transcendent function* (v. *Symbol*, par. 828), since this function creates individual lines of development which could never be reached by keeping to the path prescribed by collective norms.

[760] Under no circumstances can individuation be the sole aim of psychological education. Before it can be taken as a goal, the educational aim of adaptation to the necessary minimum of collective norms must first be attained. If a plant is to unfold its specific nature to the full, it must first be able to grow in the soil in which it is planted.

[761] Individuation is always to some extent opposed to collective norms, since it means separation and differentiation from the general and a building up of the particular—not a particularity that is *sought out*, but one that is already ingrained in the psychic constitution. The opposition to the collective norm, however, is only apparent, since closer

examination shows that the individual standpoint is not *antagonistic* to it, but only *differently oriented*. The individual way can never be directly opposed to the collective norm, because the opposite of the collective norm could only be another, but contrary, norm. But the individual way can, by definition, never be a norm. A norm is the product of the totality of individual ways, and its justification and beneficial effect are contingent upon the existence of individual ways that need from time to time to orient to a norm. A norm serves no purpose when it possesses absolute validity. A real conflict with the collective norm arises only when an individual way is raised to a norm, which is the actual aim of extreme individualism. Naturally this aim is pathological and inimical to life. It has, accordingly, nothing to do with individuation, which, though it may strike out on an individual bypath, precisely on that account needs the norm for its *orientation* (q.v.) to society and for the vitally necessary relationship of the individual to society. Individuation, therefore, leads to a natural esteem for the collective norm, but if the orientation is exclusively collective the norm becomes increasingly superfluous and morality goes to pieces. The more a man's life is shaped by the collective norm, the greater is his individual immorality.

[762] Individuation is practically the same as the development of consciousness out of the original state of *identity* (q.v.). It is thus an extension of the sphere of consciousness, an enriching of conscious psychological life.

[763] 30. INFERIOR function. This term is used to denote the function that lags behind in the process of *differentiation* (q.v.). Experience shows that it is practically impossible, owing to adverse circumstances in general, for anyone to develop all his psychological functions simultaneously. The demands of society compel a man to apply himself first and foremost to the differentiation of the function with which he is best equipped by nature, or which will secure him the greatest social success. Very frequently, indeed as a general rule, a man identifies more or less completely with the most favoured and hence the most developed function. It is this that gives rise to the various psychological *types* (q.v.). As a consequence of this one-sided development, one or more functions

are necessarily retarded. These functions may properly be called *inferior* in a psychological but not psychopathological sense, since they are in no way morbid but merely backward as compared with the favoured function.

[764] Although the inferior function may be conscious as a phenomenon, its true significance nevertheless remains unrecognized. It behaves like many repressed or insufficiently appreciated contents, which are partly conscious and partly unconscious, just as, very often, one knows a certain person from his outward appearance but does not know him as he really is. Thus in normal cases the inferior function remains conscious, at least in its effects; but in a neurosis it sinks wholly or in part into the unconscious. For, to the degree that the greater share of *libido* (q.v.) is taken up by the favoured function, the inferior function undergoes a regressive development; it reverts to the *archaic* (q.v.) stage and becomes incompatible with the conscious, favoured function. When a function that should normally be conscious lapses into the unconscious, its specific energy passes into the unconscious too. A function such as feeling possesses the energy with which it is endowed by nature; it is a well-organized living system that cannot under any circumstances be wholly deprived of its energy. So with the inferior function: the energy left to it passes into the unconscious and activates it in an unnatural way, giving rise to *fantasies* (q.v.) on a level with the archaicized function. In order to extricate the inferior function from the unconscious by analysis, the unconscious fantasy formations that have now been activated must be brought to the surface. The conscious realization of these fantasies brings the inferior function to consciousness and makes further development possible.

[765] 31. INSTINCT. When I speak of instinct in this work or elsewhere, I mean what is commonly understood by this word, namely, an *impulsion* towards certain activities. The impulsion can come from an inner or outer stimulus which triggers off the mechanism of instinct psychically, or from organic sources which lie outside the sphere of psychic causality. Every psychic phenomenon is instinctive that does not arise from voluntary causation but from dynamic impulsion, irrespective of whether

this impulsion comes directly from organic, extra-psychic sources, or from energies that are merely released by voluntary intention—in the latter case with the qualification that the end-result exceeds the effect voluntarily intended. In my view, all psychic processes whose energies are not under conscious control are instinctive. Thus *affects* (q.v.) are as much instinctive processes as they are *feeling* (q.v.) processes. Psychic processes which under ordinary circumstances are functions of the *will* (q.v.), and thus entirely under conscious control, can, in abnormal circumstances, become instinctive processes when supplied with unconscious energy. This phenomenon occurs whenever the sphere of consciousness is restricted by the repression of incompatible contents, or when, as a result of fatigue, intoxication, or morbid cerebral conditions in general, an *abaissement du niveau mental* (Janet) ensues—when, in a word, the most strongly feeling-toned processes are no longer, or not yet, under conscious control. Processes that were once conscious but in time have become *automatized* I would reckon among the automatic processes rather than the instinctive. Nor do they normally behave like instincts, since in normal circumstances they never appear as impulsions. They do so only when supplied with an energy which is foreign to them.

[766] 32. INTELLECT. I call *directed thinking* (q.v.) intellect.

[767] 33. INTROJECTION. This term was introduced by Avenarius[66] to correspond with *projection* (q.v.). The expulsion of a subjective content into an object, which is what Avenarius meant, is expressed equally well by the term projection, and it would therefore be better to reserve the term projection for this process. Ferenczi has now defined introjection as the opposite of projection, namely as an indrawing of the object into the subjective sphere of interest, while projection is an expulsion of subjective contents into the object. “Whereas the paranoiac expels from his ego emotions which have become disagreeable, the neurotic helps himself to as large a portion of the outer world as his ego can ingest, and makes this an object of unconscious fantasies.”[67] The first mechanism is projection, the second introjection. Introjection is a sort of “diluting process,” an “expansion of the circle of interest.” According to Ferenczi, the process is a normal one.

[768] Psychologically speaking, introjection is a process of *assimilation* (q.v.), while projection is a process of *dissimilation*. Introjection is an assimilation of object to subject, projection a dissimilation of object from subject through the expulsion of a subjective content into the object (v. *Projection, active)*. Introjection is a process of *extraversion* (q.v.), since assimilation to the object requires *empathy* (q.v.) and an investment of the object with *libido* (q.v.). A *passive* and an *active* introjection may be distinguished: transference phenomena in the treatment of the neuroses belong to the former category, and, in general, all cases where the object exercises a compelling influence on the subject, while empathy as a process of adaptation belongs to the latter category.

[769] 34. INTROVERSION means an inward-turning of *libido* (q.v.), in the sense of a negative relation of subject to object. Interest does not move towards the object but withdraws from it into the subject. Everyone whose attitude is introverted thinks, feels, and acts in a way that clearly demonstrates that the subject is the prime motivating factor and that the object is of secondary importance. Introversion may be intellectual or emotional, just as it can be characterized by *sensation* or *intuition* (qq.v.). It is *active* when the subject *voluntarily* shuts himself off from the object, *passive* when he is unable to restore to the object the libido streaming back from it. When introversion is habitual, we speak of an *introverted type* (q.v.).

[770] 35. INTUITION (L. *intueri*, ‘to look at or into’). I regard intuition as a basic psychological *function* (q.v.). It is the function that mediates perceptions in an *unconscious way*. Everything, whether outer or inner objects or their relationships, can be the focus of this perception. The peculiarity of intuition is that it is neither sense perception, nor feeling, nor intellectual inference, although it may also appear in these forms. In intuition a content presents itself whole and complete, without our being able to explain or discover how this content came into existence. Intuition is a kind of instinctive apprehension, no matter of what contents. Like *sensation* (q.v.), it is an *irrational* (q.v.) function of perception. As with sensation, its contents have the character of being “given,” in contrast to the “derived” or “produced” character of *thinking*

and *feeling* (qq.v.) contents. Intuitive knowledge possesses an intrinsic certainty and conviction, which enabled Spinoza (and Bergson) to uphold the *scientia intuitiva* as the highest form of knowledge. Intuition shares this quality with *sensation* (q.v.), whose certainty rests on its physical foundation. The certainty of intuition rests equally on a definite state of psychic "alertness" of whose origin the subject is unconscious.

[771] Intuition may be *subjective* or *objective:* the first is a perception of unconscious psychic data originating in the subject, the second is a perception of data dependent on subliminal perceptions of the object and on the feelings and thoughts they evoke. We may also distinguish *concrete* and *abstract* forms of intuition, according to the degree of participation on the part of sensation. Concrete intuition mediates perceptions concerned with the actuality of things, abstract intuition mediates perceptions of ideational connections. Concrete intuition is a reactive process, since it responds directly to the given facts; abstract intuition, like abstract sensation, needs a certain element of direction, an act of the will, or an aim.

[772] Like sensation, intuition is a characteristic of infantile and primitive psychology. It counterbalances the powerful sense impressions of the child and the primitive by mediating perceptions of mythological images, the precursors of *ideas* (q.v.). It stands in a compensatory relationship to sensation and, like it, is the matrix out of which thinking and feeling develop as rational functions. Although intuition is an irrational function, many intuitions can afterwards be broken down into their component elements and their origin thus brought into harmony with the laws of reason.

[773] Everyone whose general *attitude* (q.v.) is oriented by intuition belongs to the intuitive *type* (q.v.).[68] Introverted and extraverted intuitives may be distinguished according to whether intuition is directed inwards, to the inner vision, or outwards, to action and achievement. In abnormal cases intuition is in large measure fused together with the contents of the *collective unconscious* (q.v.) and determined by them, and this may make the intuitive type appear extremely irrational and beyond comprehension.

[774] 36. IRRATIONAL. I use this term not as denoting something *contrary* to reason, but something *beyond* reason, something, therefore, not grounded on reason. Elementary facts come into this category; the fact, for example, that the earth has a moon, that chlorine is an element, that water reaches its greatest density at four degrees centigrade, etc. Another irrational fact is *chance*, even though it may be possible to demonstrate a rational causation after the event.[69]

[775] The irrational is an existential factor which, though it may be pushed further and further out of sight by an increasingly elaborate rational explanation, finally makes the explanation so complicated that it passes our powers of comprehension, the limits of rational thought being reached long before the whole of the world could be encompassed by the laws of reason. A completely rational explanation of an object that actually exists (not one that is merely posited) is a Utopian ideal. Only an object that is posited can be completely explained on rational grounds, since it does not contain anything beyond what has been posited by rational thinking. Empirical science, too, posits objects that are confined within rational bounds, because by deliberately excluding the accidental it does not consider the actual object as a whole, but only that part of it which has been singled out for rational observation.

[776] In this sense *thinking* is a *directed function*, and so is *feeling* (qq.v.). When these functions are concerned not with a rational choice of objects, or with the qualities and interrelations of objects, but with the perception of accidentals which the actual object never lacks, they at once lose the attribute of directedness and, with it, something of their rational character, because they then accept the accidental. They begin to be irrational. The kind of thinking or feeling that is directed to the perception of accidentals, and is therefore irrational, is either *intuitive* or *sensational*. Both *intuition* and *sensation* (qq.v.) are functions that find fulfilment in the *absolute perception* of the flux of events. Hence, by their very nature, they will react to every possible occurrence and be attuned to the absolutely contingent, and must therefore lack all rational direction. For this reason I call them irrational functions, as opposed to thinking and feeling, which find fulfilment only when they are in complete harmony with the laws of reason.

[777] Although the irrational as such can never become the object of science, it is of the greatest importance for a practical psychology that the irrational factor should be correctly appraised. Practical psychology stirs up many problems that are not susceptible of a rational solution, but can only be settled irrationally, in a way not in accord with the laws of reason. The expectation or exclusive conviction that there must be a rational way of settling every conflict can be an insurmountable obstacle to finding a solution of an irrational nature.

[778] 37. LIBIDO. By libido I mean *psychic energy*.[70] Psychic energy is the *intensity* of a psychic process, its *psychological value*. This does not imply an assignment of value, whether moral, aesthetic, or intellectual; the psychological value is already implicit in its *determining* power, which expresses itself in definite psychic effects. Neither do I understand libido as a psychic *force*, a misconception that has led many critics astray. I do not hypostatize the concept of energy, but use it to denote intensities or values. The question as to whether or not a specific psychic force exists has nothing to do with the concept of libido. I often use "libido" promiscuously with "energy." The justification for calling psychic energy libido is fully gone into in the works cited in the footnote.

[779] 38. OBJECTIVE LEVEL. When I speak of interpreting a dream or fantasy on the objective level, I mean that the persons or situations appearing in it are referred to objectively real persons or situations, in contrast to interpretation on the *subjective level* (q.v.), where the persons or situations refer exclusively to subjective factors. Freud's interpretation of dreams is almost entirely on the objective level, since the dream wishes refer to real objects, or to sexual processes which fall within the physiological, extra-psychological sphere.

[780] 39. ORIENTATION. I use this term to denote the general principle governing an *attitude* (q.v.). Every attitude is oriented by a certain viewpoint, no matter whether this viewpoint is conscious or not. A power attitude (v. *Power-complex*) is oriented by the power of the *ego* (q.v.) to hold its own against unfavourable influences and conditions. A thinking

attitude is oriented by the principle of logic as its supreme law; a sensation attitude is oriented by the sensuous perception of given facts.

[781] 40. PARTICIPATION MYSTIQUE is a term derived from Lévy-Bruhl.[71] It denotes a peculiar kind of psychological connection with objects, and consists in the fact that the subject cannot clearly distinguish himself from the object but is bound to it by a direct relationship which amounts to partial *identity* (q.v.). This identity results from an *a priori* oneness of subject and object. *Participation mystique* is a vestige of this primitive condition. It does not apply to the whole subject-object relationship but only to certain cases where this peculiar tie occurs. It is a phenomenon that is best observed among primitives, though it is found very frequently among civilized peoples, if not with the same incidence and intensity. Among civilized peoples it usually occurs between persons, seldom between a person and a thing. In the first case it is a transference relationship, in which the object (as a rule) obtains a sort of magical—i.e. absolute—influence over the subject. In the second case there is a similar influence on the part of the thing, or else an *identification* (q.v.) with a thing or the idea of a thing.

41. PERSONA, V. SOUL.

[782] 42. POWER-COMPLEX. I occasionally use this term to denote the whole complex of ideas and strivings which seek to subordinate all other influences to the *ego* (q.v.), no matter whether these influences have their source in people and objective conditions or in the subject’s own impulses, thoughts, and feelings.

[783] 43. PROJECTION means the expulsion of a subjective content into an object; it is the opposite of *introjection* (q.v.). Accordingly it is a process of *dissimilation* (v. *Assimilation*), by which a subjective content becomes alienated from the subject and is, so to speak, embodied in the object. The subject gets rid of painful, incompatible contents by projecting them, as also of positive values which, for one reason or another—self-depreciation, for instance—are inaccessible to him. Projection results from the archaic *identity* (q.v.) of subject and object, but is properly so called only when the need to dissolve the identity with the object has

already arisen. This need arises when the identity becomes a disturbing factor, i.e., when the absence of the projected content is a hindrance to adaptation and its withdrawal into the subject has become desirable. From this moment the previous partial identity acquires the character of projection. The term projection therefore signifies a state of identity that has become noticeable, an object of criticism, whether it be the self-criticism of the subject or the objective criticism of another.

[784] We may distinguish *passive* and *active* projection. The passive form is the customary form of all pathological and many normal projections; they are not intentional and are purely automatic occurrences. The active form is an essential component of the act of *empathy* (q.v.). Taken as a whole, empathy is a process of introjection, since it brings the object into intimate relation with the subject. In order to establish this relationship, the subject detaches a content—a feeling, for instance—from himself, lodges it in the object, thereby animating it, and in this way draws the object into the sphere of the subject. The active form of projection is, however, also an act of judgment, the aim of which is to separate the subject from the object. Here a subjective judgment is detached from the subject as a valid statement and lodged in the object; by this act the subject distinguishes himself from the object. Projection, accordingly, is a process of *introversion* (q.v.) since, unlike introjection, it does not lead to ingestion and assimilation but to differentiation and separation of subject from object. Hence it plays a prominent role in paranoia, which usually ends in the total isolation of the subject.

43a. PSYCHE, V. SOUL.

[785] 44. RATIONAL. The rational is the reasonable, that which accords with reason. I conceive reason as an *attitude* (q.v.) whose principle it is to conform thought, feeling, and action to objective values. Objective values are established by the everyday experience of external facts on the one hand, and of inner, psychological facts on the other. Such experiences, however, could not represent objective “values” if they were “valued” as such by the subject, for that would already amount to an act of reason. The rational attitude which permits us to declare objective

values as valid at all is not the work of the individual subject, but the product of human history.

[786] Most objective values—and reason itself—are firmly established complexes of ideas handed down through the ages. Countless generations have laboured at their organization with the same necessity with which the living organism reacts to the average, constantly recurring environmental conditions, confronting them with corresponding functional complexes, as the eye, for instance, perfectly corresponds to the nature of light. One might, therefore, speak of a pre-existent, metaphysical, universal "Reason" were it not that the adapted reaction of the living organism to average environmental influences is the necessary condition of its existence—a thought already expressed by Schopenhauer. Human reason, accordingly, is nothing other than the expression of man's adaptability to average occurrences, which have gradually become deposited in firmly established complexes of ideas that constitute our objective values. Thus the laws of reason are the laws that designate and govern the average, "correct," adapted *attitude* (q.v.). Everything is "rational" that accords with these laws, everything that contravenes them is "irrational" (q.v.).

[787] *Thinking* and *feeling* (qq.v.) are rational functions in so far as they are decisively influenced by *reflection*. They function most perfectly when they are in the fullest possible accord with the laws of reason. The irrational functions, *sensation* and *intuition* (qq.v.), are those whose aim is pure *perception*; for, as far as possible, they are forced to dispense with the rational (which presupposes the exclusion of everything that is outside reason) in order to attain the most complete perception of the general flux of events.

[788] 45. REDUCTIVE means "leading back." I use this term to denote a method of psychological interpretation which regards the unconscious product not as a *symbol* (q.v.) but *semiotically*, as a *sign* or *symptom* of an underlying process. Accordingly, the reductive method traces the unconscious product back to its elements, no matter whether these be reminiscences of events that actually took place, or elementary psychic processes. The reductive method is oriented backwards, in contrast to the

constructive (q.v.) method, whether in the purely historical sense or in the figurative sense of tracing complex, differentiated factors back to something more general and more elementary. The interpretive methods of both Freud and Adler are reductive, since in both cases there is a reduction to the elementary processes of wishing or striving, which in the last resort are of an infantile or physiological nature. Hence the unconscious product necessarily acquires the character of an inauthentic expression to which the term "symbol" is not properly applicable. Reduction has a disintegrative effect on the real significance of the unconscious product, since this is either traced back to its historical antecedents and thereby annihilated, or integrated once again with the same elementary process from which it arose.

[789] 46. SELF.[72] As an empirical concept, the self designates the whole range of psychic phenomena in man. It expresses the unity of the personality as a whole. But in so far as the total personality, on account of its unconscious component, can be only in part conscious, the concept of the self is, in part, only *potentially* empirical and is to that extent a *postulate*. In other words, it encompasses both the experienceable and the inexperienceable (or the not yet experienced). It has these qualities in common with very many scientific concepts that are more names than ideas. In so far as psychic totality, consisting of both conscious and unconscious contents, is a postulate, it is a *transcendental* concept, for it presupposes the existence of unconscious factors on empirical grounds and thus characterizes an entity that can be described only in part but, for the other part, remains at present unknowable and illimitable.

[790] Just as conscious as well as unconscious phenomena are to be met with in practice, the self as psychic totality also has a conscious as well as an unconscious aspect. Empirically, the self appears in dreams, myths, and fairytales in the figure of the "supraordinate personality" (v. EGO), such as a king, hero, prophet, saviour, etc., or in the form of a totality symbol, such as the circle, square, *quadratura circuli*, cross, etc. When it represents a *complexio oppositorum*, a union of opposites, it can also appear as a united duality, in the form, for instance, of *tao* as the interplay of *yang* and *yin*, or of the hostile brothers, or of the hero and his

adversary (arch-enemy, dragon), Faust and Mephistopheles, etc. Empirically, therefore, the self appears as a play of light and shadow, although conceived as a totality and unity in which the opposites are united. Since such a concept is irrepresentable—*tertium non datur*—it is transcendental on this account also. It would, logically considered, be a vain speculation were it not for the fact that it designates symbols of unity that are found to occur empirically.

[791] The self is not a philosophical idea, since it does not predicate its own existence, i.e., does not hypostatize itself. From the intellectual point of view it is only a working hypothesis. Its empirical symbols, on the other hand, very often possess a distinct *numinosity*, i.e., an *a priori* emotional value, as in the case of the mandala,[73] "Deus est circulus …,"[74] the Pythagorean tetraktys,[75] the quaternity,[76] etc. It thus proves to be an *archetypal idea* (v. *Idea; Image*), which differs from other ideas of the kind in that it occupies a central position befitting the significance of its content and its numinosity.

[792] 47. SENSATION. I regard sensation as one of the basic psychological *functions* (q.v.). Wundt likewise reckons it among the elementary psychic phenomena.[77] Sensation is the psychological function that mediates the perception of a physical stimulus. It is, therefore, identical with perception. Sensation must be strictly distinguished from *feeling* (q.v.), since the latter is an entirely different process, although it may associate itself with sensation as "feeling-tone." Sensation is related not only to external stimuli but to inner ones, i.e., to changes in the internal organic processes.

[793] Primarily, therefore, sensation is *sense perception*—perception mediated by the sense organs and "body-senses" (kinaesthetic, vasomotor sensation, etc.). It is, on the one hand, an element of ideation, since it conveys to the mind the perceptual image of the external object; and on the other hand, it is an element of feeling, since through the perception of bodily changes it gives feeling the character of an *affect* (q.v.). Because sensation conveys bodily changes to consciousness, it is also a representative of physiological impulses. It is not identical with them, being merely a perceptive function.

[794] A distinction must be made between sensuous or *concrete* (q.v.) sensation and *abstract* (q.v.) sensation. The first includes all the above-mentioned forms of sensation, whereas the second is a sensation that is abstracted or separated from the other psychic elements. Concrete sensation never appears in “pure” form, but is always mixed up with ideas, feelings, thoughts. Abstract sensation is a differentiated kind of perception, which might be termed “aesthetic” in so far as, obeying its own principle, it detaches itself from all contamination with the different elements in the perceived object and from all admixtures of thought and feeling, and thus attains a degree of purity beyond the reach of concrete sensation. The concrete sensation of a flower, on the other hand, conveys a perception not only of the flower as such, but also of the stem, leaves, habitat, and so on. It is also instantly mingled with feelings of pleasure or dislike which the sight of the flower evokes, or with simultaneous olfactory perceptions, or with thoughts about its botanical classification, etc. But abstract sensation immediately picks out the most salient sensuous attribute of the flower, its brilliant redness, for instance, and makes this the sole or at least the principal content of consciousness, entirely detached from all other admixtures. Abstract sensation is found chiefly among artists. Like every abstraction, it is a product of functional *differentiation* (q.v.), and there is nothing primitive about it. The primitive form of a function is always concrete, i.e., contaminated (v. *Archaism; Concretism*). Concrete sensation is a reactive phenomenon, while abstract sensation, like every abstraction, is always associated with the *will* (q.v.), i.e., with a sense of direction. The will that is directed to abstract sensation is an expression and application of the *aesthetic sensation attitude*.

[795] Sensation is strongly developed in children and primitives, since in both cases it predominates over thinking and feeling, though not necessarily over *intuition* (q.v.). I regard sensation as conscious, and intuition as unconscious, perception. For me sensation and intuition represent a pair of opposites, or two mutually compensating functions, like thinking and feeling. Thinking and feeling as independent functions are developed, both ontogenetically and phylogenetically, from sensation (and equally, of course, from intuition as the necessary counterpart of

sensation). A person whose-whole *attitude* (q.v.) is oriented by sensation belongs to the *sensation type* (q.v.).

[796] Since sensation is an elementary phenomenon, it is given *a priori*, and, unlike thinking and feeling, is not subject to rational laws. I therefore call it an *irrational* (q.v.) function, although reason contrives to assimilate a great many sensations into a rational context. Normal sensations are proportionate, i.e., they correspond approximately to the intensity of the physical stimulus. Pathological sensations are disproportionate, i.e., either abnormally weak or abnormally strong. In the former case they are inhibited, in the latter exaggerated. The inhibition is due to the predominance of another function; the exaggeration is the result of an abnormal fusion with another function, for instance with undifferentiated thinking or feeling. It ceases as soon as the function with which sensation is fused is differentiated in its own right. The psychology of the neuroses affords instructive examples of this, since we often find a strong *sexualization* (Freud) of other functions, i.e., their fusion with sexual sensations.

[797] 48. SOUL. [Psyche, personality, persona, anima.] I have been compelled, in my investigations into the structure of the unconscious, to make a conceptual distinction between *soul* and *psyche*. By psyche I understand the totality of all psychic processes, conscious as well as unconscious. By soul, on the other hand, I understand a clearly demarcated functional complex that can best be described as a "personality." In order to make clear what I mean by this, I must introduce some further points of view. It is, in particular, the phenomena of somnambulism, double consciousness, split personality, etc., whose investigation we owe primarily to the French school,[78] that have enabled us to accept the possibility of a plurality of personalities in one and the same individual.

[*Soul as a functional complex or "personality"*]

[798] It is at once evident that such a plurality of personalities can never appear in a normal individual. But, as the above-mentioned phenomena show, the possibility of a dissociation of personality must exist, at least in

the germ, within the range of the normal. And, as a matter of fact, any moderately acute psychological observer will be able to demonstrate, without much difficulty, traces of character-splitting in normal individuals. One has only to observe a man rather closely, under varying conditions, to see that a change from one milieu to another brings about a striking alteration of personality, and on each occasion a clearly defined character emerges that is noticeably different from the previous one. “Angel abroad, devil at home” is a formulation of the phenomenon of character-splitting derived from everyday experience. A particular milieu necessitates a particular *attitude* (q.v.). The longer this attitude lasts, and the more often it is required, the more habitual it becomes. Very many people from the educated classes have to move in two totally different milieus—the domestic circle and the world of affairs. These two totally different environments demand two totally different attitudes, which, depending on the degree of the ego’s *identification* (q.v.) with the attitude of the moment, produce a duplication of character. In accordance with social conditions and requirements, the social character is oriented on the one hand by the expectations and demands of society, and on the other by the social aims and aspirations of the individual. The domestic character is, as a rule, moulded by emotional demands and an easy-going acquiescence for the sake of comfort and convenience; whence it frequently happens that men who in public life are extremely energetic, spirited, obstinate, wilful and ruthless appear good-natured, mild, compliant, even weak, when at home and in the bosom of the family. Which is the true character, the real personality? This question is often impossible to answer.

[799] These reflections show that even in normal individuals character-splitting is by no means an impossiblity. We are, therefore, fully justified in treating personality dissociation as a problem of normal psychology. In my view the answer to the above question should be that such a man has no real character at all: he is not *individual* (q.v.) but *collective* (q.v.), the plaything of circumstance and general expectations. Were he individual, he would have the same character despite the variation of attitude. He would not be identical with the attitude of the moment, and he neither would nor could prevent his *individuality* (q.v.) from expressing itself

just as clearly in one state as in another. Naturally he is individual, like every living being, but unconsciously so. Because of his more or less complete identification with the attitude of the moment, he deceives others, and often himself, as to his real character. He puts on a *mask*, which he knows is in keeping with his conscious intentions, while it also meets the requirements and fits the opinions of society, first one motive and then the other gaining the upper hand.

[*Soul as persona*]

[800] This mask, i.e., the *ad hoc* adopted attitude, I have called the *persona*,[79] which was the name for the masks worn by actors in antiquity. The man who identifies with this mask I would call "personal" as opposed to "individual."

[801] The two above-mentioned attitudes represent two collective personalities, which may be summed up quite simply under the name "personae." I have already suggested that the real individuality is different from both. The persona is thus a functional complex that comes into existence for reasons of adaptation or personal convenience, but is by no means identical with the individuality. The persona is exclusively concerned with the relation to objects. The relation of the individual to the object must be sharply distinguished from the relation to the subject. By the "subject" I mean first of all those vague, dim stirrings, feelings, thoughts, and sensations which flow in on us not from any demonstrable continuity of conscious experience of the object, but well up like a disturbing, inhibiting, or at times helpful, influence from the dark inner depths, from the background and underground vaults of consciousness, and constitute, in their totality, our perception of the life of the unconscious. The subject, conceived as the "inner object," *is* the unconscious. Just as there is a relation to the outer object, an outer attitude, there is a relation to the inner object, an inner attitude. It is readily understandable that this inner attitude, by reason of its extremely intimate and inaccessible nature, is far more difficult to discern than the outer attitude, which is immediately perceived by everyone. Nevertheless, it does not seem to me impossible to formulate it as a concept. All those allegedly accidental inhibitions, fancies, moods, vague

feelings, and scraps of fantasy that hinder concentration and disturb the peace of mind even of the most normal man, and that are rationalized away as being due to bodily causes and suchlike, usually have their origin, not in the reasons consciously ascribed to them, but in perceptions of unconscious processes. Dreams naturally belong to this class of phenomena, and, as we all know, are often traced back to such external and superficial causes as indigestion, sleeping on one’s back, and so forth, in spite of the fact that these explanations can never stand up to searching criticism. The attitude of the individual in these matters is extremely varied. One man will not allow himself to be disturbed in the slightest by his inner processes—he can ignore them completely; another man is just as completely at their mercy—as soon as he wakes up some fantasy or other, or a disagreeable feeling, spoils his mood for the whole day; a vaguely unpleasant sensation puts the idea into his head that he is suffering from a secret disease, a dream fills him with gloomy forebodings, although ordinarily he is not superstitious. Others, again, have only periodic access to these unconscious stirrings, or only to a certain category of them. For one man they may never have reached consciousness at all as anything worth thinking about, for another they are a worrying problem he broods on daily. One man takes them as physiological, another attributes them to the behaviour of his neighbours, another finds in them a religious revelation.

[802] These entirely different ways of dealing with the stirrings of the unconscious are just as habitual as the attitudes to the outer object. The inner attitude, therefore, is correlated with just as definite a functional complex as the outer attitude. People who, it would seem, entirely overlook their inner psychic processes no more lack a typical inner attitude than the people who constantly overlook the outer object and the reality of facts lack a typical outer one. In all the latter cases, which are by no means uncommon, the persona is characterized by a lack of relatedness, at times even a blind inconsiderateness, that yields only to the harshest blows of fate. Not infrequently, it is just these people with a rigid persona who possess an attitude to the unconscious processes which is extremely susceptible and open to influence. Inwardly they are as weak, malleable, and “soft-centered” as they are inflexible and

unapproachable outwardly. Their inner attitude, therefore, corresponds to a personality that is diametrically opposed to the outer personality. I know a man, for instance, who blindly and pitilessly destroyed the happiness of those nearest to him, and yet would interrupt important business journeys just to enjoy the beauty of a forest scene glimpsed from the carriage window. Cases of this kind are doubtless familiar to everyone, so I need not give further examples.

[*Soul as anima*]

[803] We can, therefore, speak of an inner personality with as much justification as, on the grounds of daily experience, we speak of an outer personality. The inner personality is the way one behaves in relation to one's inner psychic processes; it is the inner attitude, the characteristic face, that is turned towards the unconscious. I call the outer attitude, the outward face, the *persona*; the inner attitude, the inward face, I call the *anima*.[80] To the degree that an attitude is habitual, it is a well-knit functional complex with which the ego can identify itself more or less. Common speech expresses this very graphically: when a man has an habitual attitude to certain situations, an habitual way of doing things, we say he is quite *another man* when doing this or that. This is a practical demonstration of the autonomy of the functional complex represented by the habitual attitude: it is as though another personality had taken possession of the individual, as though "another spirit had got into him." The same autonomy that very often characterizes the outer attitude is also claimed by the inner attitude, the anima. It is one of the most difficult educational feats to change the persona, the outer attitude, and it is just as difficult to change the anima, since its structure is usually quite as well-knit as the persona's. Just as the persona is an entity that often seems to constitute the whole character of a man, and may even accompany him unaltered throughout his entire life, the anima is a clearly defined entity with a character that, very often, is autonomous and immutable. It therefore lends itself very readily to characterization and description.

[804] As to the character of the anima, my experience confirms the rule that it is, by and large, *complementary* to the character of the persona. The anima usually contains all those common human qualities which the

conscious attitude lacks. The tyrant tormented by bad dreams, gloomy forebodings, and inner fears is a typical figure. Outwardly ruthless, harsh, and unapproachable, he jumps inwardly at every shadow, is at the mercy of every mood, as though he were the feeblest and most impressionable of men. Thus his anima contains all those fallible human qualities his persona lacks. If the persona is intellectual, the anima will quite certainly be sentimental. The complementary character of the anima also affects the sexual character, as I have proved to myself beyond a doubt. A very feminine woman has a masculine soul, and a very masculine man has a feminine soul. This contrast is due to the fact that a man is not in all things wholly masculine, but also has certain feminine traits. The more masculine his outer attitude is, the more his feminine traits are obliterated: instead, they appear in his unconscious. This explains why it is just those very virile men who are most subject to characteristic weaknesses; their attitude to the unconscious has a womanish weakness and impressionability. Conversely, it is often just the most feminine women who, in their inner lives, display an intractability, an obstinacy, and a wilfulness that are to be found with comparable intensity only in a man's outer attitude. These are masculine traits which, excluded from the womanly outer attitude, have become qualities of her soul.

[805] If, therefore, we speak of the *anima* of a man, we must logically speak of the *animus* of a woman, if we are to give the soul of a woman its right name. Whereas logic and objectivity are usually the predominant features of a man's outer attitude, or are at least regarded as ideals, in the case of a woman it is feeling. But in the soul it is the other way round: inwardly it is the man who feels, and the woman who reflects. Hence a man's greater liability to total despair, while a woman can always find comfort and hope; accordingly a man is more likely to put an end to himself than a woman. However much a victim of social circumstances a woman may be, as a prostitute for instance, a man is no less a victim of impulses from the unconscious, taking the form of alcoholism and other vices.

[806] As to its common human qualities, the character of the anima can be deduced from that of the persona. Everything that should normally be in the outer attitude, but is conspicuously absent, will invariably be found in

the inner attitude. This is a fundamental rule which my experience has borne out over and over again. But as regards its individual qualities, nothing can be deduced about them in this way. We can only be certain that when a man is identical with his persona, his individual qualities will be associated with the anima. This association frequently gives rise in dreams to the symbol of psychic pregnancy, a symbol that goes back to the *primordial image* (q.v.) of the hero's birth. The child that is to be born signifies the individuality, which, though present, is not yet conscious. For in the same way as the persona, the instrument of adaptation to the environment, is strongly influenced by environmental conditions, the anima is shaped by the unconscious and its qualities. In a primitive milieu the persona necessarily takes on primitive features, and the anima similarly takes over the *archaic* (q.v.) features of the unconscious as well as its symbolic, prescient character. Hence the "pregnant," "creative" qualities of the inner attitude.

[807] *Identity* (q.v.) with the persona automatically leads to an unconscious identity with the anima because, when the ego is not differentiated from the persona, it can have no conscious relation to the unconscious processes. Consequently, it *is* these processes, it is identical with them. Anyone who is himself his outward role will infallibly succumb to the inner processes; he will either frustrate his outward role by absolute inner necessity or else reduce it to absurdity, by a process of *enantiodromia* (q.v.). He can no longer keep to his individual way, and his life runs into one deadlock after another. Moreover, the anima is inevitably projected upon a real object, with which he gets into a relation of almost total dependence. Every reaction displayed by this object has an immediate, inwardly enervating effect on the subject. Tragic ties are often formed in this way (v. *Soul-image*).

[808] 49. SOUL-IMAGE [Anima / Animus].[81] The soul-image is a specific *image* (q.v.) among those produced by the unconscious. Just as the *persona* (v. *Soul*), or outer attitude, is represented in dreams by images of definite persons who possess the outstanding qualities of the persona in especially marked form, so in a man the soul, i.e., anima, or inner attitude, is represented in the unconscious by definite persons with the

corresponding qualities. Such an image is called a “soul-image.” Sometimes these images are of quite unknown or mythological figures. With men the anima is usually personified by the unconscious as a woman; with women the animus is personified as a man. In every case where the *individuality* (q.v.) is unconscious, and therefore associated with the soul, the soul-image has the character of the same sex. In all cases where there is an *identity* (q.v.) with the persona, and the soul accordingly is unconscious, the soul-image is transferred to a real person. This person is the object of intense love or equally intense hate (or fear). The influence of such a person is immediate and absolutely compelling, because it always provokes an affective response. The *affect* (q.v.) is due to the fact that a real, conscious adaptation to the person representing the soul-image is impossible. Because an objective relationship is non-existent and out of the question, the *libido* (q.v.) gets dammed up and explodes in an outburst of affect. Affects always occur where there is a failure of adaptation. Conscious adaptation to the person representing the soul-image is impossible precisely because the subject is unconscious of the soul. Were he conscious of it, it could be distinguished from the object, whose immediate effects might then be mitigated, since the potency of the object depends on the *projection* (q.v.) of the soul-image.

[809] For a man, a woman is best fitted to be the real bearer of his soul-image, because of the feminine quality of his soul; for a woman it will be a man. Wherever an impassioned, almost magical, relationship exists between the sexes, it is invariably a question of a projected soul-image. Since these relationships are very common, the soul must be unconscious just as frequently—that is, vast numbers of people must be quite unaware of the way they are related to their inner psychic processes. Because this unconsciousness is always coupled with complete identification with the persona, it follows that this identification must be very frequent too. And in actual fact very many people are wholly identified with their outer attitude and therefore have no conscious relation to their inner processes. Conversely, it may also happen that the soul-image is not projected but remains with the subject, and this results in an identification with the soul because the subject is then convinced that the way he relates to his inner processes is his real character. In that event the persona, being

unconscious, will be projected on a person of the same sex, thus providing a foundation for many cases of open or latent homosexuality, and of father-transferences in men or mother-transferences in women. In such cases there is always a defective adaptation to external reality and a lack of relatedness, because identification with the soul produces an attitude predominantly oriented to the perception of inner processes, and the object is deprived of its determining power.

[810] If the soul-image is projected, the result is an absolute affective tie to the object. If it is not projected, a relatively unadapted state develops, which Freud has described as *narcissism*. The projection of the soul-image offers a release from preoccupation with one's inner processes so long as the behaviour of the object is in harmony with the soul-image. The subject is then in a position to live out his persona and develop it further. The object, however, will scarcely be able to meet the demands of the soul-image indefinitely, although there are many women who, by completely disregarding their own lives, succeed in representing their husband's soul-image for a very long time. The biological feminine instinct assists them in this. A man may unconsciously do the same for his wife, though this will prompt him to deeds which finally exceed his capacities whether for good or evil. Here again the biological masculine instinct is a help.

[811] If the soul-image is not projected, a thoroughly morbid relation to the unconscious gradually develops. The subject is increasingly overwhelmed by unconscious contents, which his inadequate relation to the object makes him powerless to assimilate or put to any kind of use, so that the whole subject-object relation only deteriorates further. Naturally these two attitudes represent the two extremes between which the more normal attitudes lie. In a normal man the soul-image is not distinguished by any particular clarity, purity, or depth, but is apt to be rather blurred. In men with a good-natured and unaggressive persona, the soul-image has a rather malevolent character. A good literary example of this is the daemonic woman who is the companion of Zeus in Spitteler's *Olympian Spring*. For an idealistic woman, a depraved man is often the bearer of the soul-image; hence the "saviour fantasy" so frequent in such cases.

The same thing happens with men, when the prostitute is surrounded with the halo of a soul crying for succour.

[812] 50. SUBJECTIVE LEVEL. When I speak of interpreting a dream or fantasy on the subjective level, I mean that the persons or situations appearing in it refer to subjective factors entirely belonging to the subject's own psyche. As we know, the psychic image of an object is never exactly like the object—at most there is a near resemblance. It is the product of sense perception and *apperception* (q.v.), and these are processes that are inherent in the psyche and are merely stimulated by the object. Although the evidence of our senses is found to coincide very largely with the qualities of the object, our apperception is conditioned by unpredictable subjective influences which render a correct knowledge of the object extraordinarily difficult. Moreover, such a complex psychic factor as a man's character offers only a few *points d'appui* for pure sense perception. Knowledge of human character requires *empathy* (q.v.), reflection, *intuition* (q.v.). As a result of these complications, our final judgment is always of very doubtful value, so that the image we form of a human object is, to a very large extent, subjectively conditioned. In practical psychology, therefore, we would do well to make a rigorous distinction between the image or *imago* of a man and his real existence. Because of its extremely subjective origin, the *imago* is frequently more an image of a subjective functional complex than of the object itself. In the analytical treatment of unconscious products it is essential that the *imago* should not be assumed to be identical with the object; it is better to regard it as an image of the subjective relation to the object. That is what is meant by interpretation on the subjective level.

[813] Interpretation of an unconscious product on the subjective level reveals the presence of subjective judgments and tendencies of which the object is made the vehicle. When, therefore, an object-imago appears in an unconscious product, it is not on that account the image of a real object; it is far more likely that we are dealing with a subjective functional complex (v. *Soul*, pars. 798ff.). Interpretation on the subjective level allows us to take a broader psychological view not only of dreams but also of literary works, in which the individual figures then appear as

representatives of relatively autonomous functional complexes in the psyche of the author.

[814] 51. SYMBOL. The concept of a *symbol* should in my view be strictly distinguished from that of a *sign*. Symbolic and *semiotic* meanings are entirely different things. In his book on symbolism, Ferrero[82] does not speak of symbols in the strict sense, but of signs. For instance, the old custom of handing over a piece of turf at the sale of a plot of land might be described as "symbolic" in the vulgar sense of the word, but actually it is purely semiotic in character. The piece of turf is a sign, or token, standing for the whole estate. The winged wheel worn by railway officials is not a *symbol* of the railway, but a *sign* that distinguishes the personnel of the railway system. A symbol always presupposes that the chosen expression is the best possible description or formulation of a relatively unknown fact, which is none the less known to exist or is postulated as existing. Thus, when the badge of a railway official is explained as a symbol, it amounts to saying that this man has something to do with an unknown system that cannot be differently or better expressed than by a winged wheel.

[815] Every view which interprets the symbolic expression as an analogue or an abbreviated designation for a *known* thing is *semiotic*. A view which interprets the symbolic expression as the best possible formulation of a relatively *unknown* thing, which for that reason cannot be more clearly or characteristically represented, is *symbolic*. A view which interprets the symbolic expression as an intentional paraphrase or transmogrification of a known thing is *allegoric*. The interpretation of the cross as a symbol of divine love is *semiotic*, because "divine love" describes the fact to be expressed better and more aptly than a cross, which can have many other meanings. On the other hand, an interpretation of the cross is *symbolic* when it puts the cross beyond all conceivable explanations, regarding it as expressing an as yet unknown and incomprehensible fact of a mystical or transcendent, i.e., psychological, nature, which simply finds itself most appropriately represented in the cross.

[816] So long as a symbol is a living thing, it is an expression for something that cannot be characterized in any other or better way. The symbol is alive only so long as it is pregnant with meaning. But once its meaning has been born out of it, once that expression is found which formulates the thing sought, expected, or divined even better than the hitherto accepted symbol, then the symbol is *dead*, i.e., it possesses only an historical significance. We may still go on speaking of it as a symbol, on the tacit assumption that we are speaking of it as it was before the better expression was born out of it. The way in which St. Paul and the earlier speculative mystics speak of the cross shows that for them it was still a living symbol which expressed the inexpressible in unsurpassable form. For every esoteric interpretation the symbol is dead, because esotericism has already given it (at least ostensibly) a better expression, whereupon it becomes merely a conventional sign for associations that are more completely and better known elsewhere. Only from the exoteric standpoint is the symbol a living thing.

[817] An expression that stands for a known thing remains a mere sign and is never a symbol. It is, therefore, quite impossible to create a living symbol, i.e., one that is pregnant with meaning, from known associations. For what is thus produced never contains more than was put into it. Every psychic product, if it is the best possible expression at the moment for a fact as yet unknown or only relatively known, may be regarded as a symbol, provided that we accept the expression as standing for something that is only divined and not yet clearly conscious. Since every scientific theory contains an hypothesis, and is therefore an anticipatory description of something still essentially unknown, it is a symbol. Furthermore, every psychological expression is a symbol if we assume that it states or signifies something more and other than itself which eludes our present knowledge. This assumption is absolutely tenable wherever a consciousness exists which is attuned to the deeper meaning of things. It is untenable only when this same consciousness has itself devised an expression which states exactly what it is intended to state—a mathematical term, for instance. But for another consciousness this limitation does not exist. It can take the mathematical term as a symbol for an unknown psychic fact which the term was not intended to express

but is concealed within it—a fact which is demonstrably not known to the man who devised the semiotic expression and which therefore could not have been the object of any conscious use.

[818] Whether a thing is a symbol or not depends chiefly on the *attitude* (q.v.) of the observing consciousness; for instance, on whether it regards a given fact not merely as such but also as an expression for something unknown. Hence it is quite possible for a man to establish a fact which does not appear in the least symbolic to himself, but is profoundly so to another consciousness. The converse is also true. There are undoubtedly products whose symbolic character does not depend merely on the attitude of the observing consciousness, but manifests itself spontaneously in the symbolic effect they have on the observer. Such products are so constituted that they would lack any kind of meaning were not a symbolic one conceded to them. Taken as a bare fact, a triangle with an eye enclosed in it is so meaningless that it is impossible for the observer to regard it as a merely accidental piece of foolery. Such a figure immediately conjures up a symbolic interpretation. This effect is reinforced by the widespread incidence of the same figure in identical form, or by the particular care that went into its production, which is an expression of the special value placed upon it.

[819] Symbols that do not work in this way on the observer are either extinct, i.e., have been superseded by a better formulation, or are products whose symbolic nature depends entirely on the attitude of the observing consciousness. The attitude that takes a given phenomenon as symbolic may be called, for short, the *symbolic attitude*. It is only partially justified by the actual behaviour of things; for the rest, it is the outcome of a definite view of the world which *assigns meaning* to events, whether great or small, and attaches to this meaning a greater value than to bare facts. This view of things stands opposed to another view which lays the accent on sheer facts and subordinates meaning to them. For the latter attitude there can be no symbols whatever when the symbolism depends exclusively on the mode of observation. But even for such an attitude symbols do exist—those, namely, that prompt the observer to conjecture a hidden meaning. A bull-headed god can certainly be explained as a man's body with a bull's head on it. But this explanation

can hardly hold its own against the symbolic explanation, because the symbolism is too arresting to be overlooked. A symbol that forcibly obtrudes its symbolic nature on us need not be a *living* symbol. It may have a merely historical or philosophical significance, and simply arouses intellectual or aesthetic interest. A symbol really lives only when it is the best and highest expression for something divined but not yet known to the observer. It then compels his unconscious participation and has a life-giving and life-enhancing effect. As Faust says: “How differently this new sign works upon me!”[83]

[820] The living symbol formulates an essential unconscious factor, and the more widespread this factor is, the more general is the effect of the symbol, for it touches a corresponding chord in every psyche. Since, for a given epoch, it is the best possible expression for what is still unknown, it must be the product of the most complex and differentiated minds of that age. But in order to have such an effect at all, it must embrace what is common to a large group of men. This can never be what is most differentiated, the highest attainable, for only a very few attain to that or understand it. The common factor must be something that is still so primitive that its ubiquity cannot be doubted. Only when the symbol embraces that and expresses it in the highest possible form is it of general efficacy. Herein lies the potency of the living, social symbol and its redeeming power.

[821] All that I have said about the social symbol applies equally to the individual symbol. There are individual psychic products whose symbolic character is so obvious that they at once compel a symbolic interpretation. For the individual they have the same functional significance that the social symbol has for a larger human group. These products never have an exclusively conscious or an exclusively unconscious source, but arise from the equal collaboration of both. Purely unconscious products are no more convincingly symbolic *per se* than purely conscious ones; it is the symbolic attitude of the observing consciousness that endows them both with the character of a symbol. But they can be conceived equally well as causally determined facts, in much the same way as one might regard the red exanthema of scarlet fever as a “symbol” of the disease. In that case it is perfectly correct to speak of a

"symptom" and not of a "symbol." In my view Freud is quite justified when, from his standpoint, he speaks of *symptomatic*[84] rather than symbolic actions, since for him these phenomena are not symbolic in the sense here defined, but are symptomatic signs of a definite and generally known underlying process. There are, of course, neurotics who regard their unconscious products, which are mostly morbid symptoms, as symbols of supreme importance. Generally, however, this is not what happens. On the contrary, the neurotic of today is only too prone to regard a product that may actually be full of significance as a mere "symptom."

[822] The fact that there are two distinct and mutually contradictory views eagerly advocated on either side concerning the meaning or meaninglessness of things shows that processes obviously exist which express no particular meaning, being in fact mere consequences, or symptoms; and that there are other processes which bear within them a hidden meaning, processes which are not merely derived from something but which seek to become something, and are therefore symbols. It is left to our discretion and our critical judgment to decide whether the thing we are dealing with is a symptom or a symbol.

[823] The symbol is always a product of an extremely complex nature, since data from every psychic function have gone into its making. It is, therefore, neither *rational* nor *irrational* (qq.v.). It certainly has a side that accords with reason, but it has another side that does not; for it is composed not only of rational but also of irrational data supplied by pure inner and outer perception. The profundity and pregnant significance of the symbol appeal just as strongly to *thinking* as to *feeling* (qq.v.), while its peculiar plastic imagery, when shaped into sensuous form, stimulates *sensation* as much as *intuition* (qq.v.). The living symbol cannot come to birth in a dull or poorly developed mind, for such a mind will be content with the already existing symbols offered by established tradition. Only the passionate yearning of a highly developed mind, for which the traditional symbol is no longer the unified expression of the rational and the irrational, of the highest and the lowest, can create a new symbol.

[824] But precisely because the new symbol is born of man's highest spiritual aspirations and must at the same time spring from the deepest roots of his being, it cannot be a onesided product of the most highly differentiated mental functions but must derive equally from the lowest and most primitive levels of the psyche. For this collaboration of opposing states to be possible at all, they must first face one another in the fullest conscious opposition. This necessarily entails a violent disunion with oneself, to the point where thesis and antithesis negate one another, while the ego is forced to acknowledge its absolute participation in both. If there is a subordination of one part, the symbol will be predominantly the product of the other part, and, to that extent, less a symbol than a symptom—a symptom of the suppressed antithesis. To the extent, however, that a symbol is merely a symptom, it also lacks a redeeming effect, since it fails to express the full right of all parts of the psyche to exist, being a constant reminder of the suppressed antithesis even though consciousness may not take this fact into account. But when there is full parity of the opposites, attested by the ego's absolute participation in both, this necessarily leads to a suspension of the *will* (q.v.), for the will can no longer operate when every motive has an equally strong countermotive. Since life cannot tolerate a standstill, a damming up of vital energy results, and this would lead to an insupportable condition did not the tension of opposites produce a new, uniting function that transcends them. This function arises quite naturally from the regression of *libido* (q.v.) caused by the blockage. All progress having been rendered temporarily impossible by the total division of the will, the libido streams backwards, as it were, to its source. In other words, the neutralization and inactivity of consciousness bring about an activity of the unconscious, where all the differentiated functions have their common, archaic root, and where all contents exist in a state of promiscuity of which the primitive mentality still shows numerous vestiges.

[825] From the activity of the unconscious there now emerges a new content, constellated by thesis and antithesis in equal measure and standing in a *compensatory* (q.v.) relation to both. It thus forms the middle ground on which the opposites can be united. If, for instance, we

conceive the opposition to be sensuality versus spirituality, then the mediatory content born out of the unconscious provides a welcome means of expression for the spiritual thesis, because of its rich spiritual associations, and also for the sensual antithesis, because of its sensuous imagery. The ego, however, torn between thesis and antithesis, finds in the middle ground its own counterpart, its sole and unique means of expression, and it eagerly seizes on this in order to be delivered from its division. The energy created by the tension of opposites therefore flows into the mediatory product and protects it from the conflict which immediately breaks out again, for both the opposites are striving to get the new product on their side. Spirituality wants to make something spiritual out of it, and sensuality something sensual; the one wants to turn it into science or art, the other into sensual experience. The appropriation or dissolution of the mediatory product by either side is successful only if the ego is not completely divided but inclines more to one side or the other. But if one side succeeds in winning over and dissolving the mediatory product, the ego goes along with it, whereupon an identification of the ego with the most favoured function (v. *Inferior Function*) ensues. Consequently, the process of division will be repeated later on a higher plane.

[826] If, however, as a result of the stability of the ego, neither side succeeds in dissolving the mediatory product, this is sufficient demonstration that it is superior to both. The stability of the ego and the superiority of the mediatory product to both thesis and antithesis are to my mind correlates, each conditioning the other. Sometimes it seems as though the stability of the inborn *individuality* (q.v.) were the decisive factor, sometimes as though the mediatory product possessed a superior power that determines the ego’s absolute stability. In reality it may be that the stability of the one and the superior power of the other are two sides of the same coin.

[827] If the mediatory product remains intact, it forms the raw material for a process not of dissolution but of construction, in which thesis and antithesis both play their part. In this way it becomes a new content that governs the whole attitude, putting an end to the division and forcing the

energy of the opposites into a common channel. The standstill is overcome and life can flow on with renewed power towards new goals.

[828] I have called this process in its totality the *transcendent function*, “function” being here understood not as a basic function but as a complex function made up of other functions, and “transcendent” not as denoting a metaphysical quality but merely the fact that this function facilitates a transition from one attitude to another. The raw material shaped by thesis and antithesis, and in the shaping of which the opposites are united, is the living symbol. Its profundity of meaning is inherent in the raw material itself, the very stuff of the psyche, transcending time and dissolution; and its configuration by the opposites ensures its sovereign power over all the psychic functions.

[829] Indications of the process of symbol-formation are to be found in the scanty records of the conflicts experienced by the founders of religion during their initiation period, e.g., the struggle between Jesus and Satan, Buddha and Mara, Luther and the devil, Zwingli and his previous worldly life; or the regeneration of Faust through the pact with the devil. In *Zarathustra* we find an excellent example of the suppressed antithesis in the “Ugliest Man.”

52. SYNTHETIC, V. CONSTRUCTIVE.

[830] 53. THINKING. This I regard as one of the four basic psychological *functions* (q.v.). Thinking is the psychological function which, following its own laws, brings the contents of ideation into conceptual connection with one another. It is an *apperceptive* (q.v.) activity, and as such may be divided into *active* and *passive* thinking. Active thinking is an act of the *will* (q.v.), passive thinking is a mere occurrence. In the former case, I submit the contents of ideation to a voluntary act of judgment; in the latter, conceptual connections establish themselves of their own accord, and judgments are formed that may even contradict my intention. They are not consonant with my aim and therefore, for me, lack any sense of direction, although I may afterwards recognize their directedness through an act of active apperception. Active thinking, accordingly, would correspond to my concept of *directed thinking*.[85] Passive thinking was

inadequately described in my previous work as "fantasy thinking."[86] Today I would call it *intuitive* thinking.

[831] To my mind, a mere stringing together of ideas, such as is described by certain psychologists as *associative thinking*,[87] is not thinking at all, but mere ideation. The term "thinking" should, in my view, be confined to the linking up of ideas by means of a concept, in other words, to an act of judgment, no matter whether this act is intentional or not.

[832] The capacity for directed thinking I call *intellect*; the capacity for passive or undirected thinking I call *intellectual intuition*. Further, I call directed thinking a *rational* (q.v.) function, because it arranges the contents of ideation under concepts in accordance with a rational norm of which I am conscious. Undirected thinking is in my view an *irrational* (q.v.) function, because it arranges and judges the contents of ideation by norms of which I am not conscious and therefore cannot recognize as being in accord with reason. Subsequently I may be able to recognize that the intuitive act of judgment accorded with reason, although it came about in a way that appears to me irrational.

[833] Thinking that is governed by *feeling* (q.v.) I do not regard as intuitive thinking, but as a thinking dependent on feeling; it does not follow its own logical principle but is subordinated to the principle of feeling. In such thinking the laws of logic are only ostensibly present; in reality they are suspended in favour of the aims of feeling.

[834] 53a. THOUGHT. Thought is the specific content or material of the thinking function, discriminated by *thinking* (q.v.).

54. TRANSCENDENT FUNCTION, V. SYMBOL, pars. 825–28.

[835] 55. TYPE. A type is a specimen or example which reproduces in a characteristic way the character of a species or class. In the narrower sense used in this particular work, a type is a characteristic specimen of a general *attitude* (q.v.) occurring in many individual forms. From a great number of existing or possible attitudes I have singled out four; those, namely, that are primarily oriented by the four basic psychological *functions* (q.v.): *thinking, feeling, sensation, intuition* (qq.v.). When any

of these attitudes is *habitual*, thus setting a definite stamp on the character of an *individual* (q.v.), I speak of a psychological type. These *function-types*, which one can call the thinking, feeling, sensation, and intuitive types, may be divided into two classes according to the quality of the basic function, i.e., into the *rational* and the *irrational* (qq.v.). The thinking and feeling types belong to the former class, the sensation and intuitive types to the latter. A further division into two classes is permitted by the predominant trend of the movement of *libido* (q.v.), namely *introversion* and *extraversion* (qq.v.). All the basic types can belong equally well to one or the other of these classes, according to the predominance of the introverted or extraverted attitude.[88] A thinking type may belong either to the introverted or to the extraverted class, and the same holds good for the other types. The distinction between rational and irrational types is simply another point of view and has nothing to do with introversion and extraversion.

[836] In my previous contributions to typology[89] I did not differentiate the thinking and feeling types from the introverted and extraverted types, but identified the thinking type with the introverted, and the feeling type with the extraverted. But a more thorough investigation of the material has shown me that we must treat the introverted and extraverted types as categories over and above the function-types. This differentiation, moreover, fully accords with experience, since, for example, there are undoubtedly two kinds of feeling types, the attitude of the one being oriented more by his feeling-experience [= introverted feeling type], the other more by the object [= extraverted feeling type].

[837] 56. UNCONSCIOUS. The concept of the *unconscious* is for me an *exclusively psychological* concept, and not a philosophical concept of a metaphysical nature. In my view the unconscious is a psychological borderline concept, which covers all psychic contents or processes that are not conscious, i.e., not related to the *ego* (q.v.) in any perceptible way. My justification for speaking of the existence of unconscious processes at all is derived simply and solely from experience, and in particular from psychopathological experience, where we have undoubted proof that, in a case of hysterical amnesia, for example, the ego knows nothing of the

existence of numerous psychic complexes, and the next moment a simple hypnotic procedure is sufficient to bring the lost contents back to memory.

[838] Thousands of such experiences justify us in speaking of the existence of unconscious psychic contents. As to the actual state an unconscious content is in when not attached to consciousness, this is something that eludes all possibility of cognition. It is therefore quite pointless to hazard conjectures about it. Conjectures linking up the unconscious state with cerebration and physiological processes belong equally to the realm of fantasy. It is also impossible to specify the range of the unconscious, i.e., what contents it embraces. Only experience can decide such questions.

[839] We know from experience that conscious contents can become unconscious through loss of their energic value. This is the normal process of "forgetting." That these contents do not simply get lost below the threshold of consciousness we know from the experience that occasionally, under suitable conditions, they can emerge from their submersion decades later, for instance in dreams, or under hypnosis, or in the form of cryptomnesia,[90] or through the revival of associations with the forgotten content. We also know that conscious contents can fall below the threshold of consciousness through "intentional forgetting," or what Freud calls the *repression* of a painful content, with no appreciable loss of value. A similar effect is produced by a dissociation of the personality, i.e., the disintegration of consciousness as the result of a violent *affect* (q.v.) or nervous shock, or through the collapse of the personality in schizophrenia (Bleuler).

[840] We know from experience, too, that sense perceptions which, either because of their slight intensity or because of the deflection of attention, do not reach conscious *apperception* (q.v.), none the less become psychic contents through unconscious apperception, which again may be demonstrated by hypnosis, for example. The same thing may happen with certain judgments or other associations which remain unconscious because of their low energy charge or because of the deflection of attention. Finally, experience also teaches that there are unconscious psychic associations—mythological *images* (q.v.), for instance—which

have never been the object of consciousness and must therefore be wholly the product of unconscious activity.

[841] To this extent, then, experience furnishes *points d'appui* for the assumption of unconscious contents. But it can tell us nothing about what might *possibly* be an unconscious content. It is idle to speculate about this, because the range of what *could* be an unconscious content is simply illimitable. What is the lowest limit of subliminal sense perception? Is there any way of measuring the scope and subtlety of unconscious associations? When is a forgotten content totally obliterated? To these questions there is no answer.

[842] Our experience so far of the nature of unconscious contents permits us, however, to make one general classification. We can distinguish a *personal unconscious*, comprising all the acquisitions of personal life, everything forgotten, repressed, subliminally perceived, thought, felt. But, in addition to these personal unconscious contents, there are other contents which do not originate in personal acquisitions but in the inherited possibility of psychic functioning in general, i.e., in the inherited structure of the brain. These are the mythological associations, the motifs and images that can spring up anew anytime anywhere, independently of historical tradition or migration. I call these contents the *collective unconscious*. Just as conscious contents are engaged in a definite activity, so too are the unconscious contents, as experience confirms. And just as conscious psychic activity creates certain products, so unconscious psychic activity produces dreams, *fantasies* (q.v.), etc. It is idle to speculate on how great a share consciousness has in dreams. A dream presents itself to us: we do not consciously create it. Conscious reproduction, or even the perception of it, certainly alters the dream in many ways, without, however, doing away with the basic fact of the unconscious source of creative activity.

[843] The functional relation of the unconscious processes to consciousness may be described as *compensatory* (q.v.), since experience shows that they bring to the surface the subliminal material that is constellated by the conscious situation, i.e., all those contents which could not be missing from the picture if everything were conscious. The compensatory

function of the unconscious becomes more obvious the more one-sided the conscious *attitude* (q.v.) is; pathology furnishes numerous examples of this.

[844] 57. WILL. I regard the will as the amount of psychic energy at the disposal of consciousness. Volition would, accordingly, be an energic process that is released by conscious motivation. A psychic process, therefore, that is conditioned by unconscious motivation I would not include under the concept of the will. The will is a psychological phenomenon that owes its existence to culture and moral education, but is largely lacking in the primitive mentality.

EPILOGUE

[845] In our age, which has seen the fruits of the French Revolution—"Liberté, Egalité, Fraternité"—growing into a broad social movement whose aim is not merely to raise or lower political rights to the same general level, but, more hopefully, to abolish unhappiness altogether by means of external regulations and egalitarian reforms—in such an age it is indeed a thankless task to speak of the complete inequality of the elements composing a nation. Although it is certainly a fine thing that every man should stand equal before the law, that every man should have his political vote, and that no man, through hereditary social position and privilege, should have unjust advantage over his brother, it is distinctly less fine when the idea of equality is extended to other walks of life. A man must have a very clouded vision, or view human society from a very misty distance, to cherish the notion that the uniform regulation of life would automatically ensure a uniform distribution of happiness. He must be pretty far gone in delusion if he imagines that equality of income, or equal opportunities for all, would have approximately the same value for everyone. But, if he were a legislator, what would he do about all those people whose greatest opportunities lie not without, but within? If he were just, he would have to give at least twice as much money to the one man as to the other, since to the one it means much, to the other little. No social legislation will ever be able to overcome the psychological differences between men, this most necessary factor for generating the vital energy of a human society. It may serve a useful purpose, therefore, to speak of the heterogeneity of men. These differences involve such different requirements for happiness that no legislation, however perfect, could afford them even approximate satisfaction. No outward form of life could be devised, however equitable and just it might appear, that would not involve injustice for one or the other human type. That, in spite of this, every kind of enthusiast—political, social, philosophical, or religious—is busily endeavouring to find those uniform external conditions which would bring with them greater opportunities for the

happiness of all seems to me connected with a general attitude to life too exclusively oriented by the outer world.

[846] It is not possible to do more than touch on this far-reaching question here, since such considerations lie outside the scope of this book. We are here concerned only with the psychological problem, and the existence of different typical attitudes is a problem of the first order, not only for psychology but for all departments of science and life in which man's psychology plays a decisive role. It is, for instance, obvious to anyone of ordinary intelligence that every philosophy that is not just a history of philosophy depends on a personal psychological premise. This premise may be of a purely individual nature, and indeed is generally regarded as such if any psychological criticism is made at all. The matter is then considered settled. But this is to overlook the fact that what one regards as an individual prejudice is by no means so under all circumstances, since the standpoint of a particular philosopher often has a considerable following. It is acceptable to his followers not because they echo him without thinking, but because it is something they can fully understand and appreciate. Such an understanding would be impossible if the philosopher's standpoint were determined only individually, for it is quite certain in that case that he would be neither fully understood nor even tolerated. The peculiarity of the standpoint which is understood and acknowledged by his followers must therefore correspond to a *typical* personal attitude, which in the same or a similar form has many representatives in a society. As a rule, the partisans of either side attack each other purely externally, always seeking out the chinks in their opponent's armour. Squabbles of this kind are usually fruitless. It would be of considerably greater value if the dispute were transferred to the psychological realm, from which it arose in the first place. The shift of position would soon show a diversity of psychological attitudes, each with its own right to existence, and each contributing to the setting up of incompatible theories. So long as one tries to settle the dispute by external compromises, one merely satisfies the modest demands of shallow minds that have never yet been enkindled by the passion of a principle. A real understanding can, in my view, be reached only when the diversity of psychological premises is accepted.

[847] It is a fact, which is constantly and overwhelmingly apparent in my practical work, that people are virtually incapable of understanding and accepting any point of view other than their own. In small things a general superficiality of outlook, combined with a none too common forbearance and tolerance and an equally rare goodwill, may help to build a bridge over the chasm which lack of understanding opens between man and man. But in more important matters, and especially those concerned with ideals, an understanding seems, as a rule, to be beyond the bounds of possibility. Certainly strife and misunderstanding will always be among the props of the tragicomedy of human existence, but it is none the less undeniable that the advance of civilization has led from the law of the jungle to the establishment of courts of justice and standards of right and wrong which are above the contending parties. It is my conviction that a basis for the settlement of conflicting views would be found in the recognition of different types of attitude—a recognition not only of the existence of such types, but also of the fact that every man is so imprisoned in his type that he is simply incapable of fully understanding another standpoint. Failing a recognition of this exacting demand, a violation of the other standpoint is practically inevitable. But just as the contending parties in a court of law refrain from direct violence and submit their claims to the justice of the law and the impartiality of the judge, so each type, conscious of his own partiality, should refrain from heaping abuse, suspicion, and indignity upon his opponent.

[848] In considering the problem of typical attitudes, and in presenting them in outline, I have endeavoured to direct the eye of my readers to this picture of the many possible ways of viewing life, in the hope that I may have contributed my small share to the knowledge of the almost infinite variations and gradations of individual psychology. No one, I trust, will draw the conclusion from my description of types that I believe the four or eight types here presented to be the only ones that exist. This would be a serious misconception, for I have no doubt whatever that these attitudes could also be considered and classified from other points of view. Indeed, there are indications of such possibilities in this book, as for instance Jordan’s classification in terms of activity. But whatever the criterion for

a classification of types may be, a comparison of the various forms of habitual attitudes will result in an equal number of psychological types.

[849] However easy it may be to regard the existing attitudes from other viewpoints than the one here adopted, it would be difficult to adduce evidence against the existence of psychological types. I have no doubt at all that my opponents will be at some pains to strike the question of types off the scientific agenda, since the type problem must, to say the least of it, be a very unwelcome obstacle for every theory of complex psychic processes that lays claim to general validity. Every theory of complex psychic processes presupposes a uniform human psychology, just as scientific theories in general presuppose that nature is fundamentally one and the same. But in the case of psychology there is the peculiar condition that, in the making of its theories, the psychic process is not merely an object but at the same time the subject. Now if one assumes that the subject is the same in all individual cases, it can also be assumed that the subjective process of theory-making, too, is the same everywhere. That this is not so, however, is demonstrated most impressively by the existence of the most diverse theories about the nature of complex psychic processes. Naturally, every new theory is ready to assume that all other theories were wrong, usually for the sole reason that its author has a different subjective view from his predecessors. He does not realize that the psychology he sees is *his* psychology, and on top of that is the psychology of his type. He therefore supposes that there can be only one true explanation of the psychic process he is investigating, namely the one that agrees with his type. All other views—I might almost say all seven other views—which, in their way, are just as true as his, are for him mere aberrations. In the interests of the validity of his own theory, therefore, he will feel a lively but very understandable distaste for any view that establishes the existence of different types of human psychology, since his own view would then lose, shall we say, seven-eighths of its truth. For, besides his own theory, he would have to regard seven other theories of the same process as equally true, or, if that is saying too much, at least grant a second theory a value equal to his own.

[850] I am quite convinced that a natural process which is very largely independent of human psychology, and can therefore be viewed only as an object, can have but one true explanation. But I am equally convinced that the explanation of a complex psychic process which cannot be objectively registered by any apparatus must necessarily be only the one which that subjective process itself produces. In other words, the author of the concept can produce only just such a concept as corresponds to the psychic process he is endeavouring to explain; but it will correspond only when the process to be explained coincides with the process occurring in the author himself. If neither the process to be explained, nor any analogy of it, were to be found in the author, he would be confronted with a complete enigma, whose explanation he would have to leave to the man who himself experienced the process. If I have a vision, for instance, no objectively registering apparatus will enable me to discover how it originated; I can explain its origin only as I myself understand it. But in this "as I myself understand it" lies the partiality, for at best my explanation will start from the way the visionary process presents itself to me. By what right do I assume that the visionary process presents itself in the same or a similar way to everyone?

[851] With some show of reason, one will adduce the uniformity of human psychology at all times and places as an argument in favour of this generalization of a subjective judgment. I myself am so profoundly convinced of the uniformity of the psyche that I have even summed it up in the concept of the collective unconscious, as a universal and homogeneous substratum whose uniformity is such that one finds the same myth and fairytale motifs in all corners of the earth, with the result that an uneducated American Negro dreams of motifs from Greek mythology[1] and a Swiss clerk re-experiences in his psychosis the vision of an Egyptian Gnostic.[2] But this fundamental homogeneity is offset by an equally great heterogeneity of the conscious psyche. What immeasurable distances lie between the consciousness of a primitive, a Periclean Athenian, and a modern European! What a difference even between the consciousness of a learned professor and that of his spousel What, in any case, would our world be like if there existed a uniformity of minds? No, the notion of a uniformity of the conscious psyche is an

academic chimera, doubtless simplifying the task of a university lecturer when facing his pupils, but collapsing into nothing in the face of reality. Quite apart from the differences among individuals whose innermost natures are separated by stellar distances, the types, as classes of individuals, are themselves to a very large extent different from one another, and it is to the existence of these types that we must ascribe the differences of views in general.

[852] In order to discover the uniformity of the human psyche, I have to descend into the very foundations of consciousness. Only there do I find that in which all are alike. If I build my theory on what is common to all, I explain the psyche in terms of its foundation and origin. But that does nothing to explain its historical and individual differentiation. With such a theory I ignore the peculiarities of the conscious psyche. I actually deny the whole other side of the psyche, its differentiation from the original germinal state. I reduce man to his phylogenetic prototype, or I dissolve him into his elementary processes; and when I try to reconstruct him again, in the former case an ape will emerge, and in the latter a welter of elementary processes engaged in aimless and meaningless reciprocal activity.

[853] No doubt an explanation of the psyche on the basis of its uniformity is not only possible but fully justified. But if I want to project a picture of the psyche in its totality, I must bear in mind the diversity of psyches, since the conscious individual psyche belongs just as much to a general picture of psychology as does its unconscious foundation. In my construction of theories, therefore, I can, with as much right, proceed from the fact of differentiated psyches, and consider the same process from the standpoint of differentiation which I considered before from the standpoint of uniformity. This naturally leads me to a view diametrically opposed to the former one. Everything which in that view was left out of the picture as an individual variant now becomes important as a starting-point for further differentiations; and everything which previously had a special value on account of its uniformity now appears valueless, because merely collective. From this angle I shall always be intent on where a thing is going to, not where it comes from; whereas from the former angle I never bothered about the goal but only about the origin. I can,

therefore, explain the same psychic process with two contradictory and mutually exclusive theories, neither of which I can declare to be wrong, since the rightness of one is proved by the uniformity of the psyche, and the rightness of the other by its diversity.

[854] This brings us to the great difficulty which the reading of my earlier book[3] only aggravated, both for the scientific public and for the layman, with the result that many otherwise competent heads were thrown into confusion. There I made an attempt to present both views with the help of case material. But since reality neither consists of theories nor follows them, the two views, which we are bound to think of as divided, are united within it. Each is a product of the past and carries a future meaning, and of neither can it be said with certainty whether it is an end or a beginning. Everything that is alive in the psyche shimmers in rainbow hues. For anyone who thinks there is only one true explanation of a psychic process, this vitality of psychic contents, which necessitates two contradictory theories, is a matter for despair, especially if he is enamoured of simple and uncomplicated truths, incapable maybe of thinking both at the same time.

[855] On the other hand, I am not convinced that, with these two ways of looking at the psyche—the reductive and constructive as I have called them[4]—the possibilities of explanation are exhausted. I believe that other equally "true" explanations of the psychic process can still be put forward, just as many in fact as there are types. Moreover, these explanations will agree as well or as ill with one another as the types themselves in their personal relations. Should, therefore, the existence of typical differences of human psyches be granted—and I confess I see no reason why it should not be granted—the scientific theorist is confronted with the disagreeable dilemma of either allowing several contradictory theories of the same process to exist side by side, or of making an attempt, foredoomed at the outset, to found a sect which claims for itself the only correct method and the only true theory. Not only does the former possibility encounter the extraordinary difficulty of an inwardly contradictory "double-think" operation, it also contravenes one of the first principles of intellectual morality: *principia explicandi non sunt*

multiplicanda praeter necessitatem.[5] But in the case of psychological theories the necessity of a plurality of explanations is given from the start, since, in contrast to any other scientific theory, the object of psychological explanation is consubstantial with the subject: one psychological process has to explain another. This serious difficulty has already driven thoughtful persons to remarkable subterfuges, such as the assumption of an "objective intellect" standing outside the psychic process and capable of contemplating the subordinate psyche objectively, or the similar assumption that the intellect is a faculty which can stand outside itself and contemplate itself. All these expedients are supposed to create a sort of extra-terrestrial Archimedean point by means of which the intellect can lift itself off its own hinges. I understand very well the profound human need for convenient solutions, but I do not see why truth should bow to this need. I can also understand that, aesthetically, it would be far more satisfactory if, instead of the paradox of mutually contradictory explanations, we could reduce the psychic process to the simplest possible instinctive foundation and leave it at that, or if we could credit it with a metaphysical goal of redemption and find peace in that hope.

[856] Whatever we strive to fathom with our intellect will end in paradox and relativity, if it be honest work and not *a petitio principii* in the interests of convenience. That an intellectual understanding of the psychic process must end in paradox and relativity is simply unavoidable, if only for the reason that the intellect is but one of many psychic functions which is intended by nature to serve man in constructing of his images of the objective world. We should not pretend to understand the world only by the intellect; we apprehend it just as much by feeling. Therefore the judgment of the intellect is, at best, only a half-truth, and must, if it is honest, also admit its inadequacy.

[857] To deny the existence of types is of little avail in the face of the facts. In view of their existence, therefore, every theory of psychic processes has to submit to being evaluated in its turn as itself a psychic process, as the expression of a specific type of human psychology with its own justification. Only from these typical self-representations of the psyche

can the materials be collected which will co-operate to form a higher synthesis.

APPENDIX

FOUR PAPERS ON PSYCHOLOGICAL TYPOLOGY

1

A CONTRIBUTION TO THE STUDY OF PSYCHOLOGICAL TYPES[1]

[858] It is well known that in their general aspects hysteria and schizophrenia present a striking contrast, which is particularly evident in the attitude of the patients to the external world. In their relations to the object, the hysteric displays as a rule an intensity of feeling that surpasses the normal, while in the schizophrenic the normal level is not reached at all. The clinical picture is exaggerated emotivity in the one, and extreme apathy in the other, with regard to the environment. In their personal relations this difference is marked by the fact that we can remain in affective rapport with our hysterical patients, which is not the case in schizophrenia. The contrast between the two types of illness is also observable in the rest of their symptomatology. So far as the intellectual symptoms of hysteria are concerned, they are fantasy products which may be accounted for in a natural and human way by the antecedents and individual history of the patient; in schizophrenia, on the contrary, the fantasy products are more nearly related to dreams than to the psychology of the waking state. They have, moreover, a distinctly archaic character, the mythological creations of the primitive imagination being far more in evidence than the personal memories of the patient. Finally, the physical symptoms so common in hysteria, which simulate well-known and impressive organic illnesses, are not to be found in the clinical picture of schizophrenia.

[859] All this clearly indicates that hysteria is characterized by a centrifugal movement of libido, while in schizophrenia the movement is more centripetal. The reverse obtains, however, when the illness has fully established its compensatory effects. In the hysteric the libido is then hampered in its movement of expansion and is forced to regress upon itself; the patients cease to partake in the common life, are wrapped up in their daydreams, keep to their beds, remain shut up in their sickrooms, etc. During the incubation of his illness the schizophrenic likewise turns

away from the outer world in order to withdraw into himself, but when the period of morbid compensation arrives, he seems constrained to draw attention to himself, to force himself upon the notice of those around him, by his extravagant, insupportable, or directly aggressive behaviour.

[860] I propose to use the terms *extraversion* and *introversion* to describe these two opposite movements of libido, further qualifying them as *regressive* in pathological cases where delusional ideas, fictions, or fantastic interpretations, all inspired by emotivity, falsify the judgment of the patient about things or about himself. We speak of extraversion when he gives his whole interest to the outer world, to the object, and attributes an extraordinary importance and value to it. When, on the contrary, the objective world sinks into the shadow, at it were, or undergoes a devaluation, while the individual occupies the centre of his own interest and becomes in his own eyes the only person worthy of consideration, it is a case of introversion. I call *regressive extraversion* the phenomenon which Freud calls *transference*, when the hysteric projects upon the object his own illusions and subjective valuations. In the same way, I call *regressive introversion* the opposite phenomenon which we find in schizophrenia, when these fantastic ideas refer to the subject himself.

[861] It is obvious that these two contrary movements of libido, as simple psychic mechanisms, may operate alternately in the same individual, since after all they serve the same purpose by different methods—namely, to minister to his well-being. Freud has taught us that in the mechanism of hysterical extraversion the personality seeks to get rid of disagreeable memories and impressions, and to free itself from its complexes, by a process of *repression*. The individual clings to the object in order to forget these painful contents and leave them behind him. Conversely, in the mechanism of introversion, the libido concentrates itself wholly on the complexes, and seeks to detach and isolate the personality from external reality. This psychological process is associated with a phenomenon which is not properly speaking “repression,” but would be better rendered by the term “devaluation” of the objective world.

[862] To this extent, extraversion and introversion are two modes of psychic reaction which can be observed in the same individual. The fact, however, that two such contrary disturbances as hysteria and schizophrenia are characterized by the predominance of the mechanism of extraversion or of introversion suggests that there may also be normal human types who are distinguished by the predominance of one or other of the two mechanisms. And indeed, psychiatrists know very well that long before the illness is fully established, the hysterical patient as well as the schizophrenic is marked by the predominance of his specific type, which reaches back into the earliest years of childhood.

[863] As Binet has pointed out so aptly,[1a] a neurosis simply emphasizes and throws into excessive relief the characteristic traits of a personality. It has long been known that the so-called hysterical character is not simply the product of the manifest neurosis, but predated it to a certain extent. And Hoch has shown the same thing by his researches into the histories of schizophrenic patients; he speaks of a “shut-in” personality[2] which was present before the onset of the illness. If this is so, we may certainly expect to find the two types outside the sphere of pathology. There are moreover numerous witnesses in literature to the existence of the two types of mentality. Without pretending to exhaust the subject, I will give a few striking examples.

[864] So far as my limited knowledge goes, we have to thank William James for the best observations in this respect. He lays down the principle: “Of whatever temperament a professional philosopher is, he tries, when philosophizing, to sink the fact of his temperament.”[3] And starting from this idea, which is altogether in accord with the spirit of psychoanalysis, he divides philosophers into two classes: the “tender-minded” and the “tough-minded,” or, as we might also call them, the “spiritually-minded” and the “materially-minded.” The very terms clearly reveal the opposite movements of the libido. The first class direct their libido to the world of thought, and are predominantly introverted; the second direct it to material things and objective reality, and are extraverted.

[865] James characterizes the “tender-minded” first of all as *rationalistic*, “going by principles.”[4] They are the men of principles and systems; they aspire to dominate experience and to transcend it by abstract reasoning, by their logical deductions and purely rational concepts. They care little for facts, and the multiplicity of empirical phenomena hardly bothers or disconcerts them at all; they forcibly fit the data into their ideal constructions, and reduce everything to their *a priori* premises. This was the method of Hegel in settling beforehand the number of the planets. In the domain of pathology we again meet this kind of philosopher in paranoiacs, who, unperturbed by all factual evidence to the contrary, impose their delirious conceptions on the universe, and find a means of interpreting everything, and according to Adler “arranging” everything, in conformity with their preconceived system.

[866] The other characteristics of this type which James enumerates follow logically from these premises. The “tender-minded” man is “intellectualistic, idealistic, optimistic, religious, free-willist, monistic, dogmatical.”[5] All these qualities betray the almost exclusive concentration of libido upon his intellectual life. This concentration on the inner world of thought is nothing else than introversion. In so far as experience plays any role with these philosophers, it serves only as a fillip to abstraction, to the imperative need to fit the multiplicity and chaos of events into an order which, in the last resort, is the creation of purely subjective thinking.

[867] The “tough-minded” man, on the other hand, is empirical, “going by facts.” Experience is his master, facts are his guide and they colour all his thinking. It is only tangible phenomena in the outside world that count. Thought is merely a reaction to external experience. For him principles are always of less value than facts; if he has any, they merely reflect and describe the flux of events, and are incapable of forming a system. Hence his theories are liable to inner contradiction and get overlaid by the accumulation of empirical material. Psychic reality limits itself for him to observation and to the experience of pleasure and pain; he does not go beyond that, nor does he recognize the rights of philosophical thought. Remaining on the ever-changing surface of the phenomenal world, he himself partakes of its instability; he sees all its aspects, all its theoretical

and practical possibilities, but he never arrives at the unity of a settled system, which alone could satisfy the tender-minded. The tough-minded man is reductive. As James so excellently says: “What is higher is explained by what is lower and treated for ever as a case of ‘nothing but’—nothing but something else of a quite inferior sort.”[6]

[868] From these general characteristics, the others which James points out logically follow. The tough-minded man is “sensationalistic,” giving more value to the senses than to reflection. He is “materialistic and pessimistic,” for he knows only too well the uncertainty and hopeless chaos of the course of things. He is “irreligious,” being incapable of asserting the realities of his inner world against the pressure of external facts; a fatalist, because resigned; a pluralist, incapable of all synthesis; and finally a sceptic, as a last and inevitable consequence of all the rest.[7]

[869] The expressions, therefore, used by James show clearly that the difference between the types is the result of a different localization of the libido, this “magical power” in the depth of our being, which, depending on the individual, is directed sometimes to our inner life, sometimes to the objective world. Contrasting the religious subjectivism of the solipsist with the contemporary empirical attitude, James says: “But our esteem for facts has not neutralized in us all religiousness. It is itself almost religious. Our scientific temper is devout.”[8]

[870] A second parallel is furnished by Wilhelm Ostwald,[9] who divides men of genius into “classics” and “romantics.” The romantics are distinguished by their rapid reactions, their abundant production of ideas, some of which are badly digested and of doubtful value. They are brilliant teachers, of a compelling ardour, and collect round them a large and enthusiastic circle of students, on whom they exert great personal influence. This type is obviously identical with our extraverted type. The classics, on the contrary, are slow to react; they produce with much difficulty, paralyzed by their own severe self-criticism; they have no love for teaching, and are in fact mostly bad teachers, lacking enthusiasm; living apart and absorbed in themselves, they exercise little direct personal influence, making scarcely any disciples, but producing works

of finished perfection which often bring them only posthumous fame. This type is an unmistakable introvert.

[871] We find a third, very valuable parallel in the aesthetic theory of Wilhelm Worringer.[10] Borrowing A. Riegl's expression "absolute artistic volition"[11] to designate the internal force which inspires the artist, he distinguishes two forms: abstraction and empathy. He speaks of the urge to abstraction and the urge to empathy, thereby making clear the libidinal nature of these two forms, the stirring of the *élan vital*. "In the same way," says Worringer, "as the urge to empathy finds its gratification in organic beauty, so the urge to abstraction discovers beauty in the inorganic, the negation of all life, in crystalline forms or, generally speaking, wherever the severity of abstract law reigns."[12] Empathy is a movement of libido towards the object in order to assimilate it and imbue it with emotional values; abstraction withdraws libido from the object, despoils it of all that could recall life; leaching out, as it were, its intellectual content, and crystallizing from the lye the typical elements that conform to law, which are either superimposed on the object or are its very antithesis. Bergson also makes use of these images of crystallization and rigidity to illustrate the nature of intellectual abstraction and clarification.

[872] Worringer's "abstraction" represents that process which we have already encountered as a consequence of introversion—the exaltation of the intellect to offset the devaluation of external reality. "Empathy" corresponds to extraversion, as Theodor Lipps had already pointed out. "What I feel myself into is life in general, and life is power, inner work, effort, and accomplishment. To live, in a word, is to act, and to act is to experience the expenditure of my forces. This activity is by its very nature an activity of the will."[13] "Aesthetic enjoyment," says Worringer, "is objectified self-enjoyment,"[14] a formula that accords very well with our definition of extraversion. But Worringer's conception of aesthetics is not vitiated by any "tough-mindedness," and so he is fully capable of appreciating the value of psychological realities. Hence Worringer says: "The crucial factor is thus not so much the tone of the feeling as the feeling itself, the inner movement, the inner life, the subject's inner

activity."[15] And again: "The value of a line or of a form consists in the vital value which it holds for us. It acquires its beauty only through the vital feeling which we unconsciously project into it."[16] These statements correspond exactly to my own view of the theory of libido, which seeks to maintain the balance between the two psychological opposites of extraversion and introversion.

[873] The counterpole of empathy is abstraction. According to Worringer, "the urge to abstraction is the outcome of a great inner uneasiness inspired in man by the phenomena of the external world, and its religious counterpart is the strongly transcendental colouring of all ideas. We might describe this state as an immense spiritual dread of space…. This same feeling of fear may also be assumed to be the root of artistic creation."[17] We recognize in this definition the primary tendency towards introversion. To the introverted type the universe does not appear beautiful and desirable, but disquieting and even dangerous; he entrenches himself in his inner fastness, securing himself by the invention of regular geometrical figures full of repose, whose primitive, magical power assures him of domination over the surrounding world.

[874] "The urge to abstraction is the origin of all art," says Worringer.[18] This idea finds weighty confirmation in the fact that schizophrenics produce forms and figures showing the closest analogy with those of primitive humanity, not only in their thoughts but also in their drawings.

[875] In this connection it would be unjust not to recall that Schiller attempted a similar formulation in his *naïve* and *sentimental* types.[19] The naïve poet "*is* Nature, the sentimental seeks her," he says. The naïve poet expresses primarily *himself*, while the sentimental is primarily influenced by the object. For Schiller, a perfect example of the naïve poet is Homer. "The naïve poet follows simple Nature and sensation and confines himself to a mere copying of reality."[20] "The sentimental poet," on the contrary "reflects on the impression objects make on him, and on that reflection alone depends the emotion with which he is exalted, and which likewise exalts us. Here the object is related to an idea, and on this relation alone depends his poetic power."[21] But Schiller also saw that these two types result from the predominance of psychological

mechanisms which might be present in the same individual. “It is not only in the same poet,” he says, “but even in the same work that these two categories are frequently found united.”[22] These quotations show what types Schiller had in mind, and one recognizes their basic identity with those we have been discussing.

[876] We find another parallel in Nietzsche’s contrast between the *Apollinian* and the *Dionysian*.[23] The example which Nietzsche uses to illustrate this contrast is instructive—namely, that between dream and intoxication. In a dream the individual is shut up in himself, it is the most intimate of all psychic experiences; in intoxication he is liberated from himself, and, utterly self-forgetful, plunges into the multiplicity of the objective world. In his picture of Apollo, Nietzsche borrows the words of Schopenhauer: “As upon a tumultuous sea, unbounded in every direction, the mariner sits full of confidence in his frail barque, rising and falling amid the raging mountains of waves, so the individual man, in a world of troubles, sits passive and serene, trusting to the *principium individuationis*.”[24]“Yes,” continues Nietzsche, “one might say that the unshakable confidence in this principle, and the calm security of those whom it has inspired, have found in Apollo their most sublime expression, and one might describe Apollo himself as the glorious divine image of the principle of individuation.”[25]

[877] The Apollinian state, therefore, as Nietzsche conceives it, is a withdrawal into oneself, or introversion. Conversely the Dionysian state is the unleashing of a torrent of libido into things. “Not only,” says Nietzsche, “is the bond between man and man reconfirmed in the Dionysian enchantment, but alienated Nature, hostile or enslaved, celebrates once more her feast of reconciliation with her prodigal son—Man. Liberally the earth proffers her gifts, and the wild beasts from rock and desert draw near peacefully. The car of Dionysos is heaped with flowers and garlands; panthers and tigers stride beneath his yoke. Transform Beethoven’s Ode to Joy into a painting, and give free rein to your imagination as the awestruck millions prostrate themselves in the dust: thus you approach the Dionysian intoxication. Now is the slave free, now all the rigid, hostile barriers which necessity, caprice, or

shameless fashion have set up between man and man are broken down. Now, with this gospel of universal harmony, each feels himself not only united, reconciled, merged with his neighbour, but one with him, as though the veil of Maya had been torn away, and nothing remained of it but a few shreds floating before the mystery of the Primal Unity."[26] Any commentary on this passage would be superfluous.

[878] In concluding this series of examples drawn from outside my own special field of study, I would still like to mention a parallel from the sphere of linguistics, which likewise illustrates our two types. This is Franz Finck's hypothesis concerning the structure of language.[27] According to Finck, there are two main types of linguistic structure. The one is represented in general by the transitive verbs: I see him, I kill him, etc. The other is represented by the intransitive verbs: He appears before me, he dies at my feet. The first type clearly shows a centrifugal movement of libido going out from the subject; the second, a centripetal movement of libido coming in from the object. The latter, introverting type of structure is found particularly among the primitive languages of the Eskimos.

[879] Finally, in the domain of psychiatry our two types have been described by Otto Gross.[28] He distinguishes two forms of inferiority: a type with a diffuse and shallow consciousness, and another with a contracted and deep consciousness. The first is characterized by the weakness, the second by the intense activity, of the "secondary function." Gross recognized that the secondary function is closely connected with affectivity, from which it is not difficult to see that once again our two types are meant. The relation he established between manic-depressive insanity and the type with a shallow consciousness shows that we are dealing with extraversion, while the relation between the psychology of the paranoiac and the type with a contracted consciousness indicates the identity with introversion.

[880] After the foregoing considerations it will come as a surprise to nobody to learn that in the domain of psychoanalysis we also have to reckon with the existence of these two psychological types. On the one side we have a theory which is essentially reductive, pluralistic, causal,

and sensualistic. This is the theory of Freud, which is strictly limited to empirical facts, and traces back complexes to their antecedents and to more simple elements. It regards psychological life as consisting in large measure of reactions, and accords the greatest role to sensation. On the other side we have the diametrically opposed theory of Adler,[29] which is thoroughly intellectualistic, monistic, and finalistic. Here psychological phenomena are not reduced to antecedent and more simple elements, but are conceived as "arrangements," as the outcome of intentions and aims of a complex nature. Instead of the *causa efficiens* we have the *causa finalis*. The previous history of the patient and the concrete influences of the environment are of much less importance than his dominating principles, his "guiding fictions." It is not his striving for the object and his subjective pleasure in it that are the determining factors, but the securing of the individual's power in the face of the hostile environmental influences.

[881] While the dominant note in Freudian psychology is a centrifugal tendency, a striving for pleasure in the object, in Adler's it is a centripetal striving for the supremacy of the subject, who wants to be "on top," to safeguard his power, to defend himself against the overwhelming forces of existence. The expedient to which the type described by Freud resorts is the infantile transference of subjective fantasies into the object, as a compensatory reaction to the difficulties of life. The characteristic recourse of the type described by Adler is, on the contrary, "security," "masculine protest," and the stubborn reinforcement of the "guiding fiction."

[882] The difficult task of creating a psychology which will be equally fair to both types must be reserved for the future.

2

PSYCHOLOGICAL TYPES[1]

[883] From ancient times there have been numerous attempts to reduce the manifold differences between human individuals to definite categories, and on the other hand to break down the apparent uniformity of mankind by a sharper characterization of certain typical differences. Without wishing to go too deeply into the history of these attempts, I would like to call attention to the fact that the oldest categories known to us originated with physicians. Of these perhaps the most important was Claudius Galen, the Greek physician who lived in the second century A.D. He distinguished four basic temperaments: the sanguine, the phlegmatic, the choleric, and the melancholic. The underlying idea goes back to the fifth century B.C., to the teachings of Hippocrates, that the human body was composed of the four elements, air, water, fire, and earth. Corresponding to these elements, four substances were to be found in the living body, blood, phlegm, yellow bile, and black bile; and it was Galen's idea that, by the varying admixture of these four substances, men could be divided into four classes. Those in whom there was a preponderance of blood belonged to the sanguine type; a preponderance of phlegm produced the phlegmatic; yellow bile produced the choleric, and black bile the melancholic. As our language shows, these differences of temperament have passed into history, though they have, of course, long since been superseded as a physiological theory.

[884] To Galen undoubtedly belongs the credit for having created a psychological classification of human beings which has endured for two thousand years, a classification based on perceptible differences of *emotionality* or *affectivity*. It is interesting to note that the first attempt at a typology was concerned with the emotional behaviour of man—obviously because affectivity is the commonest and most striking feature of behaviour in general.

[885] Affects, however, are by no means the only distinguishing mark of the human psyche. Characteristic data can be expected from other psychological phenomena as well, the only requirement being that we perceive and observe other functions as clearly as we do affects. In earlier centuries, when the concept "psychology" as we know it today was entirely lacking, all psychic functions other than affects were veiled in darkness, just as they still seem to be scarcely discernible subtleties for the great majority of people today. Affects can be seen on the surface, and that is enough for the unpsychological man—the man for whom the psyche of his neighbour presents no problem. He is satisfied with seeing other people's affects; if he sees none, then the other person is psychologically invisible to him because, apart from affects, he can perceive nothing in the other's consciousness.

[886] The reason why we are able to discover other functions besides affects in the psyche of our fellow men is that we ourselves have passed from an "unproblematical" state of consciousness to a problematical one. If we judge others only by affects, we show that our chief, and perhaps only, criterion is affect. This means that the same criterion is also applicable to our own psychology, which amounts to saying that our psychological judgment is neither objective nor independent but is enslaved to affect. This truth holds good for the majority of men, and on it rests the psychological possibility of murderous wars and the constant threat of their recurrence. This must always be so as long as we judge the people "on the other side" by our own affects. I call such a state of consciousness "unproblematical" because it has obviously never become a problem to itself. It becomes a problem only when a doubt arises as to whether affects—including our own affects—offer a satisfactory basis for psychological judgments. We are always inclined to justify ourselves before anyone who holds us responsible for an emotional action by saying that we acted only on an outburst of affect and are not usually in that condition. When it concerns ourselves we are glad to explain the affect as an exceptional condition of diminished responsibility but are loath to make the same allowance for others. Even if this is a not very edifying attempt to exculpate our beloved ego, there is still something positive in the feeling of justification such an excuse affords: it is an

attempt to distinguish oneself from one’s own affect, and hence one’s fellow man from *his* affect. Even if my excuse is only a subterfuge, it is nevertheless an attempt to cast doubt on the validity of affect as the sole index of personality, and to appeal to other psychic functions that are just as characteristic of it as the affect, if not more so. When a man judges us by our affects, we readily accuse him of lack of understanding, or even injustice. But this puts us under an obligation not to judge others by their affects either.

[887] For this purpose the primitive, unpsychological man, who regards affects in himself and others as the only essential criterion, must develop a problematical state of consciousness in which other factors besides affects are recognized as valid. In this problematical state a paradoxical judgment can be formed: “I am this affect” and “this affect is not me.” This antithesis expresses a splitting of the ego, or rather, a splitting of the psychic material that constitutes the ego. By recognizing myself as much in my affect as in something else that is not my affect, I differentiate an affective factor from other psychic factors, and in so doing I bring the affect down from its original heights of unlimited power into its proper place in the hierarchy of psychic functions. Only when a man has performed this operation on himself, and has distinguished between the various psychic factors in himself, is he in a position to look around for other criteria in his psychological judgment of others, instead of merely falling back on affect. Only in this way is a really objective psychological judgment possible.

[888] What we call “psychology” today is a science that can be pursued only on the basis of certain historical and moral premises laid down by Christian education during the last two thousand years. A saying like “Judge not, that ye be not judged,” inculcated by religion, has created the possibility of a will which strives, in the last resort, for simple objectivity of judgment. This objectivity, implying no mere indifference to others but based on the principle of excusing others as we do ourselves, is the prerequisite for a just judgment of our fellow men. You wonder perhaps why I dwell so insistently on this question of objectivity, but you would cease to wonder if ever you should try to classify people in practice. A man of pronounced sanguine temperament will tell you that at bottom he

is deeply melancholic; a choleric, that his only fault consists in his having always been too phlegmatic. But a classification in the validity of which I alone believe is about as helpful as a universal church of which I am the sole member. We have, therefore, to find criteria which can be accepted as binding not only by the judging subject but also by the judged object.

[889] In complete contrast to the old system of classification by temperaments, the new typology begins with the explicit agreement neither to allow oneself to be judged by affect nor to judge others by it, since no one can declare himself finally identical with his affect. This creates a problem, because it follows that, where affects are concerned, the general agreement which science demands can never be reached. We must, therefore, look around for other factors as a criterion—factors to which we appeal when we excuse ourselves for an emotional action. We say perhaps: “Admittedly I said this or that in a state of affect, but of course I was exaggerating and no harm was meant.” A very naughty child who has caused his mother a lot of trouble might say: “I didn’t mean to, I didn’t want to hurt you, I love you too much.”

[890] Such explanations appeal to the existence of a different kind of personality from the one that appeared in the affect. In both cases the affective personality appears as something inferior that seized hold of the real ego and obscured it. But often the personality revealed in the affect is a higher and better one, so much so that, regrettably, one cannot remain on such a pinnacle of perfection. We all know those sudden fits of generosity, altruism, self-sacrifice, and similar “beautiful gestures” for which, as an ironical observer might remark, one does not care to be held responsible—perhaps a reason why so many people do so little good.

[891] But whether the affective personality be high or low, the affect is considered an exceptional state whose qualities are represented either as a falsification of the “real” personality or as not belonging to it as an authentic attribute. What then is this “real” personality? Obviously, it is partly that which everyone distinguishes in himself as separate from affect, and partly that in everyone which is dismissed as inauthentic in the judgment of others. Since it is impossible to deny the pertinence of the affective state to the ego, it follows that the ego is the same ego

whether in the affective state or in the so-called "authentic" state, even though it displays a differential attitude to these psychological happenings. In the affective state it is unfree, driven, coerced. By contrast, the normal state is a state of free will, with all one's powers at one's disposal. In other words, *the affective state is unproblematical, while the normal state is problematical: it comprises both the problem and possibility of free choice*. In this latter state an understanding becomes possible, because in it alone can one discern one's motives and gain self-knowledge. Discrimination is the *sine qua non* of cognition. But discrimination means splitting up the contents of consciousness into discrete functions. Therefore, if we wish to define the psychological peculiarity of a man in terms that will satisfy not only our own subjective judgment but also the object judged, we must take as our criterion that state or attitude which is felt by the object to be the conscious, normal condition. Accordingly, we shall make his conscious motives our first concern, while eliminating as far as possible our own arbitrary interpretations.

[892] Proceeding thus we shall discover, after a time, that in spite of the great variety of conscious motives and tendencies, certain groups of individuals can be distinguished who are characterized by a striking conformity of motivation. For example, we shall come upon individuals who in all their judgments, perceptions, feelings, affects, and actions feel external factors to be the predominant motivating force, or who at least give weight to them no matter whether causal or final motives are in question. I will give some examples of what I mean. St. Augustine: "I would not believe the Gospel if the authority of the Catholic Church did not compel it."[2] A dutiful daughter: "I could not allow myself to think anything that would be displeasing to my father." One man finds a piece of modern music beautiful because everybody else pretends it is beautiful. Another marries in order to please his parents but very much against his own interests. There are people who contrive to make themselves ridiculous in order to amuse others; they even prefer to make butts of themselves rather than remain unnoticed. There are not a few who in everything they do or don't do have but one motive in mind: what will others think of them? "One need not be ashamed of a thing if nobody

knows about it.” There are some who can find happiness only when it excites the envy of others; some who make trouble for themselves in order to enjoy the sympathy of their friends.

[893] Such examples could be multiplied indefinitely. They point to a psychological peculiarity that can be sharply distinguished from another attitude which, by contrast, is motivated chiefly by internal or subjective factors. A person of this type might say: “I know I could give my father the greatest pleasure if I did so and so, but I don’t happen to think that way.” Or: “I see that the weather has turned out bad, but in spite of it I shall carry out my plan.” This type does not travel for pleasure but to execute a preconceived idea. Or: “My book is probably incomprehensible, but it is perfectly clear to me.” Or, going to the other extreme: “Everybody thinks I could do something, but I know perfectly well I can do nothing.” Such a man can be so ashamed of himself that he literally dares not meet people. There are some who feel happy only when they are quite sure nobody knows about it, and to them a thing is disagreeable just because it is pleasing to everyone else. They seek the good where no one would think of finding it. At every step the sanction of the subject must be obtained, and without it nothing can be undertaken or carried out. Such a person would have replied to St. Augustine: “I would believe the Gospel if the authority of the Catholic Church did *not* compel it.” Always he has to prove that everything he does rests on his own decisions and convictions, and never because he is influenced by anyone, or desires to please or conciliate some person or opinion.

[894] This attitude characterizes a group of individuals whose motivations are derived chiefly from the subject, from inner necessity. There is, finally, a third group, and here it is hard to say whether the motivation comes chiefly from within or without. This group is the most numerous and includes the less differentiated normal man, who is considered normal either because he allows himself no excesses or because he has no need of them. The normal man is, by definition, influenced as much from within as from without. He constitutes the extensive middle group, on one side of which are those whose motivations are determined mainly by the external object, and, on the other, those whose motivations are determined from within. I call the first group *extraverted*, and the second

group *introverted*. The terms scarcely require elucidation as they explain themselves from what has already been said.

[895] Although there are doubtless individuals whose type can be recognized at first glance, this is by no means always the case. As a rule, only careful observation and weighing of the evidence permit a sure classification. However simple and clear the fundamental principle of the two opposing attitudes may be, in actual reality they are complicated and hard to make out, because every individual is an exception to the rule. Hence one can never give a description of a type, no matter how complete, that would apply to more than one individual, despite the fact that in some ways it aptly characterizes thousands of others. Conformity is one side of a man, uniqueness is the other. Classification does not explain the individual psyche. Nevertheless, an understanding of psychological types opens the way to a better understanding of human psychology in general.

[896] Type differentiation often begins very early, so early that in some cases one must speak of it as innate. The earliest sign of extraversion in a child is his quick adaptation to the environment, and the extraordinary attention he gives to objects and especially to the effect he has on them. Fear of objects is minimal; he lives and moves among them with confidence. His apprehension is quick but imprecise. He appears to develop more rapidly than the introverted child, since he is less reflective and usually without fear. He feels no barrier between himself and objects, and can therefore play with them freely and learn through them. He likes to carry his enterprises to the extreme and exposes himself to risks. Everything unknown is alluring.

[897] To reverse the picture, one of the earliest signs of introversion in a child is a reflective, thoughtful manner, marked shyness and even fear of unknown objects. Very early there appears a tendency to assert himself over familiar objects, and attempts are made to master them. Everything unknown is regarded with mistrust; outside influences are usually met with violent resistance. The child wants his own way, and under no circumstances will he submit to an alien rule he cannot understand. When he asks questions, it is not from curiosity or a desire to create a sensation,

but because he wants names, meanings, explanations to give him subjective protection against the object. I have seen an introverted child who made his first attempts to walk only after he had learned the names of all the objects in the room he might touch. Thus very early in an introverted child the characteristic defensive attitude can be noted which the adult introvert displays towards the object; just as in an extraverted child one can very early observe a marked assurance and initiative, a happy trustfulness in his dealings with objects. This is indeed the basic feature of the extraverted attitude: psychic life is, as it were, enacted outside the individual in objects and objective relationships. In extreme cases there is even a sort of blindness for his own individuality. The introvert, on the contrary, always acts as though the object possessed a superior power over him against which he has to defend himself. His real world is the inner one.

[898] Sad though it is, the two types are inclined to speak very badly of one another. This fact will immediately strike anyone who investigates the problem. And the reason is that the psychic values have a diametrically opposite localization for the two types. The introvert sees everything that is in any way valuable for him in the subject; the extravert sees it in the object. This dependence on the object seems to the introvert a mark of the greatest inferiority, while to the extravert the preoccupation with the subject seems nothing but infantile auto-eroticism. So it is not surprising that the two types often come into conflict. This does not, however, prevent most men from marrying women of the opposite type. Such marriages are very valuable as psychological symbioses so long as the partners do not attempt a mutual "psychological" understanding. But this phase of understanding belongs to the normal development of every marriage provided the partners have the necessary leisure or the necessary urge to development—though even if both these are present real courage is needed to risk a rupture of the marital peace. In favourable circumstances this phase enters automatically into the lives of both types, for the reason that each type is an example of one-sided development. The one develops only external relations and neglects the inner; the other develops inwardly but remains outwardly at a standstill. In time the need arises for the individual to develop what has been

neglected. The development takes the form of a differentiation of certain functions, to which I must now turn in view of their importance for the type problem.

[899] The conscious psyche is an apparatus for adaptation and orientation, and consists of a number of different psychic functions. Among these we can distinguish four basic ones: *sensation, thinking, feeling, intuition*. Under sensation I include all perceptions by means of the sense organs; by thinking I mean the function of intellectual cognition and the forming of logical conclusions; feeling is a function of subjective valuation; intuition I take as perception by way of the unconscious, or perception of unconscious contents.

[900] So far as my experience goes, these four basic functions seem to me sufficient to express and represent the various modes of conscious orientation. For complete orientation all four functions should contribute equally: thinking should facilitate cognition and judgment, feeling should tell us how and to what extent a thing is important or unimportant for us, sensation should convey concrete reality to us through seeing, hearing, tasting, etc., and intuition should enable us to divine the hidden possibilities in the background, since these too belong to the complete picture of a given situation.

[901] In reality, however, these basic functions are seldom or never uniformly differentiated and equally at our disposal. As a rule one or the other function occupies the foreground, while the rest remain undifferentiated in the background. Thus there are many people who restrict themselves to the simple perception of concrete reality, without thinking about it or taking feeling values into account. They bother just as little about the possibilities hidden in a situation. I describe such people as *sensation types*. Others are exclusively oriented by what they think, and simply cannot adapt to a situation which they are unable to understand intellectually. I call such people *thinking types*. Others, again, are guided in everything entirely by feeling. They merely ask themselves whether a thing is pleasant or unpleasant, and orient themselves by their feeling impressions. These are the *feeling types*. Finally, the *intuitives* concern themselves neither with ideas nor with feeling reactions, nor yet

with the reality of things, but surrender themselves wholly to the lure of possibilities, and abandon every situation in which no further possibilities can be scented.

[902] Each of these types represents a different kind of one-sidedness, but one which is linked up with and complicated in a peculiar way by the introverted or extraverted attitude. It was because of this complication that I had to mention these function-types, and this brings us back to the question of the one-sidedness of the introverted and extraverted attitudes. This one-sidedness would lead to a complete loss of psychic balance if it were not compensated by an unconscious counterposition. Investigation of the unconscious has shown, for example, that alongside or behind the introvert's conscious attitude there is an unconscious extraverted attitude which automatically compensates his conscious one-sidedness.

[903] Though one can, in practice, intuit the existence of a general introverted or extraverted attitude, an exact scientific investigator cannot rest content with an intuition but must concern himself with the actual material presented. We then discover that no individual is simply introverted or extraverted, but that he is so in one of his functions. Take a thinking type, for example: most of the conscious material he presents for observation consists of thoughts, conclusions, reflections, as well as actions, affects, valuations, and perceptions of an intellectual nature, or at least the material is directly dependent on intellectual premises. We must interpret the nature of his general attitude from the peculiarity of this material. The material presented by a feeling type will be of a different kind, that is, feelings and emotional contents of all sorts, thoughts, reflections, and perceptions dependent on emotional premises. Only from the peculiar nature of his feelings shall we be able to tell to which of the attitude-types he belongs. That is why I mention these function-types here, because in individual cases the introverted and extraverted attitudes can never be demonstrated *per se*; they appear only as the peculiarity of the predominating conscious function. Similarly, there is no general attitude of the unconscious, but only typically modified forms of unconscious functions, and only through the investigation of the unconscious functions and their peculiarities can the unconscious attitude be scientifically established.

[904] It is hardly possible to speak of typical unconscious functions, although in the economy of the psyche one has to attribute *some* function to the unconscious. It is best, I think, to express oneself rather cautiously in this respect, and I would not go beyond the statement that the unconscious, so far as we can see at present, has a compensatory function to consciousness. What the unconscious is in itself is an idle speculation. By its very nature it is beyond all cognition. We merely postulate its existence from its products, such as dreams and fantasies. But it is a well-established fact of scientific experience that dreams, for example, practically always have a content that could correct the conscious attitude, and this justifies us in speaking of a compensatory function of the unconscious.

[905] Besides this general function, the unconscious also possesses functions that can become conscious under other conditions. The thinking type, for instance, must necessarily repress and exclude feeling as far as possible, since nothing disturbs thinking so much as feeling, and the feeling type represses thinking, since nothing is more injurious to feeling than thinking. Repressed functions lapse into the unconscious. Just as only one of the four sons of Horus had a human head,[3] so as a rule only one of the four basic functions is fully conscious and differentiated enough to be freely manipulable by the will, the others remaining partially or wholly unconscious. This “unconsciousness” does not mean that a thinking type, for instance, is not conscious of his feelings. He knows his feelings very well, in so far as he is capable of introspection, but he denies them any validity and declares they have no influence over him. They therefore come upon him against his will, and being spontaneous and autonomous, they finally appropriate to themselves the validity which his consciousness denies them. They are activated by unconscious stimulation, and form indeed a sort of counterpersonality whose existence can be established only by analysing the products of the unconscious.

[906] When a function is not at one’s disposal, when it is felt as something that disturbs the differentiated function, suddenly appearing and then vanishing again fitfully, when it has an obsessive character, or remains obstinately in hiding when most needed—it then has all the qualities of a

quasi-unconscious function. Other peculiarities may be noted: there is always something inauthentic about it, as it contains elements that do not properly belong to it. Thus the unconscious feelings of the thinking type are of a singularly fantastic nature, often in grotesque contrast to the excessively rationalistic intellectualism of his conscious attitude. His conscious thinking is purposive and controlled, but his feeling is impulsive, uncontrolled, moody, irrational, primitive, and just as archaic as the feelings of a savage.

[907] The same is true of every function that is repressed into the unconscious. It remains undeveloped, fused together with elements not properly belonging to it, in an archaic condition—for the unconscious is the residue of unconquered nature in us, just as it is also the matrix of our unborn future. The undeveloped functions are always the seminal ones, so it is no wonder that sometime in the course of life the need will be felt to supplement and alter the conscious attitude.

[908] Apart from the qualities I have mentioned, the undeveloped functions possess the further peculiarity that, when the conscious attitude is introverted, they are extraverted and vice versa. One could therefore expect to find extraverted feelings in an introverted intellectual, and this was aptly expressed by just such a type when he said: “Before dinner I am a Kantian, but after dinner a Nietzschean.” In his habitual attitude, that is to say, he is an intellectual, but under the stimulating influence of a good dinner a Dionysian wave breaks through his conscious attitude.

[909] It is just here that we meet with a great difficulty in diagnosing the types. The observer sees both the manifestations of the conscious attitude and the autonomous phenomena of the unconscious, and he will be at a loss as to what he should ascribe to the conscious and what to the unconscious. A differential diagnosis can be based only on a careful study of the qualities of the observed material. We must try to discover which phenomena result from consciously chosen motives and which are spontaneous; and it must also be established which of them are adapted, and which of them have an unadapted, archaic character.

[910] It will now be sufficiently clear that the qualities of the main conscious function, i.e., of the conscious attitude as a whole, are in strict

contrast to those of the unconscious attitude. In other words, we can say that between the conscious and the unconscious there is normally an opposition. This opposition, however, is not perceived as a conflict so long as the conscious attitude is not too one-sided and not too remote from that of the unconscious. But if the contrary should be the case, then the Kantian will be disagreeably surprised by his Dionysian counterpart, which will begin to develop highly unsuitable impulses. His consciousness will then feel obliged to suppress these autonomous manifestations, and thus the conflict situation is created. Once the unconscious gets into active opposition to consciousness, it simply refuses to be suppressed. It is true that certain manifestations which consciousness has marked down are not particularly difficult to suppress, but then the unconscious impulses simply seek other outlets that are less easy to recognize. And once these false safety valves are opened, one is already on the way to neurosis. The indirect outlets can, of course, each be made accessible to understanding by analysis and subjected again to conscious suppression. But that does not extinguish their instinctual dynamism; it is merely pushed still further into the background, unless an understanding of the indirect route taken by the unconscious impulses brings with it an understanding of the one-sidedness of the conscious attitude. The one should alter the other, for it was just this one-sidedness that activated the unconscious opposition in the first place, and insight into the unconscious impulses is useful only when it effectively compensates that one-sidedness.

[911] The alteration of the conscious attitude is no light matter, because any habitual attitude is essentially a more or less conscious ideal, sanctified by custom and historical tradition, and founded on the bedrock of one’s innate temperament. The conscious attitude is always in the nature of a *Weltanschauung*, if it is not explicitly a religion. It is this that makes the type problem so important. The opposition between the types is not merely an external conflict between men, it is the source of endless inner conflicts; the cause not only of external disputes and dislikes, but of nervous ills and psychic suffering. It is this fact, too, that obliges us physicians constantly to widen our medical horizon and to include within

it not only general psychological standpoints but also questions concerning one's views of life and the world.

[912] Within the space of a lecture I cannot, of course, give you any idea of the depth and scope of these problems. I must content myself with a general survey of the main facts and their implications. For a fuller elaboration of the whole problem I must refer you to my book *Psychological Types*.

[913] Recapitulating, I would like to stress that each of the two general attitudes, introversion and extraversion, manifests itself in a special way in an individual through the predominance of one of the four basic functions. Strictly speaking, there are no introverts and extraverts pure and simple, but only introverted and extraverted function-types, such as thinking types, sensation types, etc. There are thus at least eight clearly distinguishable types. Obviously one could increase this number at will if each of the functions were split into three subgroups, which would not be impossible empirically. One could, for example, easily divide thinking into its three well-known forms: intuitive and speculative, logical and mathematical, empirical and positivist, the last being mainly dependent on sense perception. Similar subgroups could be made of the other functions, as in the case of intuition, which has an intellectual as well as an emotional and sensory aspect. In this way a large number of types could be established, each new division becoming increasingly subtle.

[914] For the sake of completeness, I must add that I do not regard the classification of types according to introversion and extraversion and the four basic functions as the only possible one. Any other psychological criterion could serve just as well as a classifier, although, in my view, no other possesses so great a practical significance.

3

A PSYCHOLOGICAL THEORY OF TYPES[1]

[915] Character is the fixed individual form of a human being. Since this form is compounded of body and mind, a general characterology must teach the significance of both physical and psychic features. The enigmatic oneness of the living organism has as its corollary the fact that bodily traits are not merely physical, nor mental traits merely psychic. The continuity of nature knows nothing of those antithetical distinctions which the human intellect is forced to set up as aids to understanding.

[916] The distinction between mind and body is an artificial dichotomy, an act of discrimination based far more on the peculiarity of intellectual cognition than on the nature of things. In fact, so intimate is the intermingling of bodily and psychic traits that not only can we draw far-reaching inferences as to the constitution of the psyche from the constitution of the body, but we can also infer from psychic peculiarities the corresponding bodily characteristics. It is true that the latter process is far more difficult, not because the body is less influenced by the psyche than the psyche by the body, but for quite another reason. In taking the psyche as our starting-point, we work from the relatively unknown to the known; while in the opposite case we have the advantage of starting from something known, that is, from the visible body. Despite all the psychology we think we possess today, the psyche is still infinitely more obscure to us than the visible surface of the body. The psyche is still a foreign, barely explored country of which we have only indirect knowledge, mediated by conscious functions that are open to almost endless possibilities of deception.

[917] This being so, it seems safer to proceed from outside inwards, from the known to the unknown, from the body to the psyche. Thus all attempts at characterology have started from the outside world; astrology, in ancient times, even started from interstellar space in order to arrive at

those lines of fate whose beginnings lie in the human heart. To the same class of interpretations from outward signs belong palmistry, Gall's phrenology, Lavater's physiognomy, and—more recently—graphology, Kretschmer's physiological types, and Rorschach's klexographic method. As we can see, there are any number of paths leading from outside inwards, from the physical to the psychic, and it is necessary that research should follow this direction until the elementary psychic facts are established with sufficient certainty. But once having established these facts, we can reverse the procedure. We can then put the question: What are the bodily correlatives of a given psychic condition? Unfortunately we are not yet far enough advanced to give even an approximate answer. The first requirement is to establish the primary facts of psychic life, and this is far from having been accomplished. Indeed, we have only just begun the work of compiling an inventory of the psyche, not always with great success.

[918] Merely to establish the fact that certain people have this or that physical appearance is of no significance if it does not allow us to infer a psychic correlative. We have learned something only when we have determined what psychic attributes go with a given bodily constitution. The body means as little to us without the psyche as the latter without the body. But when we try to infer a psychic correlative from a physical characteristic, we are proceeding—as already stated—from the known to the unknown.

[919] I must, unfortunately, stress this point, since psychology is the youngest of the sciences and therefore the one that suffers most from preconceived opinions. The fact that we have only recently discovered psychology tells us plainly enough that it has taken us all this time to make a clear distinction between ourselves and the content of our minds. Until this could be done, it was impossible to study the psyche objectively. Psychology, as a science, is actually our most recent acquisition; up to now it has been just as fantastic and arbitrary as was natural science in the Middle Ages. It was believed that psychology could be created as it were by decree—a prejudice under which we are still labouring. Psychic life is, after all, what is most immediate to us, and apparently what we know most about. Indeed, it is more than familiar, we

yawn over it. We are irritated by the banality of its everlasting commonplaces; they bore us to extinction and we do everything in our power to avoid thinking about them. The psyche being immediacy itself, and we ourselves being the psyche, we are almost forced to assume that we know it through and through in a way that cannot be doubted or questioned. That is why each of us has his own private opinion about psychology and is even convinced that he knows more about it than anyone else. Psychiatrists, because they must struggle with their patients' relatives and guardians whose "understanding" is proverbial, are perhaps the first to become aware as a professional group of that blind prejudice which encourages every man to take himself as his own best authority in psychological matters. But this of course does not prevent the psychiatrist also from becoming a "know-all." One of them even went so far as to confess: "There are only two normal people in this city—Professor B. is the other."

[920] Since this is how matters stand in psychology today, we must bring ourselves to admit that what is closest to us, the psyche, is the very thing we know least about, although it seems to be what we know best of all, and furthermore that everyone else probably understands it better than we do ourselves. At any rate that, for a start, would be a most useful heuristic principle. As I have said, it is just because the psyche is so close to us that psychology has been discovered so late. And because it is still in its initial stages as a science, we lack the concepts and definitions with which to grasp the facts. If concepts are lacking, facts are not; on the contrary, we are surrounded—almost buried—by facts. This is in striking contrast to the state of affairs in other sciences, where the facts have first to be unearthed. Here the classification of primary data results in the formation of descriptive concepts covering certain natural orders, as, for example, the grouping of the elements in chemistry and of plant families in botany. But it is quite different in the case of the psyche. Here an empirical and descriptive method merely plunges us into the ceaseless stream of subjective psychic happenings, so that whenever any sort of generalizing concept emerges from this welter of impressions it is usually nothing more than a symptom. Because we ourselves are psyches, it is almost impossible to us to give free rein to psychic happenings without

being dissolved in them and thus robbed of our ability to recognize distinctions and make comparisons.

[921] This is one difficulty. The other is that the more we turn from spatial phenomena to the non-spatiality of the psyche, the more impossible it becomes to determine anything by exact measurement. It becomes difficult even to establish the facts. If, for example, I want to emphasize the unreality of something, I say that I merely “thought” it. I say: “I would never even have had this thought unless such and such had happened; and besides, I never think things like that.” Remarks of this kind are quite usual, and they show how nebulous psychic facts are, or rather, how vague they appear subjectively—for in reality they are just as objective and just as definite as any other events. The truth is that I actually did think such and such a thing, regardless of the conditions and provisos I attach to this process. Many people have to wrestle with themselves in order to make this perfectly obvious admission, and it often costs them a great moral effort. These, then, are the difficulties we encounter when we draw inferences about the state of affairs in the psyche from the known things we observe outside.

[922] My more limited field of work is not the clinical study of external characteristics, but the investigation and classification of the psychic data which may be inferred from them. The first result of this work is a phenomenology of the psyche, which enables us to formulate a corresponding theory about its structure. From the empirical application of this structural theory there is finally developed a psychological typology.

[923] Clinical studies are based on the description of symptoms, and the step from this to a phenomenology of the psyche is comparable to the step from a purely symptomatic pathology to the pathology of cellular and metabolic processes. That is to say, the phenomenology of the psyche brings into view those psychic processes in the background which underlie the clinical symptoms. As is generally known, this knowledge is obtained by the application of analytical methods. We have today a working knowledge of the psychic processes that produce psychogenic symptoms, and have thus laid the foundations for a theory of complexes.

Whatever else may be taking place in the obscure recesses of the psyche—and there are notoriously many opinions about this—one thing is certain: it is the complexes (emotionally-toned contents having a certain amount of autonomy) which play the most important part here. The term "autonomous complex" has often met with opposition, unjustifiably, it seems to me, because the active contents of the unconscious do behave in a way I cannot describe better than by the word "autonomous." The term is meant to indicate the capacity of the complexes to resist conscious intentions, and to come and go as they please. Judging by all we know about them, they are psychic entities which are outside the control of the conscious mind. They have been split off from consciousness and lead a separate existence in the dark realm of the unconscious, being at all times ready to hinder or reinforce the conscious functioning.

[924] A deeper study of the complexes leads logically to the problem of their origin, and as to this a number of different theories are current. Theories apart, experience shows that complexes always contain something like a conflict, or at least are either the cause or the effect of a conflict. At any rate the characteristics of conflict—shock, upheaval, mental agony, inner strife—are peculiar to the complexes. They are the "sore spots," the *bêtes noires*, the "skeletons in the cupboard" which we do not like to remember and still less to be reminded of by others, but which frequently come back to mind unbidden and in the most unwelcome fashion. They always contain memories, wishes, fears, duties, needs, or insights which somehow we can never really grapple with, and for this reason they constantly interfere with our conscious life in a disturbing and usually a harmful way.

[925] Complexes obviously represent a kind of inferiority in the broadest sense—a statement I must at once qualify by saying that to have complexes does not necessarily indicate inferiority. It only means that something discordant, unassimilated, and antagonistic exists, perhaps as an obstacle, but also as an incentive to greater effort, and so, perhaps, to new possibilities of achievement. In this sense, therefore, complexes are focal or nodal points of psychic life which we would not wish to do without; indeed, they should not be missing, for otherwise psychic activity would come to a fatal standstill. They point to the unresolved

problems in the individual, the places where he has suffered a defeat, at least for the time being, and where there is something he cannot evade or overcome—his weak spots in every sense of the word.

[926] These characteristics of the complex throw a significant light on its origin. It obviously arises from the clash between a demand of adaptation and the individual's constitutional inability to meet the challenge. Seen in this light, the complex is a valuable symptom which helps us to diagnose an individual disposition.

[927] Experience shows us that complexes are infinitely varied, yet careful comparison reveals a relatively small number of typical primary forms, which are all built upon the first experiences of childhood. This must necessarily be so, because the individual disposition is already a factor in infancy; it is innate, and not acquired in the course of life. The parental complex is therefore nothing but the first manifestation of a clash between reality and the individual's constitutional inability to meet the demands it makes upon him. The primary form of the complex cannot be other than a parental complex, because the parents are the first reality with which the child comes into conflict.

[928] The existence of a parental complex therefore tells us little or nothing about the peculiar constitution of the individual. Practical experience soon teaches us that the crux of the matter does not lie in the presence of a parental complex, but rather in the special way in which the complex works itself out in the individual's life. And here we observe the most striking variations, though only a very small number can be attributed to the special nature of the parental influence. There are often several children who are exposed to the same influence, and yet each of them reacts to it in a totally different way.

[929] I therefore turned my attention to these differences, telling myself that it is through them that the peculiarities of the individual dispositions may be discerned. Why, in a neurotic family, does one child react with hysteria, another with a compulsion neurosis, the third with a psychosis, and the fourth apparently not at all? This problem of the "choice of neurosis," which Freud was also faced with, robs the parental complex as

such of its aetiological significance, and shifts the inquiry to the reacting individual and his special disposition.

[930] Although Freud's attempts to solve this problem leave me entirely dissatisfied, I am myself unable to answer the question. Indeed, I think it premature to raise the question of the choice of neurosis at all. Before we tackle this extremely difficult problem we need to know a great deal more about the way the individual reacts. The question is: How does a person react to an obstacle? For instance, we come to a brook over which there is no bridge. It is too broad to step across, so we must jump. For this purpose we have at our disposal a complicated functional system, namely, the psychomotor system. It is fully developed and needs only to be triggered off. But before this happens, something of a purely psychic nature takes place: a decision is made about what is to be done. This is followed by those crucial events which settle the matter in some way and vary with each individual. But, significantly enough, we rarely if ever recognize these events as characteristic, for as a rule we do not see ourselves at all or only as a last resort. That is to say, just as the psychomotor apparatus is habitually at our disposal for jumping, there is an exclusively psychic apparatus ready for use in making decisions, which functions by habit and therefore unconsciously.

[931] Opinions differ widely as to what this apparatus is like. It is certain only that every individual has his accustomed way of making decisions and dealing with difficulties. One person will say he jumped the brook for fun; another, that there was no alternative; a third, that every obstacle he meets challenges him to overcome it. A fourth did not jump the brook because he dislikes useless effort, and a fifth refrained because he saw no urgent necessity to get to the other side.

[932] I have purposely chosen this commonplace example in order to demonstrate how irrelevant such motivations seem. They appear so futile that we are inclined to brush them aside and to substitute our own explanation. And yet it is just these variations that give us valuable insights into the individual psychic systems of adaptation. If we observe, in other situations of life, the person who jumped the brook for fun, we shall probably find that for the most part everything he does or omits to

do can be explained in terms of the pleasure it gives him. We shall observe that the one who jumped because he saw no alternative goes through life cautiously and apprehensively, always deciding *faute de mieux*. And so on. In all these cases special psychic systems are in readiness to execute the decisions. We can easily imagine that the number of these attitudes is legion. The individual attitudes are certainly as inexhaustible as the variations of crystals, which may nevertheless be recognized as belonging to one or another system. But just as crystals show basic uniformities which are relatively simple, these attitudes show certain fundamental peculiarities which allow us to assign them to definite groups.

[933] From earliest times attempts have been made to classify individuals according to types, and so to bring order into the chaos. The oldest attempts known to us were made by oriental astrologers who devised the so-called trigons of the four elements—air, water, earth, and fire. The air trigon in the horoscope consists of the three aerial signs of the zodiac, Aquarius, Gemini, Libra; the fire trigon is made up of Aries, Leo, Sagittarius. According to this age-old view, whoever is born in these trigons shares in their aerial or fiery nature and will have a corresponding temperament and fate. Closely connected with this ancient cosmological scheme is the physiological typology of antiquity, the division into four temperaments corresponding to the four humours. What was first represented by the signs of the zodiac was later expressed in the physiological language of Greek medicine, giving us the classification into the phlegmatic, sanguine, choleric, and melancholic. These are simply designations for the secretions of the body. As is well known, this typology lasted at least seventeen hundred years. As for the astrological type theory, to the astonishment of the enlightened it still remains intact today, and is even enjoying a new vogue.

[934] This historical retrospect may serve to assure us that our modern attempts to formulate a theory of types are by no means new and unprecedented, even though our scientific conscience does not permit us to revert to these old, intuitive ways of thinking. We must find our own answer to this problem, an answer which satisfies the need of science. And here we meet the chief difficulty of the problem of types—that is,

the question of standards or criteria. The astrological criterion was simple and objective: it was given by the constellations at birth. As to the way characterological qualities could be correlated with the zodiacal signs and the planets, this is a question which reaches back into the grey mists of prehistory and remains unanswerable. The Greek classification according to the four physiological temperaments took as its criteria the appearance and behaviour of the individual, exactly as we do today in the case of physiological typology. But where shall we seek our criterion for a psychological theory of types?

[935] Let us return to the example of the four people who had to cross a brook. How and from what standpoints are we to classify their habitual motivations? One person does it for fun, another does it because not to do it is more troublesome, a third doesn’t do it because he has second thoughts, and so on. The list of possibilities seems both endless and useless for purposes of classification.

[936] I do not know how other people would set about this task. I can only tell you how I myself have tackled it, and I must bow to the charge that my way of solving the problem is the outcome of my personal prejudice. This objection is so entirely true that I would not know how to defend myself. I can only point happily to old Columbus, who, following his subjective assumptions, a false hypothesis, and a route abandoned by modern navigation, nevertheless discovered America. Whatever we look at, and however we look at it, we see only through our own eyes. For this reason science is never made by one man, but many. The individual merely offers his own contribution, and it is only in this sense that I dare to speak of *my* way of seeing things.

[937] My profession has always obliged me to take account of the peculiarities of individuals, and the special circumstance that in the course of I don’t know how many years I have had to treat innumerable married couples and have been faced with the task of making husband and wife plausible to each other has emphasized the need to establish certain average truths. How many times, for instance, have I not had to say: “Look here, your wife has a very active nature, and it cannot be expected that her whole life should centre on housekeeping.” That is a

sort of statistical truth, and it holds the beginnings of a type theory: there are active natures and passive natures. But this time-worn truth did not satisfy me. My next attempt was to say that some persons are reflective and others are unreflective, because I had observed that many apparently passive natures are in reality not so much passive as given to forethought. They first consider a situation and then act, and because they do this habitually they miss opportunities where immediate action without reflection is called for, thus coming to be prejudged as passive. The persons who did not reflect always seemed to me to jump headfirst into a situation without any forethought, only to reflect afterwards that they had perhaps landed themselves in a swamp. Thus they could be considered "unreflective," and this seemed a more appropriate word than "active." Forethought is in certain cases a very important form of activity, a responsible course of action as compared with the unthinking, short-lived zeal of the mere busybody. But I soon discovered that the hesitation of the one was by no means always forethought, and that the quick action of the other was not necessarily want of reflection. The hesitation equally often arises from a habitual timidity, or at least from a customary shrinking back as if faced with too great a task; while immediate action is frequently made possible by a predominating self-confidence in relation to the object. This observation caused me to formulate these typical differences in the following way: there is a whole class of men who, at the moment of reaction to a given situation, at first draw back a little as if with an unvoiced "No," and only after that are able to react; and there is another class who, in the same situation, come out with an immediate reaction, apparently quite confident that their behaviour is self-evidently right. The former class would therefore be characterized by a negative relation to the object, and the latter by a positive one.

[938] The former class corresponds to the *introverted* and the second to the *extraverted* attitude. But these two terms in themselves signify as little as the discovery of Molière's *bourgeois gentilhomme* that he ordinarily spoke in prose. They acquire meaning and value only when we know all the other characteristics that go with the type.

[939] One cannot be introverted or extraverted without being so in every respect. For example, to be "introverted" means that everything in the

psyche happens as it must happen according to the law of the introvert’s nature. Were that not so, the statement that a certain individual is “introverted” would be as irrelevant as the statement that he is six feet tall, or that he has brown hair, or is brachycephalic. These statements contain no more than the facts they express. The term “introverted” is incomparably more exacting. It means that the consciousness as well as the unconscious of the introvert must have certain definite qualities, that his general behaviour, his relation to people, and even the course of his life show certain typical characteristics.

[940] Introversion or extraversion, as a typical attitude, means an essential bias which conditions the whole psychic process, establishes the habitual mode of reaction, and thus determines not only the style of behaviour but also the quality of subjective experience. Not only that, it determines the kind of compensation the unconscious will produce.

[941] Once we have established the habitual mode of reaction it is bound to hit the mark to a certain extent, because habit is, so to speak, the central switchboard from which outward behaviour is regulated and by which specific experiences are shaped. A certain kind of behaviour brings corresponding results, and the subjective understanding of these results gives rise to experiences which in turn influence our behaviour, in accordance with the saying “Every man is the maker of his own fate.”

[942] While there can be little doubt that the habitual mode of reaction brings us to the central point, the delicate question remains as to whether or not we have satisfactorily characterized it by the term “introverted” or “extraverted.” There can be a honest difference of opinion about this even among those with an intimate knowledge of this special field. In my book on types I have put together everything I could find in support of my views, though I expressly stated that I do not imagine mine to be the only true or possible typology.

[943] The contrast between introversion and extraversion is simple enough, but simple formulations are unfortunately the most open to doubt. They all too easily cover up the actual complexities and so deceive us. I speak here from my own experience, for scarcely had I published the first formulation of my criteria[2] when I discovered to my dismay that

somehow or other I had been taken in by them. Something was amiss. I had tried to explain too much in too simple a way, as often happens in the first joy of discovery.

[944] What struck me now was the undeniable fact while people may be classed as introverts or extraverts, this does not account for the tremendous differences between individuals in either class. So great, indeed, are these differences that I was forced to doubt whether I had observed correctly in the first place. It took nearly ten years of observation and comparison to clear up this doubt.

[945] The question as to where the tremendous differences among individuals of the same type came from entangled me in unforeseen difficulties which for a long time I was unable to master. To observe and recognize the differences gave me comparatively little trouble, the root of my difficulties being now, as before, the problem of criteria. How was I to find suitable terms for the characteristic differences? Here I realized for the first time how young psychology really is. It is still little more than a chaos of arbitrary opinions and dogmas, produced for the most part in the study or consulting room by spontaneous generation from the isolated and Jove-like brains of learned professors, with complete lack of agreement. Without wishing to be irreverent, I cannot refrain from confronting the professor of psychology with, say, the psychology of women, of the Chinese, or of the Australian aborigines. Our psychology must get down to brass tacks, otherwise we simply remain stuck in the Middle Ages.

[946] I realized that no sound criteria were to be found in the chaos of contemporary psychology, that they had first to be created, not out of thin air, but on the basis of the invaluable preparatory work done by many men whose names no history of psychology will pass over in silence.

[947] Within the limits of a lecture I cannot possibly mention all the separate observations that led me to pick out certain *psychic functions* as criteria for the differences under discussion. I will only state very broadly what the essential differences are, so far as I have been able to ascertain them. An introvert, for example, does not simply draw back and hesitate before the object, but he does so in a quite definite way. Moreover he

does not behave just like every other introvert, but again in a way peculiar to himself. Just as the lion strikes down his enemy or his prey with his fore-paw, in which his specific strength resides, and not with his tail like the crocodile, so our habitual mode of reaction is normally characterized by the use of our most reliable and efficient function, which is an expression of our particular strength. However, this does not prevent us from reacting occasionally in a way that reveals our specific weakness. According to which function predominates, we shall seek out certain situations while avoiding others, and shall thus have experiences specific to ourselves and different from those of other people. An intelligent man will adapt to the world through his intelligence, and not like a sixth-rate pugilist, even though now and then, in a fit of rage, he may make use of his fists. In the struggle for existence and adaptation everyone instinctively uses his most developed function, which thus becomes the criterion of his habitual mode of reaction.

[948] How are we to sum up these functions under general concepts, so that they can be distinguished from the welter of merely individual events? A rough typization of this kind has long since existed in social life, in the figures of the peasant, the worker, the artist, the scholar, the fighter, and so forth, or in the various professions. But this sort of typization has little or nothing to do with psychology, for, as a well-known savant once maliciously remarked, there are certain scholars who are no more than “intellectual porters.”

[949] A type theory must be more subtle. It is not enough, for example, to speak of intelligence, for this is too general and too vague a concept. Almost any kind of behaviour can be called intelligent if it works smoothly, quickly, effectively and to a purpose. Intelligence, like stupidity, is not a function but a modality; the word tells us no more than *how* a function is working, not *what* is functioning. The same holds true of moral and aesthetic criteria. We must be able to designate what it is that functions outstandingly in the individual’s habitual way of reacting. We are thus forced to revert to something that at first glance looks alarmingly like the old faculty psychology of the eighteenth century. In reality, however, we are only returning to ideas current in daily speech, perfectly accessible and comprehensible to everyone. When, for instance,

I speak of “thinking,” it is only the philosopher who does not know what it means; no layman will find it incomprehensible. He uses the word every day, and always in the same general sense, though it is true he would be at a loss if suddenly called upon to give an unequivocal definition of thinking. The same is true of “memory” or “feeling.” However difficult it is to define these purely psychological concepts scientifically, they are easily intelligible in current speech. Language is a storehouse of concrete images; hence concepts which are too abstract and nebulous do not easily take root in it, or quickly die out again for lack of contact with reality. But thinking and feeling are such insistent realities that every language above the primitive level has absolutely unmistakable expressions for them. We can therefore be sure that these expressions coincide with quite definite psychic facts, no matter what the scientific definition of these complex facts may be. Everyone knows, for example, what consciousness means, and nobody can doubt that it coincides with a definite psychic condition, however far science may be from defining it satisfactorily.

[950] And so it came about that I simply took the concepts expressed in current speech as designations for the corresponding psychic functions, and used them as my criteria in judging the differences between persons of the same attitude-type. For instance, I took thinking, as it is generally understood, because I was struck by the fact that many people habitually do more thinking than others, and accordingly give more weight to thought when making important decisions. They also use their thinking in order to understand the world and adapt to it, and whatever happens to them is subjected to consideration and reflection or at least subordinated to some principle sanctioned by thought. Other people conspicuously neglect thinking in favour of emotional factors, that is, of feeling. They invariably follow a policy dictated by feeling, and it takes an extraordinary situation to make them reflect. They form an unmistakable contrast to the other type, and the difference is most striking when the two are business partners or are married to each other. It should be noted that a person may give preference to thinking whether he be extraverted or introverted, but he will use it only in the way that is characteristic of his attitude-type, and the same is true of feeling.

[951] The predominance of one or the other of these functions does not explain all the differences that occur. What I call the thinking and feeling types comprise two groups of persons who again have something in common which I cannot designate except by the word *rationality*. No one will dispute that thinking is essentially rational, but when we come to feeling, weighty objections may be raised which I would not like to brush aside. On the contrary, I freely admit that this problem of feeling has been one that has caused me much brain-racking. However, as I do not want to overload my lecture with the various existing definitions of this concept, I shall confine myself briefly to my own view. The chief difficulty is that the word "feeling" can be used in all sorts of different ways. This is especially true in German, but is noticeable to some extent in English and French as well. First of all, then, we must make a careful distinction between feeling and *sensation*, which is a sensory function. And in the second place we must recognize that a feeling of regret is something quite different from a "feeling" that the weather will change or that the price of our aluminum shares will go up. I have therefore proposed using *feeling* as a proper term in the first example, and dropping it—so far as its psychological usage is concerned—in the second. Here we should speak of *sensation* when sense impressions are involved, and of *intuition* if we are dealing with a kind of perception which cannot be traced back directly to conscious sensory experience. Hence I define sensation as perception via conscious sensory functions, and intuition as perception via the unconscious.

[952] Obviously we could argue until Doomsday about the fitness of these definitions, but ultimately it is only a question of terminology. It is as if we were debating whether to call a certain animal a leopard or a panther, when all we need to know is what name we are giving to what. Psychology is virgin territory, and its terminology has still to be fixed. As we know, temperature can be measured according to Réaumur, Celsius, or Fahrenheit, but we must indicate which system we are using.

[953] It is evident, then, that I take feeling as a function *per se* and distinguish it from sensation and intuition. Whoever confuses these last two functions with feeling in the strict sense is obviously not in a position to acknowledge the rationality of feeling. But once they are distinguished

from feeling, it becomes quite clear that feeling values and feeling judgments—indeed, feelings in general—are not only rational but can also be as logical, consistent and discriminating as thinking. This may seem strange to the thinking type, but it is easily explained when we realize that in a person with a differentiated thinking function the feeling function is always less developed, more primitive, and therefore contaminated with other functions, these being precisely the functions which are not rational, not logical, and not discriminating or evaluating, namely, sensation and intuition. These two are by their very nature opposed to the rational functions. When we think, it is in order to judge or to reach a conclusion, and when we feel it is in order to attach a proper value to something. Sensation and intuition, on the other hand, are perceptive functions—they make us aware of what is happening, but do not interpret or evaluate it. They do not proceed selectively, according to principles, but are simply receptive to what happens. But "what happens" is essentially irrational. There is no inferential method by which it could ever be proved that there must be so and so many planets, or so and so many species of warm-blooded animals. Irrationality is a vice where thinking and feeling are called for, rationality is a vice where sensation and intuition should be trusted.

[954] Now there are many people whose habitual reactions are irrational because they are based either on sensation or on intuition. They cannot be based on both at once, because sensation is just as antagonistic to intuition as thinking is to feeling. When I try to assure myself with my eyes and ears of what is actually happening, I cannot at the same time give way to dreams and fantasies about what lies around the corner. As this is just what the intuitive type must do in order to give the necessary free play to his unconscious or to the object, it is easy to see that the sensation type is at the opposite pole to the intuitive. Unfortunately, time does not allow me to go into the interesting variations which the extraverted or introverted attitude produces in the irrational types.

[955] Instead, I would like to add a word about the effects regularly produced on the other functions when preference is given to one function. We know that a man can never be everything at once, never quite complete. He always develops certain qualities at the expense of

others, and wholeness is never attained. But what happens to those functions which are not consciously brought into daily use and are not developed by exercise? They remain in a more or less primitive and infantile state, often only half conscious, or even quite unconscious. These relatively undeveloped functions constitute a specific inferiority which is characteristic of each type and is an integral part of his total character. The one-sided emphasis on thinking is always accompanied by an inferiority of feeling, and differentiated sensation is injurious to intuition and vice versa.

[956] Whether a function is differentiated or not can easily be recognized from its strength, stability, consistency, reliability, and adaptedness. But inferiority in a function is often not so easy to recognize or to describe. An essential criterion is its lack of self-sufficiency and consequent dependence on people and circumstances, its disposing us to moods and crotchetiness, its unreliable use, its suggestible and labile character. The inferior function always puts us at a disadvantage because we cannot direct it, but are rather its victims.

[957] Since I must restrict myself here to a mere sketch of the ideas underlying a psychological theory of types, I must forgo a detailed description of each type. The total result of my work in this field up to the present is the establishing of two general attitude-types, extraversion and introversion, and four function-types, thinking, feeling, sensation, and intuition. Each of these function-types varies according to the general attitude and thus eight variants are produced.

[958] I have often been asked, almost accusingly, why I speak of four functions and not of more or fewer. That there are exactly four was a result I arrived at on purely empirical grounds. But as the following consideration will show, these four together produce a kind of totality. Sensation establishes what is actually present, thinking enables us to recognize its meaning, feeling tells us its value, and intuition points to possibilities as to whence it came and whither it is going in a given situation. In this way we can orient ourselves with respect to the immediate world as completely as when we locate a place geographically by latitude and longitude. The four functions are somewhat like the four

points of the compass; they are just as arbitrary and just as indispensable. Nothing prevents our shifting the cardinal points as many degrees as we like in one direction or the other, or giving them different names. It is merely a question of convention and intelligibility.

[959] But one thing I must confess: I would not for anything dispense with this compass on my psychological voyages of discovery. This is not merely for the obvious, all-too-human reason that everyone is in love with his own ideas. I value the type theory for the objective reason that it provides a system of comparison and orientation which makes possible something that has long been lacking, a critical psychology.

4

PSYCHOLOGICAL TYPOLOGY[1]

[960] Ever since the early days of science, it has been a notable endeavour of the reflective intellect to interpose gradations between the two poles of the absolute similarity and dissimilarity of human beings. This resulted in a number of types, or “temperaments” as they were then called, which classified similarities and dissimilarities into regular categories. The Greek philosopher Empedocles attempted to impose order on the chaos of natural phenomena by dividing them into the four elements: earth, water, air, and fire. It was above all the physicians of ancient times who applied this principle of order, in conjunction with the related doctrine of the four qualities, dry, moist, cold, warm, to human beings, and thus tried to reduce the bewildering diversity of mankind to orderly groups. Of these physicians one of the most important was Galen, whose use of these teachings influenced medical science and the treatment of the sick for nearly seventeen hundred years. The very names of the Galenic temperaments betray their origin in the pathology of the four “humours.” *Melancholic* denotes a preponderance of black bile, *phlegmatic* a preponderance of phlegm or mucus (the Greek word *phlegma* means fire, and phlegm was regarded as the end-product of inflammation), *sanguine* a preponderance of blood, and *choleric* a preponderance of choler, or yellow bile.

[961] Our modern conception of “temperament” has certainly become much more psychological, since in the course of man’s development over the last two thousand years the “soul” has freed itself from any conceivable connection with cold agues and fevers, or secretions of mucus and bile. Not even the doctors of today would equate a temperament, that is, a certain kind of emotional state or excitability, directly with the constitution of the blood or lymph, although their profession and their exclusive approach to human beings from the side of physical illness tempt them, more often than the layman, to regard the

psyche as an end-product dependent on the physiology of the glands. The “humours” of present-day medicine are no longer the old body-secretions, but the more subtle hormones, which influence “temperament” to an outstanding degree, if we define this as the sum-total of emotional reactions. The whole make-up of the body, its constitution in the broadest sense, has in fact a very great deal to do with the psychological temperament, so much that we cannot blame the doctors if they regard psychic phenomena as largely dependent on the body. Somewhere the psyche is living body, and the living body is animated matter; somehow and somewhere there is an undiscoverable unity of psyche and body which would need investigating psychically as well as physically; in other words, this unity must be as dependent on the body as it is on the psyche so far as the investigator is concerned. The materialism of the nineteenth century gave the body first place and relegated the psyche to the rank of something secondary and derived, allowing it no more substantiality than that of a so-called “epiphenomenon.” What proved to be a good working hypothesis, namely, that psychic phenomena are conditioned by physical processes, became a philosophical presumption with the advent of materialism. Any serious science of the living organism will reject this presumption; for on the one hand it will constantly bear in mind that living matter is an as yet unsolved mystery, and on the other hand it will be objective enough to recognize that for us there is a completely unbridgeable gulf between physical and psychic phenomena, so that the psychic realm is no less mysterious than the physical.

[962] The materialistic presumption became possible only in recent times, after man’s conception of the psyche had, in the course of many centuries, emancipated itself from the old view and developed in an increasingly abstract direction. The ancients could still see body and psyche together, as an undivided unity, because they were closer to that primitive world where no moral rift yet ran through the personality, and the pagan could still feel himself indivisibly one, childishly innocent and unburdened by responsibility. The ancient Egyptians could still enjoy the naïve luxury of a negative confession of sin: “I have not let any man go hungry. I have not made anyone weep. I have not committed murder,”

and so on. The Homeric heroes wept, laughed, raged, outwitted and killed each other in a world where these things were taken as natural and self-evident by men and gods alike, and the Olympians amused themselves by passing their days in a state of amaranthine irresponsibility.

[963] It was on this archaic level that pre-philosophical man lived and experienced the world. He was entirely in the grip of his emotions. All passions that made his blood boil and his heart pound, that accelerated his breathing or took his breath away, that “turned his bowels to water”—all this was a manifestation of the “soul.” Therefore he localized the soul in the region of the diaphragm (in Greek *phren*, which also means mind)[2] and the heart. It was only with the first philosophers that the seat of reason began to be assigned to the head. There are still Negroes today whose “thoughts” are localized principally in the belly, and the Pueblo Indians “think” with their hearts—“only madmen think with their heads,” they say.[3] On this level consciousness is essentially passion and the experience of oneness. Yet, serene and tragic at once, it was just this archaic man who, having started to think, invented that dichotomy which Nietzsche laid at the door of Zarathustra: the discovery of pairs of opposites, the division into odd and even, above and below, good and evil. It was the work of the old Pythagoreans, and it was their doctrine of moral responsibility and the grave metaphysical consequences of sin that gradually, in the course of the centuries, percolated through to all strata of the population, chiefly owing to the spread of the Orphic and Pythagorean mysteries. Plato even used the parable of the white and black horses[4] to illustrate the intractability and polarity of the human psyche, and, still earlier, the mysteries proclaimed the doctrine of the good rewarded in the Hereafter and of the wicked punished in hell. These teachings cannot be dismissed as the mystical humbug of “backwoods” philosophers, as Nietzsche claimed, or as so much sectarian cant, for already in the sixth century B.C. Pythagoreanism was something like a state religion throughout Graecia Magna. Also, the ideas underlying its mysteries never died out, but underwent a philosophical renaissance in the second century B.C., when they exercised the strongest influence on the Alexandrian world of thought. Their collision with Old Testament

prophecy then led to what one can call the beginnings of Christianity as a world religion.

[964] From Hellenistic syncretism there now arose a classification of man into types which was entirely alien to the "humoral" psychology of Greek medicine. In the philosophical sense, it established gradations between the Parmenidean poles of light and darkness, of above and below. It classified men into *hylikoi, psychikoi*, and *pneumatikoi*—material, psychic, and spiritual beings. This classification is not, of course, a scientific formulation of similarities and dissimilarities; it is a critical system of values based not on the behaviour and outward appearance of man as a phenotype, but on definitions of an ethical, mystical, and philosophic kind. Although it is not exactly a "Christian" conception it nevertheless forms an integral part of early Christianity at the time of St. Paul. Its very existence is incontrovertible proof of the split that had occurred in the original unity of man as a being entirely in the grip of his emotions. Before this, he was merely alive and there, the plaything of experience, incapable of any reflective analysis concerning his origins and his destination. Now, suddenly, he found himself confronted by three fateful factors and endowed with body, soul, and spirit, to each of which he had moral obligations. Presumably it was already decided at birth whether he would pass his life in the hylic or the pneumatic state, or in the indeterminate centre between the two. The ingrained dichotomy of the Greek mind had now become acute, with the result that the accent shifted significantly to the psychic and spiritual, which was unavoidably split off from the hylic realm of the body. All the highest and ultimate goals lay in man's moral destination, in a spiritual, supramundane end-state, and the separation of the hylic realm broadened into a cleavage between world and spirit. Thus the original, suave wisdom expressed in the Pythagorean pairs of opposites became a passionate moral conflict. Nothing, however, is so apt to challenge our self-awareness and alertness as being at war with oneself. One can hardly think of any other or more effective means of waking humanity out of the irresponsible and innocent half-sleep of the primitive mentality and bringing it to a state of conscious responsibility.

[965] This process is called cultural development. It is, at any rate, a development of man's powers of discrimination and capacity for judgment, and of consciousness in general. With the increase of knowledge and enhanced critical faculties the foundations were laid for the whole subsequent development of the human mind in terms of intellectual achievement. The particular mental product that far surpassed all the achievements of the ancient world was science. It closed the rift between man and nature in the sense that, although he was separated from nature, science enabled him to find his rightful place again in the natural order. His special metaphysical position, however, had to be jettisoned—so far as it was not secured by belief in the traditional religion—whence arose the notorious conflict between "faith and knowledge." At all events, science brought about a splendid rehabilitation of matter, and in this respect materialism may even be regarded as an act of historical justice.

[966] But one absolutely essential field of experience, the human psyche itself, remained for a very long time the preserve of metaphysics, although increasingly serious attempts were made after the Enlightment to open it up to scientific investigation. They began, tentatively, with the sense perceptions, and gradually ventured into the domain of associations. This line of research paved the way for experimental psychology, and it culminated in the "physiological psychology" of Wundt. A more descriptive kind of psychology, with which the medical men soon made contact, developed in France. Its chief exponents were Taine, Ribot, and Janet. It was characteristic of this scientific approach that it broke down the psyche into particular mechanisms or processes. In face of these attempts, there were some who advocated what we today would call a "holistic" approach—the systematic observation of the psyche as a whole. It seems as if this trend originated in a certain type of biography, more particularly the kind that an earlier age, which also had its good points, used to describe as "curious lives." In this connection I think of Justinus Kerner and his *Seeress of Prevorst*, and the case of the elder Blumhardt and his medium Gottliebin Dittus.[5] To be historically fair, however, I should not forget the medieval *Acta Sanctorum*.[6]

[967] This line of research has been continued in more recent investigations associated with the names of William James, Freud, and Theodore Flournoy. James and his friend Flournoy, a Swiss psychologist, made an attempt to describe the whole phenomenology of the psyche and also to view it as a totality. Freud, too, as a doctor, took as his point of departure the wholeness and indivisibility of the human personality, though, in keeping with the spirit of the age, he restricted himself to the investigation of instinctive mechanisms and individual processes. He also narrowed the picture of man to the wholeness of an essentially "bourgeois" collective person, and this necessarily led to philosophically onesided interpretations. Freud, unfortunately, succumbed to the medical man's temptation to trace everything psychic to the body, in the manner of the old "humoral" psychologists, not without rebellious gestures at those metaphysical preserves of which he had a holy dread.

[968] Unlike Freud, who after a proper psychological start reverted to the *ancient* assumption of the sovereignty of the physical constitution, trying to turn everything back in theory into instinctual processes conditioned by the body, I start with the assumption of the sovereignty of the psyche. Since body and psyche somewhere form a unity, although in their manifest natures they are so utterly different, we cannot but attribute to the one as to the other a substantiality of its own. So long as we have no way of knowing that unity, there is no alternative but to investigate them separately and, for the present, treat them as though they were independent of each other, at least in their structure. That they are not so, we can see for ourselves every day. But if we were to stop at that, we would never be in a position to make out anything about the psyche at all.

[969] Now if we assume the sovereignty of the psyche, we exempt ourselves from the—at present—insoluble task of reducing everything psychic to something definitely physical. We can then take the manifestations of the psyche as expressions of its intrinsic being, and try to establish certain conformities or types. So when I speak of a psychological typology, I mean by this the formulation of the structural elements of the psyche and not a description of the psychic emanations of a particular type of constitution. This is covered by, for instance, Kretschmer's researches into body-structure and character.

[970] I have given a detailed description of a purely psychological typology in my book *Psychological Types*. My investigation was based on twenty years of work as a doctor, which brought me into contact with people of all classes from all the great nations. When one begins as a young doctor, one's head is still full of clinical pictures and diagnoses. In the course of the years, impressions of quite another kind accumulate. One is struck by the enormous diversity of human individuals, by the chaotic profusion of individual cases, the special circumstances of whose lives and whose special characters produce clinical pictures that, even supposing one still felt any desire to do so, can be squeezed into the straitjacket of a diagnosis only by force. The fact that the disturbance can be given such and such a name appears completely irrelevant beside the overwhelming impression one has that all clinical pictures are so many mimetic or histrionic demonstrations of certain definite character traits. The pathological problem upon which everything turns has virtually nothing to do with the clinical picture, but is essentially an expression of character. Even the complexes, the "nuclear elements" of a neurosis, are beside the point, being mere concomitants of a certain characterological disposition. This can be seen most easily in the relation of the patient to his parental family. He is, let us say, one of four siblings, is neither the eldest nor the youngest, has had the same education and conditioning as the others. Yet he is sick and they are sound. The anamnesis shows that a whole series of influences to which the others were exposed as well as he, and from which indeed they all suffered, had a pathological effect on him alone—at least to all appearances. In reality these influences were not aetiological factors in his case either, but prove to be false explanations. The real cause of the neurosis lies in the peculiar way he responded to and assimilated the influences emanating from the environment.

[971] By comparing many such cases it gradually became clear to me that there must be two fundamentally different general attitudes which would divide human beings into two groups—provided the whole of humanity consisted of highly differentiated individuals. Since this is obviously not the case, one can only say that this difference of attitude becomes plainly observable only when we are confronted with a comparatively well-

differentiated personality; in other words, it becomes of practical importance only after a certain degree of differentiation has been reached. Pathological cases of this kind are almost always people who deviate from the familial type and, in consequence, no longer find sufficient security in their inherited instinctual foundation. Weak instincts are one of the prime causes of the development of an habitual one-sided attitude, though in the last resort it is conditioned or reinforced by heredity.

[972] I have called these two fundamentally different attitudes *extraversion* and *introversion*. Extraversion is characterized by interest in the external object, responsiveness, and a ready acceptance of external happenings, a desire to influence and be influenced by events, a need to join in and get "with it," the capacity to endure bustle and noise of every kind, and actually find them enjoyable, constant attention to the surrounding world, the cultivation of friends and acquaintances, none too carefully selected, and finally by the great importance attached to the figure one cuts, and hence by a strong tendency to make a show of oneself. Accordingly, the extravert's philosophy of life and his ethics are as a rule of a highly collective nature with a strong streak of altruism, and his conscience is in large measure dependent on public opinion. Moral misgivings arise mainly when "other people know." His religious convictions are determined, so to speak, by majority vote.

[973] The actual subject, the extravert as a subjective entity, is, so far as possible, shrouded in darkness. He hides it from himself under veils of unconsciousness. The disinclination to submit his own motives to critical examination is very pronounced. He has no secrets he has not long since shared with others. Should something unmentionable nevertheless befall him, he prefers to forget it. Anything that might tarnish the parade of optimism and positivism is avoided. Whatever he thinks, intends, and does is displayed with conviction and warmth.

[974] The psychic life of this type of person is enacted, as it were, outside himself, in the environment. He lives in and through others; all self-communings give him the creeps. Dangers lurk there which are better drowned out by noise. If he should ever have a "complex," he finds

refuge in the social whirl and allows himself to be assured several times a day that everything is in order. Provided he is not too much of a busybody, too pushing, and too superficial, he can be a distinctly useful member of the community.

[975] In this short essay I have to content myself with an allusive sketch. It is intended merely to give the reader some idea of what extraversion is like, something he can bring into relationship with his own knowledge of human nature. I have purposely started with a description of extraversion because this attitude is familiar to everyone; the extravert not only lives in this attitude, but parades it before his fellows on principle. Moreover it accords with certain popular ideals and moral requirements.

[976] *Introversion,* on the other hand, being directed not to the object but to the subject, and not being oriented by the object, is not so easy to put into perspective. The introvert is not forthcoming, he is as though in continual retreat before the object. He holds aloof from external happenings, does not join in, has a distinct dislike of society as soon as he finds himself among too many people. In a large gathering he feels lonely and lost. The more crowded it is, the greater becomes his resistance. He is not in the least “with it,” and has no love of enthusiastic get-togethers. He is not a good mixer. What he does, he does in his own way, barricading himself against influences from outside. He is apt to appear awkward, often seeming inhibited, and it frequently happens that, by a certain brusqueness of manner, or by his glum unapproachability, or some kind of malapropism, he causes unwitting offence to people. His better qualities he keeps to himself, and generally does everything he can to dissemble them. He is easily mistrustful, self-willed, often suffers from inferiority feelings and for this reason is also envious. His apprehensiveness of the object is not due to fear, but to the fact that it seems to him negative, demanding, overpowering or even menacing. He therefore suspects all kinds of bad motives, has an everlasting fear of making a fool of himself, is usually very touchy and surrounds himself with a barbed wire entanglement so dense and impenetrable that finally he himself would rather do anything than sit behind it. He confronts the world with an elaborate defensive system compounded of scrupulosity, pedantry, frugality, cautiousness, painful conscientiousness, stiff-lipped

rectitude, politeness, and open-eyed distrust. His picture of the world lacks rosy hues, as he is over-critical and finds a hair in every soup. Under normal conditions he is pessimistic and worried, because the world and human beings are not in the least good but crush him, so he never feels accepted and taken to their bosom. Yet he himself does not accept the world either, at any rate not outright, for everything has first to be judged by his own critical standards. Finally only those things are accepted which, for various subjective reasons, he can turn to his own account.

[977] For him self-communings are a pleasure. His own world is a safe harbour, a carefully tended and walled-in garden, closed to the public and hidden from prying eyes. His own company is the best. He feels at home in his world, where the only changes are made by himself. His best work is done with his own resources, on his own initiative, and in his own way. If ever he succeeds, after long and often wearisome struggles, in assimilating something alien to himself, he is capable of turning it to excellent account. Crowds, majority views, public opinion, popular enthusiasm never convince him of anything, but merely make him creep still deeper into his shell.

[978] His relations with other people become warm only when safety is guaranteed, and when he can lay aside his defensive distrust. All too often he cannot, and consequently the number of friends and acquaintances is very restricted. Thus the psychic life of this type is played out wholly within. Should any difficulties and conflicts arise in this inner world, all doors and windows are shut tight. The introvert shuts himself up with his complexes until he ends in complete isolation.

[979] In spite of these peculiarities the introvert is by no means a social loss. His retreat into himself is not a final renunciation of the world, but a search for quietude, where alone it is possible for him to make his contribution to the life of the community. This type of person is the victim of numerous misunderstandings—not unjustly, for he actually invites them. Nor can he be acquitted of the charge of taking a secret delight in mystification, and that being misunderstood gives him a certain satisfaction, since it reaffirms his pessimistic outlook. That being so, it is

easy to see why he is accused of being cold, proud, obstinate, selfish, conceited, cranky, and what not, and why he is constantly admonished that devotion to the goals of society, clubbableness, imperturbable urbanity, and selfless trust in the powers-that-be are true virtues and the marks of a sound and vigorous life.

[980] The introvert is well enough aware that such virtues exist, and that somewhere, perhaps—only not in his circle of acquaintances—there are divinely inspired people who enjoy undiluted possession of these ideal qualities. But his self-criticism and his awareness of his own motives have long since disabused him of the illusion that he himself would be capable of such virtues; and his mistrustful gaze, sharpened by anxiety, constantly enables him to detect on his fellow men the ass's ear sticking up from under the lion's mane. The world and men are for him a disturbance and a danger, affording no valid standard by which he could ultimately orient himself. What alone is valid for him is his subjective world, which he sometimes believes, in moments of delusion, to be the objective one. We could easily charge these people with the worst kind of subjectivism, indeed with morbid individualism, if it were certain beyond a doubt that only one objective world existed. But this truth, if such it be, is not axiomatic; it is merely a half truth, the other half of which is the fact that the world *also* is as it is seen by human beings, and in the last resort by the individual. There is simply no world at all without the knowing subject. This, be it never so small and inconspicuous, is always the other pier supporting the bridge of the phenomenal world. The appeal to the subject therefore has the same validity as the appeal to the so-called objective world, for it is grounded on psychic reality itself. But this is a reality with its own peculiar laws which are not of a secondary nature.

[981] The two attitudes, extraversion and introversion, are opposing modes that make themselves felt not least in the history of human thought. The problems to which they give rise were very largely anticipated by Friedrich Schiller, and they underlie his *Letters on the Aesthetic Education of Man*.[7] But since the concept of the unconscious was still unknown to him, he was unable to reach a satisfactory solution. Moreover philosophers, who would be the best equipped to go more

closely into this question, do not like having to submit their thinking function to a thorough psychological criticism, and therefore hold aloof from such discussions. It should, however, be obvious that the intrinsic polarity of such an attitude exerts a very great influence on the philosopher’s own point of view.

[982] For the extravert the object is interesting and attractive *a priori*, as is the subject, or psychic reality, for the introvert. We could therefore use the expression “numinal accent” for this fact, by which I mean that for the extravert the quality of positive significance and value attaches primarily to the object, so that it plays the predominant, determining, and decisive role in all psychic processes from the start, just as the subject does for the introvert.

[983] But the numinal accent does not decide only between subject and object; it also selects the conscious function of which the individual makes the principal use. I distinguish four functions: *thinking*, *feeling*, *sensation*, and *intuition*. The essential function of sensation is to establish that something exists, thinking tells us what it means, feeling what its value is, and intuition surmises whence it comes and whither it goes. Sensation and intuition I call irrational functions, because they are both concerned simply with what happens and with actual or potential realities. Thinking and feeling, being discriminative functions, are rational. Sensation, the *fonction du réel*, rules out any simultaneous intuitive activity, since the latter is not concerned with the present but is rather a sixth sense for hidden possibilities, and therefore should not allow itself to be unduly influenced by existing reality. In the same way, thinking is opposed to feeling, because thinking should not be influenced or deflected from its purpose by feeling values, just as feeling is usually vitiated by too much reflection. The four functions therefore form, when arranged diagrammatically, a cross with a rational axis at right angles to an irrational axis.

[984] The four orienting functions naturally do not contain everything that is in the conscious psyche. Will and memory, for instance, are not included. The reason for this is that the differentiation of the four orienting functions is, essentially, an empirical consequence of typical

differences in the functional attitude. There are people for whom the numinal accent falls on sensation, on the perception of actualities, and elevates it into the sole determining and all-overriding principle. These are the fact-minded men, in whom intellectual judgment, feeling, and intuition are driven into the background by the paramount importance of actual facts. When the accent falls on thinking, judgment is reserved as to what significance should be attached to the facts in question. And on this significance will depend the way in which the individual deals with the facts. If feeling is numinal, then his adaptation will depend entirely on the feeling value he attributes to them. Finally, if the numinal accent falls on intuition, actual reality counts only in so far as it seems to harbour possibilities which then become the supreme motivating force, regardless of the way things actually are in the present.

[985] The localization of the numinal accent thus gives rise to four function-types, which I encountered first of all in my relations with people and formulated systematically only very much later. In practice these four types are always combined with the attitude-type, that is, with extraversion or introversion, so that the functions appear in an extraverted or introverted variation. This produces a set of eight demonstrable function-types. It is naturally impossible to present the specific psychology of these types within the confines of an essay, and to go into its conscious and unconscious manifestations. I must therefore refer the interested reader to the aforementioned study.

[986] It is not the purpose of a psychological typology to classify human beings into categories—this in itself would be pretty pointless. Its purpose is rather to provide a critical psychology which will make a methodical investigation and presentation of the empirical material possible. First and foremost, it is a critical tool for the research worker, who needs definite points of view and guidelines if he is to reduce the chaotic profusion of individual experiences to any kind of order. In this respect we could compare typology to a trigonometric net or, better still, to a crystallographic axial system. Secondly, a typology is a great help in understanding the wide variations that occur among individuals, and it also furnishes a clue to the fundamental differences in the psychological theories now current. Last but not least, it is an essential means for

determining the “personal equation” of the practising psychologist, who, armed with an exact knowledge of his differentiated and inferior functions, can avoid many serious blunders in dealing with his patients.

[987] The typological system I have proposed is an attempt, grounded on practical experience, to provide an explanatory basis and theoretical framework for the boundless diversity that has hitherto prevailed in the formation of psychological concepts. In a science as young as psychology, limiting definitions will sooner or later become an unavoidable necessity. Some day psychologists will have to agree upon certain basic principles secure from arbitrary interpretation if psychology is not to remain an unscientific and fortuitous conglomeration of individual opinions.

CORRELATION OF PARAGRAPH NUMBERS

CORRELATION OF PARAGRAPH NUMBERS

As the Gesammelte Werke edition of *Psychologische Typen* (1960; 2nd edn., 1967) follows a different system of paragraph numbering from the Collected Works edition, the following table gives the equivalents between the two. Paragraphs 1–7 are numbered alike in both.

INDEX

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

•6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus
The Self

Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to "Essays on Contemporary Events" (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff's "Studies in Jungian Psychology" (1959)
The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling's "America Set Free" (1930) and "La Révolution Mondiale" (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

[†]11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

[*]12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)
Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

[†]16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

[‡]17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

See also:

C. G. JUNG: LETTERS

Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé. Translations from the German by R.F.C. Hull.

VOL. 1: 1906–1950
VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS

Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

[*] See infra, Foreword to the Argentine Edition.

[1] [Swiss psychotherapist and former pupil of Jung's; died 1932. The correspondence (1915–16) was brought to light in 1966 by Schmid's daughter, Marie-Jeanne Boller-Schmid, who had been Jung's secretary from 1932 to 1952. The correspondence was discontinued early in 1916 at Jung's request. After careful consideration we concur with his view that its inclusion (e.g., in an Appendix to this volume) "would create more confusion than clarity"; nor, on account of its prolixity, is it included in *Coll. Works*, vol. 18. A remarkable personal codicil to a letter to Schmid, written on November 6, 1915, too valuable and moving to pass into oblivion, is, however, included in *C. G. Jung: Letters*, vol. 1. Cf. also Jung's obituary for Schmid, *Coll. Works*, vol. 18, pars. 1713ff.—EDITORS.]

[1] [*Tipos psicológicos*, translated by Ramón de la Serna (Buenos Aires, 1936).]

[1] “A Contribution to the Study of Psychological Types” (1913), infra, Appendix, pars. 858ff., and “The Psychology of the Unconscious Processes,” *Collected Papers on Analytical Psychology* (2nd edn., 1917), pp. 391ff. [The latter section, on types, was subsequently revised and appears as ch. IV (“The Problem of the Attitude-Type”) of the first of the *Two Essays on Analytical Psychology*. Cf. also “The Structure of the Unconscious” (1916), in ibid., pars. 462, n. 8, and 482.—EDITORS.]

[16] *The Northern Tribes of Central Australia*, p. 451.

[17] Buber, *Ekstatische Konfessionen*, pp. 31f.

[18] Cf. *Greek Thinkers*, II, p. 193.

[19] Cf. ibid., pp. 181f.

[20] Cf. ibid., pp. 167f.

[21] Cf. ibid., p. 168.

[22] Cf. *The Organon, or Logical Treatises of Aristotle, with the Introduction of Porphyry*, II, pp. 609f.

[23] *Symposium*, 211B (trans. Hamilton), pp. 93f. [In similar contexts, Jung cited from Plato the phrase "a supra-celestial place" or "a place beyond the skies," which is from *Phaedrus* 247C. See "The Structure of the Psyche," par. 336; "Psychological Aspects of the Mother Archetype," par. 149; "Transformation Symbolism in the Mass," par. 430; "Flying Saucers," par. 621.—EDITORS.]

[24] *The Mediaeval Mind*, II, p. 340.

[25] *Psychologie*, II, p. 120.

[26] "Sic ergo vere est aliquid, quo majus cogitari non potest, ut nec cogitari possit non esse, et hoc es tu, Domine Deus Noster" *(Proslogion*, trans. Fairweather, p. 74).

[27] Ibid.

[28] *Scriptum supra libros Sententiarum magistri Petri Lombardi*, I, dist. 25, qu. 1, art. 4 (ed. Mandonnet, I, p. 612).

[29] *Critique of Pure Reason* (trans. Kemp Smith), pp. 500f.

[30] Ibid., pp. 510f.

[31] Ibid., p. 503.

[32] Ibid., pp. 504f.

[33] Ibid., p. 506.

[34] Cf. *Critique of Practical Reason*, pp. 226f.

[35] *Abelard*.

[36] Ibid., II, p. 119.

[37] Ibid., p. 112.

[38] Ibid., p. 140.

[39] "Hic docuit voces cum rebus significare,
Et docuit voces res significando notare;
Errores generum correxit, ita specierum.
Hic genus et species in sola voce locavit,
Et genus et species sermones esse notavit.
…
Sic animal nullumque animal genus esse probatur.
Sic et homo et nullus homo species vocitatur."

Ms. by Godfrey, Prior of St. Swithin's, Winchester. Bodleian Library, Ms. Digby 65 (13th cent.), fol. 7.

[40] "Life of St. Anthony," in *The Paradise or Garden of the Holy Fathers*, compiled by Athanasius, Archbishop of Alexandria, and others (trans. E. A. W. Budge), I, pp. 3–76.

[41] Ibid., pp. 24f.

[42] Ibid., pp. 33ff.

[43] Heraclitus, fr. 44, in Burnet, *Early Greek Philosophy*, p. 136.

[44] I say "semiotic" in contradistinction to "symbolic." What Freud terms symbols are no more than *signs* for elementary instinctive processes. But a *symbol* is the best possible expression for something that cannot be expressed otherwise than by a more or less close analogy.

[45] Jung, "On Psychological Understanding," pars. 391ff., and *Two Essays on Analytical Psychology*, pars. 121ff.

[1] All quotations are from the translation by Snell, *On the Aesthetic Education of Man*.

[2] Ibid., p. 39.

[3] Ibid.

[4] Ibid.

[5] Ibid., pp. 40f.

[6] Cf. p. 44.

[7] Ibid., p. 43.

[8] [For the Germanic distinction between culture and civilization, see *The Practice of Psychotherapy*, par. 227, n. 10.—TRANS.]

[9] Cf. Snell, p. 44.

[10] Ibid., pp. 44f. My italics.

[11] Oratio IV, *In regem solem*. Cf. Julian, *Works* (L.C.L.), I, p. 389.

[12] Snell, p. 46.

[13] Ibid., p. 47.

[14] Cf. ibid., pp. 48f.

[15] Goethe, *Briefwechsel mit Schiller in den Jahren 1794–1805*, in *Werke* (ed. Beutler), XX, p. 20.

[16] *Emile* (trans. Foxley), p. 7.

[17] Ibid., p. 8.

[18] Cf. ibid., p. 5.

[19] Cf. ibid., p. 7.

[20] Cf. ibid., p. 46.

[21] Indications of this are already to be found in the Greek mysteries.

[22] Cf. Snell, p. 51.

[23] Cf. ibid., pp. 51f.

[24] Cf. ibid., p. 52.

[25] Cf. ibid., p. 58.

[26] Ibid., p. 59.

[27] Ibid., p. 59

[28] Ibid.

[29] Ibid., p. 60.

[30] Cf. ibid.

[31] *Emile* (trans. Foxley), p. 49.

[32] Cf. ibid., p. 50.

[33] Cf. ibid., p. 7.

[34] Isaiah 35:8.

[35] Snell, p. 60.

[36] Cf. ibid., p. 61.

[37] Ibid., p. 62.

[38] Ibid.

[39] Ibid., p. 63.

[40] Cf. the discourse of Julian the Apostate on the mother of the gods, *Works*, I, pp. 462ff.

[41] Letter to Goethe, January 5, 1798 (Beutler, XX, p. 485).

[42] Letter to Schiller, April 27, 1798 (p. 564).

[43] Letter to Schiller, January 6, 1798 (pp. 486f.).

[44] Letter to Goethe, August 31, 1794 (p. 19).

[45] Cf. Snell, p. 63.

[46] Letter to Schiller, April 27, 1798 (p. 564).

[47] I would like to emphasize that everything I say in this chapter about the extravert and introvert applies only to the types we are discussing: the intuitive, extraverted feeling type represented by Goethe, and the intuitive, introverted thinking type represented by Schiller.

[48] Schiller, *The Diver*.

[49] Snell, p. 64.

[50] Cf. ibid., p. 64f.

[51] Cf. ibid., p. 66.

[52] Ibid., p. 65n.

[53] P. 65.

[54] P. 66.

[55] The “formal instinct” is equivalent to the “power of thought” for Schiller.

[56] P. 66.

[57] Later on Schiller himself criticizes this point.

[58] Cf. p. 67.

[59] P. 66.

[60] Cf. p. 68n.

[61] Cf. p. 71n.

[62] Cf. p. 70.

[63] To avoid misunderstandings, I should like to observe that this contempt does not apply to the object, at least not as a rule, but to the relation to it.

[64] That is, between affectivity and *active* thinking, in contrast to the *reactive* thinking previously referred to.

[65] Cf. Snell, p. 88.

[66] Cf. p. 72.

[67] Cf. p. 78.

[68] Cf. p. 72.

[69] Cf. ibid.

[70] Cf. p. 73.

[71] Individualism. [The positive definition of individualism, given here, which is similar to the definition of individuation (cf. par. 757), is in marked contrast to the negative aspect stressed in par. 433 and especially par. 761: “A real conflict with the collective norm arises only when an individual way is raised to a norm, which is the actual aim of extreme individualism. Naturally this aim is pathological and inimical to life. It has, accordingly, nothing to do with individuation.” This fundamental distinction between individualism and individuation is expanded upon in *Two Essays*, pars. 267–8.—EDITORS.]

[72] Cf. p. 73.

[73] Cf. pp. 73f.

[74] Cf. p. 76.

[75] Ibid.

[76] P. 67.

[77] Cf. p. 80.

[78] Cf. p. 135.

[79] Cf. infra, pars. 185f.

[80] Cf. p. 94.

[81] [No page references are given in the German text for these quotations. Jung used a Latin translation by Ficino, cited in the Bibliography. For the longer passage, as translated from the original Greek, cf. *The Essays and Hymns of Synesius* (trans. FitzGerald), II, pp. 334f.—EDITORS.]

[82] Cf. Snell, p. 94.

[83] Cf. Nunberg, “On the Physical Accompaniments of Association Processes,” in Jung (ed.), *Studies in Word-Association*, pp. 531ff.

[84] Cf. *Symbols of Transformation*, pars. 233ff.

[85] [A preliminary formulation of the “self” first occurs in “The Structure of the Unconscious” (1916), *Two Essays* (1966 edn.), par. 512: “The unconscious personal contents constitute the *self*, the

unconscious or subconscious ego." Thereafter the self does not appear to have been mentioned in Jung's writings until the publication of *Psychological Types*, and even as late as the 1950 Swiss edition it is at one point (p. 123) used interchangeably with the ego. This has been corrected in *Ges. Werke* (p. 95), where "Selbst" (self) is deleted. (In the Baynes version confusion is made worse confounded because throughout this whole passage "Ich"=ego is more often than not translated as "self," which Jung used only at that one point. Cf. Baynes, pp. 115–17, with pars. 138–41 of the present edition.) Thus, in par. 183, the "self" appears for the first time as an entity distinct from the ego, though it is evident from the context that the term also has an affinity with the "individual nucleus" which can be differentiated from the opposing functions or opposites (par. 174). In par. 175, however, the "individual nucleus" is abbreviated into the "individuality." The relation between the self and individuality is developed later, in *Two Essays*. Cf. par. 266: "… in so far as 'individuality' embraces our innermost, last, and incomparable uniqueness, it also implies becoming one's own self." Par. 404: "The self is our life's goal, for it is the completest expression of that fateful combination we call individuality."—EDITORS.]

[86] I must emphasize that I am here presenting this function only in principle. Further contributions to this very complex problem, concerning in particular the fundamental importance of the way in which the unconscious material is assimilated into consciousness, will be found in "The Structure of the Unconscious" and "The Psychology of the Unconscious Processes." [These were subsequently expanded into *Two Essays on Analytical Psychology*. Cf. also "The Transcendent Function."—EDITORS.]

[87] Cf. Snell, p. 98.

[14] Aestheticism can, of course, take the place of the religious function. But how many things are there that could not do the same? What have we not come across at one time or another as a substitute for the absence of religion? Even though aestheticism may be a very noble substitute, it is nevertheless only a compensation for the real thing that is lacking. Moreover, Nietzsche's later "conversion" to Dionysus best shows that the aesthetic substitute did not stand the test of time.

[91] 1.67.7. (Cf. p. 61.)

[92] 4.12.2. (Cf. p. 393.)

[93] Release of libido is obtained through ritual work. The release puts the libido at the disposal of consciousness, where it becomes domesticated. From an instinctive, undomesticated state it is converted into a state of disposability. The following passage is an illustration of this: “The rulers, the bountiful lords, brought him (Agni) forth by their power out of the depths, out of the bull’s shape.” *Rig Veda* 1.141.3. (Cf. *Vedic Hymns*, p. 147.)

[94] *Rig Veda* 1.141.1. (Cf. ibid.)

[149] Further evidence of the pagan root of the vessel symbolism is the "magic cauldron" of Celtic mythology. Dagda, one of the benevolent gods of ancient Ireland, possesses such a cauldron, which supplies everybody with food according to his needs or merits. The Celtic god Bran likewise possesses a cauldron of renewal. It has even been suggested that the name Brons, one of the figures in the Grail legend, is derived from Bran. Alfred Nutt considers that Bran, lord of the cauldron, and Brons are steps in the transformation of the Celtic Peredur Saga into the quest of the Holy Grail. It would seem, therefore, that Grail motifs already existed in Celtic mythology. I am indebted to Dr. Maurice Nicoll, of London, for this information.

[150] [Pars. 399–400 = *Ges. Werke* 6, par. 447, which there follows our par. 401.—EDITORS.]

[1] Gross gives a revised though essentially unaltered account of his types in his book *Über psychopathische Minderwertigkeiten*, pp. 27ff.

[2] *Studies in Word-Association*.

[3] “Untersuchungen über die sprachliche Komponente der Assoziation.”

[4] Elsewhere (*Psychopath. Minderw*., p. 41) Gross draws a distinction, rightly, in my opinion, between the “over-valued idea” and what he calls the “over-valued complex.” The latter is characteristic not only of this type, as Gross thinks, but also of the other. The “conflict complex” always has considerable value because of its high feeling-tone, no matter in which type it may appear.

[5] Bjerre, “Zur Radikalbehandlung der chronischen Paranoia,” pp. 795ff.

[42] [This appeared as Def. 41, PHANTASY, in the Baynes translation.—EDITORS.]

[43] Acts 9:3ff.

[44] Acts 10:10ff. and 11:4ff.

[45] [Imaginative activity is therefore not to be confused with “active imagination,” a psychotherapeutic method developed by Jung himself. Active imagination corresponds to the definitions of *active fantasy* in pars. 712–14. The method of active imagination (though not called by that name) may be found in “The Aims of Psychotherapy,” pars. 101–6, “The Transcendent Function,” pars. 166ff., “On the Nature of the Psyche,” pars. 400–2, and *Two Essays on Analytical Psychology*, pars. 343ff., 366. The term “active imagination” was used for the first time in “The Tavistock Lectures” (delivered in London, 1935), first published as *Analytical Psychology: Its Theory and Practice* (1968), now in *Coll. Works*, vol. 18. The method is described there in pars. 391ff. Further descriptions occur in *Mysterium Coniunctionis*, esp. pars. 706, 749–54.—EDITORS.]

[46] [This appeared as Def. 20 in the Baynes translation.—EDITORS.]

[47] For the history both of the theory and concept of feeling, see Wundt, *Outlines of Psychology*, pp. 33ff.; Nahlowsky, *Das Gefühlsleben in seinen wesentlichen Erscheinungen*; Ribot, *The*

Psychology of the Emotions; Lehmann, *Die Hauptgesetze des menschlichen Gefühblebens*; Villa, *Contemporary Psychology*, pp. 182ff.

[48] For the distinction between feeling and sensation, see Wundt, *Grundzüge der physiologischen Psychologie*, I, pp. 350ff.

[49] "Was soll uns Kant nicht sein?," *Philosophische Studien, VII*, p. 13.

[50] Cf. Kant, *Critique of Pure Reason* (trans. Kemp Smith), p. 319.

[51] *Logik*, I, sec. 1, par. 3 *(Werke*, ed. Cassirer, VIII, p. 400). [Cf. supra, par. 519, n. 11.]

[52] *Critique of Pure Reason*, pp. 319ff.

[53] Cf. *The World as Will and Idea*, I, p. 168.

[54] Ibid., p. 302. See also infra, par. 752.

[58] *Logik der reinen Erkenntnis*, pp. 14, 18.

[59] Supra, pars. 108f., 158ff.

[60] A striking example of an archaic image is that of the solar phallus, *Symbols of Transformation*, pars. 151ff.

[61] Jung, "Instinct and the Unconscious," pars. 270ff. See also supra, par. 624.

[62] [In a letter to Freud, Nov. 11, 1912, reporting on a recent visit to the United States, Jung wrote: "I analyzed fifteen Negroes in Washington, with demonstrations." He did this at St. Elizabeths Hospital (a government facility) through the cooperation of its director, Dr. William Alanson White; see *Symbols of Transformation*, par. 154 and n. 52. In late 1912 Jung had already written and partially published *Wandlungen und Symbole der Libido*, and he mentioned the research on Negroes only in its revision. *Symbols of Transformation* (orig. 1952). Cf. also "The Tavistock Lectures," par. 79.—EDITORS.]

[63] [This paragraph has been somewhat revised in *Gesammelte Werke*, vol. 6, and the translation reproduces the revisions.—EDITORS.]

[64] Cf. *The World as Will and Idea*, I, pp. 302f.

[65] *Critique of Pure Reason*, p. 314.

[66] *Der menschliche Weltbegriff*, pp. 25ff.

[67] "Introjection and Transference," *First Contributions to Psychoanalysis*, pp. 47f.

[68] The credit for having discovered the existence of this type belongs to Miss M. Moltzer. [Mary Moltzer, daughter of a Netherlands distiller, took up nursing as a personal gesture against alcoholic abuse and moved to Zurich. She studied under Jung, became an analytical psychologist, and was joint translator of his *The Theory of Psychoanalysis* (see vol. 4, p. 83 and par. 458). She attended the international congress of psychoanalysts at Weimar, 1911.—EDITORS.]

[69] Jung, "Synchronicity: An Acausal Connecting Principle."

[70] *Symbols of Transformation*, Part II, chs. II and III, and “On Psychic Energy,” pars. 7ff.

[71] *How Natives Think*.

[72] [This definition was written for the *Gesammelte Werke* edition. It may be of interest to note that the definition here given of the self as “the whole range of psychic phenomena in man” is almost identical with the definition of the psyche as “the totality of all psychic processes, conscious as well as unconscious” (par. 797). The inference would seem to be that every individual, by virtue of having, or being, a psyche, is potentially the self. It is only a question of “realizing” it. But the realization, if ever achieved, is the work of a lifetime.—EDITORS.]

[73] [Jung, “A Study in the Process of Individuation” and “Concerning Mandala Symbolism.”—EDITORS.]

[74] [The full quotation is “Deus est circulus cuius centrum est ubique, circumferentia vero nusquam” (God is a circle whose centre is everywhere and the circumference nowhere); see “A Psychological Approach to the Dogma of the Trinity,” par. 229, n. 6. In this form the saying is a variant of one attributed to St. Bonaventure *(Itinerarium mentis in Deum*, 5): “Deus est figura intellectualis cuius centrum …” (God is an intelligible sphere whose centre …); see *Mysterium Coniunctionis*, par. 41, n. 42. For more documentation see Borges, “Pascal’s Sphere.”—EDITORS.]

[75] [Concerning the *tetraktys* see *Psychology and Alchemy*, par. 189; “Commentary on The Secret of the Golden Flower,” par. 31; *Psychology and Religion: West and East*, pars. 61, 90, 246.—EDITORS.]

[76] [The quaternity figures so largely in Jung’s later writings that the reader who is interested in its numerous significations, including that of a symbol of the self, should consult the indexes (s.v. “quaternity,” “self”) of *Coll. Works*, vols. 9, Parts I and II, 11, 12, 13, 14.—EDITORS.]

[77] For the history of the concept of sensation see Wundt, *Grundzüge der physiologischen Psychologie*, I, pp. 350ff.; Dessoir, *Geschichte der neueren Psychologie*; Villa, *Contemporary Psychology*; Hartmann, *Die moderne Psychologie*.

[78] Azam, *Hypnotisme, double conscience, et altérations de la personnalité;* Prince, *The Dissociation of a Personality*; Landmann, *Die Mehrheit geistiger Persönlichkeiten in einem Individuum*; Ribot, *Die Persönlichkeit*; Flournoy, *From India to the Planet Mars*; Jung, “On the Psychology and Pathology of So-called Occult Phenomena.”

[79] *Two Essays on Analytical Psychology*, pars. 243ff.

[80] [In the German text the word *Anima* is used only twice: here and at the beginning of par. 805. Everywhere else the word used is *Seele* (soul). In this translation *anima* is substituted for “soul” when it refers specifically to the feminine component in a man, just as in Def. 49 (SOUL-IMAGE) *animus* is substituted for “soul” when it refers specifically to the masculine component in a woman. “Soul” is retained only when it refers to the psychic factor common to both sexes. The distinction is not always easy to make, and the reader may prefer to translate *anima/animus* back into “soul” on occasions when this would help to clarify Jung’s argument. For a discussion of this question and the problems involved in translating *Seele* see *Psychology and Alchemy*, par. 9 n. 8. See also *Two Essays on Analytical Psychology*, pars. 296ff., for the relations between *anima/animus* and persona.—EDITORS.]

[81] [See *n*. 80.—EDITORS.]

SECOND EDITION

TRANSLATED BY R. F. C. HULL

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

PUBLISHED BY PRINCETON
UNIVERSITY PRESS, PRINCETON, N.J.

Second edition, revised and augmented, 1966

First Princeton / Bollingen Paperback Printing, 1972

THE HARDCOVER EDITION IS PUBLISHED IN THE UNITED STATES OF AMERICA BY PRINCETON UNIVERSITY PRESS AND IN ENGLAND BY ROUTLEDGE AND KEGAN PAUL, LTD. IN THE AMERICAN EDITION, ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES. THE PRESENT VOLUME IS NUMBER 7 OF THE COLLECTED WORKS AND WAS THE SECOND TO APPEAR.

The two principal works in this volume are translated from *Über die Psychologie des Unbewussten* (1943) and *Die Beziehungen zwischen dem Ich und dem Unbewussten* (1928; 2nd edn., 1935), published by Rascher Verlag, Zurich.

The first edition was published in a Meridian Books paperback edition (New York, 1956)

LIBRARY OF CONGRESS CATALOGUE CARD NUMBER: 75–156
ISBN 0-691-01782-4 (paperback edn.)
ISBN 0-691-09776-3 (hardcover edn.)
MANUFACTURED IN THE U.S.A.

EDITORIAL NOTE TO THE FIRST EDITION

“The Structure of the Unconscious” and “New Paths in Psychology” together marked a turning point in the history of analytical psychology, for they revealed the foundations upon which the greater part of Professor Jung’s later work was built.

Both these essays were considerably revised and expanded for the successive editions mentioned in the Prefaces to the present volume. These Prefaces indicate the extent of the changes which were made on each occasion. As C. F. and H. G. Baynes say in the introduction to their English translation of an intermediate version, where the title *Two Essays in Analytical Psychology* was used for the first time: “Of the first essay only the framework of its earlier form can be recognized, and so much new material has been added to the second essay that both works start afresh, so to speak, full of the amazing vitality of Jung’s mind.” The essays are indeed remarkable for the number of revisions to which they have been subjected, each reflecting a new development of thought based upon increasingly fruitful researches into the unconscious.

However interesting the intermediate versions may be in themselves, the original drafts of these essays are undoubtedly far more significant to the student of analytical psychology. They contain the first tentative formulations of Jung’s concept of archetypes and the collective unconscious, as well as his germinating theory of types. This theory was put forward, partially at least, as an attempt to explain the conflicts within the psychoanalytic school, of which he had been so prominent a member and from which he had so recently seceded.

With these considerations in mind the Editors decided to include the original drafts of these two essays in separate Appendices. It was felt that their historical interest fully justified the duplication of reading matter which comparison of the texts would involve.

Acknowledgment is gratefully made of the kindness of Faber and Faber, Ltd., London, and the Oxford University Press, New York, in permitting quotation from the Louis MacNeice translation of Goethe’s *Faust*.

EDITORIAL NOTE TO THE SECOND EDITION

When the stock of the first edition of this volume was exhausted, twelve years after its first publication, the publishers undertook a complete resetting of type rather than a corrected reprint, as the result of research among Professor Jung's posthumous papers.

The text of Appendix 1, "New Paths in Psychology," was found to be an incomplete version of what the author published in 1912, and it was decided to publish the complete version, with the earliest deletions indicated. For Appendix 2, "The Structure of the Unconscious," it had been necessary in the first edition to retranslate a French translation in the absence of the original German. Subsequently the author's holograph manuscript was discovered in his archives, and this furthermore contained several unpublished passages and variants of historical interest.

Both appendices have accordingly been re-edited and largely retranslated to take the new findings into account. (For details, see the editorial note at the beginning of each appendix.) Similar though not identical presentations were published in Volume 7 of the *Gesammelte Werke*, i.e., the Swiss edition, in 1964. Also on the model of the Swiss edition, the complete texts of the various forewords have been added. The title of the first essay has been modified to "On the Psychology of the Unconscious."

The texts of the two main essays have also been revised, for consistency, the reference apparatus has been brought up to date, a bibliography has been added, and a new index has been supplied.

ON THE PSYCHOLOGY OF THE UNCONSCIOUS

PREFACE TO THE FIRST EDITION (1917)

This essay* is the result of my attempt to revise, at the publisher's request, the paper which appeared in the Rascher Yearbook for 1912 under the title "Neue Bahnen der Psychologie."† The present work thus reproduces that earlier essay, though in altered and enlarged form. In my earlier paper I confined myself to the exposition of one essential aspect of the psychological views inaugurated by Freud. The manifold and important changes which recent years have brought in the psychology of the unconscious have compelled me to broaden considerably the framework of my earlier paper. On the one hand a number of passages on Freud were shortened, while on the other hand, Adler's psychology was taken into account; and, so far as was possible within the limits of this essay, a general survey of my own views was given.

I must warn the reader at the outset that he will be dealing with a study which, on account of its rather complicated subject-matter, will make considerable demands on his patience and attention. Nor can I associate this work with the idea that it is in any sense conclusive or adequately convincing. This requirement could be met only by comprehensive scientific treatises on each separate problem touched upon in the essay. The reader who wishes to probe more deeply into the questions at issue must therefore be referred to the specialist literature. My intention is simply to give a broad survey of the most recent views on the nature and psychology of the unconscious. I regard the problem of the unconscious as so important and so topical that it would, in my opinion, be a great loss if this question, which touches each one of us so closely, were to disappear from the orbit of the educated lay public by being banished to some inaccessible technical journal, there to lead a shadowy paper-existence on the shelves of libraries.

The psychological concomitants of the present war—above all the incredible brutalization of public opinion, the mutual slanderings, the unprecedented fury of destruction, the monstrous flood of lies, and man's incapacity to call a halt to the bloody demon—are uniquely fitted to force upon the attention of every thinking person the problem of the chaotic unconscious which slumbers uneasily beneath the ordered world of consciousness. This war has pitilessly revealed to civilized man that he is still a barbarian, and has at the same time shown what an iron scourge lies in store for him if ever again he should be tempted to make his neighbour responsible for his own evil qualities. The psychology of the individual is reflected in the psychology of the nation. What the nation does is done also by each individual, and so long as the individual continues to do it, the nation will do likewise. Only a change in the attitude of the individual can initiate a change in the psychology of the nation. The great problems of humanity were never yet solved by general laws, but only through regeneration of the attitudes of individuals. If ever there was a time when self-reflection was the absolutely necessary and only right thing, it is now, in our present catastrophic epoch. Yet whoever reflects upon himself is bound to strike upon the frontiers of the unconscious, which contains what above all else he needs to know.

PREFACE TO THE SECOND EDITION (1918)

I am glad that it has been the lot of this little book to pass into a second edition in so short a time, despite the difficulties it must have presented to many readers. I am letting the second edition appear unaltered except for a few minor modifications and improvements, although I am aware that the last chapters in particular, owing to the extraordinary difficulty and the novelty of the material, really needed discussion on a much broader basis in order to be generally understood. But a more detailed treatment of the fundamental principles there outlined would far exceed the bounds of a more or less popular presentation, so that I preferred to treat these questions with due circumstantiality in a separate work which is now in preparation.*

From the many communications I received after the publication of the first edition I have discovered that, even among the wider public, interest in the problems of the human psyche is very much keener than I expected. This interest may be due in no small measure to the profound shock which our consciousness sustained through the World War. The spectacle of this catastrophe threw man back upon himself by making him feel his complete impotence; it turned his gaze inwards, and, with everything rocking about him, he must needs seek something that guarantees him a hold. Too many still look outwards, some believing in the illusion of victory and of victorious power, others in treaties and laws, and others again in the overthrow of the existing order. But still too few look inwards, to their own selves, and still fewer ask themselves whether the ends of human society might not best be served if each man tried to abolish the old order in himself, and to practise in his own person and in his own inward state those precepts, those victories which he preaches at every street-corner, instead of always expecting these things of his fellow men. Every individual needs revolution, inner division, overthrow of the existing order, and renewal, but not by forcing them upon his neighbours under the hypocritical cloak of Christian love or the sense of social responsibility or any of the other beautiful euphemisms for unconscious urges to personal power. Individual self-reflection, return of the individual to the ground of human nature, to his own deepest being with its individual and social destiny—here is the beginning of a cure for that blindness which reigns at the present hour.

Interest in the problem of the human psyche is a symptom of this instinctive return to oneself. It is to serve this interest that the present book was written.

Küsnacht, Zurich, October 1918 C. G. J.

PREFACE TO THE THIRD EDITION* (1926)

This book was written during the World War, and it owes its existence primarily to the psychological repercussions of that great event. Now that the war is over, the waves are beginning to subside again. But the great psychological problems that the war threw up still occupy the mind and heart of every thinking and feeling person. It is probably thanks to this that my little book has survived the postwar period and now appears in a third edition.

In view of the fact that seven years have elapsed since the publication of the first edition, I have deemed it necessary to undertake fairly extensive alterations and improvements, particularly in the chapters on types and on the unconscious. The chapter on “The Development of Types in the Analytical Process”† I have omitted entirely, as this question has since received comprehensive treatment in my book *Psychological Types*, to which I must refer the interested reader.

Anyone who has tried to popularize highly complicated material that is still in the process of scientific development will agree with me that this is no easy task. It is even more difficult when many of the psychological processes and problems I have to discuss here are quite unknown to most people. Much of what I say may arouse their prejudices or may appear arbitrary; but they should bear in mind that the purpose of such a book can be, at most, to give them a rough idea of its subject and to provoke thought, but not to enter into all the details of the argument. I shall be quite satisfied if my book fulfils this purpose.

Küsnacht, Zurich, April 1925 C. G. J.

PREFACE TO THE FOURTH EDITION (1936)

Aside from a few improvements the fourth edition appears unchanged. From numerous reactions of the public I have seen that the idea of the collective unconscious, to which I have devoted one chapter in this book, has aroused particular interest. I cannot therefore omit calling the attention of my readers to the latest issues of the *Eranos-Jahrbuch,*[*] which contain important works by various authors on this subject. The present book makes no attempt to give a comprehensive account of the full range of analytical psychology; consequently, much is merely hinted at and some things are not mentioned at all. I hope, however, that it will continue to fulfil its modest purpose.

Küsnacht, Zurich, April 1936 C. G. J.

PREFACE TO THE FIFTH EDITION† (1943)

Since the last, unchanged edition, six years have gone by; hence it seemed to me advisable to submit the present, new edition of the book to a thorough revision. On this occasion a number of inadequacies could be eliminated or improved, and superfluous material deleted. A difficult and complicated matter like the psychology of the unconscious gives rise not only to many new insights but to errors as well. It is still a boundless expanse of virgin territory into which we make experimental incursions, and only by going the long way round do we strike the direct road. Although I have tried to introduce as many new viewpoints as possible into the text, my reader should not expect anything like a complete survey of the fundamentals of our contemporary psychological knowledge in this domain. In this popular account I am presenting only a few of the most essential aspects of medical psychology and also of my own researches, and this only by way of an introduction. A solid knowledge cannot be acquired except through the study of the literature on the one hand and through practical experience on the other. In particular I would like to recommend to those readers who are desirous of gaining detailed knowledge of these matters that they should not only study the basic works of medical psychology and psychopathology, but also thoroughly digest the psychological text-books. So doing, they will acquire the requisite knowledge of the position and general significance of medical psychology in the most direct way.

From such a comparative study the reader will be able to judge how far Freud’s complaint about the “unpopularity” of his psychoanalysis, and my own feeling that I occupy an isolated outpost, are justified. Although there have been a few notable exceptions, I do not think I exaggerate when I say that the views of modern medical psychology have still not penetrated far enough into the strongholds of academic science. New ideas, if they are not just a flash in the pan, generally require at least a generation to take root. Psychological innovations probably take much longer, since in this field more than in any other practically everybody sets himself up as an authority.

Küsnacht, Zurich, April 1942 C. G. J.

PSYCHOANALYSIS

[1] If he wants to help his patient, the doctor and above all the “specialist for nervous diseases” must have psychological knowledge; for nervous disorders and all that is embraced by the terms “nervousness,” hysteria, etc. are of psychic origin and therefore logically require psychic treatment. Cold water, light, fresh air, electricity, and so forth have at best a transitory effect and sometimes none at all. The patient is sick in mind, in the highest and most complex of the mind’s functions, and these can hardly be said to belong any more to the province of medicine. Here the doctor must also be a psychologist, which means that he must have knowledge of the human psyche.

[2] In the past, that is to say up to fifty years ago, the doctor’s psychological training was still very bad. His psychiatric textbooks were wholly confined to clinical descriptions and the systematization of mental diseases, and the psychology taught in the universities was either philosophy or the so-called “experimental psychology” inaugurated by Wundt.[1] The first moves towards a psychotherapy of the neuroses came from the Charcot school, at the Salpetrière in Paris; Pierre Janet[2] began his epoch-making researches into the psychology of neurotic states, and Bernheim[3] in Nancy took up with great success Liébeault’s[4] old and forgotten idea of treating the neuroses by suggestion. Sigmund Freud translated Bernheim’s book and also derived valuable inspiration from it. At that time there was still no psychology of the neuroses and psychoses. To Freud belongs the undying merit of having laid the foundations of a psychology of the neuroses. His teachings sprang from his experience in the practical treatment of the neuroses, that is, from the application of a method which he called *psychoanalysis*.

[3] Before we enter upon a closer presentation of our subject, something must be said about its relation to science as known hitherto. Here we encounter a curious spectacle which proves yet again the truth of Anatole France’s remark: “Les savants ne sont pas curieux.” The first work of any magnitude[5] in this field awakened only the faintest echo, in spite of the

fact that it introduced an entirely new conception of the neuroses. A few writers spoke of it appreciatively and then, on the next page, proceeded to explain their hysterical cases in the same old way. They behaved very much like a man who, having eulogized the idea or fact that the earth was a sphere, calmly continues to represent it as flat. Freud's next publications remained absolutely unnoticed, although they put forward observations which were of incalculable importance for psychiatry. When, in the year 1900, Freud wrote the first real psychology of dreams[6] (a proper Stygian darkness had hitherto reigned over this field), people began to laugh, and when he actually started to throw light on the psychology of sexuality in 1905,[7] laughter turned to insult. And this storm of learned indignation was not behindhand in giving Freudian psychology an unwanted publicity, a notoriety that extended far beyond the confines of scientific interest.

[4] Accordingly we must look more closely into this new psychology. Already in Charcot's time it was known that the neurotic symptom is "psychogenic," i.e., originates in the psyche. It was also known, thanks mainly to the work of the Nancy school, that all hysterical symptoms can be produced through suggestion. Equally, something was known, thanks to the researches of Janet, about the psychological mechanisms that produce such hysterical phenomena as anaesthesia, paresia, paralysis, and amnesia. But it was not known *how* an hysterical symptom originates in the psyche; the psychic causal connections were completely unknown. In the early eighties Dr. Breuer, an old Viennese practitioner, made a discovery which became the real starting-point for the new psychology. He had a young, very intelligent woman patient suffering from hysteria, who manifested the following symptoms among others: she had a spastic (rigid) paralysis of the right arm, and occasional fits of absentmindedness or twilight states; she had also lost the power of speech inasmuch as she could no longer command her mother tongue but could only express herself in English (systematic aphasia). They tried at that time to account for these disorders with anatomical theories, although the cortical centre for the arm function was as little disturbed here as with a normal person. The symptomatology of hysteria is full of anatomical impossibilities. One lady, who had completely lost her hearing because of an hysterical

affection, often used to sing. Once, when she was singing, her doctor seated himself unobserved at the piano and softly accompanied her. In passing from one stanza to the next he made a sudden change of key, whereupon the patient, without noticing it, went on singing in the changed key. Thus she hears—and does not hear. The various forms of systematic blindness offer similar phenomena: a man suffering from total hysterical blindness recovered his power of sight in the course of treatment, but it was only partial at first and remained so for a long time. He could see everything with the exception of people's heads. He saw all the people round him without heads. Thus he sees—and does not see. From a large number of like experiences it had been concluded that only the conscious mind of the patient does not see and hear, but that the sense function is otherwise in working order. This state of affairs directly contradicts the nature of an organic disorder, which always affects the actual function as well.

[5] After this digression, let us come back to the Breuer case. There were no organic causes for the disorder, so it had to be regarded as hysterical, i.e., psychogenic. Breuer had observed that if, during her twilight states (whether spontaneous or artificially induced), he got the patient to tell him of the reminiscences and fantasies that thronged in upon her, her condition was eased for several hours afterwards. He made systematic use of this discovery for further treatment. The patient devised the name "talking cure" for it or, jokingly, "chimney-sweeping."

[6] The patient had become ill when nursing her father in his fatal illness. Naturally her fantasies were chiefly concerned with these disturbing days. Reminiscences of this period came to the surface during her twilight states with photographic fidelity; so vivid were they, down to the last detail, that we can hardly assume the waking memory to have been capable of such plastic and exact reproduction. (The name "hypermnesia" has been given to this intensification of the powers of memory which not infrequently occurs in restricted states of consciousness.) Remarkable things now came to light. One of the many stories told ran somewhat as follows:

> One night, watching by the sick man, who had a high fever, she was tense with anxiety because a surgeon was expected from Vienna to perform an operation. Her mother had left the room for a while, and Anna, the patient, sat by the sick-bed with her right arm hanging over the back of the chair. She fell into a sort of waking dream in which she saw a black snake coming, apparently out of the wall, towards the sick man as though to bite him. (It is quite likely that there really were snakes in the meadow at the back of the house, which had already given the girl a fright and which now provided the material for the hallucination.) She wanted to drive the creature away, but felt paralysed; her right arm, hanging over the back of the chair, had "gone to sleep": it had become anaesthetic and paretic, and, as she looked at it, the fingers changed into little serpents with death's-heads. Probably she made efforts to drive away the snake with her paralysed right hand, so that the anaesthesia and paralysis became associated with the snake hallucination. When the snake had disappeared, she was so frightened that she wanted to pray; but all speech failed her, she could not utter a word until finally she remembered an English nursery rhyme, and then she was able to go on thinking and praying in English.[8]

[7] Such was the scene in which the paralysis and the speech disturbance originated, and with the narration of this scene the disturbance itself was removed. In this manner the case is said to have been finally cured.

[8] I must content myself with this one example. In the book I have mentioned by Breuer and Freud there is a wealth of similar examples. It can readily be understood that scenes of this kind make a powerful impression, and people are therefore inclined to impute causal significance to them in the genesis of the symptom. The view of hysteria then current, which derived from the English theory of the "nervous shock" energetically championed by Charcot, was well qualified to explain Breuer's discovery. Hence there arose the so-called trauma theory, which says that the hysterical symptom, and, in so far as the symptoms constitute the illness, hysteria in general, derive from psychic injuries or traumata whose imprint persists unconsciously for years. Freud, now collaborating with Breuer, was able to furnish abundant confirmation of this discovery. It turned out that none of the hundreds of

hysterical symptoms arose by chance—they were always caused by psychic occurrences. So far the new conception opened up an extensive field for empirical work. But Freud's inquiring mind could not remain long on this superficial level, for already deeper and more difficult problems were beginning to emerge. It is obvious enough that moments of extreme anxiety such as Breuer's patient experienced may leave an abiding impression. But how did she come to experience them at all, since they already clearly bear a morbid stamp? Could the strain of nursing bring this about? If so, there ought to be many more occurrences of the kind, for there are unfortunately very many exhausting cases to nurse, and the nervous health of the nurse is not always of the best. To this problem medicine gives an excellent answer: "The x in the calculation is predisposition." One is just "predisposed" that way. But for Freud the problem was: what constitutes the predisposition? This question leads logically to an examination of the previous history of the psychic trauma. It is a matter of common observation that exciting scenes have quite different effects on the various persons involved, or that things which are indifferent or even agreeable to one person arouse the greatest horror in others—witness frogs, snakes, mice, cats, etc. There are cases of women who will assist at bloody operations without turning a hair, while they tremble all over with fear and loathing at the touch of a cat. I remember a young woman who suffered from acute hysteria following a sudden fright.[9] She had been to an evening party and was on her way home about midnight in the company of several acquaintances, when a cab came up behind them at full trot. The others got out of the way, but she, as though spellbound with terror, kept to the middle of the road and ran along in front of the horses. The cabman cracked his whip and swore; it was no good, she ran down the whole length of the road, which led across a bridge. There her strength deserted her, and to avoid being trampled on by the horses she would in her desperation have leapt into the river had not the passers-by prevented her. Now, this same lady had happened to be in St. Petersburg on the bloody twenty-second of January [1905], in the very street which was cleared by the volleys of the soldiers. All round her people were falling to the ground dead or wounded; she, however, quite calm and clear-headed, espied a gate leading into a yard through which she made her escape into another street. These dreadful moments caused her no further agitation. She felt perfectly well afterwards—indeed, rather better than usual.

[9] This failure to react to an apparent shock can frequently be observed. Hence it necessarily follows that the intensity of a trauma has very little pathogenic significance in itself, but it must have a special significance for the patient. That is to say, it is not the shock as such that has a pathogenic effect under all circumstances, but, in order to have an effect, it must impinge on a special psychic disposition, which may, in certain circumstances, consist in the patient's unconsciously attributing a specific significance to the shock. Here we have a possible key to the "predisposition." We have therefore to ask ourselves: what are the particular circumstances of the scene with the cab? The patient's fear began with the sound of the trotting horses; for an instant it seemed to her that this portended some terrible doom—her death, or something as dreadful; the next moment she lost all sense of what she was doing.

[10] The real shock evidently came from the horses. The patient's predisposition to react in so unaccountable a way to this unremarkable incident might therefore consist in the fact that horses have some special significance for her. We might conjecture, for instance, that she once had a dangerous accident with horses. This was actually found to be the case. As a child of about seven she was out for a drive with her coachman, when suddenly the horses took fright and at a wild gallop made for the precipitous bank of a deep river-gorge. The coachman *jumped* down and shouted to her to do likewise, but she was in such deadly fear that she could hardly make up her mind. Nevertheless she jumped in the nick of time, while the horses crashed with the carriage into the depths below. That such an event would leave a very deep impression scarcely needs proof. Yet it does not explain why at a later date such an insensate reaction should follow the perfectly harmless hint of a similar situation. So far we know only that the later symptom had a prelude in childhood, but the pathological aspect of it still remains in the dark. In order to penetrate this mystery, further knowledge is needed. For it had become clear with increasing experience that in all the cases analysed so far, there existed, apart from the traumatic experiences, another, special class of disturbances which lie in the province of love. Admittedly "love" is an elastic concept that stretches from heaven to hell and combines in itself good and evil, high and low. With this discovery Freud's views underwent a considerable change. If, more or less under the spell of Breuer's trauma theory, he had formerly sought the cause of neurosis in traumatic experiences, now the centre of gravity of the problem shifted to an entirely different point. This is best illustrated by our case: we can understand well enough why horses should play a special part in the life of the patient, but we do not understand the later reaction, so exaggerated and uncalled for. The pathological peculiarity of this story lies in the fact that she is frightened of quite harmless horses. Remembering the discovery that besides the traumatic experience there is often a disturbance in the province of love, we might inquire whether perhaps there is something peculiar in this connection.

[11] The lady knows a young man to whom she thinks of becoming engaged; she loves him and hopes to be happy with him. At first nothing more is discoverable. But it would never do to be deterred from investigation by the negative results of the preliminary questioning. There are indirect ways of reaching the goal when the direct way fails. We therefore return to that singular moment when the lady ran headlong in front of the horses. We inquire about her companions and what sort of festive occasion it was in which she had just taken part. It had been a farewell party for her best friend, who was going abroad to a health resort on account of her nerves. This friend is married and, we are told, happily; she is also the mother of a child. We may take leave to doubt the statement that she is happy; for, were she really so, she would presumably have no reason to be "nervous" and in need of a cure. Shifting my angle of approach, I learned that after her friends had rescued her they brought the patient back to the house of her host—her best friend's husband—as this was the nearest shelter at that late hour of night. There she was hospitably received in her exhausted state. At this point the patient broke off her narrative, became embarrassed, fidgeted, and tried to change the subject. Evidently some disagreeable reminiscence had suddenly bobbed up. After the most obstinate resistance had been overcome, it appeared that yet another very remarkable incident had occurred that night: the amiable host had made her a fiery declaration of love, thus precipitating a situation which, in the absence of the lady of the house, might well be considered both difficult and distressing. Ostensibly this declaration of love came to her like a bolt from the blue, but these things usually have their history. It was now the task of the next few weeks to dig out bit by bit a long love story, until at last a complete picture emerged which I attempt to outline somewhat as follows:

> As a child the patient had been a regular tomboy, caring only for wild boys' games, scorning her own sex, and avoiding all feminine ways and occupations. After puberty, when the erotic problem might have come too close, she began to shun all society, hated and despised everything that even remotely reminded her of the biological destiny of woman, and lived in a world of fantasies which had nothing in common with rude reality. Thus, until about her twenty-fourth year, she evaded all those little adventures, hopes, and expectations which ordinarily move a girl's heart at this age. Then she got to know two men who were destined to break through the thorny hedge that had grown up around her. Mr. A was her best friend's husband, and Mr. B was his bachelor friend. She liked them both. Nevertheless it soon began to look as though she liked Mr. B a vast deal better. An intimacy quickly sprang up between them and before long there was talk of a possible engagement. Through her relations with Mr. B and through her friend she often came into contact with Mr. A, whose presence sometimes disturbed her in the most unaccountable way and made her nervous. About this time the patient went to a large party. Her friends were also there. She became lost in thought and was dreamily playing with her ring when it suddenly

> slipped off her finger and rolled under the table. Both gentlemen looked for it and Mr. B succeeded in finding it. He placed the ring on her finger with an arch smile and said, “You know what that means!” Overcome by a strange and irresistible feeling, she tore the ring from her finger and flung it through the open window. A painful moment ensued, as may be imagined, and soon she left the party in deep dejection. Not long after this, so-called chance brought it about that she should spend her summer holidays at a health resort where Mr. and Mrs. A were also staying. Mrs. A then began to grow visibly nervous, and frequently stayed indoors because she felt out of sorts. The patient was thus in a position to go out for walks alone with Mr. A. On one occasion they went boating. So boisterous was she in her merriment that she suddenly fell overboard. She could not swim, and it was only with great difficulty that Mr. A pulled her half-unconscious into the boat. And then it was that he kissed her. With this romantic episode the bonds were tied fast. But the patient would not allow the depths of this passion to come to consciousness, evidently because she had long habituated herself to pass over such things or, better, to run away from them. To excuse herself in her own eyes she pursued her engagement to Mr. B all the more energetically, telling herself every day that it was Mr. B whom she loved. Naturally this curious little game had not escaped the keen glances of wifely jealousy. Mrs. A, her friend, had guessed the secret and fretted accordingly, so that her nerves only got worse. Hence it became necessary for Mrs. A to go abroad for a cure. At the farewell party the evil spirit stepped up to our patient and whispered in her ear, “Tonight he is alone. Something must happen to you so that you can go to his house.” And so indeed it happened: through her own strange behaviour she came back to his house, and thus she attained her desire.

[12] After this explanation everyone will probably be inclined to assume that only a devilish subtlety could devise such a chain of circumstances and set it to work. There is no doubt about the subtlety, but its moral evaluation remains a doubtful matter, because I must emphasize that the motives leading to this dramatic dénouement were in no sense conscious. To the patient, the whole story seemed to happen of itself, without her being conscious of any motive. But the previous history makes it perfectly clear that everything was unconsciously directed to this end, while the conscious mind was struggling to bring about the engagement to Mr. B. The unconscious drive in the other direction was stronger.

[13] So once more we return to our original question, namely, whence comes the pathological (i.e., peculiar or exaggerated) nature of the reaction to the trauma? On the basis of a conclusion drawn from analogous experiences, we conjectured that in this case too there must be, in addition to the trauma, a disturbance in the erotic sphere. This conjecture has been entirely confirmed, and we have learnt that the trauma, the ostensible cause of the illness, is no more than an occasion for something previously not conscious to manifest itself, i.e., an important erotic conflict. Accordingly the trauma loses its exclusive significance, and is replaced by a much deeper and more comprehensive conception which sees the pathogenic agent as an erotic conflict.

[14] One often hears the question: why should the erotic conflict be the cause of the neurosis rather than any other conflict? To this we can only answer: no one asserts that it must be so, but in point of fact it frequently is so. In spite of all indignant protestations to the contrary, the fact remains that love,[10] its problems and its conflicts, is of fundamental importance in human life and, as careful inquiry consistently shows, is of far greater significance than the individual suspects.

[15] The trauma theory has therefore been abandoned as antiquated; for with the discovery that not the trauma but a hidden erotic conflict is the root of the neurosis, the trauma loses its causal significance.[11]

II

THE EROS THEORY

[16] In the light of this discovery, the question of the trauma was answered in a most unexpected manner; but in its place the investigator was faced with the problem of the erotic conflict, which, as our example shows, contains a wealth of abnormal elements and cannot at first sight be compared with an ordinary erotic conflict. What is peculiarly striking and almost incredible is that only the pretence should be conscious, while the patient's real passion remained hidden from her. In this case certainly, it is beyond dispute that the real relationship was shrouded in darkness, while the pretended one dominated the field of consciousness. If we formulate these facts theoretically, we arrive at the following result: there are in a neurosis two tendencies standing in strict opposition to one another, one of which is unconscious. This proposition is formulated in very general terms on purpose, because I want to stress that although the pathogenic conflict is a personal matter it is also a broadly human conflict manifesting itself in the individual, for disunity with oneself is the hall-mark of civilized man. The neurotic is only a special instance of the disunited man who ought to harmonize nature and culture within himself.

[17] The growth of culture consists, as we know, in a progressive subjugation of the animal in man. It is a process of domestication which cannot be accomplished without rebellion on the part of the animal nature that thirsts for freedom. From time to time there passes as it were a wave of frenzy through the ranks of men too long constrained within the limitations of their culture. Antiquity experienced it in the Dionysian orgies that surged over from the East and became an essential and characteristic ingredient of classical culture. The spirit of these orgies contributed not a little towards the development of the stoic ideal of asceticism in the innumerable sects and philosophical schools of the last century before Christ, which produced from the polytheistic chaos of that epoch the twin ascetic religions of Mithraism and Christianity. A second wave of Dionysian licentiousness swept over the West at the Renaissance. It is difficult to gauge the spirit of one's own time; but in the succession of revolutionary questions to which the last half century gave birth, there was the "sexual question," and this has fathered a whole new species of literature. In this "movement" are rooted the beginnings of psychoanalysis, on whose theories it exerted a very one-sided influence. After all, nobody can be completely independent of the currents of his age. Since then the "sexual question" has largely been thrust into the background by political and spiritual problems. That, however, does nothing to alter the fundamental fact that man's instinctual nature is always coming up against the checks imposed by civilization. The names alter, but the facts remain the same. We also know today that it is by no means the animal nature alone that is at odds with civilized constraints; very often it is new ideas which are thrusting upwards from the unconscious and are just as much out of harmony with the dominating culture as the instincts. For instance, we could easily construct a political theory of neurosis, in so far as the man of today is chiefly excited by political passions to which the "sexual question" was only an insignificant prelude. It may turn out that politics are but the forerunner of a far deeper religious convulsion. Without being aware of it, the neurotic participates in the dominant currents of his age and reflects them in his own conflict.

[18] Neurosis is intimately bound up with the problem of our time and really represents an unsuccessful attempt on the part of the individual to solve the general problem in his own person. Neurosis is self-division. In most people the cause of the division is that the conscious mind wants to hang on to its moral ideal, while the unconscious strives after its—in the contemporary sense—unmoral ideal which the conscious mind tries to deny. Men of this type want to be more respectable than they really are. But the conflict can easily be the other way about: there are men who are to all appearances very disreputable and do not put the least restraint upon themselves. This is at bottom only a pose of wickedness, for in the background they have their moral side which has fallen into the unconscious just as surely as the immoral side in the case of the moral man. (Extremes should therefore be avoided as far as possible, because they always arouse suspicion of their opposite.)

[19] This general discussion was necessary in order to clarify the idea of an "erotic conflict." Thence we can proceed to discuss firstly the technique of psychoanalysis and secondly the question of therapy.

[20] Obviously the great question for this technique is: How are we to arrive by the shortest and best path at a knowledge of what is happening in the unconscious of the patient? The original method was hypnotism: either interrogation in a state of hypnotic concentration or else the spontaneous production of fantasies by the patient while in this state. This method is still occasionally employed, but compared with the present technique it is primitive and often unsatisfactory. A second method was evolved by the Psychiatric Clinic, in Zurich, the so-called association method.[1] It demonstrates very accurately the presence of conflicts in the form of "complexes" of feeling-toned ideas, as they are called, which betray themselves through characteristic disturbances in the course of the experiment.[2] But the most important method of getting at the pathogenic conflicts is, as Freud was the first to show, through the analysis of dreams.

[21] Of the dream it can indeed be said that "the stone which the builders rejected, the same is become the the head of the corner." It is only in modern times that the dream, this fleeting and insignificant-looking product of the psyche, has met with such profound contempt. Formerly it was esteemed as a harbinger of fate, a portent and comforter, a messenger of the gods. Now we see it as the emissary of the unconscious, whose task it is to reveal the secrets that are hidden from the conscious mind, and this it does with astounding completeness. The "manifest" dream, i.e., the dream as we remember it, is in Freud's view only a façade which gives us no idea of the interior of the house, but, on the contrary, carefully conceals it with the help of the "dream censor." If, however, while observing certain technical rules, we induce the dreamer to talk about the details of his dream, it soon becomes evident that his associations tend in a particular direction and group themselves round particular topics. These are of personal significance and yield a meaning which could never have been conjectured to lie behind the dream, but which, as careful comparison has shown, stands in an extremely delicate and meticulously exact relationship to the dream façade. This particular complex of ideas wherein are united all the threads of the dream is the conflict we are looking for, or rather a variation of it conditioned by circumstances. According to Freud, the painful and incompatible elements in the conflict are in this way so covered up or obliterated that we we may speak of a "wish-fulfilment." However, it is only very seldom that dreams fulfil obvious wishes, as for instance in the so-called body-stimulus dreams, e.g., the sensation of hunger during sleep, when the desire for food is satisfied by dreaming about delicious meals. Likewise the pressing idea that one ought to get up, conflicting with the desire to go on sleeping, leads to the wish-fulfilling dream-idea that one has already got up, etc. In Freud's view there are also

unconscious wishes whose nature is incompatible with the ideas of the waking mind, painful wishes which one prefers not to admit, and these are precisely the wishes that Freud regards as the real architects of the dream. For instance, a daughter loves her mother tenderly, but dreams to her great distress that her mother is dead. Freud argues that there exists in this daughter, unbeknown to herself, the exceedingly painful wish to see her mother removed from this world with all speed, because she has secret resistances to her. Even in the most blameless daughter such moods may occur, but they would be met with the most violent denial if one tried to saddle her with them. To all appearances the manifest dream contains no trace of wish-fulfilment, rather of apprehension or alarm, consequently the direct opposite of the supposed unconscious impulse. But we know well enough that *exaggerated* alarm can often and rightly be suspected of the contrary. (Here the critical reader may justifiably ask: When is the alarm in a dream exaggerated?) Such dreams, in which there is apparently no trace of wish-fulfilment, are innumerable: the conflict worked out in the dream is unconscious, and so is the attempted solution. Actually, there does exist in our dreamer the tendency to be rid of her mother; expressed in the language of the unconscious, she wants her mother to die. But the dreamer should certainly not be saddled with this tendency because, strictly speaking, it was not she who fabricated the dream, but the unconscious. The unconscious has this tendency, most unexpected from the dreamer's point of view, to get rid of the mother. The very fact that she can dream such a thing proves that she does not consciously think it. She has no notion why her mother should be got rid of. Now we know that a certain layer of the unconscious contains everything that has passed beyond the recall of memory, including all those infantile instinctual impulses which could find no outlet in adult life. We can say that the bulk of what comes out of the unconscious has an infantile character at first, as for instance this wish, which is simplicity itself: "When Mummy dies you will marry me, won't you, Daddy?" This expression of an infantile wish is the substitute for a recent desire to marry, a desire in this case painful to the dreamer, for reasons still to be discovered. The idea of marriage, or rather the seriousness of the corresponding impulse, is, as they say, "repressed into the unconscious" and from there must necessarily express itself in an infantile fashion, because the material at the disposal of the unconscious consists largely of infantile reminiscences.

[22] Our dream is apparently concerned with a twinge of infantile jealousy. The dreamer is more or less in love with her father, and for that reason she wants to get rid of her mother. But her real conflict lies in the fact that on the one hand she wants to marry, and on the other hand is unable to make up her mind: for one never knows what it will be like, whether he will make a suitable husband, etc. Again, it is so nice at home, and what will happen when she has to part from darling Mummy and be all independent and grown up? She fails to notice that the marriage question is now a serious matter for her and has her in its grip, so that she can no longer creep home to father and mother without bringing the fateful question into the bosom of the family. She is no longer the child she once was; she is the woman who wants to get married. As such she comes back, complete with her wish for a husband. But in the family the father is the husband and, without her being aware of it, it is on him that the daughter's desire for a husband falls. But that is *incest!* In this way there arises a secondary incest-intrigue. Freud assumes that the tendency to incest is primary and the real reason why the dreamer cannot make up her mind to marry. Compared with that, the other reasons we have cited count for little. With regard to this view I have long adopted the standpoint that the occasional occurrence of incest is no proof of a universal tendency to incest, any more than the fact of murder proves the existence of a universal homicidal mania productive of conflict. I would not go so far as to say that the germs of every kind of criminality are not present in each of us. But there is a world of difference between the presence of such a germ and an actual conflict with its resulting cleavage of the personality, such as exists in a neurosis.

[23] If we follow the history of a neurosis with attention, we regularly find a critical moment when some problem emerged that was evaded. This evasion is just as natural and just as common a reaction as the laziness, slackness, cowardice, anxiety, ignorance, and unconsciousness which are at the back of it. Whenever things are unpleasant, difficult, and dangerous, we mostly hesitate and if possible give them a wide berth. I regard these reasons as entirely sufficient. The symptomatology of incest, which is undoubtedly there and which Freud rightly saw, is to my mind a secondary phenomenon, already pathological.

[24] The dream is often occupied with apparently very silly details, thus producing an impression of absurdity, or else it is on the surface so unintelligible as to leave us thoroughly bewildered. Hence we always have to overcome a certain resistance before we can seriously set about disentangling the intricate web through patient work. But when at last we penetrate to its real meaning, we find ourselves deep in the dreamer's secrets and discover with astonishment that an apparently quite senseless dream is in the highest degree significant, and that in reality it speaks only of important and serious matters. This discovery compels rather more respect for the so-called superstition that dreams have a meaning, to which the rationalistic temper of our age has hitherto given short shrift.

[25] As Freud says, dream-analysis is the *via regia* to the unconscious. It leads straight to the deepest personal secrets, and is, therefore, an invaluable instrument in the hand of the physician and educator of the soul.

[26] The analytical method in general, and not only the specifically Freudian psychoanalysis, consists in the main of numerous dream-analyses. In the course of treatment, the dreams successively throw up the contents of the unconscious in order to expose them to the disinfecting power of daylight, and in this way much that is valuable and believed lost is found again. It is only to be expected that for many people who have false ideas about themselves the treatment is a veritable torture. For, in accordance with the old mystical saying, “Give up what thou hast, then shalt thou receive!” they are called upon to abandon all their cherished illusions in order that something deeper, fairer, and more embracing may arise within them. It is a genuine old wisdom that comes to light again in the treatment, and it is especially curious that this kind of psychic education should prove necessary in the heyday of our culture. In more than one respect it may be compared with the Socratic method, though it must be said that analysis penetrates to far greater depths.

[27] The Freudian mode of investigation sought to prove that an overwhelming importance attaches to the erotic or sexual factor as regards the origin of the pathogenic conflict. According to this theory there is a collision between the trend of the conscious mind and the unmoral, incompatible, unconscious wish. The unconscious wish is infantile, i.e., it is a wish from the childish past that will no longer fit the present, and is therefore repressed on moral grounds. The neurotic has the soul of a child who bears ill with arbitrary restrictions whose meaning he does not see; he tries to make this morality his own, but falls into disunity with himself: one side of him wants to suppress, the other longs to be free—and this struggle goes by the name of neurosis. Were the conflict clearly conscious in all its parts, presumably it would never give rise to neurotic symptoms; these occur only when we cannot see the other side of our nature and the urgency of its problems. Only under these conditions does the symptom appear, and it helps to give expression to the unrecognized side of the psyche. The symptom is therefore, in Freud's view, the fulfilment of unrecognized desires which, when conscious, come into violent conflict with our moral convictions. As already observed, this shadow-side of the psyche, being withdrawn from conscious scrutiny, cannot be dealt with by the patient. He cannot correct it, cannot come to terms with it, nor

yet disregard it; for in reality he does not “possess” the unconscious impulses at all. Thrust out from the hierarchy of the conscious psyche, they have become autonomous complexes which it is the task of analysis, not without great resistances, to bring under control again. There are patients who boast that for them the shadow-side does not exist; they assure us that they have no conflict, but they do not see that other things of unknown origin cumber their path—hysterical moods, underhand tricks which they play on themselves and their neighbours, a nervous catarrh of the stomach, pains in various places, irritability for no reason, and a whole host of nervous symptoms.

[28] Freudian psychoanalysis has been accused of liberating man’s (fortunately) repressed animal instincts and thus causing incalculable harm. This apprehension shows how little trust we place in the efficacy of our moral principles. People pretend that only the morality preached from the pulpit holds men back from unbridled licence; but a much more effective regulator is necessity, which sets bounds far more real and persuasive than any moral precepts. It is true that psychoanalysis makes the animal instincts conscious, though not, as many would have it, with a view to giving them boundless freedom, but rather to incorporating them in a purposeful whole. It is under all circumstances an advantage to be in full possession of one’s personality, otherwise the repressed elements will only crop up as a hindrance elsewhere, not just at some unimportant point, but at the very spot where we are most sensitive. If people can be educated to see the shadow-side of their nature clearly, it may be hoped that they will also learn to understand and love their fellow men better. A little less hypocrisy and a little more self-knowledge can only have good results in respect for our neighbour; for we are all too prone to transfer to our fellows the injustice and violence we inflict upon our own natures.

[29] The Freudian theory of repression certainly does seem to say that there are, as it were, only hypermoral people who repress their unmoral, instinctive natures. Accordingly the unmoral man, who lives a life of unrestrained instinct, should be immune to neurosis. This is obviously not the case, as experience shows. Such a man can be just as neurotic as any other. If we analyse him, we simply find that his morality is repressed. The neurotic immoralist presents, in Nietzsche’s striking phrase, the picture of the “pale felon” who does not live up to his acts.

[30] We can of course take the view that the repressed remnants of decency are in this case only a traditional hang-over from infancy, which imposes an unnecessary check on instinctual nature and should therefore be eradicated. The principle of *écrasez l’infâme* would end in a theory of absolute libertinism. Naturally, that would be quite fantastic and nonsensical. It should never be forgotten—and of this the Freudian school must be reminded—that morality was not brought down on tables of stone from Sinai and imposed on the people, but is a function of the human soul, as old as humanity itself. Morality is not imposed from outside; we have it in ourselves from the start—not the law, but our moral nature without which the collective life of human society would be impossible. That is why morality is found at all levels of society. It is the instinctive regulator of action which also governs the collective life of the herd. But moral laws are valid only within a compact human group. Beyond that, they cease. There the old truth runs: *Homo homini lupus*. With the growth of civilization we have succeeded in subjecting ever larger human groups to the rule of the same morality, without, however, having yet brought the moral code to prevail beyond the social frontiers, that is, in the free space between mutually independent societies. There, as of old, reign lawlessness and licence and mad immorality—though of course it is only the enemy who dares to say it out loud.

[31] The Freudian school is so convinced of the fundamental, indeed exclusive, importance of sexuality in neurosis that it has drawn the logical conclusion and valiantly attacked the sexual morality of our day. This was beyond a doubt useful and necessary, for in this field there prevailed

and still prevail ideas which in view of the extremely complicated state of affairs are too undifferentiated. Just as in the early Middle Ages finance was held in contempt because there was as yet no differentiated financial morality to suit each case, but only a mass morality, so today there is only a mass sexual morality. A girl who has an illegitimate baby is condemned and nobody asks whether she is a decent human being or not. Any form of love not sanctioned by law is considered immoral, whether between worth-while people or bounders. We are still so hypnotized by *what* happens that we forget *how* and *to whom* it happens, just as for the Middle Ages finance was nothing but glittering gold, fiercely coveted and therefore the devil.

[32] Yet things are not quite so simple as that. Eros is a questionable fellow and will always remain so, whatever the legislation of the future may have to say about it. He belongs on one side to man's primordial animal nature which will endure as long as man has an animal body. On the other side he is related to the highest forms of the spirit. But he thrives only when spirit and instinct are in right harmony. If one or the other aspect is lacking to him, the result is injury or at least a lopsidedness that may easily veer towards the pathological. Too much of the animal distorts the civilized man, too much civilization makes sick animals. This dilemma reveals the vast uncertainty that Eros holds for man. For, at bottom, Eros is a superhuman power which, like nature herself, allows itself to be conquered and exploited as though it were impotent. But triumph over nature is dearly paid for. Nature requires no explanations of principle, but asks only for tolerance and wise measure.

[33] "Eros is a mighty daemon," as the wise Diotima said to Socrates. We shall never get the better of him, or only to our own hurt. He is not the whole of our inward nature, though he is at least one of its essential aspects. Thus Freud's sexual theory of neurosis is grounded on a true and factual principle. But it makes the mistake of being one-sided and exclusive; also it commits the imprudence of trying to lay hold of unconfinable Eros with the crude terminology of sex. In this respect Freud is a typical representative of the materialistic epoch,[3] whose hope it was to solve the world riddle in a test-tube. Freud himself, with advancing years, admitted this lack of balance in his theory, and he opposed to Eros, whom he called libido, the destructive or death instinct.[4] In his posthumous writings he says:

> After long hesitancies and vacillations we have decided to assume the the existence of only two basic instincts, *Eros* and *the destructive instinct*…. The aim of the first of these basic instincts is to establish ever greater unities and to preserve them thus—in short, to bind together; the aim of the second is, on the contrary, to undo connections and so to destroy things…. For this reason we also call it the *death instinct.*[5]

[34] I must content myself with this passing reference, without entering more closely into the questionable nature of the conception. It is sufficiently obvious that life, like any other process, has a beginning and an end and that every beginning is also the beginning of the end. What Freud probably means is the essential fact that every process is a phenomenon of energy, and that all energy can proceed only from the tension of opposites.

III

THE OTHER POINT OF VIEW: THE WILL TO POWER

[35] So far we have considered the problem of this new psychology essentially from the Freudian point of view. Undoubtedly it has shown us a very real truth to which our pride, our civilized consciousness, may say no, though something else in us says yes. Many people find this fact extremely irritating; it arouses their hostility or even their fear, and consequently they are unwilling to recognize the conflict. And indeed it is a frightening thought that man also has a shadow-side to him, consisting not just of little weaknesses and foibles, but of a positively demonic dynamism. The individual seldom knows anything of this; to him, as an individual, it is incredible that he should ever in any circumstances go beyond himself. But let these harmless creatures form a mass, and there emerges a raging monster; and each individual is only one tiny cell in the monster's body, so that for better or worse he must accompany it on its bloody rampages and even assist it to the utmost. Having a dark suspicion of these grim possibilities, man turns a blind eye to the shadow-side of human nature. Blindly he strives against the salutary dogma of original sin, which is yet so prodigiously true. Yes, he even hesitates to admit the conflict of which he is so painfully aware. It can readily be understood that a school of psychology—even if it be biased and exaggerated in this or that respect—which insists on the seamy side, is unwelcome, not to say frightening, because it forces us to gaze into the bottomless abyss of this problem. A dim premonition tells us that we cannot be whole without this negative side, that we have a body which, like all bodies, casts a shadow, and that if we deny this body we cease to be three-dimensional and become flat and without substance. Yet this body is a beast with a beast's soul, an organism that gives unquestioning obedience to instinct. To unite oneself with this shadow is to say yes to instinct, to that formidable dynamism lurking in the background. From this the ascetic morality of Christianity wishes to free us, but at the risk of disorganizing man's animal nature at the deepest level.

[36] Has anyone made clear to himself what that means—a yea-saying to instinct? That was what Nietzsche desired and taught, and he was in deadly earnest. With a rare passion he sacrificed himself, his whole life, to the idea of the Superman—to the idea of the man who through obedience to instinct transcends himself. And what was the course of that life? It was as Nietzsche himself prophesied in *Zarathustra*, in that foreboding vision of the fatal fall of the rope-dancer, the man who would not be "surpassed." To the dying rope-dancer Zarathustra says: "Thy soul will sooner be dead than thy body!" and later the dwarf says to Zarathustra, "O Zarathustra, stone of wisdom! High thou flingest thyself, but every stone that is flung must fall! Condemned to thyself and to thine own stoning: O Zarathustra, far indeed thou flingest the stone—but upon thyself will it fall." And when he cried his "Ecce Homo" over himself, again it was too late, as once before when this saying was uttered, and the crucifixion of the soul began before the body was dead.

[37] We must look very critically at the life of one who taught such a yea-saying, in order to examine the effects of this teaching on the teacher's own life. When we scrutinize his life with this aim in view we are bound to admit that Nietzsche lived beyond instinct, in the lofty heights of heroic sublimity—heights that he could maintain only with the help of the most meticulous diet, a carefully selected climate, and many aids to sleep—until the tension shattered his brain. He talked

of yea-saying and lived the nay. His loathing for man, for the human animal that lived by instinct, was too great. Despite everything, he could not swallow the toad he so often dreamed of and which he feared had to be swallowed. The roaring of the Zarathustrian lion drove back into the cavern of the unconscious all the "higher" men who were clamouring to live. Hence his life does not convince us of his teaching. For the "higher" man wants to be able to sleep without chloral, to live in Naumburg and Basel despite "fogs and shadows." He desires wife and offspring, standing and esteem among the herd, innumerable commonplace realities, and not least those of the Philistine. Nietzsche failed to live this instinct, the animal urge to life. For all his greatness and importance, Nietzsche's was a pathological personality.

[38] But what was it that he lived, if not the life of instinct? Can Nietzsche really be accused of having denied his instincts in practice? He would scarcely have agreed to that. He could even show without much difficulty that he lived his instinctual life in the highest sense. But how is it possible, we may ask in astonishment, for man's instinctual nature to drive him into separation from his kind, into absolute isolation from humanity, into an aloofness from the herd upheld by loathing? We think of instinct as uniting man, causing him to mate, to beget, to seek pleasure and good living, the satisfaction of all sensuous desires. We forget that this is only one of the possible directions of instinct. There exists not only the instinct for the preservation of the species, but also the instinct of self-preservation.

[39] It is of this last instinct, the *will to power*, that Nietzsche obviously speaks. Whatever else is instinctual only follows, for him, in the train of the will to power. From the standpoint of Freud's sexual psychology, this is an error of the most glaring kind, a misconception of biology, the bungling of a decadent neurotic. For it is a very simple matter for any adherent of sexual psychology to prove that everything lofty and heroic in Nietzsche's view of life and the world is nothing but a consequence of the repression and misunderstanding of that other instinct which *this* psychology regards as fundamental.

[40] The case of Nietzsche shows, on the one hand, the consequences of neurotic one-sidedness, and, on the other hand, the dangers that lurk in this leap beyond Christianity. Nietzsche undoubtedly felt the Christian denial of animal nature very deeply indeed, and therefore he sought a higher human wholeness beyond good and evil. But he who seriously criticizes the basic attitudes of Christianity also forfeits the protection which these bestow upon him. He delivers himself up unresistingly to the animal psyche. That is the moment of Dionysian frenzy, the overwhelming manifestation of the "blond beast,"[1] which seizes the unsuspecting soul with nameless shudderings. The seizure transforms him into a hero or into a godlike being, a superhuman entity. He rightly feels himself "six thousand feet beyond good and evil."

[41] The psychological observer knows this state as "identification with the shadow," a phenomenon which occurs with great regularity at such moments of collision with the unconscious. The only thing that helps here is cautious self-criticism. Firstly and before all else, it is exceedingly unlikely that one has just discovered a world-shattering truth, for such things happen extremely seldom in the world's history. Secondly, one must carefully inquire whether something similar might not have happened elsewhere—for instance Nietzsche, as a philologist, could have adduced a few obvious classical parallels which would certainly have calmed his mind. Thirdly, one must reflect that a Dionysian experience may well be nothing more than a relapse into a pagan form of religion, so that in reality nothing new is discovered and the same story only repeats itself from the beginning. Fourthly, one cannot avoid foreseeing that this joyful intensification of mood to heroic and godlike heights is dead certain to be followed by an equally deep plunge into the abyss. These considerations would put one in a position of advantage: the

whole extravaganza could then be reduced to the proportions of a somewhat exhausting mountaineering expedition, to which succeed the eternal commonplaces of day. Just as every stream seeks the valley and the broad river that hastens towards the flatlands, so life not only flows along in commonplaces, but makes everything else commonplace. The uncommon, if it is not to end in catastrophe, may steal in alongside the commonplace, but not often. If heroism becomes chronic, it ends in a cramp, and the cramp leads to catastrophe or to neurosis or both. Nietzsche got stuck in a state of high tension. But with this ecstasy he could just as well have borne up under Christianity. Not that this answers the question of the animal psyche in the least—for an ecstatic animal is a monstrosity. An animal fulfils the law of its own life, neither more nor less. We can call it obedient and "good." But the ecstatic by-passes the law of his own life and behaves, from the point of view of nature, improperly. This impropriety is the exclusive prerogative of man, whose consciousness and free will can occasionally loose themselves *contra naturam* from their roots in animal nature. It is the indispensable foundation of all culture, but also of spiritual sickness if exaggerated. Man can suffer only a certain amount of culture without injury. The endless dilemma of culture and nature is always a question of too much or too little, never of either-or.

[42] The case of Nietzsche faces us with the question: What did the collision with the shadow, namely the will to power, reveal to him? Is it to be regarded as something bogus, a symptom of repression? Is the will to power genuine or merely secondary? If the conflict with the shadow had let loose a flood of sexual fantasies, the matter would be perfectly clear; but it happened otherwise. The "Kern des Pudels" was not Eros but the power of the ego. From this we would have to conclude that what was repressed was not Eros but the will to power. There is in my opinion no ground for the assumption that Eros is genuine and the will to power bogus. The will to power is surely just as mighty a daemon as Eros, and just as old and original.

[43] A life like Nietzsche's, lived to its fatal end with rare consistency in accordance with the underlying instinct for power, cannot simply be explained away as bogus. Otherwise one would make oneself guilty of the same unfair judgment that Nietzsche passed on his polar opposite, Wagner: "Everything about him is false. What is genuine is hidden or decorated. He is an actor, in every good and bad sense of the word." Why this prejudice? Because Wagner embodies that other elemental urge which Nietzsche overlooked, and upon which Freud's psychology is built. If we inquire whether Freud knew of that other instinct, the urge to power, we find that he conceived it under the name of "ego-instinct." But these "ego-instincts" occupy a rather pokey little corner in his psychology compared with the broad, all too broad, development of the sexual factor. In reality human nature bears the burden of a terrible and unending conflict between the principle of the ego and the principle of instinct: the ego all barriers and restraint, instinct limitless, and both principles of equal might. In a certain sense man may count himself happy that he is "conscious only of the single urge," and therefore it is only prudent to guard against ever knowing the other. But if he does learn to know the other, it is all up with him: he then enters upon the Faustian conflict. In the first part of *Faust* Goethe has shown us what it means to accept instinct and in the second part what it means to accept the ego and its weird unconscious world. All that is insignificant, paltry, and cowardly in us cowers and shrinks from this acceptance—and there is an excellent pretext for this: we discover that the "other" in us is indeed "another," a real man, who actually thinks, does, feels, and desires all the things that are despicable and odious. In this way we can seize hold of the bogey and declare war on him to our satisfaction. Hence those chronic idiosyncrasies of which the history of morals has preserved some fine examples. A particularly transparent example is that already cited—"Nietzsche *contra* Wagner, *contra* Paul," etc. But daily life abounds in such cases. By this ingenious device a man may save himself from the Faustian catastrophe, before which his courage and his strength might well fail him. A whole man, however, knows that his bitterest foe,

or indeed a host of enemies, does not equal that one worst adversary, the “other self” who dwells in his bosom. Nietzsche had Wagner *in himself*, and that is why he envied him *Parsifal;* but, what was worse, he, Saul, also had Paul in him. Therefore Nietzsche became one stigmatized by the spirit; like Saul he had to experience Christification, when the “other” whispered the “Ecce Homo” in his ear. Which of them “broke down before the cross”—Wagner or Nietzsche?

[44] Fate willed it that one of Freud’s earliest disciples, Alfred Adler, should formulate a view of neurosis[2] based exclusively on the power principle. It is of no little interest, indeed singularly fascinating, to see how utterly different the same things look when viewed in a contrary light. To take the main contrast first: with Freud everything follows from antecedent circumstances according to a rigorous causality, with Adler everything is a teleological “arrangement.” Here is a simple example: A young woman begins to have attacks of anxiety. At night she wakes up from a nightmare with a blood-curdling cry, is scarcely able to calm herself, clings to her husband and implores him not to leave her, demanding assurance that he really loves her, etc. Gradually a nervous asthma develops, the attacks also coming on during the day.

[45] The Freudian method at once begins burrowing into the inner causality of the sickness and its symptoms. What were the first anxiety dreams about? Ferocious bulls, lions, tigers, and evil men were attacking her. What are the patient’s associations? A story of something that happened to her before she was married. She was staying at a health resort in the mountains. She played a good deal of tennis and the usual acquaintances were made. There was a young Italian who played particularly well and also knew how to handle a guitar in the evening. An innocent flirtation developed, leading once to a moonlight stroll. On this occasion the Italian temperament “unexpectedly” broke loose, much to the alarm of the unsuspecting girl. He gave her “such a look” that she could never forget it. This look follows her even in her dreams: the wild animals that pursue her look at her just like that. But does this look in fact come only from the Italian? Another reminscence is instructive. The patient had lost her father through an accident when she was about fourteen years old. Her father was a man of the world and travelled a good deal. Not long before his death he took her with him to Paris, where they visited, among other places, the Folies Bergères. There something happened that made an indelible impression on her. On leaving the theatre, a painted hussy jostled her father in an incredibly brazen way. Looking in alarm to see what he would do, she saw this same look, this animal glare, in his eyes. This inexplicable something followed her day and night. From then on her relations with her father changed. Sometimes she was irritable and subject to venomous moods, sometimes she loved him extravagantly. Then came sudden fits of weeping for no reason, and for a time, whenever her father was at home, she suffered at table from a horrible gulping accompanied by what looked like choking-fits, generally followed by loss of voice for one or two days. When the news of the sudden death of her father reached her, she was seized by uncontrollable grief, which gave way to fits of hysterical laughter. However, she soon calmed down; her condition quickly improved, and the neurotic symptoms practically vanished. A veil of forgetfulness was drawn over the past. Only the episode with the Italian stirred something in her of which she was afraid. She then abruptly broke off all connection with the young man. A few years later she married. The first appearance of her present neurosis was after the birth of her second child, just when she made the discovery that her husband had a certain tender interest in another woman.

[46] This history gives rise to many questions: for example, what about the mother? Concerning the mother the relevant facts are that she was very nervous and spent her time trying every kind of sanatorium and method of cure. She too suffered from nervous asthma and anxiety symptoms. The marriage had been of a very distant kind as far back as the patient could remember. Her mother did

not understand the father properly; the patient always had the feeling that she understood him much better. She was her father's confessed darling and was correspondingly cool at heart towards her mother.

[47] These hints may suffice to give us an over-all picture of the illness. Behind the present symptoms lie fantasies which are immediately related to the experience with the Italian, but which clearly point back to the father, whose unhappy marriage gave the little daughter an early opportunity to secure for herself the place that should properly have been filled by the mother. Behind this conquest there lies, of course, the fantasy of being the really suitable wife for the father. The first attack of neurosis broke out at a moment when this fantasy received a severe shock, probably the same shock that the mother had also received, though this would be unknown to the child. The symptoms are easily understandable as an expression of disappointed and slighted love. The choking is due to that feeling of constriction in the throat, a well-known concomitant of violent affects which cannot be quite "swallowed down." (The metaphors of common speech, as we know, frequently relate to such physiological phenomena.) When the father died, her conscious mind was grieved to death, but her shadow laughed, after the manner of Till Eulenspiegel, who was doleful when things went downhill, but full of merry pranks on the weary way up, always on the look-out for what lay ahead. When her father was at home, she was dejected and ill; when he was away, she always felt much better, like the innumerable husbands and wives who hide from each other the sweet secret that neither is altogether indispensable to the other.

[48] That the unconscious had at this juncture some justification for laughing is shown by the supervening period of good health. She succeeded in letting her whole past sink into oblivion. Only the episode with the Italian threatened to resurrect the underworld. But with a quick gesture she flung the door to and remained healthy until the dragon of neurosis came creeping back, just when she imagined herself safely over the mountain, in the perfect state, so to speak, of wife and mother.

[49] Sexual psychology says: the cause of the neurosis lies in the patient's fundamental inability to free herself from her father. That is why that experience came up again when she discovered in the Italian the mysterious "something" which had previously made such an overwhelming impression on her in connection with her father. These memories were naturally revived by the analogous experience with her husband, the immediate cause of the neurosis. We could therefore say that the content of and reason for the neurosis was the conflict between the infantile-erotic relation to her father and her love for her husband.

[50] If, however, we look at the same clinical picture from the point of view of the "other" instinct, the will to power, it assumes quite a different aspect. Her parents' unhappy marriage afforded an excellent opportunity for the childish urge to power. The power-instinct wants the ego to be "on top" under all circumstances, by fair means or foul. The "integrity of the personality" must be preserved at all costs. Every attempt, be it only an apparent attempt, of the environment to obtain the slightest ascendency over the subject is met, to use Adler's expression, by the "masculine protest." The disillusionment of the mother and her withdrawal into neurosis created the desired opportunity for a display of power and for gaining the ascendency. Love and good behaviour are, from the standpoint of the power-instinct, known to be a choice means to this end. Virtuousness often serves to *compel* recognition from others. Already as a child the patient knew how to secure a privileged position with her father through especially ingratiating and affectionate behaviour, and to get the better of her mother—not out of love for her father, but because love was a good method of gaining the upper hand. The laughing-fit at the time of her father's death is striking proof of this. We are inclined to regard such an explanation as a horrible depreciation of love, not to say a

malicious insinuation, until we reflect for a moment and look at the world as it is. Have we not seen countless people who love and believe in their love, and then, when their purpose is accomplished, turn away as though they had never loved? And finally, is not this the way of nature herself? Is "disinterested" love at all possible? If so, it belongs to the highest virtues, which in point of fact are exceedingly rare. Perhaps there is in general a tendency to think as little as possible about the purpose of love; otherwise we might make discoveries which would show the worth of our love in a less favourable light.

[51] The patient, then, had a laughing-fit at the death of her father—she had finally arrived on top. It was an hysterical laughter, a psychogenic symptom, something that sprang from unconscious motives and not from those of the conscious ego. That is a difference not to be made light of, and one that also tells us whence and how certain human virtues arise. Their opposites went down to hell—or, in modern parlance, into the unconscious—where the counterparts of our conscious virtues have long been accumulating. Hence for very virtue we wish to know nothing of the unconscious; indeed it is the acme of virtuous sagacity to declare that there is no such thing as the unconscious. But alas! it fares with us all as with Brother Medardus in Hoffmann's tale *The Devil's Elixir:* somewhere we have a sinister and frightful brother, our own flesh-and-blood counterpart, who holds and maliciously hoards everything that we would so willingly hide under the table.

[52] The first outbreak of neurosis in our patient occurred the moment she realized that there was something in her father which she could not dominate. And then a great light dawned: she now knew what was the purpose of her mother's neurosis, namely that when you encounter an obstacle which cannot be overcome by rational methods and charm, there is still another method, hitherto unknown to her, which her mother had already discovered beforehand, i.e., neurosis. So from now on she imitates her mother's neurosis. But what, we may ask in astonishment, is the good of a neurosis? What can it do? Anyone who has in his neighbourhood a definite case of neurosis knows well enough what it can "do." There is no better method of tyrannizing over the entire household. Heart-attacks, choking-fits, spasms of all kinds, produce an enormous effect that can hardly be surpassed. Oceans of sympathy are let loose, there is the anguish of worried parents, the running to and fro of servants, telephone bells, hurrying doctors, difficult diagnoses, elaborate examinations, lengthy treatments, heavy expenses, and there in the midst of all the hubbub lies the innocent sufferer, with everybody overflowing with gratitude when at last she recovers from her "spasms."

[53] This unsurpassable "arrangement"—to use Adler's expression—was discovered by the little one and applied with success whenever her father was there. It became superfluous when the father died, for now she was finally on top. The Italian was dropped overboard when he laid too much emphasis on her femininity by an appropriate reminder of his virility. But when a suitable chance of marriage presented itself, she loved, and resigned herself without a murmur to the fate of wife and mother. So long as her revered superiority was maintained, everything went swimmingly. But once her husband had a little bit of interest outside, she had recourse as before to that exceedingly effective "arrangement" for the indirect exercise of her power, because she had again encountered the obstacle—this time in her husband—which previously in her father's case had escaped her mastery.

[54] This is how things look from the point of view of power psychology. I fear the reader must feel like the *cadi* who, having heard the counsel for the one party, said, "Thou hast well spoken. I perceive that thou art right." Then came the other party, and when he had finished, the *cadi* scratched himself behind the ear and said, "Thou hast well spoken. I perceive that thou also art right." It is unquestionable that the urge to power plays an extraordinarily important part. It is correct that neurotic symptoms and complexes are also elaborate "arrangements" which inexorably

pursue their aims, with incredible obstinacy and cunning. Neurosis is teleologically oriented. In establishing this Adler has won for himself no small credit.

[55] Which of the two points of view is right? That is a question that might lead to much brain-racking. One simply cannot lay the two explanations side by side, for they contradict each other absolutely. In the one, the chief and decisive fact is Eros and its destiny; in the other, it is the power of the ego. In the first case, the ego is merely a sort of appendage to Eros; in the second, love is just a means to the end, which is ascendency. Those who have the power of the ego most at heart will revolt against the first conception, but those who care most for love will never be reconciled to the second.

IV

THE PROBLEM OF THE ATTITUDE-TYPE

1

[56] The incompatibility of the two theories discussed in the preceding chapters requires a standpoint superordinate to both, in which they could come together in unison. We are certainly not entitled to discard one in favour of the other, however convenient this expedient might be. For, if we examine the two theories without prejudice, we cannot deny that both contain significant truths, and, contradictory as these are, they should not be regarded as mutually exclusive. The Freudian theory is attractively simple, so much so that it almost pains one if anybody drives in the wedge of a contrary assertion. But the same is true of Adler's theory. It too is of illuminating simplicity and explains just as much as the Freudian theory. No wonder, then, that the adherents of both schools obstinately cling to their one-sided truths. For humanly understandable reasons they are unwilling to give up a beautiful, rounded theory in exchange for a paradox, or, worse still, lose themselves in the confusion of contradictory points of view.

[57] Now, since both theories are in a large measure correct—that is to say, since they both appear to explain their material—it follows that a neurosis must have two opposite aspects, one of which is grasped by the Freudian, the other by the Adlerian theory. But how comes it that each investigator sees only one side, and why does each maintain that he has the only valid view? It must come from the fact that, owing to his psychological peculiarity, each investigator most readily sees that factor in the neurosis which corresponds to his peculiarity. It cannot be assumed that the cases of neurosis seen by Adler are totally different from those seen by Freud. Both are obviously working with the same material; but because of personal peculiarities they each see things from a different angle, and thus they evolve fundamentally different views and theories. Adler sees how a subject who feels suppressed and inferior tries to secure an illusory superiority by means of "protests," "arrangements," and other appropriate devices directed equally against parents, teachers, regulations, authorities, situations, institutions, and such. Even sexuality may figure among these devices. This view lays undue emphasis upon the subject, before which the idiosyncrasy and significance of objects entirely vanish. Objects are regarded at best as vehicles of suppressive tendencies. I shall probably not be wrong in assuming that the love relation and other desires directed upon objects exist equally in Adler as essential factors; yet in his theory of neurosis they do not play the principal role assigned to them by Freud.

[58] Freud sees his patient in perpetual dependence on, and in relation to, significant objects. Father and mother play a large part here; whatever other significant influences or conditions enter into the life of the patient go back in a direct line of causality to these prime factors. The *pièce de résistance* of his theory is the concept of transference, i.e., the patient's relation to the doctor. Always a specifically qualified object is either desired or met with resistance, and this reaction always follows the pattern established in earliest childhood through the relation to father and mother. What comes from the subject is essentially a blind striving after pleasure; but this striving always acquires its quality from specific objects. With Freud objects are of the greatest

significance and possess almost exclusively the determining power, while the subject remains remarkably insignificant and is really nothing more than the source of desire for pleasure and a "seat of anxiety." As already pointed out, Freud recognizes ego-instincts, but this term alone is enough to show that his conception of the subject differs *toto coelo* from Adler's, where the subject figures as the determining factor.

[59] Certainly both investigators see the subject in relation to the object; but how differently this relation is seen! With Adler the emphasis is placed on a subject who, no matter what the object, seeks his own security and supremacy: with Freud the emphasis is placed wholly upon objects, which, according to their specific character, either promote or hinder the subject's desire for pleasure.

[60] This difference can hardly be anything else but a difference of temperament, a contrast between two types of human mentality, one of which finds the determining agency pre-eminently in the subject, the other in the object. A middle view, it may be that of common sense, would suppose that human behaviour is conditioned as much by the subject as by the object. The two investigators would probably assert, on the other hand, that their theory does not envisage a psychological explanation of the normal man, but is a theory of neurosis. But in that case Freud would have to explain and treat some of his patients along Adlerian lines, and Adler condescend to give earnest consideration in certain instances to his former teacher's point of view—which has occurred neither on the one side nor on the other.

[61] The spectacle of this dilemma made me ponder the question: are there at least two different human types, one of them more interested in the object, the other more interested in himself? And does that explain why the one sees only the one and the other only the other, and thus each arrives at totally different conclusions? As we have said, it was hardly to be supposed that fate selected the patients so meticulously that a definite group invariably reached a definite doctor. For some time it had struck me, in connection both with myself and with my colleagues, that there are some cases which make a distinct appeal, while others somehow refuse to "click." It is of crucial importance for the treatment whether a good relationship between doctor and patient is possible or not. If some measure of natural confidence does not develop within a short period, then the patient will do better to choose another doctor. I myself have never shrunk from recommending to a colleague a patient whose peculiarities were not in my line or were unsympathetic to me, and indeed this is in the patient's own interests. I am positive that in such a case I would not do good work. Everyone has his personal limitations, and the psychotherapist in particular is well advised never to disregard them. Excessive personal differences and incompatibilities cause resistances that are disproportionate and out of place, though they are not altogether unjustified. The Freud-Adler controversy is simply a paradigm and one single instance among many possible attitude-types.

[62] I have long busied myself with this question and have finally, on the basis of numerous observations and experiences, come to postulate two fundamental attitudes, namely *introversion* and *extraversion*. The first attitude is normally characterized by a hesitant, reflective, retiring nature that keeps itself to itself, shrinks from objects, is always slightly on the defensive and prefers to hide behind mistrustful scrutiny. The second is normally characterized by an outgoing, candid, and accommodating nature that adapts easily to a given situation, quickly forms attachments, and, setting aside any possible misgivings, will often venture forth with careless confidence into unknown situations. In the first case obviously the subject, and in the second the object, is all-important.

[63] Naturally these remarks sketch the two types only in the roughest outlines.[1] As a matter of empirical fact the two attitudes, to which I shall come back shortly, can seldom be observed in their pure state. They are infinitely varied and compensated, so that often the type is not at all easy to establish. The reason for variation—apart from individual fluctuations—is the predominance of one of the conscious functions, such as thinking or feeling, which then gives the basic attitude a special character. The numerous compensations of the basic type are generally due to experiences which teach a man, perhaps in a very painful way, that he cannot give free rein to his nature. In other cases, for instance with neurotics, one frequently does not know whether one is dealing with a conscious or an unconscious attitude because, owing to the dissociation of the personality, sometimes one half of it and sometimes the other half occupies the foreground and confuses one's judgment. This is what makes it so excessively trying to live with neurotic persons.

[64] The actual existence of far-reaching type-differences, of which I have described eight groups[2] in the above-mentioned book, has enabled me to conceive the two controversial theories of neurosis as manifestations of a type-antagonism.

[65] This discovery brought with it the need to rise above the opposition and to create a theory which should do justice not merely to one or the other side, but to both equally. For this purpose a critique of both the aforementioned theories is essential. Both are painfully inclined to reduce high-flown ideals, heroic attitudes, nobility of feeling, deep convictions, to some banal reality, if applied to such things as these. On no account should they be so applied, for both theories are properly therapeutic instruments from the armoury of the doctor, whose knife must be sharp and pitiless for excising what is diseased and injurious. This was what Nietzsche wanted with his destructive criticism of ideals, which he held to be morbid overgrowths in the soul of humanity (as indeed they sometimes are). In the hand of a good doctor, of one who really knows the human soul —who, to use Nietzsche's phrase, has a "finger for nuances"—both theories, when applied to the really sick part of a soul, are wholesome caustics, of great help in dosages measured to the individual case, but harmful and dangerous in the hand that knows not how to measure and weigh. They are critical methods, having, like all criticism, the power to do good when there is something that must be destroyed, dissolved, or reduced, but capable only of harm when there is something to be built.

[66] Both theories may therefore be allowed to pass with no ill consequences provided that, like medical poisons, they are entrusted to the sure hand of the physician, for it requires an uncommon knowledge of the human psyche to apply these caustics with advantage. One must be capable of distinguishing the pathological and the useless from what is valuable and worth preserving, and that is one of the most difficult things. Anyone who wishes to get a vivid impression of how irresponsibly a psychologizing doctor can falsify his subject through narrow, pseudo-scientific prejudice, should turn to the writings of Möbius on Nietzsche, or, better still, to the various "psychiatric" writings on the "case" of Christ. He will not hesitate to cry a "threefold lamentation" over the patient who meets with such "understanding."

[67] The two theories of neurosis are not universal theories: they are caustic remedies to be applied, as it were, locally. They are destructive and reductive. They say to everything, "You are nothing but…." They explain to the sufferer that his symptoms come from here and from there and are nothing but this or that. It would be unjust to assert that this reduction is wrong in a given case; but, exalted to the status of a general explanation of the healthy psyche as well as the sick, a reductive theory by itself is impossible. For the human psyche, be it sick or healthy, cannot be explained *solely* by reduction. Eros is certainly always and everywhere present, the urge to power

certainly pervades the heights and depths of the psyche, but the psyche is not *just* the one or the other, nor for that matter both together. It is *also* what it has made and will make out of them. A man is only half understood when we know how everything in him came into being. If that were all, he could just as well have been dead years ago. As a living being he is not understood, for life does not have only a yesterday, nor is it explained by reducing today to yesterday. Life has also a tomorrow, and today is understood only when we can add to our knowledge of what was yesterday the beginnings of tomorrow. This is true of all life's psychological expressions, even of pathological symptoms. The symptoms of a neurosis are not simply the effects of long-past causes, whether "infantile sexuality" or the infantile urge to power; they are also attempts at a new synthesis of life—unsuccessful attempts, let it be added in the same breath, yet attempts nevertheless, with a core of value and meaning. They are seeds that fail to sprout owing to the inclement conditions of inner and outer nature.

[68] The reader will doubtless ask: What in the world is the value and meaning of a neurosis, this most useless and pestilent curse of humanity? To be neurotic—what good can that do? As much good, possibly, as flies and other pests, which the good Lord created so that man might exercise the useful virtue of patience. However stupid this thought is from the point of view of natural science, it may yet be sensible enough from the point of view of psychology, if we put "nervous symptoms" instead of "pests." Even Nietzsche, a rare one for scorning stupid and banal thoughts, more than once acknowledged how much he owed to his malady. I myself have known more than one person who owed his entire usefulness and reason for existence to a neurosis, which prevented all the worst follies in his life and *forced* him to a mode of living that developed his valuable potentialities. These might have been stifled had not the neurosis, with iron grip, held him to the place where he belonged. There are actually people who have the whole meaning of their life, their true significance, in the unconscious, while in the conscious mind is nothing but inveiglement and error. With others the case is reversed, and here neurosis has a different meaning. In these cases, but not in the former, a thoroughgoing reduction is indicated.

[69] At this point the reader may be inclined to grant the possibility that the neurosis has such a meaning in certain cases, while denying it so far-reaching a purposiveness in ordinary everyday cases. What, for instance, could be the value of a neurosis in the above-mentioned case of asthma with its hysterical anxiety-states? I admit that the value is not so obvious here, especially when the case is considered from the theoretical reductive standpoint, that is, from the shadow-side of individual development.

[70] The two theories we have been discussing evidently have this much in common: they pitilessly unveil everything that belongs to man's shadow-side. They are theories or, more correctly, hypotheses which explain in what the pathogenic factor consists. They are accordingly concerned not with a man's positive values, but with his negative values which make themselves so disturbingly conspicuous.

[71] A "value" is a possibility for the display of energy. But in so far as a negative value is likewise a possibility for the display of energy—which can be seen most clearly in the notable manifestations of neurotic energy—it too is properly a "value," but one that brings about useless and harmful manifestations of energy. Energy in itself is neither good nor bad, neither useful nor harmful, but neutral, since everything depends on the *form* into which energy passes. Form gives energy its quality. On the other hand, mere form without energy is equally neutral. For the creation of a real value, therefore, both energy and valuable form are needed. In neurosis psychic energy[3] is present, but undoubtedly it is there in an inferior and unserviceable form. The two reductive theories act as solvents of this inferior form. They are approved caustic remedies, by means of

which we obtain free but neutral energy. Now, it has hitherto been supposed that this newly disengaged energy is at the conscious disposal of the patient, so that he can apply it at his pleasure. Since it was thought that the energy is nothing but the instinctual power of sex, people talked of a "sublimated" application of it, on the assumption that the patient could, with the help of analysis, canalize the sexual energy into a "sublimation," in other words, could apply it non-sexually, in the practice of an art, perhaps, or in some other good or useful activity. According to this view, it is possible for the patient, from free choice or inclination, to achieve the sublimation of his instinctual forces.

[72] We may allow that this view has a certain justification in so far as man is at all capable of marking out a definite line along which his life has to go. But we know that there is no human foresight or wisdom that can prescribe direction to our life, except for small stretches of the way. This is of course true only of the "ordinary" type of life, not of the "heroic" type. The latter kind also exists, though it is much rarer. Here we are certainly not entitled to say that no marked direction can be given to life, or only for short distances. The heroic style of life is absolute—that is, it is oriented by fateful decisions, and the decision to go in a certain direction holds, sometimes, to the bitter end. Admittedly the doctor has to do, in the main, only with human beings, seldom with voluntary heroes, and then they are mostly of a type whose surface heroism is an infantile defiance of a fate greater than they, or else a pomposity meant to cover up some touchy inferiority. In this overpoweringly humdrum existence, alas, there is little out of the ordinary that is healthy, and not much room for conspicuous heroism. Not that heroic demands are never put to us: on the contrary—and this is just what is so irritating and irksome—the banal everyday makes banal demands upon our patience, our devotion, perseverance, self-sacrifice; and for us to fulfil these demands (as we must) humbly and without courting applause through heroic gestures, a heroism is needed that cannot be seen from the outside. It does not glitter, is not belauded, and it always seeks concealment in everyday attire. These are the demands which, if not fulfilled, are the cause of neurosis. In order to evade them, many a man has dared the *great* decision of his life and carried it through, even if in the common human estimation it was a great error. Before a fate such as this one can only bow one's head. But, as I say, such cases are rare; the others are in the vast majority. For them the direction of their life is not a simple, straight line; fate confronts them like an intricate labyrinth, all too rich in possibilities, and yet of these many possibilities only one is their own right way. Who would presume—even though armed with the completest knowledge of his own character—to designate in advance that single possibility? Much indeed can be attained by the will, but, in view of the fate of certain markedly strong-willed personalities, it is a fundamental error to try to subject our own fate at all costs to our will. Our will is a function regulated by reflection; hence it is dependent on the quality of that reflection. This, if it really is reflection, is supposed to be rational, i.e., in accord with reason. But has it ever been shown, or will it ever be, that life and fate are in accord with reason, that they too are rational? We have on the contrary good grounds for supposing that they are irrational, or rather that in the last resort they are grounded beyond human reason. The irrationality of events is shown in what we call chance, which we are obviously compelled to deny because we cannot in principle think of any process that is not causal and necessary, whence it follows that it cannot happen by chance.[4] In practice, however, chance reigns everywhere, and so obtrusively that we might as well put our causal philosophy in our pocket. The plenitude of life is governed by law and yet not governed by law, rational and yet irrational. Hence reason and the will that is grounded in reason are valid only up to a point. The further we go in the direction selected by reason, the surer we may be that we are excluding the irrational possibilities of life which have just as much right to be lived. It was indeed highly expedient for man to become somewhat more capable of directing his life. It may justly be

maintained that the acquisition of reason is the greatest achievement of humanity; but that is not to say that things must or will always continue in that direction. The frightful catastrophe of the first World War drew a very thick line through the calculations of even the most optimistic rationalizers of culture. In 1913, Wilhelm Ostwald wrote:

> The whole world is agreed that the present state of armed peace is untenable and is gradually becoming impossible. It demands tremendous sacrifices from each single nation, far exceeding the expenditure for cultural purposes, yet without securing any positive values. If mankind could discover ways and means for doing away with these preparations for wars *which never take place*, together with the immobilization of a large part of the nation's manhood, at the age of maximum strength and efficiency, for the furtherance of warlike aims, and all the other innumerable evils which the present state of affairs creates, such an immense economy of energy would be effected that from this moment onwards we could look forward to a blossoming of culture hitherto undreamed of. For war, like personal combat, although the oldest of all possible means of settling contests of will, is on that very account the most inept, and entails the most grievous waste of energy. Hence the complete abolition of warfare, potential no less than actual, is the categorical imperative of efficiency and one of the supremely important cultural tasks of our day.[5]

[73] The irrationality of fate, however, did not concur with the rationality of well-meaning thinkers; it ordained not only the destruction of the accumulated arms and armies, but, far beyond that, a mad and monstrous devastation, a mass murder without parallel—from which humanity may possibly draw the conclusion that only one side of fate can be mastered with rational intentions.

[74] What is true of humanity in general is also true of each individual, for humanity consists only of individuals. And as is the psychology of humanity so also is the psychology of the individual. The World War brought a terrible reckoning with the rational intentions of civilization. What is called "will" in the individual is called "imperialism" in nations; for all will is a demonstration of power over fate, i.e., the exclusion of chance. Civilization is the rational, "purposeful" sublimation of free energies, brought about by will and intention. It is the same with the individual; and just as the idea of a world civilization received a fearful correction at the hands of war, so the individual must often learn in his life that so-called "disposable" energies are not his to dispose.

[75] Once, in America, I was consulted by a business man of about forty-five, whose case is a good illustration of what has been said. He was a typical American self-made man who had worked his way up from the bottom. He had been very successful and had founded an immense business. He had also succeeded in organizing it in such a way that he was able to think of retiring. Two years before I saw him he had in fact taken his farewell. Until then he had lived entirely for his business and concentrated all his energies on it with the incredible intensity and one-sidedness

peculiar to successful American business men. He had purchased a splendid estate where he thought of “living,” by which he meant horses, automobiles, golf, tennis, parties and what not. But he had reckoned without his host. The energy which should have been at his disposal would not enter into these alluring prospects, but went capering off in quite another direction. A few weeks after the initiation of the longed-for life of bliss, he began brooding over peculiar, vague sensations in his body, and a few weeks more sufficed to plunge him into a state of extreme hypochondria. He had a complete nervous collapse. From a healthy man, of uncommon physical strength and abounding energy, he became a peevish child. That was the end of all his glories. He fell from one state of anxiety to the next and worried himself almost to death with hypochondriacal mopings. He then consulted a famous specialist, who recognized at once that there was nothing wrong with the man but lack of work. The patient saw the sense of this, and returned to his former position. But, to his immense disappointment, no interest in the business could be aroused. Neither patience nor resolution was of any use. His energy could not by any means be forced back into the business. His condition naturally became worse than before. All that had formerly been living, creative energy in him now turned against him with terrible destroying force. His creative genius rose up, as it were, in revolt against him; and just as before he had built up great organizations in the world, so now his daemon spun equally subtle systems of hypochondriacal delusion that completely annihilated him. When I saw him he was already a hopeless moral ruin. Nevertheless I tried to make clear to him that though such colossal energy might be withdrawn from the business, the question remained, where should it go? The finest horses, the fastest cars, and the most amusing parties may very likely fail to allure the energy, although it would be rational enough to think that a man who had devoted his whole life to serious work had a sort of natural right to enjoy himself. Yes, if fate behaved in a humanly rational way, it would certainly be so: first work, then well-earned rest. But fate behaves irrationally, and the energy of life inconveniently demands a gradient agreeable to itself; otherwise it simply gets dammed up and turns destructive. It regresses to former situations—in the case of this man, to the memory of a syphilitic infection contracted twenty-five years before. Yet even this was only a stage on the way to the resuscitation of infantile reminiscences which had all but vanished in the meantime. It was the original relation to his mother that mapped the course of his symptoms: they were an “arrangement” whose purpose it was to compel the attention and interest of his long-dead mother. Nor was this stage the last; for the ultimate goal was to drive him back, as it were, into his own body, after he had lived since his youth only in his head. He had differentiated one side of his being; the other side remained in an inert physical state. He would have needed this other side in order to “live.” The hypochondriacal “depression” pushed him down into the body he had always overlooked. Had he been able to follow the direction indicated by his depression and hypochondriacal illusion, and make himself conscious of the fantasies which proceed from such a condition, that would have been the road to salvation. My arguments naturally met with no response, as was to be expected. A case so far advanced can only be cared for until death; it can hardly be cured.

[76] This example clearly shows that it does not lie in our power to transfer “disposable” energy at will to a rationally chosen object. The same is true in general of the apparently disposable energy which is disengaged when we have destroyed its unserviceable forms through the corrosive of reductive analysis. This energy, as we have said, can at best be applied voluntarily for only a short time. But in most cases it refuses to seize hold, for any length of time, of the possibilities rationally presented to it. Psychic energy is a very fastidious thing which insists on fulfilment of its own conditions. However much energy may be present, we cannot make it serviceable until we have succeeded in finding the right gradient.

[77] This question of the gradient is an eminently practical problem which crops up in most analyses. For instance, when in a favourable case the disposable energy, the so-called libido,[6] does seize hold of a rational object, we think we have brought about the transformation through conscious exertion of the will. But in that we are deluded, because even the most strenuous exertions would not have sufficed had there not been present at the same time a gradient in that direction. How important the gradient is can be seen in cases when, despite the most desperate exertions, and despite the fact that the object chosen or the form desired impresses everybody with its reasonableness, the transformation still refuses to take place, and all that happens is a new repression.

[78] It has become abundantly clear to me that life can flow forward only along the path of the gradient. But there is no energy unless there is a tension of opposites; hence it is necessary to discover the opposite to the attitude of the conscious mind. It is interesting to see how this compensation by opposites also plays its part in the historical theories of neurosis: Freud's theory espoused Eros, Adler's the will to power. Logically, the opposite of love is hate, and of Eros, Phobos (fear); but psychologically it is the will to power. Where love reigns, there is no will to power; and where the will to power is paramount, love is lacking. The one is but the shadow of the other: the man who adopts the standpoint of Eros finds his compensatory opposite in the will to power, and that of the man who puts the accent on power is Eros. Seen from the one-sided point of view of the conscious attitude, the shadow is an inferior component of the personality and is consequently repressed through intensive resistance. But the repressed content must be made conscious so as to produce a tension of opposites, without which no forward movement is possible. The conscious mind is on top, the shadow underneath, and just as high always longs for low and hot for cold, so all consciousness, perhaps without being aware of it, seeks its unconscious opposite, lacking which it is doomed to stagnation, congestion, and ossification. Life is born only of the spark of opposites.

[79] It was a concession to intellectual logic on the one hand and to psychological prejudice on the other that impelled Freud to name the opposite of Eros the destructive or death instinct. For in the first place, Eros is not equivalent to life; but for anyone who thinks it is, the opposite of Eros will naturally appear to be death. And in the second place, we all feel that the opposite of our own highest principle must be purely destructive, deadly, and evil. We refuse to endow it with any positive life-force; hence we avoid and fear it.

[80] As I have already indicated, there are many highest principles both of life and of philosophy, and accordingly there are just as many different forms of compensation by opposites. Earlier on I singled out the two—as it seems to me—main opposite types, which I have called introverted and extraverted. William James[7] had already been struck by the existence of both these types among thinkers. He distinguished them as “tender-minded” and “tough-minded.” Similarly Ostwald[8] found an analogous division into “classic” and “romantic” types among men of learning. So I am not alone in my idea of types, to mention only these two well-known names among many others. Inquiries into history have shown me that not a few of the great spiritual controversies rest upon the opposition of the two types. The most significant case of this kind was the opposition between nominalism and realism which, beginning with the difference between the Platonic and Megarian schools, became the heritage of scholastic philosophy, and it was Abelard's great merit to have hazarded at least the attempt to unite the two opposed standpoints in his “conceptualism.”[9] This controversy has continued right into our own day, as is shown in the opposition between idealism and materialism. And again, not only the human mind in general, but each individual has a share in

this opposition of types. It has come to light on closer investigation that either type has a predilection to marry its opposite, each being unconsciously complementary to the other. The reflective nature of the introvert causes him always to think and consider before acting. This naturally makes him slow to act. His shyness and distrust of things induce hesitation, and so he always has difficulty in adapting to the external world. Conversely the extravert has a positive relation to things. He is, so to speak, attracted to them. New, unknown situations fascinate him. In order to make closer acquaintance with the unknown he will jump into it with both feet. As a rule he acts first and thinks afterwards. Thus his action is swift, subject to no misgivings and hesitations. The two types therefore seem created for a symbiosis. The one takes care of reflection and the other sees to the initiative and practical action. When the two types marry they may effect an ideal union. So long as they are fully occupied with their adaptation to the manifold external needs of life they fit together admirably. But when the man has made enough money, or if a fine legacy should drop from the skies and external necessity no longer presses, then they have time to occupy themselves with one another. Hitherto they stood back to back and defended themselves against necessity. But now they turn face to face and look for understanding—only to discover that they have never understood one another. Each speaks a different language. Then the conflict between the two types begins. This struggle is envenomed, brutal, full of mutual depreciation, even when conducted quietly and in the greatest intimacy. For the value of the one is the negation of value for the other. It might reasonably be supposed that each, conscious of his own value, could peaceably recognize the other’s value, and that in this way any conflict would be superfluous. I have seen a good number of cases where this line of argument was adopted, without, however, arriving at a satisfactory goal. Where it is a question of normal people, such critical periods of transition will be overcome fairly smoothly. By “normal” I mean a person who can somehow exist under all circumstances which afford him the minimum needs of life. But many people cannot do this; therefore not so very many people are normal. What we commonly mean by a “normal person” is actually an ideal person whose happy blend of character is a rare occurrence. By far the greater number of more or less differentiated persons demand conditions of life which offer considerably more than the certainty of food and sleep. For these the ending of a symbiotic relationship comes as a severe shock.

[81] It is not easy to understand why this should be so. Yet if we consider that no man is simply introverted or simply extraverted, but has both attitudes potentially in him—although he has developed only one of them as a function of adaptation—we shall immediately conjecture that with the introvert extraversion lies dormant and undeveloped somewhere in the background, and that introversion leads a similar shadowy existence in the extravert. And this is indeed the case. The introvert does possess an extraverted attitude, but it is unconscious, because his conscious gaze is always turned to the subject. He sees the object, of course, but has false or inhibiting ideas about it, so that he keeps his distance as much as possible, as though the object were something formidable and dangerous. I will make my meaning clear by a simple illustration:

> Let us suppose two youths rambling in the country. They come to a fine castle; both want to see inside it. The introvert says, “I’d like to know what it’s like inside.” The extravert answers, “Right, let’s go in,” and makes for the gateway. The introvert draws back—“Perhaps we aren’t allowed in,” says he, with visions of policemen, fines, and fierce dogs in the background. Whereupon the extravert answers, “Well, we

can ask. They'll let us in all right"—with visions of kindly old watchmen, hospitable seigneurs, and the possibility of romantic adventures. On the strength of extraverted optimism they at length find themselves in the castle. But now comes the dénouement. The castle has been rebuilt inside, and contains nothing but a couple of rooms with a collection of old manuscripts. As it happens, old manuscripts are the chief joy of the introverted youth. Hardly has he caught sight of them than he becomes as one transformed. He loses himself in contemplation of the treasures, uttering cries of enthusiasm. He engages the caretaker in conversation so as to extract from him as much information as possible, and when the result is disappointing he asks to see the curator in order to propound his questions to him. His shyness has vanished, objects have taken on a seductive glamour, and the world wears a new face. But meanwhile the spirits of the extraverted youth are ebbing lower and lower. His face grows longer and he begins to yawn. No kindly watchmen are forthcoming here, no knightly hospitality, not a trace of romantic adventure—only a castle made over into a museum. There are manuscripts enough to be seen at home. While the enthusiasm of the one rises, the spirits of the other fall, the castle bores him, the manuscripts remind him of a library, library is associated with university, university with studies and menacing examinations. Gradually a veil of gloom descends over the once so interesting and enticing castle. The object becomes negative. "Isn't it marvellous," cries the introvert, "to have stumbled on this wonderful collection?" "The place bores me to extinction," replies the other with undisguised ill humour. This annoys the introvert, who secretly vows never again to go rambling with an extravert. The latter is annoyed with the other's annoyance, and he thinks to himself that he always knew the fellow was an inconsiderate egotist who would, in his own selfish interest, waste all the lovely spring day that could be enjoyed so much better out of doors.

[82] What has happened? Both were wandering together in happy symbiosis until they discovered the fatal castle. Then the forethinking, or Promethean, introvert said it might be seen from the inside, and the after-thinking, or Epimethean, extravert opened the door.[10] At this point the types invert themselves: the introvert, who at first resisted the idea of going in, cannot now be induced to go out, and the extravert curses the moment when he set foot inside the castle. The former is now fascinated by the object, the latter by his negative thoughts. When the introvert spotted the manuscripts, it was all up with him. His shyness vanished, the object took possession of him, and

he yielded himself willingly. The extravert, however, felt a growing resistance to the object and was eventually made the prisoner of his own ill-humoured subjectivity. The introvert became extraverted, the extravert introverted. But the extraversion of the introvert is different from the extraversion of the extravert, and vice versa. So long as both were wandering along in joyous harmony, neither fell foul of the other, because each was in his natural character. Each was positive to the other, because their attitudes were complementary. They were complementary, however, only because the attitude of the one included the other. We can see this from the short conversation at the gateway. Both wanted to enter the castle. The doubt of the introvert as to whether an entry were possible also held good for the other. The initiative of the extravert likewise held good for the other. Thus the attitude of the one includes the other, and this is always in some degree true if a person happens to be in the attitude natural to him, for this attitude has some degree of collective adaptation. The same is true of the introvert's attitude, although this always starts from the subject. It simply goes from subject to object, while the extravert's attitude goes from object to subject.

[83] But the moment when, in the case of the introvert, the object overpowers and attracts the subject, his attitude loses its social character. He forgets the presence of his friend, he no longer includes him, he becomes absorbed into the object and does not see how very bored his friend is. In the same way the extravert loses all consideration for the other as soon as his expectations are disappointed and he withdraws into subjectivity and moodiness.

[84] We can therefore formulate the occurrence as follows: in the introvert the influence of the object produces an inferior extraversion, while in the extravert an inferior introversion takes the place of his social attitude. And so we come back to the proposition from which we started: "The value of the one is the negation of value for the other."

[85] Positive as well as negative occurrences can constellate the inferior counter-function. When this happens, sensitiveness appears. Sensitiveness is a sure sign of the presence of inferiority. This provides the psychological basis for discord and misunderstanding, not only as between two people, but also in ourselves. The essence of the inferior function[11] is autonomy: it is independent, it attacks, it fascinates and so spins us about that we are no longer masters of ourselves and can no longer rightly distinguish between ourselves and others.

[86] And yet it is necessary for the development of character that we should allow the other side, the inferior function, to find expression. We cannot in the long run allow one part of our personality to be cared for symbiotically by another; for the moment when we might have need of the other function may come at any time and find us unprepared, as the above example shows. And the consequences may be bad: the extravert loses his indispensable relation to the object, and the introvert loses his to the subject. Conversely, it is equally indispensable for the introvert to arrive at some form of action not constantly bedevilled by doubts and hesitations, and for the extravert to reflect upon himself, yet without endangering his relationships.

[87] In extraversion and introversion it is clearly a matter of two antithetical, natural attitudes or trends, which Goethe once referred to as diastole and systole. They ought, in their harmonious alternation, to give life a rhythm, but it seems to require a high degree of art to achieve such a rhythm. Either one must do it quite unconsciously, so that the natural law is not disturbed by any conscious act, or one must be conscious in a much higher sense, to be capable of willing and carrying out the antithetical movements. Since we cannot develop backwards into animal unconsciousness, there remains only the more strenuous way forwards into higher consciousness. Certainly that consciousness, which would enable us to live the great Yea and Nay of our own free will and purpose, is an altogether superhuman ideal. Still, it is a goal. Perhaps our present

mentality only allows us consciously to will the Yea and to bear with the Nay. When that is the case, much is already achieved.

[88] The problem of opposites, as an inherent principle of human nature, forms a further stage in our process of realization. As a rule it is one of the problems of maturity. The practical treatment of a patient will hardly ever begin with this problem, especially not in the case of young people. The neuroses of the young generally come from a collision between the forces of reality and an inadequate, infantile attitude, which from the causal point of view is characterized by an abnormal dependence on the real or imaginary parents, and from the teleological point of view by unrealizable fictions, plans, and aspirations. Here the reductive methods of Freud and Adler are entirely in place. But there are many neuroses which either appear only at maturity or else deteriorate to such a degree that the patients become incapable of work. Naturally one can point out in these cases that an unusual dependence on the parents existed even in youth, and that all kinds of infantile illusions were present; but all that did not prevent them from taking up a profession, from practising it successfully, from keeping up a marriage of sorts until that moment in riper years when the previous attitude suddenly failed. In such cases it is of little help to make them conscious of their childhood fantasies, dependence on the parents, etc., although this is a necessary part of the procedure and often has a not unfavourable result. But the real therapy only begins when the patient sees that it is no longer father and mother who are standing in his way, but himself—i.e., an unconscious part of his personality which carries on the role of father and mother. Even this realization, helpful as it is, is still negative; it simply says, “I realize that it is not father and mother who are against me, but I myself.” But *who* is it in him that is against him? What is this mysterious part of his personality that hides under the father-and mother-imagos, making him believe for years that the cause of his trouble must somehow have got into him from outside? This part is the counterpart of his conscious attitude, and it will leave him no peace and will continue to plague him until it has been accepted. For young people a liberation from the past may be enough: a beckoning future lies ahead, rich in possibilities. It is sufficient to break a few bonds; the life-urge will do the rest. But we are faced with another task in the case of people who have left a large part of their life behind them, for whom the future no longer beckons with marvellous possibilities, and nothing is to be expected but the endless round of familiar duties and the doubtful pleasures of old age.

[89] If ever we succeed in liberating young people from the past, we see that they always transfer the imagos of their parents to more suitable substitute figures. For instance, the feeling that clung to the mother now passes to the wife, and the father’s authority passes to respected teachers and superiors or to institutions. Although this is not a fundamental solution, it is yet a practical road which the normal man treads unconsciously and therefore with no notable inhibitions and resistances.

[90] The problem for the adult is very different. He has put this part of the road behind him with or without difficulty. He has cut loose from his parents, long since dead perhaps, and has sought and found the mother in the wife, or, in the case of a woman, the father in the husband. He has duly honoured his fathers and their institutions, has himself become a father, and, with all this in the past, has possibly come to realize that what originally meant advancement and satisfaction has now become a boring mistake, part of the illusion of youth, upon which he looks back with mingled regret and envy, because nothing now awaits him but old age and the end of all illusions. Here there are no more fathers and mothers; all the illusions he projected upon the world and upon things gradually come home to him, jaded and way-worn. The energy streaming back from these

manifold relationships falls into the unconscious and activates all the things he had neglected to develop.

[91] In a young man, the instinctual forces tied up in the neurosis give him, when released, buoyancy and hope and the chance to extend the scope of his life. To the man in the second half of life the development of the function of opposites lying dormant in the unconscious means a renewal; but this development no longer proceeds via the dissolution of infantile ties, the destruction of infantile illusions and the transference of old imagos to new figures: it proceeds via the problem of opposites.

[92] The principle of opposition is, of course, fundamental even in adolescence, and a psychological theory of the adolescent psyche is bound to recognize this fact. Hence the Freudian and Adlerian viewpoints contradict each other only when they claim to be generally applicable theories. But so long as they are content to be technical, auxiliary concepts, they do not contradict or exclude one another. A psychological theory, if it is to be more than a technical makeshift, must base itself on the principle of opposition; for without this it could only re-establish a neurotically unbalanced psyche. There is no balance, no system of self-regulation, without opposition. The psyche is just such a self-regulating system.

2

[93] If at this point we take up the thread we let fall earlier, we shall now see clearly why it is that the values which the individual lacks are to be found in the neurosis itself. At this point, too, we can return to the case of the young woman and apply the insight we have gained. Let us suppose that this patient is “analysed,” i.e., she has, through the treatment, come to understand the nature of the unconscious thoughts lurking behind her symptoms, and has thus regained possession of the unconscious energy which constituted the strength of those symptoms. The question then arises: what to do with the so-called disposable energy? In accordance with the psychological type of the patient, it would be rational to transfer this energy to an object—to philanthropic work, for example, or some useful activity. With exceptionally energetic natures that are not afraid of wearing themselves to the bone, if need be, or with people who delight in the toil and moil of such activities, this way is possible, but mostly it is impossible. For—do not forget—the libido, as this psychic energy is technically called, already possesses its object unconsciously, in the form of the young Italian or some equally real human substitute. In these circumstances a sublimation is as impossible as it is desirable, because the real object generally offers the energy a much better gradient than do the most admirable ethical activities. Unfortunately far too many of us talk about a man only as it would be desirable for him to be, never about the man as he really is. But the doctor has always to do with the real man, who remains obstinately himself until all sides of his reality are recognized. True education can only start from naked reality, not from a delusive ideal.

[94] It is unhappily the case that no man can direct the so-called disposable energy at will. It follows its own gradient. Indeed, it had already found that gradient even before we set the energy free from the unserviceable form to which it was linked. For we discover that the patient’s fantasies, previously occupied with the young Italian, have now transferred themselves to the doctor.[12] The doctor has himself become the object of the unconscious libido. If the patient altogether refuses to recognize the fact of the transference,[13] or if the doctor fails to understand it, or interprets it falsely, vigorous resistances supervene, directed towards making the relation with

the doctor completely impossible. Then the patient goes away and looks for another doctor, or for someone who understands; or, if he gives up the search, he gets stuck in his problem.

[95] If, however, the transference to the doctor takes place, and is accepted, a natural form is found which supplants the earlier one and at the same time provides the energy with an outlet relatively free from conflict. Hence if the libido is allowed to run its natural course, it will find its own way to the destined object. Where this does not happen, it is always a question of wilful defiance of the laws of nature, or of some disturbing influence.

[96] In the transference all kinds of infantile fantasies are projected. They must be cauterized, i.e., resolved by reductive analysis, and this is generally known as “resolving the transference.” Thereby the energy is again released from an unserviceable form, and again we are faced with the problem of its disposability. Once more we shall put our trust in nature, hoping that, even before it is sought, an object will have been chosen which will provide a favourable gradient.

V

THE PERSONAL AND THE COLLECTIVE (OR TRANSPERSONAL) UNCONSCIOUS

[97] At this point a new stage in our process of realization begins. We carried the analysis of infantile transference fantasies to the point where it became sufficiently clear, even to the patient, that he was making the doctor his father, mother, uncle, guardian, and teacher, and all the rest of the parental authorities. But, as experience has repeatedly shown, still other fantasies appear which represent the doctor as a saviour or godlike being—naturally in complete contradiction to healthy conscious reasoning. Moreover it transpires that these godlike attributes go far beyond the framework of Christianity in which we have grown up; they take on a pagan glamour and indeed very often appear in animal form.

[98] The transference is in itself no more than a projection of unconscious contents. At first the so-called superficial contents of the unconscious are projected, as can be seen from symptoms, dreams, and fantasies. In this state the doctor is interesting as a possible lover (rather like the young Italian in the case we were discussing). Then he appears more in the role of the father: either the good, kind father or the “thunderer,” depending on the qualities which the real father had for the patient. Sometimes the doctor has a maternal significance, a fact that seems somewhat peculiar, but is still within the bounds of possibility. All these fantasy projections are founded on personal memories.

[99] Finally there appear forms of fantasy that possess an extravagant character. The doctor is then endowed with uncanny powers: he is a magician or a wicked demon, or else the corresponding personification of goodness, a saviour. Again, he may appear as a mixture of both. Of course it is to be understood that he need not necessarily appear like this to the patient’s conscious mind; it is only the fantasies coming to the surface which picture him in this guise. Such patients often cannot get it into their heads that their fantasies really come from themselves and have little or nothing to do with the character of the doctor. This delusion rests on the fact that there are no personal grounds in the memory for this kind of projection. It can sometimes be shown that similar fantasies had, at a certain period in childhood, attached themselves to the father or mother, although neither father nor mother provided any real occasion for them.

[100] Freud has shown in a little essay[1] how Leonardo da Vinci was influenced in his later life by the fact that he had two mothers. The fact of the two mothers, or of a double descent, was real enough in Leonardo’s case, but it plays a role in the lives of other artists as well. Benvenuto Cellini had this fantasy of a double descent. Generally speaking it is a mythological motif. Many heroes in legend have two mothers. The fantasy does not arise from the actual fact that the heroes have two mothers; it is a widespread “primordial” image belonging not to the

domain of personal memory but to the secrets of the mental history of mankind.

[101] There are present in every individual, besides his personal memories, the great "primordial" images, as Jacob Burckhardt once aptly called them, the inherited possibilities of human imagination as it was from time immemorial. The fact of this inheritance explains the truly amazing phenomenon that certain motifs from myths and legends repeat themselves the world over in identical forms. It also explains why it is that our mental patients can reproduce exactly the same images and associations that are known to us from the old texts. I give some examples of this in my book *Symbols of Transformation*.[2] In so doing I do not by any means assert the inheritance of ideas, but only of the possibility of such ideas, which is something very different.

[102] In this further stage of treatment, then, when fantasies are produced which no longer rest on personal memories, we have to do with the manifestations of a deeper layer of the unconscious where the primordial images common to humanity lie sleeping. I have called these images or motifs "archetypes," also "dominants" of the unconscious. For a further elucidation of the idea I must refer the reader to the relevant literature.[3]

[103] This discovery means another step forward in our understanding: the recognition, that is, of two layers in the unconscious. We have to distinguish between a personal unconscious and an *impersonal* or *transpersonal unconscious*. We speak of the latter also as the *collective unconscious*,[4] because it is detached from anything personal and is common to all men, since its contents can be found everywhere, which is naturally not the case with the personal contents. The personal unconscious contains lost memories, painful ideas that are repressed (i.e., forgotten on purpose), subliminal perceptions, by which are meant sense-perceptions that were not strong enough to reach consciousness, and finally, contents that are not yet ripe for consciousness. It corresponds to the figure of the shadow so frequently met with in dreams.[5]

[104] The primordial images are the most ancient and the most universal "thought-forms" of humanity. They are as much feelings as thoughts; indeed, they lead their own independent life rather in the manner of part-souls,[6] as can easily be seen in those philosophical or Gnostic systems

which rely on perception of the unconscious as the source of knowledge. The idea of angels, archangels, “principalities and powers” in St. Paul, the archons of the Gnostics, the heavenly hierarchy of Dionysius the Areopagite, all come from the perception of the relative autonomy of the archetypes.

[105] We have now found the object which the libido chooses when it is freed from the personal, infantile form of transference. It follows its own gradient down into the depths of the unconscious, and there activates what has lain slumbering from the beginning. It has discovered the hidden treasure upon which mankind ever and anon has drawn, and from which it has raised up its gods and demons, and all those potent and mighty thoughts without which man ceases to be man.

[106] Let us take as an example one of the greatest thoughts which the nineteenth century brought to birth: the idea of the conservation of energy. Robert Mayer, the real creator of this idea, was a physician, and not a physicist or natural philosopher, for whom the making of such an idea would have been more appropriate. But it is very important to realize that the idea was not, strictly speaking, “made” by Mayer. Nor did it come into being through the fusion of ideas or scientific hypotheses then extant, but grew in its creator like a plant. Mayer wrote about it in the following way to Griesinger, in 1844:

> I am far from having hatched out the theory at my writing desk. [He then reports certain physiological observations he had made in 1840 and 1841 as ship’s doctor.] Now, if one wants to be clear on matters of physiology, some knowledge of physical processes is essential, unless one prefers to work at things from the metaphysical side, which I find infinitely disgusting. I therefore held fast to physics and stuck to the subject with such fondness that, although many may laugh at me for this, I paid but little attention to that remote quarter of the globe in which we were, preferring to remain on board where I could work without intermission, and where I passed many an hour as though *inspired*, the like of which I cannot remember either before or since. Some flashes of thought that passed through me while in the roads of Surabaya were at once assiduously followed up, and in their turn led to fresh subjects. Those times have passed, but the quiet examination of that which then came to the surface in me has taught me that it is a truth, which can not only be subjectively felt, but objectively proved. It remains to be seen whether this can be accomplished by a man so little versed in physics as I am.[7]

[107] In his book on energetics,[8] Helm expresses the view that “Robert Mayer’s new idea did not detach itself gradually from the traditional concepts of energy by deeper reflection on them, but belongs to those intuitively apprehended ideas which, arising in other realms of a spiritual

nature, as it were take possession of the mind and compel it to reshape the traditional conceptions in their likeness."

[108] The question now arises: Whence came this new idea that thrust itself upon consciousness with such elemental force? And whence did it derive the power that could so seize upon consciousness that it completely eclipsed the multitudinous impressions of a first voyage to the tropics? These questions are not so easy to answer. But if we apply our theory here, the explanation can only be this: the idea of energy and its conservation must be a primordial image that was dormant in the collective unconscious. Such a conclusion naturally obliges us to prove that a primordial image of this kind really did exist in the mental history of mankind and was operative through the ages. As a matter of fact, this proof can be produced without much difficulty: the most primitive religions in the most widely separated parts of the earth are founded upon this image. These are the so-called dynamistic religions whose sole and determining thought is that there exists a universal magical power[9] about which everything revolves. Tylor, the well-known English investigator, and Frazer likewise, misunderstood this idea as animism. In reality primitives do not mean, by their power-concept, souls or spirits at all, but something which the American investigator Lovejoy has appropriately termed "primitive energetics."[10] This concept is equivalent to the idea of soul, spirit, God, health, bodily strength, fertility, magic, influence, power, prestige, medicine, as well as certain states of feeling which are characterized by the release of affects. Among certain Polynesians *mulungu*—this same primitive power-concept—means spirit, soul, daemonism, magic, prestige; and when anything astonishing happens, the people cry out "Mulungu!" This power-concept is also the earliest form of a concept of God among primitives, and is an image which has undergone countless variations in the course of history. In the Old Testament the magic power glows in the burning bush and in the countenance of Moses; in the Gospels it descends with the Holy Ghost in the form of fiery tongues from heaven. In Heraclitus it appears as world energy, as "ever-living fire"; among the Persians it is the fiery glow of *haoma*, divine grace; among the Stoics it is the original heat, the power of fate. Again, in medieval legend it appears as the aura or halo, and it

flares up like a flame from the roof of the hut in which the saint lies in ecstasy. In their visions the saints behold the sun of this power, the plenitude of its light. According to the old view, the soul itself is this power; in the idea of the soul's immortality there is implicit its conservation, and in the Buddhist and primitive notion of metempsychosis—transmigration of souls—is implicit its unlimited changeability together with its constant duration.

[109] So this idea has been stamped on the human brain for aeons. That is why it lies ready to hand in the unconscious of every man. Only, certain conditions are needed to cause it to appear. These conditions were evidently fulfilled in the case of Robert Mayer. The greatest and best thoughts of man shape themselves upon these primordial images as upon a blueprint. I have often been asked where the archetypes or primordial images come from. It seems to me that their origin can only be explained by assuming them to be deposits of the constantly repeated experiences of humanity. One of the commonest and at the same time most impressive experiences is the apparent movement of the sun every day. We certainly cannot discover anything of the kind in the unconscious, so far as the known physical process is concerned. What we do find, on the other hand, is the myth of the sun-hero in all its countless variations. It is this myth, and not the physical process, that forms the sun archetype. The same can be said of the phases of the moon. The archetype is a kind of readiness to produce over and over again the same or similar mythical ideas. Hence it seems as though what is impressed upon the unconscious were exclusively the subjective fantasy-ideas aroused by the physical process. We may therefore assume that the archetypes are recurrent impressions made by subjective reactions.[11] Naturally this assumption only pushes the problem further back without solving it. There is nothing to prevent us from assuming that certain archetypes exist even in animals, that they are grounded in the peculiarities of the living organism itself and are therefore direct expressions of life whose nature cannot be further explained. Not only are the archetypes, apparently, impressions of ever-repeated typical experiences, but, at the same time, they behave empirically like agents that tend towards the repetition of these same experiences. For when an archetype appears in a dream, in a fantasy, or in

life, it always brings with it a certain influence or power by virtue of which it either exercises a numinous or a fascinating effect, or impels to action.

[110] Having shown, in this example, how new ideas arise out of the treasure-house of primordial images, we will proceed to the further discussion of the transference process. We saw that the libido had, for its new object, seized upon those seemingly absurd and singular fantasies, the contents of the collective unconscious. As I have already said, the projection of primordial images upon the doctor is a danger not to be underrated at this stage of the treatment. The images contain not only all the fine and good things that humanity has ever thought and felt, but the worst infamies and devilries of which men have been capable. Owing to their specific energy—for they behave like highly charged autonomous centres of power—they exert a fascinating and possessive influence upon the conscious mind and can thus produce extensive alterations in the subject. One can see this in religious conversions, in cases of influence by suggestion, and particularly at the onset of certain forms of schizophrenia.[12] Now, if the patient is unable to distinguish the personality of the doctor from these projections, all hope of an understanding is finally lost and a human relationship becomes impossible. But if the patient avoids this Charybdis, he is wrecked on the Scylla of *introjecting* these images—in other words, he ascribes their peculiarities not to the doctor but to himself. This is just as disastrous. In projection, he vacillates between an extravagant and pathological deification of the doctor, and a contempt bristling with hatred. In introjection, he gets involved in a ridiculous self-deification, or else in a moral self-laceration. The mistake he makes in both cases comes from attributing to a *person* the contents of the collective unconscious. In this way he makes himself or his partner either god or devil. Here we see the characteristic effect of the archetype: it seizes hold of the psyche with a kind of primeval force and compels it to transgress the bounds of humanity. It causes exaggeration, a puffed-up attitude (inflation), loss of free will, delusion, and enthusiasm in good and evil alike. This is the reason why men have always needed demons and cannot live without gods, except for a few particularly clever specimens of *homo occidentalis*

who lived yesterday or the day before, supermen for whom “God is dead” because they themselves have become gods—but tin-gods with thick skulls and cold hearts. The idea of God is an absolutely necessary psychological function of an irrational nature, which has nothing whatever to do with the question of God’s existence. The human intellect can never answer this question, still less give any proof of God. Moreover such proof is superfluous, for the idea of an all-powerful divine Being is present everywhere, unconsciously if not consciously, because it is an archetype. There is in the psyche some superior power, and if it is not consciously a god, it is the “belly” at least, in St. Paul’s words. I therefore consider it wiser to acknowledge the idea of God consciously; for, if we do not, something else is made God, usually *something quite* inappropriate and stupid such as only an “enlightened” intellect could hatch forth. Our intellect has long known that we can form no proper idea of God, much less picture to ourselves in what manner he really exists, if at all. The existence of God is once and for all an unanswerable question. The *consensus gentium* has been talking of gods for aeons and will still be talking of them aeons hence. No matter how beautiful and perfect man may believe his reason to be, he can always be certain that it is only one of the possible mental functions, and covers only that one side of the phenomenal world which corresponds to it. But the irrational, that which is not agreeable to reason, rings it about on all sides. And the irrational is likewise a psychological function—in a word, it is the collective unconscious; whereas the rational is essentially tied to the conscious mind. The conscious mind must have reason, firstly to discover some order in the chaos of disorderly individual events occurring in the world, and secondly to create order, at least in human affairs. We are moved by the laudable and useful ambition to extirpate the chaos of the irrational both within and without to the best of our ability. Apparently the process has gone pretty far. As a mental patient once told me: “Doctor, last night I disinfected the whole heavens with bichloride of mercury, but I found no God.” Something of the sort has happened to us as well.

[111] Old Heraclitus, who was indeed a very great sage, discovered the most marvellous of all psychological laws: the regulative function of

opposites. He called it *enantiodromia*, a running contrariwise, by which he meant that sooner or later everything runs into its opposite. (Here I would remind you of the case above of the American business man, a beautiful example of enantiodromia.) Thus the rational attitude of culture necessarily runs into its opposite, namely the irrational devastation of culture.[13] We should never identify ourselves with reason, for man is not and never will be a creature of reason alone, a fact to be noted by all pedantic culture-mongers. The irrational cannot be and must not be extirpated. The gods cannot and must not die. I said just now that there seems to be something, a kind of superior power, in the human psyche, and that if this is not the idea of God, then it is the "belly." I wanted to express the fact that one or other basic instinct, or complex of ideas, will invariably concentrate upon itself the greatest sum of psychic energy and thus force the ego into its service. As a rule the ego is drawn into this focus of energy so powerfully that it identifies with it and thinks it desires and needs nothing further. In this way a craze develops, a monomania or possession, an acute one-sidedness which most seriously imperils the psychic equilibrium. Without doubt the capacity for such one-sidedness is the secret of success—of a sort, for which reason our civilization assiduously strives to foster it. The passion, the piling up of energy in these monomanias, is what the ancients called a "god," and in common speech we still do the same. Do we not say, "He makes a god of this or that"? A man thinks that he wills and chooses, and does not notice that he is already possessed, that his interest has become the master, arrogating all power to itself. Such interests are indeed gods of a kind which, once recognized by the many, gradually form a "church" and gather a herd of believers about them. This we then call an "organization." It is followed by a disorganizing reaction which aims to drive out the devil with Beelzebub. The enantiodromia that always threatens when a movement attains to undisputed power offers no solution of the problem, for it is just as blind in its disorganization as it was in its organization.

[112] The only person who escapes the grim law of enantiodromia is the man who knows how to separate himself from the unconscious, not by

repressing it—for then it simply attacks him from the rear—but by putting it clearly before him as *that which he is not*.

[113] This prepares the way for the solution of the Scylla and Charybdis problem described above. The patient must learn to differentiate what is ego and what is non-ego, i.e., collective psyche. In this way he finds the material to which he will henceforth have to accommodate himself. His energy, until now laid up in unserviceable and pathological forms, has come into its proper sphere. It is essential, in differentiating the ego from the non-ego, that a man should be firmly rooted in his ego-function; that is, he must fulfil his duty to life, so as to be in every respect a viable member of the community. All that he neglects in this respect falls into the unconscious and reinforces its position, so that he is in danger of being swallowed up by it. But the penalties for this are heavy. As Synesius opined of old, it is just the “inspired soul” (πνευματικὴ ψυχή) that becomes god and demon, and as such suffers the divine punishment of being torn asunder like Zagreus. This was what Nietzsche experienced at the onset of his malady. Enantiodromia means being torn asunder into pairs of opposites, which are the attributes of “the god” and hence also of the godlike man, who owes his godlikeness to overcoming his gods. As soon as we speak of the collective unconscious we find ourselves in a sphere, and concerned with a problem, which is altogether precluded in the practical analysis of young people or of those who have remained infantile too long. Wherever the father and mother imagos have still to be overcome, wherever there is a little bit of life still to be conquered, which is the natural possession of the average man, then we had better make no mention of the collective unconscious and the problem of opposites. But once the parental transferences and the youthful illusions have been mastered, or are at least ripe for mastery, then we must speak of these things. We are here outside the range of Freudian and Adlerian reductions; we are no longer concerned with how to remove the obstacles to a man’s profession, or to his marriage, or to anything that means a widening of his life, but are confronted with the task of finding a meaning that will enable him to continue living at all—a meaning more than blank resignation and mournful retrospect.

[114] Our life is like the course of the sun. In the morning it gains continually in strength until it reaches the zenith-heat of high noon. Then comes the enantiodromia: the steady forward movement no longer denotes an increase, but a decrease, in strength. Thus our task in handling a young person is different from the task of handling an older person. In the former case, it is enough to clear away all the obstacles that hinder expansion and ascent; in the latter, we must nurture everything that assists the descent. An inexperienced youth thinks one can let the old people go, because not much more can happen to them anyway: they have their lives behind them and are no better than petrified pillars of the past. But it is a great mistake to suppose that the meaning of life is exhausted with the period of youth and expansion; that, for example, a woman who has passed the menopause is “finished.” The afternoon of life is just as full of meaning as the morning; only, its meaning and purpose are different.[14] Man has two aims: the first is the natural aim, the begetting of children and the business of protecting the brood; to this belongs the acquisition of money and social position. When this aim has been reached a new phase begins: the cultural aim. For the attainment of the former we have the help of nature and, on top of that, education; for the attainment of the latter, little or nothing helps. Often, indeed, a false ambition survives, in that an old man wants to be a youth again, or at least feels he must behave like one, although in his heart he can no longer make believe. This is what makes the transition from the natural to the cultural phase so terribly difficult and bitter for many people; they cling to the illusion of youth or to their children, hoping to salvage in this way a last little scrap of youth. One sees it especially in mothers, who find their sole meaning in their children and imagine they will sink into a bottomless void when they have to give them up. No wonder that many bad neuroses appear at the onset of life’s afternoon. It is a sort of second puberty, another “storm and stress” period, not infrequently accompanied by tempests of passion—the “dangerous age.” But the problems that crop up at this age are no longer to be solved by the old recipes: the hand of this clock cannot be put back. What youth found and must find outside, the man of life’s afternoon must find within himself. Here we face new problems which often cause the doctor no light headache.

[115] The transition from morning to afternoon means a revaluation of the earlier values. There comes the urgent need to appreciate the value of the opposite of our former ideals, to perceive the error in our former convictions, to recognize the untruth in our former truth, and to feel how much antagonism and even hatred lay in what, until now, had passed for love. Not a few of those who are drawn into the conflict of opposites jettison everything that had previously seemed to them good and worth striving for; they try to live in complete opposition to their former ego. Changes of profession, divorces, religious convulsions, apostasies of every description, are the symptoms of this swing over to the opposite. The snag about a radical conversion into one's opposite is that one's former life suffers repression and thus produces just as unbalanced a state as existed before, when the counterparts of the conscious virtues and values were still repressed and unconscious. Just as before, perhaps, neurotic disorders arose because the opposing fantasies were unconscious, so now other disorders arise through the repression of former idols. It is of course a fundamental mistake to imagine that when we see the non-value in a value or the untruth in a truth, the value or the truth ceases to exist. It has only become *relative*. Everything human is relative, because everything rests on an inner polarity; for everything is a phenomenon of energy. Energy necessarily depends on a pre-existing polarity, without which there could be no energy. There must always be high and low, hot and cold, etc., so that the equilibrating process—which is energy—can take place. Therefore the tendency to deny all previous values in favour of their opposites is just as much of an exaggeration as the earlier one-sidedness. And in so far as it is a question of rejecting universally accepted and indubitable values, the result is a fatal loss. One who acts in this way empties himself out with his values, as Nietzsche has already said.

[116] The point is not conversion into the opposite but conservation of previous values together with recognition of their opposites. Naturally this means conflict and self-division. It is understandable enough that one should shrink from it, philosophically as well as morally; hence the alternative sought, more often than conversion into the opposite, is a convulsive stiffening of the previous attitude. It must be admitted that, in

the case of elderly men, this is a phenomenon of no little merit, however disagreeable it may be: at least they do not become renegades, they remain upright, they do not fall into muddle-headedness nor yet into the mud; they are no defaulters, but are merely dead wood or, to put it more politely, pillars of the past. But the accompanying symptoms, the rigidity, the narrow-mindedness, the stand-offishness of these *laudatores temporis acti* are unpleasant, not to say harmful; for their method of espousing a truth or any other value is so inflexible and violent that their unmannerliness repels more than the truth attracts, so that the result is the opposite of the intended good. The fundamental cause of their rigidity is fear of the problem of opposites: they have a foreboding and secret dread of the "sinister brother of Medardus." Therefore there must be only one truth and one guiding principle of action, and that must be absolute; otherwise it affords no protection against the impending disaster, which is sensed everywhere save in themselves. But actually the most dangerous revolutionary is within ourselves, and all must realize this who wish to pass over safely into the second half of life. Certainly this means exchanging the apparent security we have so far enjoyed for a condition of insecurity, of internal division, of contradictory convictions. The worst feature of all is that there appears to be no way out of this condition. *Tertium non datur*, says logic—there is no middle way.

[117] The practical necessities of treatment have therefore forced us to look for ways and means that might lead out of this intolerable situation. Whenever a man is confronted by an apparently insurmountable obstacle, he draws back: he makes what is technically called a regression. He goes back to the times when he found himself in similar situations, and he tries to apply again the means that helped him then. But what helped in youth is of no use in age. What good did it do that American business man to return to his former position? It simply wouldn't work. So the regression continues right back into childhood (hence the childishness of many elderly neurotics) and ends up in the time before childhood. That may sound strange, but in point of fact it is not only logical but altogether possible.

[118] We mentioned earlier that the unconscious contains, as it were, two layers: the personal and the collective. The personal layer ends at the

earliest memories of infancy, but the collective layer comprises the pre-infantile period, that is, the residues of ancestral life. Whereas the memory-images of the personal unconscious are, as it were, filled out, because they are images personally experienced by the individual, the archetypes of the collective unconscious are not filled out because they are forms not personally experienced. When, on the other hand, psychic energy regresses, going beyond even the period of early infancy, and breaks into the legacy of ancestral life, the mythological images are awakened: these are the archetypes.[15] An interior spiritual world whose existence we never suspected opens out and displays contents which seem to stand in sharpest contrast to all our former ideas. These images are so intense that it is quite understandable why millions of cultivated persons should be taken in by theosophy and anthroposophy. This happens simply because such modern gnostic systems meet the need for expressing and formulating the wordless occurrences going on within ourselves *better* than any of the existing forms of Christianity, not excepting Catholicism. The latter is certainly able to express, far more comprehensively than Protestantism, the facts in question through its dogma and ritual symbolism. But neither in the past nor in the present has even Catholicism attained anything like the richness of the old pagan symbolism, which is why this symbolism persisted far into Christianity and then gradually went underground, forming currents that, from the early Middle Ages to modern times, have never quite lost their vitality. To a large extent they vanished from the surface; but, changing their form, they come back again to compensate the one-sidedness of our conscious mind with its modern orientation.[16] Our consciousness is so saturated with Christianity, so utterly moulded by it, that the unconscious counter-position can discover no foothold there, for the simple reason that it seems too much the antithesis of our ruling ideas. The more one-sidedly, rigidly, and absolutely the one position is held, the more aggressive, hostile, and incompatible will the other become, so that at first sight there would seem to be little prospect of reconciling the two. But once the conscious mind admits at least the *relative* validity of all human opinion, then the opposition loses something of its irreconcilable character. In the meantime the conflict casts round for appropriate expression in, for instance, the oriental religions—Buddhism, Hinduism, Taoism. The syncretism of theosophy goes a long way towards meeting this need, and that explains its numerous successes.

[119] The work involved in analytical treatment gives rise to experiences of an archetypal nature which require to be expressed and shaped. Obviously this is not the only occasion for experiences of such a kind; often they occur quite spontaneously, and by no means only in the case of "psychological-minded" people. I have heard the most curious dreams and visions from the lips of people whose mental sanity not even the professional psychologist could doubt. The experience of the archetype is frequently guarded as the closest personal secret, because it is felt to strike into the very core of one's being. It is like a primordial experience of the non-ego, of an interior opponent who throws down a challenge to the understanding. Naturally enough we then look round for helpful parallels, and it happens all too easily that the original occurrence is interpreted in terms of derivative ideas. A typical instance of this kind is the Trinity vision of Brother Nicholas of Flüe,[17] or again, St. Ignatius' vision of the snake with multiple eyes, which he interpreted first as a divine apparition and then as a visitation from the devil. Through these periphrastic interpretations the authentic experience is replaced by images and words borrowed from a foreign source, and by views, ideas, and forms that have not grown on our soil and have no ties with our hearts, but only with our heads. Indeed, not even our thought can clearly grasp them, because it never invented them. It is a case of stolen goods that bring no prosperity. Such substitutes make men shadowy and unreal; they put empty words in the place of living realities, and slip out of the painful tension of opposites into a wan, two-dimensional, phantasmal world where everything vital and creative withers and dies.

[120] The wordless occurrences which are called forth by regression to the pre-infantile period need no substitutes; they demand to be individually shaped in and by each man's life and work. They are images sprung from the life, the joys and sorrows, of our ancestors; and to life they seek to return, not in experience only, but in deed. Because of their opposition to the conscious mind they cannot be translated straight into our world;

hence a way must be found that can mediate between conscious and unconscious reality.

VI

THE SYNTHETIC OR CONSTRUCTIVE METHOD

[121] The process of coming to terms with the unconscious is a true labour, a work which involves both action and suffering. It has been named the “transcendent function”[1] because it represents a function based on real and “imaginary,” or rational and irrational, data, thus bridging the yawning gulf between conscious and unconscious. It is a natural process, a manifestation of the energy that springs from the tension of opposites, and it consists in a series of fantasy-occurrences which appear spontaneously in dreams and visions.[2] The same process can also be observed in the initial stages of certain forms of schizophrenia. A classical account of such a proceeding is to be found, for example, in Gérard de Nerval’s autobiographical fragment, *Aurelia*. But the most important literary example is Part II of *Faust*. The natural process by which the opposites are united came to serve me as the model and basis for a method consisting essentially in this: everything that happens at the behest of nature, unconsciously and spontaneously, is deliberately summoned forth and integrated into the conscious mind and its outlook. Failure in many cases is due precisely to the fact that they lack the mental and spiritual equipment to master the events taking place in them. Here medical help must intervene in the form of a special method of treatment.

[122] As we have seen, the theories discussed at the beginning of this book rest on an exclusively causal and reductive procedure which resolves the dream (or fantasy) into its memory components and the underlying instinctual processes. I have indicated above the justification as well as the limitation of this procedure. It breaks down at the point where the dream symbols can no longer be reduced to personal reminiscences or aspirations, that is, when the images of the collective unconscious begin to appear. It would be quite senseless to try to reduce these collective ideas to anything personal—not only senseless but positively harmful, as painful experience has taught me. Only with much difficulty, after long

hesitation and disabuse by many failures, was I able to decide to abandon the purely personalistic attitude of medical psychology in the sense indicated. I had first to come to the fundamental realization that analysis, in so far as it is reduction and nothing more, must necessarily be followed by synthesis, and that certain kinds of psychic material mean next to nothing if simply broken down, but display a wealth of meaning if, instead of being broken down, that meaning is reinforced and extended by all the conscious means at our disposal—by the so-called method of amplification.[3] The images or symbols of the collective unconscious yield their distinctive values only when subjected to a synthetic mode of treatment. Just as analysis breaks down the symbolical fantasy-material into its components, so the synthetic procedure integrates it into a general and intelligible statement. The procedure is not exactly simple, so I will give an example which will help to explain the whole process.

[123] A woman patient, who had just reached the critical borderline between the analysis of the personal unconscious and the emergence of contents from the collective unconscious, had the following dream: *She is about to cross a wide river. There is no bridge, but she finds a ford where she can cross. She is on the point of doing so, when a large crab that lay hidden in the water seizes her by the foot and will not let her go*. She wakes up in terror.

Associations:

[124] *River:* “Forms a boundary that is difficult to get across—I have to overcome an obstacle—probably to do with the fact that I’m progressing so slowly—I ought to reach the other side.”

[125] *Ford:* “An opportunity to cross in safety—a possible way, otherwise the river would be too broad—in the treatment lies the possibility of surmounting the obstacle.”

[126] *Crab:* “The crab was quite hidden in the water, I did not see it before —cancer [German *Krebs*= crab] is a terrible disease, incurable [reference to Mrs. X, who died of carcinoma]—I am afraid of this disease—the crab is an animal that walks backwards—and obviously wants to drag me into the river—it caught hold of me in a horrible way and I was terribly

frightened—what keeps stopping me from getting across? Oh yes, I had another row with my friend [a woman].”

[127] There is something peculiar about her relations with this friend. It is a sentimental attachment, bordering on the homosexual, that has lasted for years. The friend is like the patient in many ways, and equally nervy. They have marked artistic interests in common. The patient is the stronger personality of the two. Because their mutual relationship is too intimate and excludes too many of the other possibilities of life, both are nervy and, despite their ideal friendship, have violent scenes due to mutual irritability. The unconscious is trying in this way to put a distance between them, but they refuse to listen. The quarrel usually begins because one of them finds that she is still not sufficiently understood, and urges that they should speak more plainly to one another; whereupon both make enthusiastic efforts to unbosom themselves. Naturally a misunderstanding comes about in next to no time, and a worse scene than ever ensues. *Faute de mieux*, this quarrelling had long been for both of them a pleasure substitute which they were unwilling to relinquish. My patient in particular could not do without the sweet pain of being misunderstood by her best friend, although every scene “tired her to death.” She had long since realized that this friendship had become moribund, and that only false ambition led her to believe that something ideal could still be made of it. She had formerly had an exaggerated, fantastic relation to her mother and after her mother’s death had transferred her feelings to her friend.

Analytical (causal-reductive) interpretation:[4]

[128] This interpretation can be summed up in one sentence: “I see well enough that I ought to cross the river (that is, give up relations with my friend), but I would much rather that my friend did not let me out of her clutches (i.e., embraces)—which, as an infantile wish, means that I want Mother to draw me to her in the exuberant embrace I know so well.” The incompatibility of the wish lies in the strong undercurrent of homosexuality, abundantly proved by the facts. The crab seizes her by the foot. The patient has large “masculine” feet, she plays the masculine role with her friend and has corresponding sexual fantasies. The foot has

a notoriously phallic significance.[5] Thus the over-all interpretation would be: The reason why she does not want to leave her friend is because she has repressed sexual desires for her. As these desires are morally and aesthetically incompatible with the tendency of the conscious personality, they are repressed and therefore more or less unconscious. Her anxiety corresponds to her repressed desire.

[129] This interpretation is a severe depreciation of the patient's exalted ideal of friendship. To be sure, at this point in the analysis she would no longer have taken exception to such an interpretation. Some time earlier certain facts had amply convinced her of her homosexual tendency, so that she could freely admit this inclination, although it was by no means agreeable to her. If, then, I had given her this interpretation at the present stage of treatment, I would have not encountered any resistance. She had already overcome the painfulness of this unwelcome tendency by understanding it. But she would have said to me, "Why are we still analysing this dream? It only reiterates what I have known for a long time." The interpretation, in fact, tells the patient nothing new; it is therefore uninteresting and ineffective. Such an interpretation would have been impossible at the beginning of the treatment, because the unusual prudery of the patient would not under any circumstances have admitted anything of that kind. The "poison" of understanding had to be injected with extreme care, and in very small doses, until she gradually became more reasonable. Now, when the analytical or causal-reductive interpretation ceases to bring to light anything new, but only the same thing in different variations, the moment has come to look out for possible archetypal motifs. If such a motif comes clearly to the forefront, it is high time to change the interpretative procedure. The causal-reductive procedure has in this particular case certain disadvantages. Firstly, it does not take accurate account of the patient's associations, e.g., the association of "crab" with "cancer." Secondly, the peculiar choice of the symbol remains unexplained. Why should the mother-friend appear as a crab? A prettier and more graphic representation would have been a water-nymph. ("Half drew she him, half sank he under," etc.) An octopus, a dragon, a snake, or a fish would have served as well. Thirdly, the causal-reductive procedure forgets that the dream is a subjective

phenomenon, and that consequently an exhaustive interpretation can never refer the crab to the friend or the mother alone, but must refer it also to the subject, the dreamer herself. The dreamer is the whole dream; she is the river, the ford, and the crab, or rather these details express conditions and tendencies in the unconscious of the subject.

[130] I have therefore introduced the following terminology: I call every interpretation which equates the dream images with real objects an *interpretation on the objective level*. In contrast to this is the interpretation which refers every part of the dream and all the actors in it back to the dreamer himself. This I call *interpretation on the subjective level*. Interpretation on the objective level is analytic, because it breaks down the dream content into memory-complexes that refer to external situations. Interpretation on the subjective level is synthetic, because it detaches the underlying memory-complexes from their external causes, regards them as tendencies or components of the subject, and reunites them with that subject. (In any experience I experience not merely the object but first and foremost myself, provided of course that I render myself an account of the experience.) In this case, therefore, all the contents of the dream are treated as symbols for subjective contents.

[131] Thus the synthetic or constructive process of interpretation[6] is interpretation on the subjective level.

The synthetic (constructive) interpretation:

[132] The patient is unconscious of the fact that the obstacle to be overcome lies in herself: namely, a boundary-line that is difficult to cross and hinders further progress. Nevertheless it is possible to pass the barrier. But a special and unexpected danger looms up just at this moment—something “animal” (non-human or subhuman), which moves backwards and downwards, threatening to drag with it the whole personality of the dreamer. This danger is like a deadly disease that begins in some secret place and is incurable (overpowering). The patient imagines that her friend is hindering her and trying to drag her down. So long as she believes this, she must go on trying to “uplift” her friend, educate and improve her; she has to make futile and senselessly idealistic efforts to stop herself from being dragged down. Naturally her friend

makes similar efforts too, for she is in the same pass as the patient. So the two keep jumping at each other like fighting cocks, each trying to get the upper hand. And the higher the pitch the one screws herself up to, the fiercer become the self-torments of the other. Why? Because each thinks the fault lies in the other, in the object. Interpretation on the subjective level brings release from this folly; for the dream shows the patient that she has something in herself which prevents her from crossing the boundary, i.e., from getting out of one situation or attitude into another. The interpretation of a change of place as a change of attitude is corroborated by forms of speech in certain primitive languages, where, for example, "I am thinking of going" is expressed as "I am at the place of (on the point of) going." To make the language of dreams intelligible we need numerous parallels from the psychology of primitive and historical symbolism, because dreams spring essentially from the unconscious, which contains remnants of the functional possibilities of all preceding epochs of evolution. A classical example of this is the "Crossing of the Great Water" in the oracles of the *I Ching*.

[133] Obviously, everything now depends on what is meant by the crab. We know in the first place that it is something connected with the friend (since the patient associates it with her friend), and also something connected with her mother. Whether mother and friend really have this quality is irrelevant so far as the patient is concerned. The situation can be changed only by the patient changing herself. Nothing can be changed in the mother, for she is dead. And the friend cannot be nagged into changing. If she wants to change, that is her own affair. The fact that the quality in question is connected with the mother points to something infantile. What, then, is there in common in the patient's relation to her mother and to her friend? The common factor is a violent, sentimental demand for love, so impassioned that she feels herself overwhelmed. This demand has the character of an overpowering infantile craving which, as we know, is blind. So we are dealing with an undisciplined, undifferentiated, and not yet humanized part of the libido which still possesses the compulsive character of an instinct, a part still untamed by domestication. For such a part some kind of *animal* is an entirely appropriate symbol. But why should the animal be a crab? The patient

associates it with cancer, of which disease Mrs. X died at about the same age as that now reached by the patient herself. So there may be a hint of identification with Mrs. X. We must therefore follow this up. The patient relates the following facts about her: Mrs. X was widowed early; she was very merry and full of life; she had a series of adventures with men, and one in particular with an extremely gifted artist whom the patient knew personally and who always impressed her as remarkably fascinating and strange.

[134] An identification can occur only on the basis of some unrealized, i.e., unconscious, similarity. Now in what way is our patient similar to Mrs. X? Here I was able to remind the patient of a series of earlier fantasies and dreams which had plainly shown that she too had a frivolous streak in her, and one which she always anxiously repressed, because she feared this dimly apprehended tendency in herself might betray her into leading an immoral life. With this we have made a further important contribution towards understanding the "animal" element; for once more we come upon the same untamed, instinctual craving, but this time directed towards men. And we have also discovered another reason why she cannot let go of her friend: she must cling to her so as not to fall victim to this other tendency, which seems to her much more dangerous. Accordingly she remains at the infantile, homosexual level, because it serves her as a defence. (Experience shows that this is one of the most potent motives for clinging to unsuitable infantile relationships.) In this animal element, however, also lies her health, the germ of a future sound personality which will not shrink from the hazards of life.

[135] But the patient had drawn quite a different conclusion from the fate of Mrs. X. She had taken the latter's sudden grave illness and early death as the punishment of fate for the gay life which, without admitting it, the patient had always envied. When Mrs. X died, the patient made a very long moral face which concealed an all-too-human malicious satisfaction. To punish herself for this, she continually used the example of Mrs. X to scare herself away from life and all further development, and burdened herself with the misery of an unsatisfying friendship. Naturally this whole sequence of events had never been clear to her, otherwise she

would never have acted as she did. The rightness of this surmise was easily verified from the material.

[136] The story of this identification by no means ends here. The patient subsequently emphasized that Mrs. X possessed a not inconsiderable artistic capacity which developed only after her husband's death and then led to her friendship with the artist. This fact seems to be one of the essential reasons for the identification, if we remember that the patient had remarked what a strong and peculiarly fascinating impression the artist had made upon her. A fascination of this kind is never exercised exclusively by one person upon another; it is always a phenomenon of relationship, which requires two people in so far as the person fascinated necessarily has a corresponding disposition. But the disposition must be unconscious, or no fascination will take place. Fascination is a compulsive phenomenon in the sense that it lacks a conscious motive; it is not a voluntary process, but something that rises up from the unconscious and forcibly obtrudes itself upon the conscious mind.

[137] It must therefore be assumed that the patient has an unconscious disposition similar to that of the artist. Accordingly she is also identified with a man.[7] We recall the analysis of the dream, where we met an allusion to the "masculine" foot. And in fact the patient does play a masculine role with her friend; she is the active one who always sets the tone, who bosses her friend and sometimes actually forces her to do something she alone wants. Her friend is distinctly feminine, even in external appearance, while the patient is clearly of a somewhat masculine type. Her voice too is strong and deeper than her friend's. Mrs. X is described as a very feminine woman, comparable to her friend, so the patient thinks, in gentleness and affectionateness. This gives us another clue: in relation to her friend, the patient obviously plays the same role that the artist played with Mrs. X. Thus she unconsciously completes her identification with Mrs. X and her lover, and thus, in spite of all, she gives expression to the frivolous streak in her which she had so anxiously repressed. But she is not living it consciously, she is rather the plaything of this unconscious tendency; in other words, she is possessed by it, and has become the unconscious exponent of her complex.

[138] We now know very much more about the crab: it contains the inner psychology of this untamed bit of libido. The unconscious identifications keep drawing her down further and further. They have this power because, being unconscious, they are not open to insight or correction. The crab is therefore the symbol for the unconscious contents. These contents are always trying to draw the patient back into her relations with her friend. (The crab walks backwards.) But the connection with her friend is synonymous with disease, for through it she became neurotic.

[139] Strictly speaking, all this really belongs to the analysis on the objective level. But we must not forget that we came into possession of this knowledge only by making use of the subjective level, which thus proves to be an important heuristic principle. For practical purposes we might rest content with the results so far reached; but we have to satisfy the demands of theory: not all the associations have yet been evaluated, nor has the significance of the choice of symbol yet been sufficiently explained.

[140] We shall now take up the patient’s remark that the crab lay hidden in the water and that she did not see it at first. Nor did she see, at first, the unconscious relations which we have just discussed; they too lay hidden in the water. The river is the obstacle that prevents her from crossing to the other side. It is precisely these unconscious relations, binding her to her friend, that prevented her. The unconscious was the obstacle. Thus the water signifies the unconscious, or rather, the state of unconsciousness, of concealment; for the crab too is something unconscious, in fact it is the dynamic content that lies concealed in its depths.

VII

THE ARCHETYPES OF THE COLLECTIVE UNCONSCIOUS

[141] We are now faced with the task of raising to the subjective level the phenomena which have so far been understood on the objective level. For this purpose we must detach them from the object and take them as symbolical exponents of the patient's subjective complexes. If we try to interpret the figure of Mrs. X on the subjective level, we must regard it as the personification of a part-soul, or rather of a certain aspect of the dreamer. Mrs. X then becomes an image of what the patient would like to be, and yet fears to be. She represents, as it were, a partial picture of the patient's future character. The fascinating artist cannot so easily be raised to the subjective level, because the unconscious artistic capacity lying dormant in the patient is already taken up by Mrs. X. It would, however, be correct to say that the artist is the image of the patient's masculinity which is not consciously realized and therefore lies in the unconscious.[1] This is true in the sense that the patient does in fact delude herself in this matter. In her own eyes she is quite remarkably fragile, sensitive, and feminine, and not in the least masculine. She was therefore indignantly amazed when I pointed out her masculine traits. But the strange, fascinating element is out of keeping with these traits. It seems to be entirely lacking to them. Yet it must be hiding somewhere, since she produced this feeling out of herself.

[142] Whenever such an element is not to be found in the dreamer himself, experience tells us that it is always projected. But upon whom? Is it still attached to the artist? He has long since disappeared from the patient's purview and cannot very well have taken the projection with him, since it lies anchored in the unconscious of the patient, and moreover she had no personal relation with this man despite his fascination. For her he was more a figure of fantasy. No, a projection of this kind is always topical, that is, somewhere there must be somebody upon whom this content is projected, otherwise she would be palpably aware of it in herself.

[143] At this point we come back to the objective level, for without it we cannot locate the projection. The patient does not know any man who means anything special to her, apart from myself; and as her doctor I mean a good deal. Presumably therefore this content is projected on to me, though I had certainly noticed nothing of the sort. But these subtler contents never appear on the surface; they always come to light outside the consulting hour. I therefore asked her cautiously, "Tell me, how do I seem to you when you are not with me? Am I just the same?" She said, "When I am with you, you are quite pleasant, but when I am by myself, or have not seen you for some time, the picture I have of you changes in a remarkable way. Sometimes you seem quite idealized, and then again different." Here she hesitated, and I prompted her: "In what way different?" Then she said, "Sometimes you seem rather dangerous, sinister, like an evil magician or a demon. I don't know how I ever get such ideas—you are not a bit like that."

[144] So the content was fixed on me as part of the transference, and that is why it was missing from her psychic inventory. Here we recognize another important fact: I was contaminated (identified) with the artist, so in her unconscious fantasy she naturally plays the role of Mrs. X with me. I could easily prove this to her with the help of the material—sexual fantasies—previously brought to light. But I myself am then the obstacle, the crab that prevents her from getting across. If, in this particular case, we were to confine ourselves to the objective level, the position would be very tricky. What would be the good of my explaining, "But I am not this artist in any sense, I am not in the least sinister, nor am I an evil magician!" That would leave the patient quite cold, for she knows that just as well as I do. The projection continues as before, and I really am the obstacle to her further progress.

[145] It is at this point that many a treatment comes to a standstill. There is no way of getting out of the toils of the unconscious, except for the doctor to raise himself to the subjective level and to acknowledge himself as an image. But an image of what? Here lies the greatest difficulty of all. "Well now," the doctor will say, "an image of something in the unconscious of the patient." Whereupon she will say, "What, so I am a man, and a sinister, fascinating man at that, a wicked magician or demon?

Not on your life! I cannot accept that, it’s all nonsense. I’d sooner believe this of you!” She is right: it is preposterous to transfer such things to her. She cannot accept being turned into a demon any more than the doctor can. Her eyes flash, an evil expression creeps into her face, the gleam of an unknown resistance never seen before. I am suddenly faced by the possibility of a painful misunderstanding. What is it? Disappointed love? Does she feel offended, depreciated? In her glance there lurks something of the beast of prey, something really demoniacal. Is she a demon after all? Or am I the beast of prey, the demon, and is this a terrified victim sitting before me, trying to defend herself with the brute strength of despair against my wicked spells? All this must surely be nonsense—fantastic delusion. What have I touched? What new chord is vibrating? Yet it is only a passing moment. The expression on the patient’s face clears, and she says, as though relieved, “It is queer, but just now I had a feeling you had touched the point I could never get over in relation to my friend. It’s a horrible feeling, something inhuman, evil, cruel. I simply cannot describe how queer this feeling is. It makes me hate and despise my friend when it comes, although I struggle against it with all my might.”

[146] This remark throws an explanatory light on what has happened: I have taken the place of the friend. The friend has been overcome. The ice of the repression is broken and the patient has entered a new phase of life without knowing it. Now I know that all that was painful and bad in her relation with her friend will devolve upon me, as well as all the good, but it will be in violent conflict with the mysterious x which the patient has never been able to master. A new phase of the transference has started, although it does not as yet clearly reveal the nature of the x that has been projected upon me.

[147] One thing is certain: if the patient gets stuck in this form of transference, the most troublesome misunderstandings lie ahead, for she will be bound to treat me as she treated her friend—in other words, the x will be continually in the air giving rise to misunderstandings. It will inevitably turn out that she will see the demon in me, since she cannot accept it in herself. All insoluble conflicts come about in this fashion. And an insoluble conflict means bringing life to a standstill.

[148] Or another possibility: the patient could use her old defence mechanism against this new difficulty and could simply ignore the point of obscurity. That is to say, she could begin repressing again, instead of keeping things conscious, which is the necessary and obvious demand of the whole method. But nothing would be gained by this; on the contrary, the x now threatens from the unconscious, and that is far more unpleasant.

[149] Whenever such an unacceptable content appears, we must consider carefully whether it is a personal quality at all. “Magician” and “demon” may well represent qualities whose very names make it instantly clear that these are not human and personal qualities but mythological ones. Magician and demon are mythological figures which express the unknown, “inhuman” feeling that swept over the patient. They are attributes not in any sense applicable to a human personality, although, as intuitive judgments not subjected to closer criticism, they are constantly being projected upon our fellow men, to the very great detriment of human relations.

[150] These attributes always indicate that contents of the transpersonal or collective unconscious are being projected. Personal memories cannot account for “demons,” or for “wicked magicians,” although everyone has, of course, at one time or another heard or read of these things. We have all heard of rattlesnakes, but we do not call a lizard or a blindworm a rattlesnake and display the corresponding emotions merely because we have been startled by the rustling of a lizard or a blindworm. Similarly, we do not call one of our fellows a demon unless there really is something demonic in his effect upon us. But if this effect were truly a part of his personal character, it would show itself everywhere, and then the man would be a demon indeed, a sort of werewolf. But that is mythology, i.e., collective psyche, and not individual psyche. In so far as through our unconscious we have a share in the historical collective psyche, we live naturally and unconsciously in a world of werewolves, demons, magicians, etc., for these are things which all previous ages have invested with tremendous affectivity. Equally we have a share in gods and devils, saviours and criminals; but it would be absurd to attribute these potentialities of the unconscious to ourselves personally. It is

therefore absolutely essential to make the sharpest possible demarcation between the personal and the impersonal attributes of the psyche. This is not to deny the sometimes very formidable existence of the contents of the collective unconscious, but only to stress that, as contents of the collective psyche, they are opposed to and different from the individual psyche. Simple-minded folk have never, of course, separated these things from their individual consciousness, because the gods and demons were not regarded as psychic projections and hence as contents of the unconscious, but as self-evident realities. Only in the age of enlightenment did people discover that the gods did not really exist, but were simply projections. Thus the gods were disposed of. But the corresponding psychological function was by no means disposed of; it lapsed into the unconscious, and men were thereupon poisoned by the surplus of libido that had once been laid up in the cult of divine images. The devaluation and repression of so powerful a function as the religious function naturally have serious consequences for the psychology of the individual. The unconscious is prodigiously strengthened by this reflux of libido, and, through its archaic collective contents, begins to exercise a powerful influence on the conscious mind. The period of the Enlightenment closed, as we know, with the horrors of the French Revolution. And at the present time, too, we are once more experiencing this uprising of the unconscious destructive forces of the collective psyche. The result has been mass-murder on an unparalleled scale.[2] This is precisely what the unconscious was after. Its position had been immeasurably strengthened beforehand by the rationalism of modern life, which, by depreciating everything irrational, precipitated the function of the irrational into the unconscious. But once this function finds itself in the unconscious, it works unceasing havoc, like an incurable disease whose focus cannot be eradicated because it is invisible. Individual and nation alike are then compelled to live the irrational in their own lives, even devoting their loftiest ideals and their best wits to expressing its madness in the most perfect form. We see the same thing in miniature in our patient, who fled from a course of life that seemed to her irrational—Mrs. X—only to act it out in pathological form, and with the greatest sacrifices, in her relations with her friend.

[151] There is nothing for it but to recognize the irrational as a necessary, because ever-present, psychological function, and to take its contents not as concrete realities—that would be a regression!—but as psychic realities, real because they *work*. The collective unconscious, being the repository of man's experience and at the same time the prior condition of this experience, is an image of the world which has taken aeons to form. In this image certain features, the archetypes or dominants, have crystallized out in the course of time. They are the ruling powers, the gods, images of the dominant laws and principles, and of typical, regularly occurring events in the soul's cycle of experience.[3] In so far as these images are more or less faithful replicas of psychic events, their archetypes, that is, their general characteristics which have been emphasized through the accumulation of similar experiences, also correspond to certain general characteristics of the physical world. Archetypal images can therefore be taken metaphorically, as intuitive concepts for physical phenomena. For instance, *aether*, the primordial breath or soul-substance, is a concept found all over the world, and *energy*, or magical power, is an intuitive idea that is equally widespread.

[152] On account of their affinity with physical phenomena,[4] the archetypes usually appear in projection; and, because projections are unconscious, they appear on persons in the immediate environment, mostly in the form of abnormal over- or undervaluations which provoke misunderstandings, quarrels, fanaticisms, and follies of every description. Thus we say, "He makes a god of so-and-so," or, "So-and-so is Mr. X's *bête noire.*" In this way, too, there grow up modern myth-formations, i.e., fantastic rumours, suspicions, prejudices. The archetypes are therefore exceedingly important things with a powerful effect, meriting our closest attention. They must not be suppressed out of hand, but must be very carefully weighed and considered, if only because of the danger of psychic infection they carry with them. Since they usually occur as projections, and since these only attach themselves where there is a suitable hook, their evaluation and assessment is no light matter. Thus, when somebody projects the devil upon his neighbour, he does so because this person has something about him which makes the attachment of such an image possible. But this is not to say that the man

is on that account a devil; on the contrary, he may be a particularly good fellow, but antipathetic to the maker of the projection, so that a "devilish" (i.e., *dividing*) effect arises between them. Nor need the projector necessarily be a devil, although he has to recognize that he has something just as devilish in himself, and has only stumbled upon it by projecting it. But that does not make him a devil; indeed he may be just as decent as the other man. The appearance of the devil in such a case simply means that the two people are at present incompatible: for which reason the unconscious forces them apart and keeps them away from each other. The devil is a variant of the "shadow" archetype, i.e., of the dangerous aspect of the unrecognized dark half of the personality.

[153] One of the archetypes that is almost invariably met with in the projection of unconscious collective contents is the "magic demon" with mysterious powers. A good example of this is Gustav Meyrink's *Golem*, also the Tibetan wizard in the same author's *Fledermäuse*, who unleashes world war by magic. Naturally Meyrink learned nothing of this from me; he brought it independently out of his unconscious by clothing in words and imagery a feeling not unlike the one which my patient had projected upon me. The magician type also figures in *Zarathustra*, while in *Faust* he is the actual hero.

[154] The image of this demon forms one of the lowest and most ancient stages in the conception of God. It is the type of primitive tribal sorcerer or medicine-man, a peculiarly gifted personality endowed with magical power.[5] This figure often appears as dark-skinned and of mongoloid type, and then it represents a negative and possibly dangerous aspect. Sometimes it can hardly be distinguished, if at all, from the shadow; but the more the magical note predominates, the easier it is to make the distinction, and this is not without relevance in so far as the demon can also have a very positive aspect as the "wise old man." [6]

[155] The recognition of the archetypes takes us a long step forwards. The magical or daemonic effect emanating from our neighbour disappears when the mysterious feeling is traced back to a definite entity in the collective unconscious. But now we have an entirely new task before us: the question of how the ego is to come to terms with this psychological

non-ego. Can we rest content with establishing the real existence of the archetypes, and simply let things take care of themselves?

[156] That would be to create a permanent state of dissociation, a split between the individual and the collective psyche. On the one side we should have the differentiated modern ego, and on the other a sort of negroid culture, a very primitive state of affairs. We should have, in fact, what actually exists—a veneer of civilization over a dark-skinned brute; and the cleavage would be clearly demonstrated before our eyes. But such a dissociation requires immediate synthesis and the development of what has remained undeveloped. There must be a union of the two parts; for, failing that, there is no doubt how the matter would be decided: the primitive man would inevitably lapse back into repression. But that union is possible only where a still valid and therefore living religion exists, which allows the primitive man adequate means of expression through a richly developed symbolism. In other words, in its dogmas and rites, this religion must possess a mode of thinking and acting that harks back to the most primitive level. Such is the case in Catholicism, and this is its special advantage as well as its greatest danger.

[157] Before we go into this new question of a possible union, let us return to the dream from which we started. This whole discussion has given us a wider understanding of the dream, and particularly of one essential part of it—the feeling of fear. This fear is a primitive dread of the contents of the collective unconscious. As we have seen, the patient identifies herself with Mrs. X, thereby showing that she also has some relation to the mysterious artist. It proved that the doctor was identified with the artist, and further we saw that on the subjective level I became an image for the figure of the magician in the collective unconscious.

[158] All this is covered in the dream by the symbol of the crab, which walks backwards. The crab is the living content of the unconscious, and it cannot be exhausted or made ineffective by analysis on the objective level. We can, however, separate the mythological or collective psychic contents from the objects of consciousness, and consolidate them as psychological realities outside the individual psyche. Through the act of cognition we “posit” the reality of the archetypes, or, more precisely, we

postulate the psychic existence of such contents on a cognitive basis. It must emphatically be stated that it is not just a question of cognitive contents, but of transubjective, largely autonomous psychic systems which on that account are only very conditionally under the control of the conscious mind and for the most part escape it altogether.

[159] So long as the collective unconscious and the individual psyche are coupled together without being differentiated, no progress can be made; or, to speak in terms of the dream, the boundary cannot be crossed. If, despite that, the dreamer makes ready to cross the border-line, the unconscious becomes activated, seizes her, and holds her fast. The dream and its material characterize the collective unconscious partly as a lower animal that lives hidden in the depths of the water, and partly as a dangerous disease that can be cured only by a timely operation. To what extent this characterization is apt has already been seen. As we have said, the animal symbol points specifically to the extra-human, the transpersonal; for the contents of the collective unconscious are not only the residues of archaic, specifically human modes of functioning, but also the residues of functions from man's animal ancestry, whose duration in time was infinitely greater than the relatively brief epoch of specifically human existence. These residues, or "engrams," as Semon calls them,[7] are extremely liable, when activated, not only to retard the pace of development, but actually to force it into regression until the store of energy that activated the unconscious has been used up. But the energy becomes serviceable again by being brought into play through man's conscious attitude towards the collective unconscious. The religions have established this cycle of energy in a concrete way by means of ritual communion with the gods. This method, however, is too much at variance with our intellectual morality, and has moreover been too radically supplanted by Christianity, for us to accept it as an ideal, or even possible, solution of the problem. If on the other hand we take the figures of the unconscious as collective psychic phenomena or functions, this hypothesis in no way violates our intellectual conscience. It offers a rationally acceptable solution, and at the same time a possible method of effecting a settlement with the activated residues of our racial history. This settlement makes the crossing of previous boundaries altogether

feasible and is therefore appropriately called the *transcendent function*. It is synonymous with progressive development towards a new attitude.

[160] The parallel with the hero-myth is very striking. More often than not the typical struggle of the hero with the monster (the unconscious content) takes place beside the water, perhaps at a ford. This is the case particularly in the Redskin myths with which Longfellow's *Hiawatha* has made us familiar. In the decisive battle the hero is, like Jonah, invariably swallowed by the monster, as Frobenius has shown[8] with a wealth of detail. But, once inside the monster, the hero begins to settle accounts with the creature in his own way, while it swims eastwards with him towards the rising sun. He cuts off a portion of the viscera, the heart for instance, or some essential organ by virtue of which the monster lives (i.e., the valuable energy that activates the unconscious). Thus he kills the monster, which then drifts to land, where the hero, new-born through the transcendent function (the "night sea journey," as Frobenius calls it), steps forth, sometimes in the company of all those whom the monster has previously devoured. In this manner the normal state of things is restored, since the unconscious, robbed of its energy, no longer occupies the dominant position. Thus the myth graphically describes the problem which also engages our patient.[9]

[161] I must now emphasize the not unimportant fact, which must also have struck the reader, that in the dream the collective unconscious appears under a very negative aspect, as something dangerous and harmful. This is because the patient has a richly developed, indeed positively luxuriant, fantasy life, possibly due to her literary gift. Her powers of fantasy are a symptom of illness in that she revels in them far too much and allows real life to slip by. Any more mythology would be exceedingly dangerous for her, because a great chunk of external life stands before her, still unlived. She has too little hold upon life to risk all at once a complete reversal of standpoint. The collective unconscious has fallen upon her and threatens to bear her away from a reality whose demands have not been adequately met. Accordingly, as the dream indicates, the collective unconscious had to be presented to her as something dangerous, otherwise she would have been only too ready to make it a refuge from the demands of life.

[162] In judging a dream we must observe very carefully *how* the figures are introduced. For example, the crab that personifies the unconscious is negative in that it "walks backwards" and, in addition, holds back the dreamer at the critical moment. Misled by the so-called dream mechanisms of Freudian manufacture, such as displacement, inversion, etc., people have imagined they could make themselves independent of the "façade" of the dream by supposing that the true dream-thoughts lay hidden behind it. As against this I have long maintained that we have no right to accuse the dream of, so to speak, a deliberate manoeuvre calculated to deceive. Nature is often obscure or impenetrable, but she is not, like man, deceitful. We must therefore take it that the dream is just what it pretends to be, neither more nor less.[10] If it shows something in a negative light, there is no reason for assuming that it is meant positively. The archetypal "danger at the ford" is so patent that one is almost tempted to take the dream as a warning. But I must discountenance all such anthropomorphic interpretations. The dream itself wants nothing; it is a self-evident content, a plain natural fact like the sugar in the blood of a diabetic or the fever in a patient with typhus. It is only we who, if we are clever and can unriddle the signs of nature, turn it into a warning.

[163] But—a warning of what? Of the obvious danger that the unconscious might overpower the dreamer at the moment of crossing. And what would being overpowered mean? An invasion by the unconscious may very easily occur at moments of critical change and decision. The bank from which she approaches the river is her situation as known to us so far. This situation has precipitated her into a neurotic deadlock, as though she had come up against an impassable obstacle. The obstacle is represented by the dream as a perfectly passable river. So things do not seem to be very serious. But in the river, most unexpectedly, the crab is hiding, and this represents the real danger on account of which the river is, or appears to be, impassable. For had she only known beforehand that the dangerous crab was lurking at this particular spot, she might perhaps have ventured to cross somewhere else, or have taken other precautions. In the dreamer's present situation it is eminently desirable that a crossing should be made. The crossing means in the first place a carrying over—a transference—of the earlier situation to the doctor. That is the new

feature. Were it not for the unpredictable unconscious, this would not involve such a great risk. But we saw that through the transference the activity of archetypal figures is liable to be let loose, a fact we had not banked on. We have reckoned without our host, for we “forgot the gods.”

[164] Our dreamer is not a religious person, she is “modern.” She has forgotten the religion she was once taught, she knows nothing of those moments when the gods intervene, or rather she does not know that there are age-old situations whose nature it is to stir us to the depths. One such situation is love, its passion and its danger. Love may summon forth unsuspected powers in the soul for which we had better be prepared. “Religio” in the sense of a “careful consideration” of unknown dangers and agencies—that is what is in question here. From a simple projection love may come upon her with all its fatal power, some dazzling illusion that might throw her life off its natural course. Is it a good thing or a bad, God or devil, that will befall the dreamer? Without knowing which, she feels that she is already in its clutches. And who can say whether she will be able to cope with this complication! Until now she had managed to circumvent such an eventuality, but now it threatens to seize hold of her. That is a risk we should avoid, or, if we must take the plunge, we need a good deal of “trust in God” or “faith” in a successful issue. Thus, unsought and unexpected, the question creeps in of one’s religious attitude to fate.

[165] The dream as it stands leaves the dreamer no alternative at present but to withdraw her foot carefully; for to go on would be fatal. She cannot yet leave the neurotic situation, because the dream gives her no positive indication of any help from the unconscious. The unconscious powers are still inauspicious and obviously expect more work and a deeper insight from the dreamer before she can really venture across.

[166] I certainly do not wish, by this negative example, to convey the impression that the unconscious plays a negative role in all cases. I will therefore add two further dreams, this time of a young man, which illuminate another and more favourable side of the unconscious. I do this the more readily since the solution of the problem of opposites can be

reached only irrationally, by way of contributions from the unconscious, i.e., from dreams.

[167] First I must acquaint the reader in some measure with the personality of the dreamer, for without this acquaintance he will hardly be able to transport himself into the peculiar atmosphere of the dreams. There are dreams that are pure poems and can therefore only be understood through the mood they convey as a whole. The dreamer is a youth of a little over twenty, still entirely boyish in appearance. There is even a touch of girlishness in his looks and manner of expression. The latter betrays a very good education and upbringing. He is intelligent, with pronounced intellectual and aesthetic interests. His aestheticism is very much in evidence: we are made instantly aware of his good taste and his fine appreciation of all forms of art. His feelings are tender and soft, given to the enthusiasms typical of puberty, but somewhat effeminate. There is no trace of adolescent callowness. Undoubtedly he is too young for his age, a clear case of retarded development. It is quite in keeping with this that he should have come to me on account of his homosexuality. The night preceding his first visit he had the following dream: *“I am in a lofty cathedral filled with mysterious twilight. They tell me that it is the cathedral at Lourdes. In the centre there is a deep dark well, into which I have to descend.”*

[168] The dream is clearly a coherent expression of mood. The dreamer’s comments are as follows: “Lourdes is the mystic fount of healing. Naturally I remembered yesterday that I was going to you for treatment and was in search of a cure. There is said to be a well like this at Lourdes. It would be rather unpleasant to go down into this water. The well in the church was ever so deep.”

[169] Now what does dream tell us? On the surface it seems clear enough, and we might be content to take it as a kind of poetic formulation of the mood of the day before. But we should never stop there, for experience shows that dreams are much deeper and more significant. One might almost suppose that the dreamer came to the doctor in a highly poetic mood and was entering upon the treatment as though it were a sacred religious act to be performed in the mystical half-light of some awe-

inspiring sanctuary. But this does not fit the facts at all. The patient merely came to the doctor to be treated for that unpleasant matter, his homosexuality, which is anything but poetic. At any rate we cannot see from the mood of the preceding day why he should dream so poetically, if we were to accept so direct a causation for the origin of the dream. But we might conjecture, perhaps, that the dream was stimulated precisely by the dreamer's impressions of that highly unpoetical affair which impelled him to come to me for treatment. We might even suppose that he dreamed in such an intensely poetical manner just because of the unpoeticalness of his mood on the day before, much as a man who has fasted by day dreams of delicious meals at night. It cannot be denied that the thought of treatment, of the cure and its unpleasant procedure, recurs in the dream, but poetically transfigured, in a guise which meets most effectively the lively aesthetic and emotional needs of the dreamer. He will be drawn on irresistibly by this inviting picture, despite the fact that the well is dark, deep, and cold. Something of the dream-mood will persist after sleep and will even linger on into the morning of the day on which he has to submit to the unpleasant and unpoetical duty of visiting me. Perhaps the drab reality will be touched by the bright, golden afterglow of the dream feeling.

[170] Is this, perhaps, the purpose of the dream? That would not be impossible, for in my experience the vast majority of dreams are compensatory.[11] They always stress the other side in order to maintain the psychic equilibrium. But the compensation of mood is not the only purpose of the dream picture. The dream also provides a *mental corrective*. The patient had of course nothing like an adequate understanding of the treatment to which he was about to submit himself. But the dream gives him a picture which describes in poetic metaphors the nature of the treatment before him. This becomes immediately apparent if we follow up his associations and comments on the image of the cathedral: “Cathedral,” he says, “makes me think of Cologne Cathedral. Even as a child I was fascinated by it. I remember my mother telling me of it for the first time, and I also remember how, whenever I saw a village church, I used to ask if that were Cologne Cathedral. I wanted to be a priest in a cathedral like that.”

[171] In these associations the patient is describing a very important experience of his childhood. As in nearly all cases of this kind, he had a particularly close tie with his mother. By this we are not to understand a particularly good or intense *conscious* relationship, but something in the nature of a secret, subterranean tie which expresses itself consciously, perhaps, only in the retarded development of character, i.e., in a relative infantilism. The developing personality naturally veers away from such an unconscious infantile bond; for nothing is more obstructive to development than persistence in an unconscious—we could also say, a psychically embryonic—state. For this reason instinct seizes on the first opportunity to replace the mother by another object. If it is to be a real mother-substitute, this object must be, in some sense, an analogy of her. This is entirely the case with our patient. The intensity with which his childish fantasy seized upon the symbol of Cologne Cathedral corresponds to the strength of his unconscious need to find a substitute for the mother. The unconscious need is heightened still further in a case where the infantile bond could become harmful. Hence the enthusiasm with which his childish imagination took up the idea of the Church; for the Church is, in the fullest sense, a mother. We speak not only of Mother Church, but even of the Church's womb. In the ceremony known as the *benedictio fontis*, the baptismal font is apostrophized as "immaculatus divini fontis uterus"—the immaculate womb of the divine font. We naturally think that a man must have known this meaning consciously before it could get to work in his fantasy, and that an unknowing child could not possibly be affected by these significations. Such analogies certainly do not work by way of the conscious mind, but in quite another manner.

[172] The Church represents a higher spiritual substitute for the purely natural, or "carnal," tie to the parents. Consequently it frees the individual from an unconscious natural relationship which, strictly speaking, is not a relationship at all but simply a condition of inchoate, unconscious identity. This, just because it is unconscious, possesses a tremendous inertia and offers the utmost resistance to any kind of spiritual development. It would be hard to say what the essential difference is between this state and the soul of an animal. Now, it is by no

means the special prerogative of the Christian Church to try to make it possible for the individual to detach himself from his original, animal-like condition; the Church is simply the latest, and specifically Western, form of an instinctive striving that is probably as old as mankind itself. It is a striving that can be found in the most varied forms among all primitive peoples who are in any way developed and have not yet become degenerate: I mean the institution or rite of initiation into manhood. When he has reached puberty the young man is conducted to the “men’s house,” or some other place of consecration, where he is systematically alienated from his family. At the same time he is initiated into the religious mysteries, and in this way is ushered not only into a wholly new set of relationships, but, as a renewed and changed personality, into a new world, like one reborn (*quasimodo genitus*). The initiation is often attended by all kinds of tortures, sometimes including such things as circumcision and the like. These practices are undoubtedly very old. They have almost become instinctive mechanisms, with the result that they continue to repeat themselves without external compulsion, as in the “baptisms” of German students or the even more wildly extravagant initiations in American students’ fraternities. They are engraved on the unconscious as a primordial image.

[173] When his mother told him as a little boy about Cologne Cathedral, this primordial image was stirred and awakened to life. But there was no priestly instructor to develop it further, so the child remained in his mother’s hands. Yet the longing for a man’s leadership continued to grow in the boy, taking the form of homosexual leanings—a faulty development that might never have come about had a man been there to educate his childish fantasies. The deviation towards homosexuality has, to be sure, numerous historical precedents. In ancient Greece, as also in certain primitive communities, homosexuality and education were practically synonymous. Viewed in this light, the homosexuality of adolescence is only a misunderstanding of the otherwise very appropriate need for masculine guidance. One might also say that the fear of incest which is based on the mother-complex extends to women in general; but in my opinion an immature man is quite right to be afraid of women, because his relations with women are generally disastrous.

[174] According to the dream, then, what the initiation of the treatment signifies for the patient is the fulfilment of the true meaning of his homosexuality, i.e., his entry into the world of the adult man. All that we have been forced to discuss here in such tedious and long-winded detail, in order to understand it properly, the dream has condensed into a few vivid metaphors, thus creating a picture which works far more effectively on the imagination, feeling, and understanding of the dreamer than any learned discourse. Consequently the patient was better and more intelligently prepared for the treatment than if he had been overwhelmed with medical and pedagogical maxims. (For this reason I regard dreams not only as a valuable source of information but as an extraordinarily effective instrument of education.)

[175] We come now to the second dream. I must explain in advance that in the first consultation I did not refer in any way to the dream we have just been discussing. It was not even mentioned. Nor was there a word said that was even remotely connected with the foregoing. This is the second dream: *"I am in a great Gothic cathedral. At the altar stands a priest. I stand before him with my friend, holding in my hand a little Japanese ivory figure, with the feeling that it is going to be baptized. Suddenly an elderly woman appears, takes the fraternity ring from my friend's finger, and puts it on her own. My friend is afraid that this may bind him in some way. But at the same moment there is a sound of wonderful organ music."*

[176] Here I will only bring out briefly those points which continue and supplement the dream of the preceding day. The second dream is unmistakably connected with the first: once more the dreamer is in church, that is, in the state of initiation into manhood. But a new figure has been added: the priest, whose absence in the previous situation we have already noted. The dream therefore confirms that the unconscious meaning of his homosexuality has been fulfilled and that a further development can be started. The actual initiation ceremony, namely the baptism, may now begin. The dream symbolism corroborates what I said before, namely that it is not the prerogative of the Christian Church to bring about such transitions and psychic transformations, but that behind

the Church there is a living primordial image which in certain conditions is capable of enforcing them.

[177] What, according to the dream, is to be baptized is a little Japanese ivory figure. The patient says of this: “It was a tiny, grotesque little manikin that reminded me of the male organ. It was certainly odd that this member was to be baptized. But after all, with the Jews circumcision is a sort of baptism. That must be a reference to my homosexuality, because the friend standing with me before the altar is the one with whom I have sexual relations. We belong to the same fraternity. The fraternity ring obviously stands for our relationship.”

[178] We know that in common usage the ring is the token of a bond or relationship, as for example the wedding ring. We can therefore safely take the fraternity ring in this case as symbolizing the homosexual relationship, and the fact that the dreamer appears together with his friend points in the same direction.

[179] The complaint to be remedied is homosexuality. The dreamer is to be led out of this relatively childish condition and initiated into the adult state by means of a kind of circumcision ceremony under the supervision of a priest. These ideas correspond exactly to my analysis of the previous dream. Thus far the development has proceeded logically and consistently with the aid of archetypal images. But now a disturbing factor comes on the scene. An elderly woman suddenly takes possession of the fraternity ring; in other words, she draws to herself what has hitherto been a homosexual relationship, thus causing the dreamer to fear that he is getting involved in a new relationship with obligations of its own. Since the ring is now on the hand of a woman, a marriage of sorts has been contracted, i.e., the homosexual relationship seems to have passed over into a heterosexual one, but a heterosexual relationship of a peculiar kind since it concerns an elderly woman. “She is a friend of my mother’s,” says the patient. “I am very fond of her, in fact she is like a mother to me.”

[180] From this remark we can see what has happened in the dream: as a result of the initiation the homosexual tie has been cut and a heterosexual relationship substituted for it, a platonic friendship with a motherly type

of woman. In spite of her resemblance to his mother, this woman is not his mother any longer, so the relationship with her signifies a step beyond the mother towards masculinity, and hence a partial conquest of his adolescent homosexuality.

[181] The fear of the new tie can easily be understood, firstly as fear which the woman's resemblance to his mother might naturally arouse—it might be that the dissolution of the homosexual tie has led to a complete regression to the mother—and secondly as fear of the new and unknown factors in the adult heterosexual state with its possible obligations, such as marriage, etc. That we are in fact concerned here not with a regression but with a progression seems to be confirmed by the music that now peals forth. The patient is musical and especially susceptible to solemn organ music. Therefore music signifies for him a very positive feeling, so in this case it forms a harmonious conclusion to the dream, which in its turn is well qualified to leave behind a beautiful, holy feeling for the following morning.

[182] If you consider the fact that up to now the patient had seen me for only one consultation, in which little more was discussed than a general anamnesis, you will doubtless agree with me when I say that both dreams make astonishing anticipations. They show the patient's situation in a highly remarkable light, and one that is very strange to the conscious mind, while at the same time lending to the banal medical situation an aspect that is uniquely attuned to the mental peculiarities of the dreamer, and thus capable of stringing his aesthetic, intellectual, and religious interests to concert pitch. No better conditions for treatment could possibly be imagined. One is almost persuaded, from the meaning of these dreams, that the patient entered upon the treatment with the utmost readiness and hopefulness, quite prepared to cast aside his boyishness and become a man. In reality, however, this was not the case at all. Consciously he was full of hesitation and resistance; moreover, as the treatment progressed, he constantly showed himself antagonistic and difficult, ever ready to slip back into his previous infantilism. Consequently the dreams stand in strict contrast to his conscious behaviour. They move along a progressive line and take the part of the educator. They clearly reveal their special function. This function I have

called compensation. The unconscious progressiveness and the conscious regressiveness together form a pair of opposites which, as it were, keeps the scales balanced. The influence of the educator tilts the balance in favour of progression.

[183] In the case of this young man the images of the collective unconscious play an entirely positive role, which comes from the fact that he has no really dangerous tendency to fall back on a fantasy-substitute for reality and to entrench himself behind it against life. The effect of these unconscious images has something fateful about it. Perhaps—who knows?—these eternal images are what men mean by fate.

[184] The archetypes are of course always at work everywhere. But practical treatment, especially in the case of young people, does not always require the patient to come to close quarters with them. At the climacteric, on the other hand, it is necessary to give special attention to the images of the collective unconscious, because they are the source from which hints may be drawn for the solution of the problem of opposites. From the conscious elaboration of this material the transcendent function reveals itself as a mode of apprehension mediated by the archetypes and capable of uniting the opposites. By "apprehension" I do not mean simply intellectual understanding, but understanding through experience. An archetype, as we have said, is a dynamic image, a fragment of the objective psyche, which can be truly understood only if experienced as an autonomous entity.

[185] A general account of this process, which may extend over a long period of time, would be pointless—even if such a description were possible—because it takes the greatest imaginable variety of forms in different individuals. The only common factor is the emergence of certain definite archetypes. I would mention in particular the shadow, the animal, the wise old man, the anima, the animus, the mother, the child, besides an indefinite number of archetypes representative of situations. A special position must be accorded to those archetypes which stand for the goal of the developmental process. The reader will find the necessary information on this point in my *Psychology and Alchemy*, as well as in

“Psychology and Religion” and the volume written in collaboration with Richard Wilhelm, *The Secret of the Golden Flower*.

[186] The transcendent function does not proceed without aim and purpose, but leads to the revelation of the essential man. It is in the first place a purely natural process, which may in some cases pursue its course without the knowledge or assistance of the individual, and can sometimes forcibly accomplish itself in the face of opposition. The meaning and purpose of the process is the realization, in all its aspects, of the personality originally hidden away in the embryonic germ-plasm; the production and unfolding of the original, potential wholeness. The symbols used by the unconscious to this end are the same as those which mankind has always used to express wholeness, completeness, and perfection: symbols, as a rule, of the quaternity and the circle. For these reasons I have termed this the *individuation process*.

[187] This natural process of individuation served me both as a model and guiding principle for my method of treatment. The unconscious compensation of a neurotic conscious attitude contains all the elements that could effectively and healthily correct the one-sidedness of the conscious mind if these elements were made conscious, i.e., were understood and integrated into it as realities. It is only very seldom that a dream achieves such intensity that the shock is enough to throw the conscious mind out of the saddle. As a rule dreams are too feeble and too unintelligible to exercise a radical influence on consciousness. In consequence, the compensation runs underground in the unconscious and has no immediate effect. But it has some effect all the same; only, it is indirect in so far as the unconscious opposition will, if consistently ignored, arrange symptoms and situations which irresistibly thwart our conscious intentions. The aim of the treatment is therefore to understand and to appreciate, so far as practicable, dreams and all other manifestations of the unconscious, firstly in order to prevent the formation of an unconscious opposition which becomes more dangerous as time goes on, and secondly in order to make the fullest possible use of the healing factor of compensation.

[188] These proceedings naturally rest on the assumption that a man is capable of attaining wholeness, in other words, that he has it in him to be healthy. I mention this assumption because there are without doubt individuals who are not at bottom altogether viable and who rapidly perish if, for any reason, they come face to face with their wholeness. Even if this does not happen, they merely lead a miserable existence for the rest of their days as fragments or partial personalities, shored up by social or psychic parasitism. Such people are, very much to the misfortune of others, more often than not inveterate humbugs who cover up their deadly emptiness under a fine outward show. It would be a hopeless undertaking to try to treat them with the method here discussed. The only thing that "helps" here is to keep up the show, for the truth would be unendurable or useless.

[189] When a case is treated in the manner indicated, the initiative lies with the unconscious, but all criticism, choice, and decision lie with the conscious mind. If the decision is right, it will be confirmed by dreams indicative of progress; in the other event correction will follow from the side of the unconscious. The course of treatment is thus rather like a running conversation with the unconscious. That the correct interpretation of dreams is of paramount importance should be sufficiently clear from what has been said. But when, you may rightly ask, is one sure of the interpretation? Is there anything approaching a reliable criterion for the correctness of an interpretation? This question, happily, can be answered in the affirmative. If we have made a wrong interpretation, or if it is somehow incomplete, we may be able to see it from the next dream. Thus, for example, the earlier motif will be repeated in clearer form, or our interpretation may be deflated by some ironic paraphrase, or it may meet with straightforward violent opposition. Now supposing that these interpretations also go astray, the general inconclusiveness and futility of our procedure will make itself felt soon enough in the bleakness, sterility, and pointlessness of the undertaking, so that doctor and patient alike will be suffocated either by boredom or by doubt. Just as the reward of a correct interpretation is an uprush of life, so an incorrect one dooms them to deadlock, resistance, doubt, and mutual desiccation. Stoppages can of course also arise from the resistance of the

patient, as for instance from an obstinate clinging to outworn illusions or to infantile demands. Sometimes, too, the doctor lacks the necessary understanding, as once happened to me in the case of a very intelligent patient, a woman who, for various reasons, looked to me rather a rum customer. After a satisfactory beginning I had the feeling more and more that somehow my interpretation of her dreams was not quite hitting the mark. As I was unable to lay my finger on the source of error, I tried to talk myself out of my doubts. But during the consulting hours I became aware of the growing dullness of our conversation, with a steadily mounting sense of excruciating futility. Finally I resolved to speak about it at the next opportunity to my patient, who, it seemed to me, had not failed to notice this fact. The next night I had the following dream: *I was walking along a country road through a valley lit by the evening sun. To my right, standing on a steep hill, was a castle, and on the topmost tower, on a kind of balustrade, sat a woman. In order to see her properly I had to bend my head back so far that I got a crick in the neck. Even in my dream I recognized the woman as my patient.*[12]

[190] From this I concluded that if I had to look up so much in the dream, I must obviously have looked down on my patient in reality. When I told her the dream together with the interpretation, a complete change came over the situation at once and the treatment shot ahead beyond all expectation. Experiences of this kind, although paid for very dearly, lead to an unshakable confidence in the reliability of dream compensations.

[191] To the manifold problems involved in this method of treatment all my labours and researches have been devoted for the last ten years. But since, in this present account of analytical psychology, I am concerned only to provide a general survey, a more detailed exposition of the widely ramified scientific, philosophical, and religious implications must remain in abeyance. For this I shall have to refer my reader to the literature I have mentioned.

VIII

GENERAL REMARKS ON THE THERAPEUTIC APPROACH TO THE UNCONSCIOUS

[192] We are greatly mistaken if we think that the unconscious is something harmless that could be made into an object of entertainment, a parlour game. Certainly the unconscious is not always and in all circumstances dangerous, but as soon as a neurosis is present it is a sign of a special heaping up of energy in the unconscious, like a charge that may explode. Here caution is indicated. One never knows what one may be releasing when one begins to analyse dreams. Something deeply buried and invisible may thereby be set in motion, very probably something that would have come to light sooner or later anyway—but again, it might not. It is as if one were digging an artesian well and ran the risk of stumbling on a volcano. When neurotic symptoms are present one must proceed very carefully. But the neurotic cases are not by a long way the most dangerous. There are cases of people, apparently quite normal, showing no especial neurotic symptoms—they may themselves be doctors and educators—priding themselves on their normality, models of good upbringing, with exceptionally normal views and habits of life, yet whose normality is an artificial compensation for a latent psychosis. They themselves suspect nothing of their condition. Their suspicions may perhaps find only an indirect expression in the fact that they are particularly interested in psychology and psychiatry, and are attracted to these things as a moth to the light. But since the analytical technique activates the unconscious and brings it to the fore, in these cases the healthful compensation is destroyed, the unconscious breaks forth in the form of uncontrollable fantasies and overwrought states which may, in certain circumstances, lead to mental disorder and possibly even to suicide. Unfortunately these latent psychoses are not so very uncommon.

[193] The danger of stumbling on cases like these threatens everybody who concerns himself with the analysis of the unconscious, even if he be

equipped with a large measure of experience and skill. Through clumsiness, mistaken ideas, arbitrary interpretations, and so forth, he may even wreck cases that need not necessarily have turned out badly. This is by no means peculiar to the analysis of the unconscious, but is the penalty of all medical intervention that miscarries. The assertion that analysis drives people mad is obviously just as stupid as the vulgar notion that the psychiatrist is bound to go mad because he deals with lunatics.

[194] Apart from the risks of treatment, the unconscious may also turn dangerous on its own account. One of the commonest forms of danger is the instigating of accidents. A very large number of accidents of every description, more than people would ever guess, are of psychic causation, ranging from trivial mishaps like stumbling, banging oneself, burning one's fingers, etc., to car smashes and catastrophes in the mountains: all these may be psychically caused and may sometimes have been preparing for weeks or even months. I have examined many cases of this kind, and often I could point to dreams which showed signs of a tendency to self-injury weeks beforehand. All those accidents that happen from so-called carelessness should be examined for such determinants. We know of course that when for one reason or another we feel out of sorts, we are liable to commit not only the minor follies, but something really dangerous which, given the right psychological moment, may well put an end to our lives. The popular saying, "Old so-and-so chose the right time to die," comes from a sure sense of the secret psychological cause in question. In the same way, bodily ills can be brought into being or protracted. A wrong functioning of the psyche can do much to injure the body, just as conversely a bodily illness can affect the psyche; for psyche and body are not separate entities but one and the same life. Thus there is seldom a bodily ailment that does not show psychic complications, even if it is not psychically caused.

[195] It would be wrong, however, to dwell only on the unfavourable side of the unconscious. In all ordinary cases the unconscious is unfavourable or dangerous only because we are not at one with it and therefore in opposition to it. A negative attitude to the unconscious, or its splitting off, is detrimental in so far as the dynamics of the unconscious are

identical with instinctual energy.[1] Disalliance with the unconscious is synonymous with loss of instinct and rootlessness.

[196] If we can successfully develop that function which I have called transcendent, the disharmony ceases and we can then enjoy the favourable side of the unconscious. The unconscious then gives us all the encouragement and help that a bountiful nature can shower upon man. It holds possibilities which are locked away from the conscious mind, for it has at its disposal all subliminal psychic contents, all those things which have been forgotten or overlooked, as well as the wisdom and experience of uncounted centuries which are laid down in its archetypal organs.

[197] The unconscious is continually active, combining its material in ways which serve the future. It produces, no less than the conscious mind, subliminal combinations that are prospective; only, they are markedly superior to the conscious combinations both in refinement and in scope. For these reasons the unconscious could serve man as a unique guide, provided that he can resist the lure of being misguided.

[198] In practice the treatment is adjusted according to the therapeutic results obtained. Results may appear at almost any stage of the treatment, quite irrespective of the severity or duration of the illness. And conversely, the treatment of a severe case may last a very long time without reaching, or needing to reach, the higher stages of development. There are a fair number who, even after therapeutic results have been obtained, go through further stages of transformation for the sake of their own development. So it is not true that one must be a serious case in order to go through the whole process. At all events only those individuals can attain to a higher degree of consciousness who are destined to it and called to it from the beginning, i.e., who have a capacity and an urge for higher differentiation. In this matter men differ extremely, as also do the animal species, among whom there are conservatives and progressives. Nature is aristocratic, but not in the sense of having reserved the possibility of differentiation exclusively for species high in the scale. So too with the possiblity of psychic development: it is not reserved for specially gifted individuals. In other words, in order to undergo a far-reaching psychological development,

neither outstanding intelligence nor any other talent is necessary, since in this development moral qualities can make up for intellectual shortcomings. It must not on any account be imagined that the treatment consists in grafting upon people's minds general formulas and complicated doctrines. There is no question of that. Each can take what he needs, in his own way and in his own language. What I have presented here is an intellectual formulation; it is not the sort of thing discussed in the general run of practical work. The little snippets of case histories I have woven into my theme give a rough idea of what happens in practice.

[199] If, after all that has been related in the foregoing chapters, the reader should still not feel capable of forming a clear picture of the theory and practice of modern medical psychology, that would not surprise me so very much. I would, on the contrary, be inclined to blame my faulty gift of exposition, since I can hardly hope to give a concrete picture of that wide field of thought and experience which is the domain of medical psychology. On paper the interpretation of a dream may look arbitrary, muddled, and spurious; but the same thing in reality can be a little drama of unsurpassed realism. To *experience* a dream and its interpretation is very different from having a tepid rehash set before you on paper. Everything about this psychology is, in the deepest sense, experience; the entire theory, even where it puts on the most abstract airs, is the direct outcome of something experienced. If I accuse the Freudian sexual theory of one-sidedness, that does not mean that it rests on rootless speculation; it too is a faithful picture of real facts which force themselves upon our practical observation. And if the inferences made from them proliferate into a one-sided theory, that only goes to show with what powers of persuasion, both objective and subjective, the facts in question themselves bring to bear. The individual investigator can hardly be asked to rise superior to his own deepest impressions and their abstract formulation; for the acquisition of such impressions as well as their conceptual mastery is in itself the labour of a lifetime. For my part, I had the great advantage over both Freud and Adler of not having grown up within the narrow confines of a psychology of the neuroses; rather, I approach them from the side of psychiatry, prepared for modern psychology by Nietzsche, and apart from Freud's views I also had before

my eyes the growth of the views of Adler. In this way I found myself in the thick of the conflict from the very beginning, and was forced to regard not only the existing opinions, but my own as well, as relative, or rather as expressions of a certain psychological type. Just as the Breuer case we have discussed was decisive for Freud, so a decisive experience underlies my own views. Towards the end of my medical training I observed for a long period a case of somnambulism in a young girl. It became the theme of my doctor’s dissertation.[2] For one acquainted with my scientific writings it may not be without interest to compare this forty-year-old study with my later ideas.

[200] Work in this field is pioneer work. I have often made mistakes and had many times to forget what I had learned. But I know and am content to know that as surely as light comes out of darkness, truth is born of error. I have let Guglielmo Ferrero’s *mot* about the “misérable vanité du savant”[3] serve me for a warning, and have therefore neither feared my mistakes nor seriously regretted them. For me, scientific research work was never a milch-cow or a means of prestige, but a struggle, often a bitter one, forced upon me by daily psychological experience of the sick. Hence not everything I bring forth is written out of my head, but much of it comes from the heart also, a fact I would beg the gracious reader not to overlook if, following up the intellectual line of thought, he comes upon certain lacunae that have not been properly filled in. A harmonious flow of exposition can be expected only when one is writing about things which one already knows. But when, urged on by the need to help and to heal, one acts as a path-finder, one must speak also of realities as yet unknown.

CONCLUSION

[201] In conclusion I must ask the reader to forgive me for having ventured to say in these few pages so much that is new and perhaps hard to understand. I expose myself to his critical judgment because I feel it is the duty of one who goes his own way to inform society of what he finds on his voyage of discovery, be it cooling water for the thirsty or the sandy wastes of unfruitful error. The one helps, the other warns. Not the criticism of individual contemporaries will decide the truth or falsity of his discoveries, but future generations. There are things that are not yet true today, perhaps we dare not find them true, but tomorrow they may be. So every man whose fate it is to go his individual way must proceed with hopefulness and watchfulness, ever conscious of his loneliness and its dangers. The peculiarity of the way here described is largely due to the fact that in psychology, which springs from and acts upon real life, we can no longer appeal to the narrowly intellectual, scientific standpoint, but are driven to take account of the standpoint of feeling, and consequently of everything that the psyche actually contains. In practical psychology we are dealing not with any generalized human psyche, but with individual human beings and the multitudinous problems that oppress them. A psychology that satisfies the intellect alone can never be practical, for the totality of the psyche can never be grasped by intellect alone. Whether we will or no, philosophy keeps breaking through, because the psyche seeks an expression that will embrace its total nature.

II

THE RELATIONS BETWEEN THE EGO AND THE UNCONSCIOUS

PREFACE TO THE SECOND EDITION (1935)

This little book is the outcome of a lecture which was originally published in 1916 under the title “La Structure de l’inconscient.” [1] This same lecture later appeared in English under the title “The Conception of the Unconscious” in my *Collected Papers on Analytical Psychology.*[2] I mention these facts because I wish to place it on record that the present essay is not making its first appearance, but is rather the expression of a long-standing endeavour to grasp and—at least in its essential features—to depict the strange character and course of that *drame intérieur*, the transformation process of the unconscious psyche. This idea of the independence of the unconscious, which distinguishes my views so radically from those of Freud, came to me as far back as 1902, when I was engaged in studying the psychic history of a young girl somnambulist.[3] In a lecture given in Zurich [1908] on “The Content of the Psychoses,” I approached this idea from another side. In 1912, I illustrated some of the main points of the process in an individual case and at the same time I indicated the historical and ethnological parallels to these seemingly universal psychic events.[4] In the above-mentioned essay, “La Structure de l’inconscient,” I attempted for the first time to give a comprehensive account of the whole process. It was a mere attempt, of whose inadequacy I was painfully aware. The difficulties presented by the material were so great that I could not hope to do them anything like justice in a single essay. I therefore let it rest at the stage of an “interim report,” with the firm intention of returning to this theme at a later opportunity. Twelve years of further experience enabled me, in 1928, to undertake a thorough revision of my formulations of 1916, and the result of these labours was the little book *Die Beziehungen zwischen dem Ich and dem Unbewussten*. [5] This time I tried to describe chiefly the relation of the ego-consciousness to the unconscious process. Following this intention, I concerned myself more particularly with those phenomena which are to be regarded as the reactive symptoms of the conscious personality to the influences of the unconscious. In this way I tried to effect an indirect approach to the unconscious process itself. These investigations have not yet come to a satisfactory conclusion, for the answer to the crucial problem of the nature and essence of the unconscious process has still to be found. I would not venture upon this exceedingly difficult task without the fullest possible experience. Its solution is reserved for the future.

I trust the reader of this book will bear with me if I beg him to regard it—should he persevere—as an earnest attempt on my part to form an intellectual conception of a new and hitherto unexplored field of experience. It is not concerned with a clever system of thought, but with the formulation of complex psychic experiences which have never yet been the subject of scientific study. Since the psyche is an irrational datum and cannot, in accordance with the old picture, be equated with a more or less divine Reason, it should not surprise us if in the course of psychological experience we come across, with extreme frequency, processes and happenings which run counter to our rational expectations and are therefore rejected by the rationalistic attitude of our conscious mind. Such an attitude is naturally not very skilled at psychological observation because it is in the highest degree unscientific. We must not attempt to tell nature what to do if we want to observe her operations undisturbed.

It is twenty-eight years of psychological and psychiatric experience that I am trying to sum up here, so perhaps my little book may lay some claim to serious consideration. Naturally I could not say everything in this single exposition. The reader will find a development of the last chapter, [with reference to the concept of the self], in my commentary to *The Secret of the Golden Flower*, the book I brought out in collaboration with my friend Richard Wilhelm. I did not wish to omit reference to this publication, because Oriental philosophy has been concerned with these interior psychic processes for many hundreds of years and is therefore, in view of the great need for comparative material, of inestimable value in psychological research.

October 1934

C. G. JUNG

PREFACE TO THE THIRD EDITION (1938)

The new edition is published without changes. Since this work first appeared no new points of view have emerged which might have made revisions desirable. I would like to preserve the character of this little book—an unpretentious introduction to the psychological problems of the process of individuation—and not burden it with copious details that might limit its readability.

April 1938 C. G. JUNG

PART ONE

THE EFFECTS OF THE UNCONSCIOUS UPON CONSCIOUSNESS

I

THE PERSONAL AND THE COLLECTIVE UNCONSCIOUS

[202] In Freud’s view, as most people know, the contents of the unconscious are reducible to infantile tendencies which are repressed because of their incompatible character. Repression is a process that begins in early childhood under the moral influence of the environment and continues throughout life. By means of analysis the repressions are removed and the repressed wishes made conscious.

[203] According to this theory, the unconscious contains only those parts of the personality which could just as well be conscious, and have been suppressed only through the process of education. Although from one point of view the infantile tendencies of the unconscious are the most conspicuous, it would nonetheless be a mistake to define or evaluate the unconscious entirely in these terms. The unconscious has still another side to it: it includes not only repressed contents, but all psychic material that lies below the threshold of consciousness. It is impossible to explain the subliminal nature of all this material on the principle of repression, for in that case the removal of repression ought to endow a person with a prodigious memory which would thenceforth forget nothing.

[204] We therefore emphatically affirm that in addition to the repressed material the unconscious contains all those psychic components that have fallen below the threshold, as well as subliminal sense-perceptions. Moreover we know, from abundant experience as well as for theoretical reasons, that the unconscious also contains all the material that has *not yet* reached the threshold of consciousness. These are the seeds of future conscious contents. Equally we have reason to suppose that the unconscious is never quiescent in the sense of being inactive, but is ceaselessly engaged in grouping and regrouping its contents. This activity should be thought of as completely autonomous only in pathological cases; normally it is co-ordinated with the conscious mind in a compensatory relationship.

[205] It is to be assumed that all these contents are of a personal nature in so far as they are acquired during the individual's life. Since this life is limited, the number of acquired contents in the unconscious must also be limited. This being so, it might be thought possible to empty the unconscious either by analysis or by making a complete inventory of the unconscious contents, on the ground that the unconscious cannot produce anything more than what is already known and assimilated into consciousness. We should also have to suppose, as already said, that if one could arrest the descent of conscious contents into the unconscious by doing away with repression, unconscious productivity would be paralysed. This is possible only to a very limited extent, as we know from experience. We urge our patients to hold fast to repressed contents that have been re-associated with consciousness, and to assimilate them into their plan of life. But this procedure, as we may daily convince ourselves, makes no impression on the unconscious, since it calmly goes on producing dreams and fantasies which, according to Freud's original theory, must arise from personal repressions. If in such cases we pursue our observations systematically and without prejudice, we shall find material which, although similar in form to the previous personal contents, yet seems to contain allusions that go far beyond the personal sphere.

[206] Casting about in my mind for an example to illustrate what I have just said, I have a particularly vivid memory of a woman patient with a mild hysterical neurosis which, as we expressed it in those days [about 1910], had its principal cause in a "father-complex." By this we wanted to denote the fact that the patient's peculiar relationship to her father stood in her way. She had been on very good terms with her father, who had since died. It was a relationship chiefly of feeling. In such cases it is usually the intellectual function that is developed, and this later becomes the bridge to the world. Accordingly our patient became a student of philosophy. Her energetic pursuit of knowledge was motivated by her need to extricate herself from the emotional entanglement with her father. This operation may succeed if her feelings can find an outlet on the new intellectual level, perhaps in the formation of an emotional tie with a suitable man, equivalent to the former tie. In this particular case,

however, the transition refused to take place, because the patient's feelings remained suspended, oscillating between her father and a man who was not altogether suitable. The progress of her life was thus held up, and that inner disunity so characteristic of a neurosis promptly made its appearance. The so-called normal person would probably be able to break the emotional bond in one or the other direction by a powerful act of will, or else—and this is perhaps the more usual thing—he would come through the difficulty unconsciously, on the smooth path of instinct, without ever being aware of the sort of conflict that lay behind his headaches or other physical discomforts. But any weakness of instinct (which may have many causes) is enough to hinder a smooth unconscious transition. Then all progress is delayed by conflict, and the resulting stasis of life is equivalent to a neurosis. In consequence of the standstill, psychic energy flows off in every conceivable direction, apparently quite uselessly. For instance, there are excessive innervations of the sympathetic system, which lead to nervous disorders of the stomach and intestines; or the vagus (and consequently the heart) is stimulated; or fantasies and memories, uninteresting enough in themselves, become overvalued and prey on the conscious mind (mountains out of molehills). In this state a new motive is needed to put an end to the morbid suspension. Nature herself paves the way for this, unconsciously and indirectly, through the phenomenon of the transference (Freud). In the course of treatment the patient transfers the father-imago to the doctor, thus making him, in a sense, the father, and in the sense that he is *not* the father, also making him a substitute for the man she cannot reach. The doctor therefore becomes both a father and a kind of lover—in other words, an object of conflict. In him the opposites are united, and for this reason he stands for a quasi-ideal solution of the conflict. Without in the least wishing it, he draws upon himself an overvaluation that is almost incredible to the outsider, for to the patient he seems like a saviour or a god. This way of speaking is not altogether so laughable as it sounds. It is indeed a bit much to be a father and lover at once. Nobody could possibly stand up to it in the long run, precisely because it is too much of a good thing. One would have to be a demigod at least to sustain such a role without a break, for all the time one would have to be the giver. To the patient in the state of transference, this provisional solution naturally seems ideal, but only at first; in the end she comes to a standstill that is just as bad as the neurotic conflict was. Fundamentally, nothing has yet happened that might lead to a real solution. The conflict has merely been transferred. Nevertheless a successful transference can—at least temporarily—cause the whole neurosis to disappear, and for this reason it has been very rightly recognized by Freud as a healing factor of first-rate importance, but, at the same time, as a provisional state only, for although it holds out the possibility of a cure, it is far from being the cure itself.

[207] This somewhat lengthy discussion seemed to me essential if my example was to be understood, for my patient had arrived at the state of transference and had already reached the upper limit where the standstill begins to make itself disagreeable. The question now arose: what next? I had of course become the complete saviour, and the thought of having to give me up was not only exceedingly distasteful to the patient, but positively terrifying. In such a situation "sound common sense" generally comes out with a whole repertory of admonitions: "you simply must," "you really ought," "you just cannot," etc. So far as sound common sense is, happily, not too rare and not entirely without effect (pessimists, I know, exist), a rational motive can, in the exuberant feeling of buoyancy you get from the transference, release so much enthusiasm that a painful sacrifice can be risked with a mighty effort of will. If successful—and these things sometimes are—the sacrifice bears blessed fruit, and the erstwhile patient leaps at one bound into the state of being practically cured. The doctor is generally so delighted that he fails to tackle the theoretical difficulties connected with this little miracle.

[208] If the leap does not succeed—and it did not succeed with my patient—one is then faced with the problem of resolving the transference. Here "psychoanalytic" theory shrouds itself in a thick darkness. Apparently we are to fall back on some nebulous trust in fate: somehow or other the matter will settle itself. "The transference stops automatically when the patient runs out of money," as a slightly cynical colleague once remarked to me. Or the ineluctable demands of life make it impossible for the patient to linger on in the transference—demands which compel the involuntary sacrifice, sometimes with a more or less complete relapse as

a result. (One may look in vain for accounts of such cases in the books that sing the praises of psychoanalysis!)

[209] To be sure, there are hopeless cases where nothing helps; but there are also cases that do not get stuck and do not inevitably leave the transference situation with bitter hearts and sore heads. I told myself, at this juncture with my patient, that there must be a clear and respectable way out of the impasse. My patient had long since run out of money—if indeed she ever possessed any—but I was curious to know what means nature would devise for a satisfactory way out of the transference deadlock. Since I never imagined that I was blessed with that “sound common sense” which always knows exactly what to do in every quandary, and since my patient knew as little as I, I suggested to her that we could at least keep an eye open for any movements coming from a sphere of the psyche uncontaminated by our superior wisdom and our conscious plannings. That meant first and foremost her dreams.

[210] Dreams contain images and thought-associations which we do not create with conscious intent. They arise spontaneously without our assistance and are representatives of a psychic activity withdrawn from our arbitrary will. Therefore the dream is, properly speaking, a highly objective, natural product of the psyche, from which we might expect indications, or at least hints, about certain basic trends in the psychic process. Now, since the psychic process, like any other life-process, is not just a causal sequence, but is also a process with a teleological orientation, we might expect dreams to give us certain *indicia* about the objective causality as well as about the objective tendencies, precisely because dreams are nothing less than self-representations of the psychic life-process.

[211] On the basis of these reflections, then, we subjected the dreams to a careful examination. It would lead too far to quote word for word all the dreams that now followed. Let it suffice to sketch their main character: the majority referred to the person of the doctor, that is to say, the actors were unmistakably the dreamer herself and her doctor. The latter, however, seldom appeared in his natural shape, but was generally distorted in a remarkable way. Sometimes his figure was of supernatural

size, sometimes he seemed to be extremely aged, then again he resembled her father, but was at the same time curiously woven into nature, as in the following dream: *Her father (who in reality was of small stature) was standing with her on a hill that was covered with wheat-fields. She was quite tiny beside him, and he seemed to her like a giant. He lifted her up from the ground and held her in his arms like a little child. The wind swept over the wheat-fields, and as the wheat swayed in the wind, he rocked her in his arms*.

[212] From this dream and from others like it I could discern various things. Above all I got the impression that her unconscious was holding unshakably to the idea of my being the father-lover, so that the fatal tie we were trying to undo appeared to be doubly strengthened. Moreover one could hardly avoid seeing that the unconscious placed a special emphasis on the supernatural, almost "divine" nature of the father-lover, thus accentuating still further the over-valuation occasioned by the transference. I therefore asked myself whether the patient had still not understood the wholly fantastic character of her transference, or whether perhaps the unconscious could never be reached by understanding at all, but must blindly and idiotically pursue some nonsensical chimera. Freud's idea that the unconscious can "do nothing but wish," Schopenhauer's blind and aimless Will, the gnostic demiurge who in his vanity deems himself perfect and then in the blindness of his limitation creates something lamentably imperfect—all these pessimistic suspicions of an essentially negative background to the world and the soul came threateningly near. And there would indeed be nothing to set against this except a well-meaning "you ought," reinforced by a stroke of the axe that would cut down the whole phantasmagoria for good and all.

[213] But, as I turned the dreams over and over in my mind, there dawned on me another possibility. I said to myself: it cannot be denied that the dreams continue to speak in the same old metaphors with which our conversations have made the patient as well as myself sickeningly familiar. But the patient has an undoubted understanding of her transference fantasy. She knows that I appear to her as a semi-divine father-lover, and she can, at least intellectually, distinguish this from my factual reality. Therefore the dreams are obviously reiterating the

conscious standpoint minus the conscious criticism, which they completely ignore. They reiterate the conscious contents, not *in toto*, but insist on the fantastic standpoint as opposed to “sound common sense.”

[214] I naturally asked myself what was the source of this obstinacy and what was its purpose? That it must have some purposive meaning I was convinced, for there is no truly living thing that does not have a final meaning, that can in other words be explained as a mere left-over from antecedent facts. But the energy of the transference is so strong that it gives one the impression of a vital instinct. That being so, what is the purpose of such fantasies? A careful examination and analysis of the dreams, especially of the one just quoted, revealed a very marked tendency—in contrast to conscious criticism, which always seeks to reduce things to human proportions—to endow the person of the doctor with superhuman attributes. He had to be gigantic, primordial, huger than the father, like the wind that sweeps over the earth—was he then to be made into a god? Or, I said to myself, was it rather the case that the unconscious was trying to *create* a god out of the person of the doctor, as it were to free a vision of God from the veils of the personal, so that the transference to the person of the doctor was no more than a misunderstanding on the part of the conscious mind, a stupid trick played by “sound common sense”? Was the urge of the unconscious perhaps only apparently reaching out towards the person, but in a deeper sense towards a god? Could the longing for a god be a *passion* welling up from our darkest, instinctual nature, a passion unswayed by any outside influences, deeper and stronger perhaps than the love for a human person? Or was it perhaps the highest and truest meaning of that inappropriate love we call “transference,” a little bit of real *Gottesminne*, that has been lost to consciousness ever since the fifteenth century?

[215] No one will doubt the reality of a passionate longing for a human person; but that a fragment of religious psychology, an historical anachronism, indeed something of a medieval curiosity—we are reminded of Mechtild of Magdeburg—should come to light as an immediate living reality in the middle of the consulting-room, and be expressed in the prosaic figure of the doctor, seems almost too fantastic to be taken seriously.
